

Docket # OOD-1598 + OON-1396

Dear FDA Commissioner -

I have concerns about genetically engineered foods and feel strongly that your agency should be acting in the interest of the public rather than agribusiness. At the very least, all products containing GE food must be labelled so consumers can make a choice. As an ecologist, I have concerns about the inadequate industry testing of these organisms. They pose potential public health and ecological risks. Sincerely, Anne Schultze
