Dear Colleague:

Information related to the 1997 BRFSS summary prevalence report of selected risk factors and preventive health measures from the core and modules is attached.

This report consists of four parts:

An introduction that contains:

An overview of the 1997 summary prevalence report.

An explanation of the tables for 1997 Behavioral Risk Factor Surveillance System (BRFSS) prevalence data.

Definitions of BRFSS risk factors and preventive health measures. When appropriate, Year 2000 Objectives are identified.

Analysis of selected questions from the 1997 BRFSS questionnaire. The set of analyses is divided into three sections:

- Section I - selected risk factors and preventive health measures in the BRFSS core.
- Section II - selected risk factors and preventive health measures from modules used by at least 13 states
- Section III - preventive health measures that concern women only.

As soon as your schedule permits, please examine the enclosed materials closely.

Sincerely yours,

David E. Nelson, M.D.,M.P.H.
Chief, Behavioral Surveillance Branch

change 1996-1997

TABLE 50.1 Had pap smear within the past three years, women
with uterine cervix
50.2 Had pap smear within the past three years, women
with uterine cervix, change 1996-1997

OVERVIEW OF THE 1997 SUMMARY REPORT

The report is divided into three sections:

Section I displays tables for selected variables in the core. In Section I, there are three tables for each risk factor or preventive measure unless otherwise noted. Estimated prevalence and relevant statistics are provided for the total population sampled and by sex. Prevalence estimates for both 1996 and 1997, or where appropriate 1995 and 1997, and the percentage point difference between the estimates are given for variables in the core.

Section II shows tables for selected variables in modules used by at least 13 states. Section II contains two tables for each risk factor or preventive measure of interest in the modules. These tables show the estimated prevalence and relevant statistics for the total sampled population and both sex groups who responded to selected questions in the optional modules.

Section III contains tables for preventive health measures that are related to women's health issues. Estimated prevalence and relevant statistics are provided for the total population sampled. Prevalence estimates for both 1996 and 1997 and the percentage point difference between them are given.

The next section describes each of the tables in detail.

EXPLANATION OF TABLES AND FIGURES

Three sample tables (Tables A-C) from Section I will be used as examples to explain the information contained in this report.

Each table describes a behavioral risk factor or preventive health measure from the Behavioral Risk Factor Surveillance System (BRFSS) instrument.

Table A shows the estimated prevalence and relevant statistics for each participant. (Participants refer to all states, and the District of Columbia and territories of the U.S.). The sample table shows the estimated prevalence and relevant statistics for "no health insurance" in the population surveyed by each BRFSS participant. This prevalence estimate excludes respondents with unknown information on insurance coverage.

The columns in Table A provide the following information:

<u>COLUMN HEADING</u>	<u>CONTENTS</u>
<u>Participant</u>	Name of the participant. Participants refers to all states including the District of Columbia and territories of the United States.
<u>Sample size</u> specific BRFSS These numbers <u>exclude</u> don't know", those who refused had no response coded (missing or	The number of individuals who responded to the question. These are unweighted numbers. individuals who reported "not sure, to answer the question, or skipped).
<u>Percent/Mean</u> number) of interest. This population to estimate the true population.	An estimate of the percent (or prevalence or mean residents who report the behavioral risk factor of is weighted to the participant's prevalence or mean in the
<u>Standard error</u> the	A measure of the amount of variability that exists in calculation of the prevalence estimate.
<u>95% confidence interval</u> estimate 95% population is performed.	A range which contains the true population prevalence of the time, if repeated sampling of the

SUMMARY STATISTICS are given at the bottom of the table:

<u>Number of participants</u> question(s) regarding	The total number of participants who asked the respective "risk factor".
<u>Median</u>	The middle value of all estimated prevalences.
<u>Range</u> among all	The lowest prevalence and the highest prevalence participants.

For example, in Table A, there were 2171 individuals in the state of Alabama who responded to the "no health insurance" question. Of those responding, the estimated prevalence of Alabama's population who reported that they had no health care plan is 14.4 percent. This prevalence estimate has a standard error of 0.9. The 95% confidence interval for this estimate is (12.7, 16.1). Ninety-five percent (95%) of confidence intervals generated under repeated sampling will contain the true population prevalence of Alabama's population who "had no health care plan".

SUMMARY STATISTICS: NO. OF PARTICIPANTS = 52 MEDIAN = 12.0 RANGE = 6.4-24.2

* HAVING NO HEALTH CARE PLAN

Table B shows the estimated prevalence and relevant statistics by sex for each state participant. This example table shows the estimated prevalence and relevant statistics for "no health insurance" among both sex groups. The same statistics are displayed in Table B as in Table A, except that Table B shows values for males and females separately. An explanation of the terms was provided earlier. This side by side display of the tables permits each participant to compare estimates for males and females in their respective state.

* HAVING NO HEALTH CARE PLAN

Table C shows the percent difference between the prevalence estimates, by participant, for the 1996 and 1997 survey years for having no health insurance. A negative change indicates a decrease in prevalence from 1996 to 1997, while a positive change indicates an increase in prevalence between the two years. This difference gives state health officials a quick method to examine changes that may have occurred in their respective state. Some of these changes may have resulted from legislative actions (or inactions) in the state, programs funded, or programs that came into existence because of results that you may have shown from the BRFSS. Since changes between two years may be attributable to many factors, conclusions drawn from this table should be interpreted with extreme caution.

Sample Size. Sample sizes vary by question. Some estimates may be based on responses from less than 50 respondents. Interpreting estimates that are based on a small number of respondents can mislead the reader into believing that a given finding is much more precise than it actually is. The BRFSS recommends not interpreting percentages where the denominator is based upon fewer than 50 unweighted respondents (sample size)

* HAVING NO HEALTH CARE PLAN
 N/A - NOT AVAILABLE

DEFINITIONS OF BRFSS RISK FACTORS AND PREVENTIVE HEALTH MEASURES

ACTIVITY LIMITATIONS

ANY DISABILITY - Respondents, age 18-64, who report that an impairment or health problem is responsible for any of the following: (1) keeping them from working at a job or business, (2) limiting the kind or amount of work they can do, (3) keeping them from doing housework, or (4) limiting the kind or amount of housework they can do. This measures Year 2000 Objective 17.2 - Target $\leq 8\%$.

ANY LIMITATIONS (1) - Respondents, age 18-64, who report they are limited in any way in any activities because of any impairment or health problem. This measures Year 2000 Objective 17.2 - Target $\leq 8\%$.

AIDS KNOWLEDGE/ATTITUDES

HIV BLOOD TEST - Respondents, age 18-64, who have ever had a blood test for HIV infection.

CHANCES OF GETTING HIV - Respondents, age 18-64, who believe that their chances of getting infected with HIV, the virus that causes AIDS are medium or high.

ENCOURAGE TEEN CONDOM USE - Respondents, age 18-64, who would encourage sexually active teenagers to use a condom.

BREAST EXAM

EVER HAD A BREAST EXAM - Female respondents, age 18 and older, who report that they have ever had a breast exam by a doctor.

EVER HAD A BREAST EXAM - Female respondents, age 40 and older, who report that they have ever had a breast exam by a doctor.

HAD A BREAST EXAM WITHIN 2 YEARS - Female respondents, age 50 and older, who report that they had a breast exam within the past two years.

CERVICAL CANCER

EVER HAD A PAP SMEAR - Female respondents, age 18 and older who report that they have ever had a pap smear. This measures Year 2000 Objective 16.12. - Target $\geq 95\%$.

EVER HAD A PAP SMEAR, WITH UTERINE CERVIX - Female respondents, with uterine cervix, age 18 and older, who report that they have ever had a pap smear.

HAD A PAP SMEAR WITHIN 3 YEARS - Female respondents, with uterine cervix, age 18 and older, who report that they had a pap smear within the last three years.

CHOLESTEROL SCREENING/AWARENESS

CHOLESTEROL SCREENING (1) - Respondents who have ever had their cholesterol checked.

CHOLESTEROL SCREENING (2) - Respondents who have had their cholesterol checked within the past five years. Year 2000 Objective 15.14 - Target \geq 75%.

CHOLESTEROL AWARENESS - Respondents who report that their cholesterol has been checked and they have been told their cholesterol is high by health professional.

CLINICAL BREAST EXAM See BREAST EXAM

COLORECTAL CANCER SCREENING

PROCTOSCOPIC EXAM - Respondents, age 50 and older, who report the

BLOOD STOOL TEST - Respondents, age 50 and older, who did not report

DIABETES

AGE AT ONSET - Mean age at onset of diabetes: age when respondent was told that they have diabetes, among those who report they were told by a doctor that they have diabetes.

DIABETES AWARENESS - Respondents who report they were told by a doctor that they have diabetes.

NOW TAKING INSULIN - Respondents who are now taking insulin, among those who report they were told by a doctor that they have diabetes.

NUMBER OF TIMES SEEN HEALTH PROFESSIONAL - Mean number of times respondents report they have seen a doctor, nurse, or other health professional for their diabetes in the past year, among those who report they were told by a doctor that they have diabetes.

DRINKING STATUS

CURRENT DRINKERS - Respondents who report that they have had any alcoholic beverages in the past month.

BINGE DRINKING (also called ACUTE DRINKING) - Respondents who report having five or more drinks on an occasion, one or more times in the past month.

CHRONIC DRINKING - Respondents who report an average of two or more drinks per day i.e., 60 or more alcoholic drinks a month. This is based on the total number of drinks per month.

DRINKING and DRIVING - Respondents who report having driven after having too much to drink, one or more times in the past month.

HEALTH INSURANCE

NO HEALTH INSURANCE - Respondents age 18 and older who report they have no health care plan.

NO HEALTH INSURANCE - Respondents age 18-64 years who report they have no health care plan.

HEALTH STATUS

ACTIVITIES LIMITED - Mean number of days in past 30 days activities were limited as reported by respondents.

MENTAL HEALTH NOT GOOD - Mean number of days in past 30 days mental health was not good as reported by respondents.

PHYSICAL HEALTH NOT GOOD - Mean number of days in past 30 days physical health was not good as reported by respondents.

SELF REPORTED HEALTH STATUS - Respondents who report having a general health status of fair or poor.

HYPERTENSION

HYPERTENSION [also called HYPERTENSION AWARENESS] - Respondents who report that their blood pressure has been checked and they have been told they have high blood pressure.

HYPERTENSION SCREENING - Respondents who report they have had their blood pressure checked within the past two years.

IMMUNIZATION

FLU SHOT - Respondents, age 65 and older, who report that they have had a flu shot with in past 12 months. This measures Year 2000 Objective 20.11 - Target \geq 80%.

PNEUMONIA VACCINATION - Respondents, age 65 and older, who report they have ever had a pneumonia vaccination. This measures Year 2000 Objective 20.11 - Target \geq 80%.

INJURY CONTROL AND CHILD SAFETY

USE OF CHILD SAFETY BELTS FOR OLDEST CHILD AGE 5-15 - Respondents who report their oldest child is between age 5 and 15 and "always" uses a safety belt when riding in a car. This approximates Year 2000 Objective 9.12 - Target \geq 85%.

USE OF CHILD SAFETY SEATS FOR OLDEST CHILD UNDER 5 - Respondents who report their oldest child is under age 5 and "always" uses a car safety seat when riding in a car. This approximates Year 2000 Objective 9.12a - Target \geq 95%.

USE OF BICYCLE HELMET - Respondents who report their oldest child is under age 15 and child age 5-15 always wears a bicycle helmet when riding a bicycle.

MAMMOGRAPHY

EVER HAD A MAMMOGRAM (1) - Female respondents age 18 and older, who report that they have ever had a mammogram.

EVER HAD A MAMMOGRAM (2) - Female respondents, age 40 and older, who report that they have ever had a mammogram.

HAD A MAMMOGRAM WITHIN 2 YEARS - Female respondents, age 50 and older, who report that they had a mammogram within the past two years.

MAMMOGRAPHY AND BREAST EXAM

MAMMOGRAM & BREAST EXAM - Female respondents, age 40 and older, who report that they have ever had a mammogram and a breast exam. This measures Year 2000 Objective 16.11 - Target \geq 80%.

MAMMOGRAM & BREAST EXAM WITHIN 2 YEARS - Female respondents, age 50 and older, who report that they have had a mammogram and a breast exam within the last two years. This measures Year 2000 Objective 16.11 - Target \geq 60%.

OVERWEIGHT

OVERWEIGHT: BY MEDIAN - Respondents at or above 120% of their ideal weight. Ideal weight is defined as the mid-value of a median frame person from the 1959 Metropolitan Life Insurance Corporation height-weight tables.

OVERWEIGHT: BY BODY MASS INDEX - Females with body mass index(BMI) Year 2000 Objective 2.3 - Target ≤ 2 of overweight.

ORAL HEALTH

DENTAL VISIT - Respondents who reported visiting a dentist or dental

TOOTH LOSS - Respondents who report a loss of 6 or more permanent

PAP SMEAR See CERVICAL CANCER

PROCTOSCOPIC EXAM see COLORECTAL CANCER SCREENING

SAFETY BELTS

LACK OF SAFETY BELT USAGE - Respondents reporting they "nearly always", "sometimes", "seldom", or "never" use safety belts when occupants of a car (i.e., do not always use a safety belt). This measures Year 2000 Objective 9.12 - Target $\geq 85\%$.

SEXUAL BEHAVIOR

CONDOM EFFECTIVENESS - Respondents, age 18-49, who believe that condo

SMOKELESS TOBACCO

EVER USED - Respondents who have ever used or tried smokeless tobacco.

CURRENT USE - Respondents who report that they currently use smokeless tobacco.

SMOKING STATUS

EVER SMOKED - Respondents who have ever smoked 100 cigarettes in their lifetime.

CURRENT SMOKER - Respondents who have ever smoked 100 cigarettes in their lifetime and reported smoking every

day or some days. This measures Year 2000 Objective 3.4
- Target \leq 15%.

LIMITATIONS OF THE DATA

This report consolidates the most current data on selected risk factors and preventive health measures for states and the District of Columbia. The information was obtained from the data files of individual states. Therefore, while all participants use telephone surveys to collect the data, the data in this report vary somewhat with respect to data collection, sampling design and sample size.

Some states conduct interviews using a paper questionnaire, but most use a computer-assisted telephone interviewing (CATI) software program. All states use probability-based methods to select their sample. For data year 1997, twenty-nine states used the Mitofsky-Waksberg method of sampling, seventeen states used a disproportionate stratified sample (DSS) design, and six states used a variety of other designs. **The BRFSS standard for sample designs is that sample records must be justifiable as a probability sample of all households with telephones in the state.** All but Alaska, California, Nevada and Texas met this criterion in 1996. The deviations from the standard by these states may reduce the comparability of their data with those of other areas. Although the effects of the deviations have not been extensively investigated, departure from the standard may produce bias in prevalence estimates and other survey results, as well as constrict confidence intervals. The sampling practices of the four states are highlighted below:

Alaska used a stratified directory/random sample combination where the sample design is made up of 3 random digit-dialed strata and 4 listed strata. Phone numbers in the listed strata are selected from a list of putative household numbers. Forty-five percent of the completed interviews come from the listed strata. Alaska's sampling frame for the listed strata contains an estimated 50% of all household numbers in these strata.

California used a truncated list-assisted design with sampling from 3+ blocks only. Noncoverage was further affected to an unknown degree by substitution for sample numbers used by any client of the commercial sample provider in the preceding six months. Probabilities of selection varied in proportion to the number of listed household numbers in the 100 blocks associated with a number, the number of known business numbers preceding a number, the number of preceding numbers selected by any client of the commercial sample provider in the preceding six months, and the measure of size used for each county, which could vary each

time a sample was drawn. Because of the unavailability of appropriate information, none of these factors is accounted for in the weights.

Nevada used a truncated list-assisted design with sampling from 5+ blocks only. Noncoverage was further affected to an unknown degree by substitution for sample numbers used by any client of the commercial sample provider in the preceding six months. Probabilities of selection varied in proportion to the number of listed household numbers in the 100 blocks associated with a number, the number of known business numbers preceding a number, the number of preceding numbers selected by any client of the commercial sample provider in the preceding six months, and the measure of size used for each county, which could vary each time a sample was drawn. Because of the unavailability of appropriate information, only the number of listed household numbers in the 100 blocks associated with a number is accounted for in the weights.

Texas used a truncated list-assisted sample which included only phone numbers from 100 blocks with one or more listed household numbers. Such hundred blocks are estimated to contain 97.1% of all household numbers.

California modified the wording of mammography, Papanicolaou (PAP) smear, and chronic alcohol use and are therefore excluded from those tables in the report. California also asked the HIV/AIDS section questions to persons 18-45 years of age rather than those 18-65 years of age, and are therefore excluded from tables reporting data on this topic.

Although states collect data monthly, the number of interviews range from 1500 in New Hampshire to 4896 in Idaho. Estimates for some states are therefore based upon smaller sample sizes, and for rare events (e.g. diabetes), may yield unstable estimates.

All data collection systems are subject to error, and records may be incomplete or contain inaccurate information. People may not remember essential information, a question may not mean the same thing to different respondents, and some individuals may not respond at all. It is not always possible to measure the magnitude of these errors or their impact on the data. The user must make his or her own evaluation on the data. Overall estimates generally have relatively small sampling errors, but estimates for certain population subgroups may be based on small numbers and have relatively large sampling errors. When the number of events is small and the probability of such an event is small, considerable caution must be observed in interpreting the conditions described.
