# DIATOMITE STATISTICS<sup>1</sup> U.S. GEOLOGICAL SURVEY

[All values are in metric tons (t) diatomite unless otherwise noted]

Last modification: November 15, 2007

					Apparent	Unit value	Unit value	World
Year	Production	Imports	<b>Exports</b>	Stocks	consumption	( <b>\$/t</b> )	(98\$/t)	production
2004	620,000	1,340	143,000	36	478,000	285	246	1,930,000
2005	653,000	4,320	142,000	36	512,000	274	228	2,010,000
2006	799,000	4,480	150,000	36	653,000	220	177	2,160,000

<sup>&</sup>lt;sup>1</sup>Compiled by T.D. Kelly (retired) and T.P. Dolley.

Data are calculated, estimated, or reported. See notes for more information.

## **Diatomite Worksheet Notes**

#### **Data Sources**

The sources of data for the diatomite worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR), and Mineral Commodity Summaries (MCS). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data either were not available or were withheld from publication because they are proprietary.

#### **Production**

Production data for the years 1900–2006 were recorded from the MR and the MYB. Production data for the years 1900–12 represent the summed weights of infusorial earth (diatomite) and tripoli that were produced within the United States. Production data for the years 1908 and 1910 were withheld because they are proprietary. Production data for the years 1915–18 did not completely represent the total quantity of diatomite produced in the United States because it was reported that a considerable proportion of the production data was withheld because they were proprietary. Annual production data for the years 1927–68 were withheld to avoid disclosing proprietary data, but 3-year production totals were reported in the MR and the MYB. Therefore, annual production data for the years 1927–68 were estimated by averaging the reported 3-year production totals.

#### Imports

Import data for the years 1946–63 were withheld because they were proprietary. Import data for the years 1964–91 and 1995–2006 were recorded from the MYB. Import data for the years 1992–93 were recorded from the MCS for 1998. Zeroes reported for these years denote less than 500 metric tons (t).

#### **Exports**

Export data for the years 1946–57 were withheld for because they were proprietary. Export data for the years 1958–2006 were recorded from the MYB.

#### Stocks

Stock data for the years 1951–65 were withheld because they were proprietary. Stock statistics for the years 1966–2006 were recorded from the MCS.

### **Apparent Consumption**

Apparent consumption statistics for the years 1900–78 were estimated as being equal to production plus imports minus exports plus or minus changes in stocks. Apparent consumption statistics for the years 1908 and 1910 were interpolated from the apparent consumption data series because production data were withheld for those years. Apparent consumption statistics from 1979–91 and from 1994–2006 were recorded from the MYB. Apparent consumption statistics for the years 1992–93 were not available from the MYB. Subsequently, apparent consumption statistics for the years 1992–93 were recorded from the MCS.

#### Unit Value (\$/t)

Unit value is defined as the value of 1 t of diatomite apparent consumption. Unit value was estimated as being equal to the average value per metric ton of diatomite that was produced within the United States. Unit value data for the years 1908 and 1910 were interpolated from the unit value data series because production data were withheld for those years.

#### Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

#### **World Production**

World production data for the years 1913–26 and 1948–2006 were recorded from the MR and the MYB.
