World	473,236	457,186	930,423

¹ U.S. data are as of the end of 2006, 1 year later than the other data on this table.

² Excludes countries that were part of the former U.S.S.R. See "U.S.S.R." in Glossary.

³ Includes only countries that were part of the former U.S.S.R. See "U.S.S.R." in Glossary.

Notes: • Data are at end of year. • World Energy Council data represent "proved recoverable reserves," which are the tonnage within the "proved amount in place" that can be recovered (extracted from the earth in raw form) under present and expected local economic conditions with existing, available technology. • The Energy Information Administration (EIA) does not certify the international reserves data, but reproduces the information as a matter of convenience for the reader. • U.S. reserves represent

estimated recoverable reserves from the Demonstrated Reserve Base, which includes both measured and indicated tonnage. The U.S. term "measured" approximates the term "proved," used by the World Energy Council. The U.S. "measured and indicated" data have been combined and cannot be recaptured as "measured alone." • Totals may not equal sum of components due to independent rounding.
