BROMINE

(Data in thousand metric tons of bromine content, unless otherwise noted)

<u>Domestic Production and Use</u>: The quantity of bromine sold or used in the United States from four companies operating in Arkansas and Michigan accounted for 100% of elemental bromine production valued at an estimated \$230 million. Arkansas continued to be the Nation's leading bromine producer, and bromine was the leading mineral commodity in terms of value produced in the State.

In January 1999, a new elemental bromine plant started production of calcium bromide and sodium bromide in Manistee, MI. Nameplate capacity is 14,000 tons per year of elemental bromine.

A new bromine compounds plant producing fire retardant used a new continuous process that does not produce methyl bromide as a coproduct began to operate in Arkansas in the third quarter of 1999.

Estimated bromine uses were as fire retardants, 27%; agriculture, 15%; petroleum additives, 15%; well drilling fluids, 10%; sanitary preparations, 5%; and other uses, 28%. Other uses included intermediate chemicals used in the manufacture of other products and bromide solutions used alone or in combination with other chemicals.

Salient Statistics—United States:	<u> 1995</u>	<u> 1996</u>	<u> 1997</u>	<u> 1998</u>	<u>1999</u> °

Recycling: Approximately 35% of U.S. bromine production was converted to byproduct sodium bromide solutions, which were recycled to obtain elemental bromine. This recycled bromine is not included in the virgin bromine production reported by the companies.

Import Sources (1995-98): Israel, 86%; United Kingdom, 4%; Belgium, 3%; France, 3%; and other, 4%.

Tariff: Item	Number	Normal Trade Relations 12/31/999
Bromine	2801.30.2000	5.5% ad val.
Bromides and bromide oxides	2827.59.5000	3.6% ad val.
Bromochloromethane	2903.49.1000	Free.
Ammonium, calcium, or zinc bromide	2827.59.2500	Free.

octabromodiphenyl oxide	2909.30.0700	12.8% ad val.
Ethylene dibromide	2903.30.0500	5.4% ad val.
Hydrobromic acid	2811.19.3000	Free.
Potassium bromate	2829.90.0500	Free.
Potassium or sodium bromide	2827.51.0000	Free.
Sodium bromate	2829.90.2500	Free.
Tetrabromobisphenol A	2908.10.2500	0.8¢/kg + 12.4% ad val.
Vinyl bromide, methyl	2903.30.1520	Free.

Depletion Allowance: 5% on brine wells (Domestic and foreign).

Government Stockpile: None.

BROMINE

Events, Trends, and Issues: Three bromine companies accounted for 64% of world production. Two of these companies are located in the United States and accounted for about 94% of U.S. production. Legislation during the 1970's and 1980's reduced the traditional demand for bromine as a gasoline additive and in agriculture, but new end uses in specialized flame retardant chemicals have demanded increasing amounts of bromine.

Israel is the second largest producer of bromine in the world and the largest producer of elemental bromine. Approximately 90% of production was for export, accounting for about 80% of international trade in bromine and bromine compounds to more than 100 countries. A company produced bromine from Dead Sea bromine-rich brines after production of potash. Exports of elemental bromine are produced into compounds at a wholly owned plant in the Netherlands.

A U.S. company signed an joint-venture agreement with a company in Jordan to build a bromine complex at Safi, Jordan. Construction was planned to begin in third quarter 2000 and be completed by 2002. Included in the construction plans is a 50,000-ton-per-year bromine plant.

World Mine Production, Reserves, and Reserve Base:

	Mine production		Reserves ⁵	Reserve base ⁵

<u>World Resources</u>: Resources of bromine are virtually unlimited. The Dead Sea in the Middle East is estimated to contain 1 billion tons of bromine. Seawater contains about 65 parts per million of bromine or an estimated 100 trillion tons. The bromine content of underground water in Poland has been estimated at 36 million tons.

<u>Substitutes</u>: Chlorine and iodine may be substituted for bromine in a few chemical reactions and for sanitation purposes. Aniline and some of its derivatives, methanol, ethanol, and gasoline-grade tertiary butyl alcohol, are effective nonlead substitutes for ethylene dibromide and lead in gasoline in some cars. There are no comparable substitutes for bromine in various oil and gas well completion and packer applications. Alumina, magnesium hydroxide, organic chlorine compounds, and phosphorus compounds can be substituted for bromine as fire retardants in some uses.

^eEstimated. E Net exporter. NA Not available.

¹Sold or used by U.S. producers.

²Imports calculated from items shown in tariff section.

³Includes recycled product.

⁴Defined as imports - exports + adjustments for Government and industry stock changes.

⁵See Appendix C for definitions.

⁶From waste bitterns associated with solar salt.

⁷From the Dead Sea. See World Resources section.

⁸From seawater. See World Resources section.
