a Expressed in degree of similarity of present vegetation to the potential natural, or climax, plant community: Excellent = 76-100% similarity, Good = 51-75% similarity; Fair = 26-50% similarity; Poor = 0-25% similarity.

b This category includes rangelands for which neither data nor estimates are available.

Note - This table is based on information from ecological site inventories (ESI) (50% of the public lands), from estimates based on earlier inventories (OTHER) (30% of the public lands), and from estimates based on professional judgment (PRO. JUDGE) alone (20% of the public lands). Ecological site inventories are being conducted to fill in data gaps. This table will be updated annually to reflect new information and changes in range condition classes.
