

# OS ADOPTION AND MIGRATION RESEARCH

- Desktop Analysis -

February, 1998

**COMPAQ**

# OS MIGRATION RESEARCH

---

## *Background*

In September, 1996, Compaq's Commercial Desktop and Portable divisions conducted a quantitative research study to evaluate OS migration -- currently installed operating systems and plans for OS migration.

As a follow-up to this study, these divisions are interested in re-evaluating the adoption rate of operating systems as well as identifying the preferred pre-installed operating system for purchase in 1998 and later.

This information will be useful in the determination of solutions to develop for corporate customers and aid Compaq in the development of Industry partnerships and hardware optimization strategies.

# OS MIGRATION RESEARCH

---

## Objectives

1. Identify the current operating systems installed in customer environments
2. Identify the operating system that was installed on new desktop and portable purchases in 1997
  - Measure the driving need for the OS installed on desktops and portables purchased in 1997
3. Determine the preferred OS to be delivered on desktops/portables to be purchased in 1998
4. Determine the rate of complete reformatting of hard drives for new purchases (desktops and portables)
5. Identify the manufacturer (desktop and portable) that delivers the optimum alternatives for:
  - Software delivery
  - OS system support
  - Availability of drivers

# OS MIGRATION RESEARCH

---

## *Sample and Method*

Research was conducted among a total of 283 PC decision makers at companies across the U.S. using telephone interviews. Sample was derived from Dun & Bradstreet and the Competitive Intelligence database.

Respondents were screened to meet the following criteria:

- Employee size of 20+
- MIS/PC decision makers who select or recommend the brands and models of PCs their companies purchase
- Have responsibility and/or knowledge about the setup procedures for end users
- Have X86 compatible computers
- Have desktop PCs or desktop and/or portable PCs currently installed in their company
- Must have purchased at least one desktop and one laptop PC (non Apple) in the past 12 months.
- For company sizes of 20 to 99 employees, must have at least 5 desktops and 2 portables; for 100-999 employees, must have 10% desktops and 5 portables; for 1000+ employees, must have 10% desktops and 10 portables.

Interviews were conducted from January 15 to February 20, 1998.

# OS MIGRATION RESEARCH

---

## Key Findings

- As seen in 1996, usage of more than one type of operating system on desktops is common.
  - Windows 95 is the dominant operating system, with roughly 70% of businesses using this OS in 1996 and over 95% of businesses using it in 1997.
  - Win 3.X maintains solid base of installed users in all company sizes, with about 60% using this OS.
  - Windows NT adoption is up substantially, with about one-half of companies using this operating system. As seen in 1996, Windows NT adoption is much higher for large businesses, with 69% using this OS.
- Windows 95 and Windows NT 4.0 are the operating systems of choice for planned installation for desktops, with about one-half preferring each of these operating systems. Migration to Windows NT is highest for large businesses.
  - Only 5% are planning to migrate to Win 98 in 1998.

# OS MIGRATION RESEARCH

---

## *Key Findings - Continued*

- Most respondents continue to prefer having the operating system pre-installed on desktops.
  - Preference for pre-installed OS is highest for large firms (83%).
- Familiarity with Windows NT Workstation 5.0 is not yet universal, with about 70% aware of this OS. Of those familiar, planned usage is small (about 10% of all DTs). Medium and larger companies indicate a higher likelihood to migrate than small companies.
  - Planned migration is slow. Of those planning migration, 5 to 7 months is the expected timeframe, with the majority of large companies likely to wait more than 6 months after introduction.

# OS MIGRATION RESEARCH

---

## *Key Findings - Continued*

- Planned migration to Windows 98 on current desktops is low.
  - About one-third of all company sizes indicate plans to use Windows 98.
  - Planned migration time is about 6 to 7 months. Similar to Windows NT Workstation 5.0, large companies are the least likely to implement Win 98 in the near term.
- About 80% of companies wipe or reformat the hard drives of new desktops.
  - This is substantially higher than that seen for laptops, measured at about 50%.
  - On average, about 25% of desktops will be reformatted. Small businesses reformat at the highest rate, with 43% of their hard drives being reformatted.
  - The operating system re-installed most often are OSR2 and the retail version of Windows 95. Large businesses lean more toward the retail version of Windows 95.

# OS MIGRATION RESEARCH

---

## Key Findings - Continued

- In terms of file systems, no one will be used universally among businesses.
  - Small businesses favor FAT 32 and NFTS, medium businesses prefer FAT 32 and large businesses prefer FAT 16, FAT 32 and NFTS equally.
  - Few (less than one-third) plan to transition to a new file system in the next 12 months.
  - Large businesses are most likely to transition (32%), with FAT 32 and NFTS being the the likely systems selected.
- About 70% of all businesses are running a Web Browser on their desktops.
  - Among those with Web Browsers installed, Microsoft leads in the number of desktops installed, followed closely by Netscape.
  - Preferred Web Browser preferences for future desktop purchases are split about evenly between Netscape and Microsoft Internet Explorer for all company sizes.

# OS MIGRATION RESEARCH

---

## *Key Findings - Continued*

- When asked to rate Compaq, HP, IBM and Dell for *availability of drivers, OS support and software delivery*, responses are varied.
  - HP is regarded as having the best availability of drivers and OS support. They are slightly behind Compaq and Dell for software delivery.
  - Compaq's slight weakness is in the area of OS support.
  - IBM generates the weakest ratings in all areas.

# OS MIGRATION RESEARCH

*How many employees work for your organization?*

- Due to recruiting difficulties, sample primarily consists of medium 100-999 (N=146) and large 1000+(N=101) companies.
- Medium sized companies average 289 employees with an installed base of 179 desktops.
- Large companies have average 16,485 employees with an installed base of 5,975 desktops .

■ '20-99   ■ '100-499   ■ 500+

	Small 20-99	Medium 100-999	Large 1000+
Average Number of Employees	58	289	16,485

Note: Percentages of less than 1/2 of 1% are not shown.

# OS MIGRATION RESEARCH

*Of the X86 Desktop PCs you plan to purchase in the next 12 months, what percentage will have each of the following operating systems installed?*

- Planned installation of Windows 95 continues to be the OS of choice, followed closely by NT 4.0.
- Apparently most companies will be taking a "wait-and-see" attitude with Win 98 in '98.
- Driven by large companies, NT is gaining a stronghold in the enterprise.
- Windows 3.X, DOS only and OS/2 use continues to decline with less than 1% of planned purchases running the OS.

Base: % of desktops plan to install 235,360

*Thinking of your future X86 Desktop PCs, which of the following file systems do you anticipate using?*

*Base - Desktop PCs*

File System Anticipate Using On Planned DT Purchases (12 Months)

- Apparently no one file system will be universally used on desktop purchased in the next 12 months...
- Small businesses tend to favor FAT 32 and NFTS
- Medium businesses prefer FAT 32
- Large businesses are more likely than small/medium to prefer FAT 16.

Base: Desktop PCs Plan to Purchase Next 12 Months

# OS MIGRATION RESEARCH

## Planned usage of file system by OS...

Base - Respondents Weighted by Desktop PCs

File System Anticipate Using On New DT Purchases in The Next 12 Months by OS (Respondents Weighted by Desktops)

- By OS, no file system is preferred...
  - FAT 16 appears to have the strongest foothold.
  - Preferences for FAT 32 and NTFS are similar.
  - Although relatively few will adopt Windows 98, it appears FAT 32 will be the file allocation system of choice.

Base: Respondents (283) weighted by desktops

# OS MIGRATION RESEARCH

*What file system(s) are you planning to transition your existing Desktop PCs to?*  
 Base - PCs

- Few plan to transition to a new file system in the next 12 months.
- Large businesses are the most likely, but of the minority planning the transition, NFTS and FAT 32 are equally chosen.

Currently Installed Desktop PCs

Base: Current Desktop PCs
