The records in this system are indexed by the name of the individual and/or a number assigned to each individual.

SAFEGUARDS:

All physical access to the Department's site, and the sites of Department contractors where this system of records is maintained, controlled and monitored by security personnel. The computer system employed by the Department offers a high degree of resistance to tampering and circumvention. This security system limits data access to Department and contract staff on a "need to know" basis, and controls individual users' ability to access and alter records within the system. The contractor, InfoUse, has established a set of procedures to ensure confidentiality of data. The system ensures that information identifying individuals is in files physically separated from other research data. InfoUse will maintain security of the complete set of all master data files and documentation. Access to individually identifiable data will be strictly controlled. All data will be kept in locked file cabinets during nonworking hours, and work on hardcopy data will take place in a single room, except for data entry. Physical security of electronic data will also be maintained. Security features that protect project data include password-protected accounts that authorize users to use the InfoUse system but to access only specific network directories and network software; user rights and directory and file attributes that limit those who can use particular directories and files and determine how they can use them; e-mail passwords that authorize the user to access mail services and additional security features that the network administrator establishes for projects as needed.

RETENTION AND DISPOSAL:

Records are maintained and disposed of in accordance with the Department's Records Disposition Schedules (ED/RDS).
