FREEDOM SOARS

DEFENDING OUR NATION AND OUR ENVIRONMENT

The Department of Defense (DoD) is steward of approximately 25 million acres of public lands. These air, land, and water resources directly support DoD's military training and readiness capabilities. They also harbor pristine habitats for a wide variety of unique species, including over 200 threatened and endangered plants and animals, as well as a wealth of opportunities for recreational and other renewable uses.

The bald eagle is a premier example of what our military does to protect wildlife. By restoring and creating habitat for eagles, building platforms for nests, establishing protection zones around nests, and monitoring bald eagle movements, military installations around the country have provided a healthy and safe environment so these magnificent flyers can flourish. By helping the eagle soar again, our military has demonstrated their ability to protect native wildlife while defending our nation. In the military's eyes, there are many ways to let freedom soar, and conservation of our natural heritage is just one of them!

To learn more about our nation's symbol, you can visit the following websites: Defense Environmental Network and Information Exchange (DENIX) at http://www.denix.osd.mil, and the U.S. Fish & Wildlife Service's Endangered Species Program Welcome Page at http://endangered.fws.gov.

1940

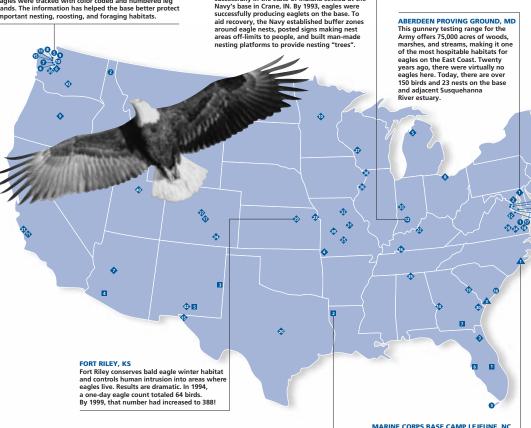

NAVAL AIR STATION WHIDBEY ISLAND, WA

Working with Washington State's Department of Fish & Wildlife and local Audubon Society volunteers, base biologists studied eagle movements and behavior for 18 months. Some eagles were fitted with backpacks carrying satellite transmitters that gave biologists very accurate information about where the eagles went, while other eagles were tracked with color coded and numbered leg bands. The information has helped the base better protect important nesting, roosting, and foraging habitats.

BARKSDALE AIR FORCE BASE, LA

A pair of bald eagles has returned to Barksdale for the past 15 years.

To encourage the return of bald

1978

eagles, the base removes aquatic weeds and stocks fish in Flag Lake.

NAVAL SURFACE WARFARE CENTER CRANE, IN In 1984, one of the first six eagle pairs to nest

successfully in the state of Indiana settled at the

Congress passes the **Bald Eagle Protection**

Act making it illegal to kill, harass, possess (without a permit) or sell bald eagles.

In 1782, Congress selects the bald eagle as the nation's symbol

North America is the only continent that has bald eagles

1963

Bald eagle populations are healthy in Alaska and do not exist in Hawaii

Eagle nests can be as big as 10 feet across and can weigh as much as 2000 lbs.

The bald eagle is declared an endangered species in the southern half of the United States.

1967

1972

almost 800 by 1974. Bald eagles mate for life and often return to their huge nests

year after year.

A strengthened

Act passes. The

number of bald

Endangered Species

eagle pairs rises to

1973

The insecticide DDT is banned.

Eagles feeding on fish contaminated by DDT produced weak-shelled eggs that cracked, broke. or failed to hatch.

Bald eagle pairs now number over 1100 in the lower 48 states, a huge

1981

The bald eagle is listed as a threatened species in Michigan, Minnesota, Oregon, Washington, and Wisconsin, and as endangered for the rest of the continental United States.

Bald eagles usually lay 2 to 3 eggs each year which hatch in about 35 days. Eaglets fly within 3 months.

Bald eagle pairs triple since 1981 to over 3300 pairs.

1991

Signs of bald eagle recovery continue. Camp Lejeune discovered its first bald eagle nest

the occasional eagle fly by.

on base in spring 2000 after years of watching

Adults can grow to 3 feet tall and have an 8 foot wingspan.

Bald eagle downlisted to threatened status throughout the continental United States.

1995

surpassed! Over 5700 bald eagle pairs are in the lower 48 states.

> Great fishers, eagles nest near water for a

constant food source

reaches fullyrecovered status, leading to a proposal to remove it from the Federal endangered species list.

The bald eagle

1999

Even when delisted, the bald eagle and its habitat will still be protected under the **Bald Eagle** Protection Act

2000

Delisting

underway.
