Re: Health Claim Petition: Daily consumption of 40 ounces of typical green tea may reduce the risk of certain forms of cancer. Although there is scientific evidence supporting the claim, the evidence is not conclusive.

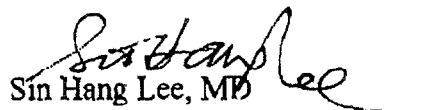

Dear Ms. Crane:

Thank you for your fax letter of February 25, 2004, advising me that only the odd number pages for references #53 and #56 were sent to the FDA with the petition.

Attached to this covering letter are copies of the complete articles of reference #53 by Ji et al. and reference #56 by Kinjo et al. Please kindly let me know if you find other omissions.

Thank you for your assistance.

Sincerely,

Sin Hang Lee, MD
