World Agricultural Production

Brazil Soy Production Reduced Due to Less Than Expected Planted Area

The USDA estimates 2007/08 Brazil soybeans production at 60.5 million tons, down 1.5 million from last month but up 1.5 million from last year, based on a reduction in estimated 2007/08 area from 22.0 to 21.5 million hectares. Some potential soybean area also was diverted to sugarcane this year due to Brazil's fervent demand for ethanol. Soybean planting was completed at the end of December, and the first harvest of irrigated soybeans began during the first week of January 2008.

Brazil's soybean yield is forecast at 2.81 tons per hectare, unchanged from last month and nearly matching the 15-year trend yield of 2.82 tons per hectare. The number of reported soybean rust cases has decreased from last year due to later planting, relatively drier weather, and newly enacted state bans on the planting of irrigated soybeans during the winter months between June 15 and September 15. (This helps prevent rust spores from spreading from monocropping.) Recent dry weather in the eastern production zone, along the border of Goias, Bahia and Minas Gerais states, may reduce yields by 10 to 20 percent in some regions where soils have low water-holding capacities and where several weeks of dryness coincided with crops advancing through the flowering and pod filling stages. The amount of precipitation during January and February will be critical in determining final yields. (For additional information, contact Curt Reynolds at 202-690-0134.)

EU Wheat Estimate Reduced Based on Harvest Results

The USDA estimates European Union (EU-27) 2007/08 wheat production at 119.8 million tons, down 0.7 million from last month and down 5.0 million from last year. This marks the fourth consecutive year of decreased production since the 146.9 million ton record crop in 2004/05. The decline in output is attributed chiefly to unfavorable weather and lower planted area for wheat due to increased rapeseed area. Area for 2007/08 is estimated at 24.8 million tons, unchanged from last month but up 0.3 million from last year. This season's aggregate EU wheat yield is estimated at 4.83 tons per hectare, below the 5.09 ton- per- hectare EU average. Yields vary greatly across the EU, with 2007/08 estimates ranging from over 7 tons per hectare in Western Europe to 1.6 tons per hectare in drought-afflicted Eastern Europe. Based on recent harvest data, the USDA reduced estimated 2007/08 wheat production by 0.25 million tons in Denmark, 0.2 million in Poland, and 0.1 million each in France, Netherlands, and Sweden. The reductions were attributed to heavy rains during harvest in northwest Europe.

In addition, estimated yields for Poland mixed grains were increased based on data from the state statistical office. Mixed grains (including triticale) are estimated at 8.4 million tons, up 0.7 million tons from last month. Favorable spring warmth and mid-season rains bolstered the record crop. Since much of Poland is comprised of poor, low-lying, sandy soils, a large portion of its farmland is seeded with mixed grains and other hardy grasses. Poland is the largest grower of mixed grains in the EU-27, which produced an estimated 13.5 million tons this season. (*For more information, call Bryan Purcell at 202-690-0138.*)

Argentina Corn in Silking and Tasseling Stage

The USDA estimates Argentine corn production for 2007/08 at 22.5 million tons, unchanged from last month and matching last year's record output. Harvested area is estimated at 3.0 million hectares, unchanged from last month and up 0.2 million from last year. Yield is estimated at 7.50 tons per hectare, unchanged from last month but 7 percent below last year's record. According to the Ministry of Agriculture, planting was finished in Buenos Aires and 93 percent complete in Cordoba as of January 3. These two provinces are roughly 60 percent of the total Argentine corn area. Recent dryness has halted further planting in Cordoba, Santa Fe, Entre Rios and the northern provinces of Chaco and Santiago del Estero. To date, a reported 3.6 million hectares have been planted against the official forecast of 4.0 million. Over 50 percent of the corn crop has reached silking/tasseling, when the crop is especially vulnerable to heat and moisture stress. Recent hot weather will likely not cause significant damage, but subsoil moisture reserves are becoming depleted following persistent dryness since early November. Final yields will hinge in large part on January rainfall. (*For additional information, contact Denise McWilliams at 202-359-8286.*)

India: Record Cotton Production Forecast

India's 2007/08 cotton production is forecast at a record 25.0 million bales, up 1.0 million or 4 percent from last month, and up 3.2 million from last year. Area is estimated at a record 9.5 million hectares, unchanged from last month but up 0.3 million or 4 percent from last year. With the 2007 monsoon providing beneficial rainfall, yield is forecast to increase 11 percent over last

season. According to the FAS Office of Agricultural Affairs in New Delhi, the increase in planted area is the result of strong cotton prices and positive returns received by farmers in 2006/07.

It is widely accepted that the strong upward trend in India's cotton yield in recent years is a direct result of the increasing adoption of Bt cotton. For 2007/08, Bt cotton planting will likely account for more than 60 percent of the total planted area. In 2006/07, the government of India approved 62 new insect-resistant Bt varieties for commercial cultivation. In addition to the approved varieties, local specialists estimate there are over 50 Bt cotton hybrids, illegally bred and marketed by farmers and seed companies, which are available at lower prices versus the officially approved varieties. Due to increase in Bt-cotton area, a record yield of 573 kilograms per hectare is forecast for the season. A January 5 report from the Cotton Corporation of India indicates that 12.7 million bales have been delivered to gins thus far. By the same date last year, 10.3 million bales had arrived representing 47 percent of the final 2006/07 output. *(For more information, please contact Jim Crutchfield at 202-690-0135.)*

Pakistan: Insect and Disease Infestation Reduces Estimated Cotton Production

Pakistan cotton production for 2007/08 is forecast at 8.2 million bales, down 0.3 million or 4 percent from last month and down 1.7 million or 17 percent from last year. Area is estimated at 3.25 million hectares which matches last year's record, and remains high as a result of favorable prices for cotton. Heavy rainfall during sowing, however, resulted in poor germination in some of the growing areas. Other areas were sown later than the optimal planting window due to irrigation water shortages. Estimated yield is down 17 percent from last year. High temperatures in August and September resulted in the shedding of bolls. More recently, damage from disease and pests has become apparent, including relatively widespread attack by cotton leaf curl virus and mealy bugs. As a result of the lower yields, gin arrivals are down 18 percent as of the beginning of January, with harvest approximately 90 percent complete. *(For more information, please contact Jim Crutchfield at 202-690-0135.)*

Russia: State Statistical Committee Reports Wheat and Barley Output

The USDA estimates Russian wheat production for 2007/08 at 49.4 million tons, up 1.4 million or 3 percent from last month and up 10 percent from last year. Area is estimated at 24.5 million hectares against 23.7 million last year. Barley production is estimated at 15.6 million tons, down 5 percent from last month and down 14 percent from last year. Area is estimated at 9.8 million hectares, down 0.2 million from last year. The revisions are based on preliminary data from the State Statistical Committee as reported by SovEcon, an independent Moscow-based commodity analysis group. Wheat yields have been remarkably stable in recent years, and have benefited from generally favorable weather and a modest but steady improvement in technology. Average wheat yield for the past seven years (2001/02 through 2007/08) is 1.88 tons per hectare compared to 1.38 tons per hectare for the previous seven years, when Russian agricultural enterprises were struggling to recover from the sudden loss of State subsidies following the collapse of the Soviet Union. *(For more information, contact Mark Lindeman at 202-690-0143.)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-454), January 11, 2008.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, February 8, 2008.

World and Selected Countries and Regions

1/11/2008 9:26:48 AM

TABLE 18

The table below presents a 26-year record of the differences between the January projection and the final estimate. Using world wheat production as an example, changes between the January projection and the final estimate have averaged 3.9 million tons (0.6 percent) and ranged from -8.3 to 6.4 million tons. The January projection has been below the final 18 times and above the final 8 times.

RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2006/07 1/					
	Difference		Lowest	Highest	Below	Above

1/ The final estimate for 1981/82-2005/06 is defined as the first December estimate following the marketing year.

2/ May not total 25 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
