CRUSHED STONE AND SAND AND GRAVEL IN THE THIRD QUARTER 2007

An estimated 436 million metric tons (Mt) of *crushed stone* was produced and shipped for consumption in the United States in the third quarter of 2007, a decrease of 11% compared with that of the same period of 2006. The estimated output of *crushed stone* produced for consumption in the first 9 months of 2007 was 1.1 billion metric tons (Gt), a 15% decrease compared with that of the same period of 2006.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the third quarter of 2007 was 340 Mt, a decrease of 13% compared with that of the same period of 2006. The estimated output of *construction sand and gravel* produced for consumption in the first 9 months of 2007 was 852 Mt, a 15% decrease compared with that of the same period of 2006.

An estimated 778 Mt of total *aggregates* was produced and shipped for consumption in the United States in the third quarter of 2007, a decrease of 11% compared with that of the same period of 2006. The estimated output of *aggregates* produced for consumption in the first 9 months of 2007 was 1.96 billion metric tons, a 15% decrease compared with that of the same period of 2006.

The estimated portland cement consumption decreased by 9% in the third quarter of 2007 and decreased by 10% in the first 9 months of 2007, compared with that of the same periods of 2006.

The production-for-consumption estimates are generated independently for each State, each geographic division, and the 48 conterminous States, which are treated as separate statistical sample areas. Therefore, some differences may exist between the total for a division and the sum of the State totals that are part of the same geographic division. Similarly, differences may exist between the estimations of total *aggregates* and estimations done separately for *crushed stone* and *construction sand and gravel* for a specific statistical area.

This survey is a sample survey that generates production-for-consumption estimates by quarters, based on information reported voluntarily by a limited number of producing companies. Previously reported data are occasionally revised by

some companies and the estimated quantities for the prior quarters are then recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and percentage changes and supersedes previously published reports.

The estimated production-for-consumption of crushed stone in the third quarter of 2007 increased in only one of the nine geographic divisions. The only increase was recorded in the New England (10%) division. Production-for-consumption of crushed stone increased in 8 of the 47 States that were estimated. The five leading States, in descending order of production-for-consumption, were Pennsylvania, Texas, Florida, Missouri, and Illinois. Their combined total production-for-consumption was 135 Mt and represented 31% of the U.S. total.

The estimated production-for-consumption of construction sand and gravel in the third quarter of 2007 increased in only one of the nine geographic divisions. The only increase was recorded in the West South Central (7%) division. Production-for-consumption of construction sand and gravel increased in 9 of the 47 States that were estimated. The five leading States, in descending order of production-for-consumption, were California, Texas, Arizona, Michigan, and Colorado. Their combined total production-for-consumption was 113 Mt and represented 32% of the U.S. total.

The estimated production-for-consumption of aggregates in the third quarter of 2007 increased in only one of the nine geographic divisions. The only increase was recorded in the New England (7%) division. The largest decreases were recorded in the South Atlantic (23%), the Pacific (18%), and the West North Central (13%) divisions. Production-for-consumption of aggregates increased in 5 of the 48 States that were estimated with the increases occurring in Massachusetts (41%), Utah (20%), Kentucky (6%), Kansas (5%), and a slight increase in New Jersey. The five leading States, in descending order of production-for-consumption, were Texas, California, Pennsylvania, Florida, and Ohio. Their combined total production-for-consumption was 203 Mt and represented 26% of the U.S. total.
