BUREAU	57	4	32	37	13	14

Note--This table shows the information that will appear in the 1995 portion of the next edition of the Public Lands Statistics book.

This table represents only that portion of each state inventoried using the Ecological Site Inventory or Soil-Vegetation Inventory Methods.

¹ Expressed in degree of similarity of present vegetation to the potential natural, or climax, plant community: Potential Natural Community = 76-100% similarity, Late Seral = 51-75% similarity; Mid Seral = 26-50% similarity; Early Seral = 0-25% similarity.

² This column is the percent of each state that has been inventoried. Ecological Site Inventories are being conducted to fill in data gaps. This table will be updated annually to reflect new information and changes in seral stages.

³ This category includes rangelands for which neither data nor estimates are available.
