

## SABIT GROUP PROGRAM ENERGY: OIL AND GAS EXPLORATION AND PRODUCTION

APRIL 26 – MAY 24, 2008

### PROGRAM TOPICS

#### Oil and Gas Exploration Techniques

Onshore  
Offshore  
Shelf  
Deep water  
Cold weather  
Seismic/geological surveys  
Seismic imaging  
Geological monitoring  
Formation evaluation  
Well logging  
Well drilling technology  
Well drilling equipment  
Well completion  
Well abandonment  
Risk management in well production  
Blowout prevention and control

#### Oil and Gas Production

Field design  
Field management  
Field redevelopment  
Production systems  
Product collection (gathering)  
Recovery (primary, secondary, enhanced)  
Separation systems  
Artificial lift systems  
Stimulation/workovers

#### Reservoir Management

Reservoir engineering  
Flow assurance  
Reservoir life extension

#### Risk Management

Insurance

Security issues  
Well security

#### Government Issues

Tariffs and duties  
Licensing  
Royalties  
Industry regulation  
Tax relief  
Environmental relief

#### Environmental solutions/methods

Environmental regulations  
Assessment of environmental hazards and risks  
Emissions  
Discharge  
Waste disposal  
Abandonment/decommissioning of offshore installations  
Gas flaring  
Oil spills

#### Information technology

Software and hardware  
Geographic Information Systems

Host companies are invited to discuss these and other topics related to hydrocarbon exploration and production.
