^a Includes supplemental gaseous fuels.

^b "Other" is the subtotal of 16 petroleum products consumed in the industrial sector. See a full description in the Technical Notes, Section 4, "Other Petroleum Products."

^c Conventional hydroelectric power. Does not include pumped-storage hydroelectricity.

^d Wood and waste.

^e "Other" geothermal, wind, photovoltaic, solar thermal energy, and net imports of electricity.

^f Net interstate flow of electricity is the difference between the amount of energy in the electricity sold within a State (including associated losses) and the energy input at the electric utilities within the State. A positive

number indicates that more electricity (including associated losses) came into the State than went out of the State during the year; conversely, a negative number indicates that more electricity (including associated losses) went out of the State than came into the State.

^g U.S. total includes 44.2 trillion Btu of net imports of coal coke that has not been allocated to the States.

Where shown, (s) = Value less than 0.05 trillion Btu.

Note: Totals may not equal sum of components due to independent rounding.

Sources: Data sources, estimation procedures, and assumptions are described in the Technical Notes.
