RE:.. Freda A. Lowe

Dear Mark,

Thank you for allowing me to evaluate Mrs. Lowe's cardiac status, and thank you especially for forwarding her pertinent records. Mrs. Lowe's stress echo report and related office information are enclosed.

Mrs. Lowe's extensive nutritional program and ongoing chelation therapy have been successful. While significant three vessel coronary disease was noted in '96, at present Mrs. Lowe's angina is quite stable and relatively mild in degree, and only a transitory inferior contraction abnormality could be brought out with stress echo testing today. Risk factor-wise Mrs. Lowe's lipids look great, and she is on an appropriate program of antioxidants, minerals and essential fatty acids.

I saw no reason to make any changes in Mrs. Lowe's obviously successful cardiovascular regimen. Mrs. Lowe will continue to work close with yourself and I asked her to check in with me again in one year's time, but to call should any change in her anginal pattern develop.

Sincerely,

Jim

I have had great success with nutritional products just as they are. Had a heart cath in 1996. Was told if I didn't have a heart cath the next day I would die. Seven years later I am still alive, have no problems and continue to take my nutritional supplements! Keep things the way they are!! Thank You
