PATIENT MONITORING							
NOTE: Cardiac monitoring with external defibrillation and pulse oximetry must be performed in the urban disaster environment. Across the nation, different agencies use different combinations of equipment to meet these goals.							
A Defibrillator/monitor with remote pacing and 12 lead capability should be kept at the Base of Operations. A compact, basic Defibrillator/monitor should be used in confined space operations. The different monitor's chosen should be from the same manufacturer in order to take advantage of the same battery support systems.						NOTE: A 5% cost cap will be used for audit or reimbursement	
In some cases, separate defibrillator/monitors and pulse oximeters may be preferred due to existing equipment practices. However, in all cases, these functions must be assured on scene.						Estimated Costs
