

READING FIRST IN...

COLORADO

Colorado will receive \$9 million in funding for the first year of its Reading First grant. And the Centennial State will receive **\$59 million over the next six years**, subject to demonstration of success and Congress' appropriations.

- That award will help districts and schools improve student achievement in reading through the application of scientifically based reading research.
- Reading First helps states, districts and schools apply scientifically based research—and the proven instructional and assessment tools consistent with this research—to ensure that every third grader reads at grade level.

Colorado will use about \$7.2 million of the grant to make sub-grant awards to approximately 45 schools in eligible districts. Colorado plans to begin making sub-grant awards in the spring of 2003.

- These sub-grants will allow schools to implement research-based reading programs for students in kindergarten through third grade and to provide professional development to ensure that all teachers have the skills they need to teach these programs effectively.
- In addition, the program will support the use of instructional assessments so that teachers can effectively screen and identify the reading barriers facing their students, as well as monitor their progress.

The Colorado Department of Education will integrate Reading First with its statewide infrastructure for improvement of early literacy.

- To accomplish this goal, the governor, in consultation with the Commissioner of Education, has convened a Reading Leadership Team to ensure a seamless, complementary approach to reading achievement throughout the state.

Colorado plans to host statewide reading academies to train every K-3 teacher in the essential components of effective reading instruction.

- These Comprehensive Reading Academies will provide multi-year, multi-level training in scientifically based reading instruction. The state will closely monitor the progress of schools and districts participating in Reading First, and will conduct a longitudinal evaluation of its program.

Reading First funds will be used to encourage excellence not just proficiency.

- The state is making extra grant monies available for those districts and schools that are willing and able to perform above and beyond the programmatic requirements.
- In addition, state officials will run a very rigorous competitive sub-grant process that will both prepare and select districts for their awards.

What is Reading First? Reading First is one of the most important components of President Bush's *No Child Left Behind Act*—the bipartisan law to improve American education. It sets aside \$900 million this year to ensure that schools use only scientifically based curricula and teaching methods.

Why are scientifically based programs important? When it comes to our children we can't afford to use untested methods or psychological fads.

- The Food and Drug Administration never lets a new drug onto the market until it has gone through strict safety tests and scientific study because the risks are just too high. So, too, in education we cannot let teaching methods be tried out on children without scientific evaluation. Reading First doesn't just protect young minds, it encourages schools to use the reading instruction already proven by science.

Why do we need Reading First? For two decades reading achievement has been flat. Less than one in three fourth-graders is deemed "proficient" in reading at grade level. By 12th grade just 40 percent of seniors are proficient in reading for their grade. *America can do better.*
