

Cotton: World Markets and Trade

Lower World Stocks Increase U.S. Exports, Despite Smaller Crop

Reduced exportable supply in other major exports coupled with relatively stable import demand is expected to increase demand for U.S. cotton. While U.S. 2008/09 production was lowered slightly this month, the forecast for U.S. exports was raised by 500,000 bales to 15.0 million. The exportable supply in the other major exporters fell by over 5 percent this month, due to slightly lower beginning stocks and a 5 percent decrease in production. Import demand in the major importing countries only decreased slightly as lower consumption demand was largely offset by reduced beginning stocks and lower production. As a result import demand decreased only marginally.

Stocks out side of the United States are relatively tight. Stocks in China continue to tighten as policies to assure the utilization of domestic cotton ahead of imports, such as the sliding scale import duty and the transportation subsidy for Xinjiang cotton, and as state strategic stock holding decreases. China's stocks-to-use are now at the lowest level in 15 years. Foreign less China stocks-to-use are also at the lowest level in 5 years.

The combination of these is allowing the United States to reduce stocks which last year had reached their highest level in 40 years.

Summary of Changes in estimates and Forecasts from Last Month (Working Statistics)
(1,000 480 lb Bales and 1,000 Ha)
