Subject: **Yellowtail Water Release Order - BHR No. 07-25**

CURRENT RESERVOIR CONDITIONS:

Elevation: 3637.06; Storage: 1,034,376 acre-feet; River Release: 1,750 cfs; Inflow: 4,010 cfs;

GENERAL COMMENTS:

To meet downstream irrigation demands, the BIA has requested gradual increases in diversions to the Bighorn Canal. In response, the following operation changes are required at Yellowtail Dam and Powerplant.

NOTE: This is the time period when fish are more susceptible to high levels of nitrogen gas super-saturation. To provide a more desirable mixing flow of approximately 75% through the spillway gates and 25% through the sluice gates to maintain the total gas super-saturation levels at safe limits, the minimum Afterbay elevation should be maintained at or above elevation 3183 whenever possible. This is only a soft limit and may be deviated from during special or emergency operations.
