TOTAL BUREAU	52	5	34	40	13	9

Note--The first column is the percent of each state that has been inventoried using Ecological Site Inventory or the Soil-Vegetation Inventory Methods. Ecological Site Inventories are being conducted to fill in data gaps. This table will be updated annually to reflect new information and changes in seral stages.

¹Expressed in degree of similarity of present vegetation to the potential natural, or climax, plant community: Potential Natural Community = 76-100% similarity; Late Seral = 51-75% similarity; Mid Seral = 26-50% similarity; and Early Seral = 0-25% similarity.

²This category includes dry lakebeds, rock outcrops, and other areas for which data cannot be gathered.
