- Watson, A., K. Bakshi, D. Opresko, R. Young, V. Hauschild, and J. King, "Cholinesterase Inhibitors as Chemical Warfare Agents: Community Preparedness Guidelines," Chapter 5, *Toxicology of Organophosphate & Carbamate Compounds*; Elsevier/Academic Press, Dec 2005 (North America), Jan 2006 (Europe).
- An ORNL Life Sciences Division team comprised of Annetta Watson, Team Leader, Dennis Opresko and Bob Young of the Toxicology and Hazard Assessment Group have collaborated with their Army sponsors and National Research Council reviewers to author this book chapter documenting team development of chemical warfare agent exposure guidelines for community emergency preparedness (acute exposure guideline levels and reference doses). These guidelines are in current use by civilian regulatory and emergency response personnel, and will now be more readily available to user communities as published in the forthcoming book.
