

Respiratory Disease Section (June 2002) Sample Person Questionnaire

Description

Respiratory disease section (variable name prefix RDQ) provides interview data on respiratory symptoms that may be related to allergies, chronic bronchitis or asthma.

Topics

- Cough symptoms in children (1– 11 years)
- Chronic bronchitis symptoms (cough and phlegm) in adults
- Wheeze/Asthma trigger factors, severity, medication use, hospitalization

Eligible Sample

All survey participants ages 1 year of age and older were asked a subset of these questions.

Analytic Notes

Additional questions on asthma are asked in the Medical Conditions (MCQ) section of this questionnaire.
