

Dear Commissioners,

01 MAR 19 P4:13

I am writing to ask you to stop allowing genetically engineered foods into our food supply + environment before they have been adequately tested. We need independent safety testing, not testing done by those who stand to profit from the sale of these products. The public has a right to know what they are eating, therefore these foods should be labeled.

Furthermore, the companies that manufacture these crops should be held liable if any harm results from their use.

Sincerely,

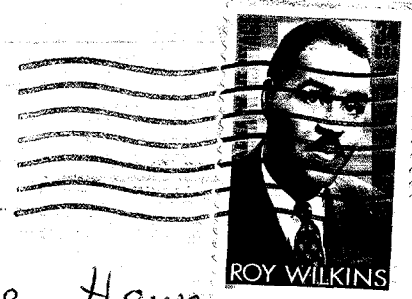

Vivian Warkentin
