PPA Mission Statement

The Flood Insurance Reform Act of 2004 introduced several new requirements and program initiatives. These include the establishment of a grant program which provides a mechanism to mitigate properties that have experienced repetitive losses where the State or community does not meet eligibility requirements under the Flood Mitigation Assistance program. Although not necessarily focused on Severe Repetitive Loss Properties, the Act does direct FEMA to give priority to "Worst-Case Properties" that would result in the greatest savings to the NFIF. This program will be funded from mandatory, premium collections.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change

PPA Mission Statement

In FY 2007, the budget assumes collection of all of the administrative and program costs associated with discretionary flood insurance activities from policyholders. See also the National Flood Mitigation Fund for offsetting collections.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Salaries and benefits	(\$27,925)	(\$30,700)	(\$32,434)	(\$1,734)

Salaries and Benefits include offsetting collections for 270 FTEs. The FY 2007 request represents a change in discretionary offsetting collections applied against Salaries and Expenses.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Travel	(\$1,202)	(\$1,700)	(\$1,700)	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Transportation of things	\$0	(\$50)	(\$50)	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
GSA rent	(\$2,873)	(\$2,943)	(\$2,943)	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Communications, utilities, and misc. charges	\$0	(\$355)	(\$355)	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Printing	(\$1,146)	(\$1,800)	(\$1,800)	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2007 request is the same as the FY 2006 level.

1216

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Advisory and assistance services	(\$950)	(\$2,000)	(\$2,000)	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Other services	(\$38,989)	(\$36,806)	(\$36,806)	\$0

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Purchases from Government accounts	(\$613)	(\$4,000)	(\$4,000)	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Supplies & materials	(\$32)	(\$100)	(\$100)	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Equipment	(\$282)	(\$400)	(\$400)	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Grants/Subsidies/Contributions	(\$16,138)	(\$15,000)	(\$15,000)	\$0

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, and individuals. The FY 2007 request is the same as the FY 2006 level.

1217

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Other	(\$5,989)	\$0	\$0	\$0

Other includes collections realized but unobligated. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

PPA Mission Statement

The National Flood Insurance Act of 1968, as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within 1 year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, Federally regulated funding institutions cannot provide loans to nonparticipating communities with an identified flood hazard.

More than 20,000 communities in all States and Territories participate in the NFIP. Structures built to NFIP criteria experience 80 percent less damage through reduced frequency and severity of losses. The flood mitigation program requirements are estimated to save in excess of \$1 billion per year in flood losses avoided. The NFIP limits the impact of disaster by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms.

In FY 2007, FEMA will continue to pay claims, issue policies, pay interest on borrowing from the Treasury, and pay operating expenses of the NFIF.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Transportation of things	\$30	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
GSA rent	\$182	\$187	\$187	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request is the same as the FY 2006 level.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Printing	\$1,777	\$0	\$0	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Other services	\$699,223	\$717,117	\$762,812	\$45,695

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The increase of \$45,695,000 represents increased costs for operating the program

1220

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Purchases from Government accounts	\$412	\$0	\$0	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Indemnities	\$2,280,794	\$17,619,689	\$663,686	(\$16,956,003)

Insurance claims and indemnities include payments from the NFIF for insurance claims arising from flooding events. The FY 2007 request includes a decrease of \$16,956,003,000 as the NFIF returns to an average loss year following the spike in claims in FY 2006 from the 2005 hurricane season.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Interest	\$2,799	\$763,125	\$756,339	(\$6,786)

Interest includes payments to the Treasury on funds borrowed to pay flood insurance claims. The FY 2007 budget includes a decrease of \$6,786,000 as the NFIF returns to an average loss year following the spike in funds borrowed to pay claims in FY 2006 from the 2005 hurricane season.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
NATIONAL FLOOD MITIGATION FUND

I. Appropriation Overview

A. Mission Statement for National Flood Mitigation Fund (NFMF): The NFMF supports activities to eliminate at-risk structures that are repetitively flooded.

B. Budget Activities:

Through fee-generated discretionary funds transferred from the National Flood Insurance Fund (NFIF), the NFMF supports activities to eliminate at-risk structures that are repetitively flooded, and provides flood mitigation assistance planning support to States and communities.

C. Budget Request Summary:

The FEMA FY 2007 request for the NFMF is 0 positions, 0 FTE, and \$31,000,000. Adjustments to base total 0 FTE and \$3,000,000. No increase in program funding is requested.

PPA Mission Statement

The National Flood Mitigation Fund (NFMF) supports activities to eliminate at-risk structures that are repetitively flooded. Through fee-generated discretionary funds transferred from the National Flood Insurance Fund (NFIF), the NFMF supports activities to eliminate at-risk structures that are repetitively flooded, and provides flood mitigation assistance planning support to States and communities.

In FY 2007, the NFMF will continue to support activities to eliminate at-risk structures that are repetitively flooded, and provide flood mitigation assistance planning support to States and communities.

Summary Justification and Explanation of Changes

	<u>2005</u> <u>Actual</u>	<u>2006 Revised</u> <u>Enacted</u>	<u>2007</u> <u>Request</u>	<u>2006 to 2007</u> <u>Change</u>
Other services	\$115	\$0	\$0	\$0

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005</u> <u>Actual</u>	<u>2006 Revised</u> <u>Enacted</u>	<u>2007</u> <u>Request</u>	<u>2006 to 2007</u> <u>Change</u>
Grants/Subsidies/Contributions	\$24,444	\$41,689	\$31,000	(\$10,689)

Grants/Subsidies/Contributions include cash payments to States, other political subdivisions, corporations, associations, and individuals. The FY 2007 request includes a net decrease of \$10,689,000: a decrease of \$13,689,000 associated with the obligation of carryover funds in FY 2006 and an increase of \$3,000,000 available from discretionary collections in the National Flood Insurance Fund.

BUDGET REQUEST AND SUPPORTING INFORMATION**FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)**
NATIONAL PRE-DISASTER MITIGATION FUND**I. Appropriation Overview**

A. Mission Statement for National Pre-Disaster Mitigation Fund: Funding requested through this account is dedicated to competitive grants for pre-disaster mitigation (PDM) operating independently of the Disaster Relief Fund (DRF), assuring that funding remains stable from year to year and is not subject to spikes in disaster activity.

B. Budget Activities:

FEMA's PDM program works to provide technical and financial assistance to State, local, and Tribal governments to reduce the risks associated with disasters.

C. Budget Request Summary:

The FEMA FY 2007 request for the National Pre-Disaster Mitigation Fund is 55 positions, 55 FTE, and \$149,978,000. Adjustments to base total \$478,000. The program increase includes 40 FTE and \$100,000,000 to help reduce disaster costs through mitigation projects.

In FY 2007, FEMA will undertake the following risk reduction activities:

- Provide technical and financial assistance to States and to local and Tribal governments to assist in the implementation of pre-disaster hazard mitigation measures that are cost-effective and are designed to reduce loss of life and damage and destruction of property, including damage to critical facilities under the jurisdiction of the States or local governments
- Provide technical and financial assistance to State and local governments for developing and enhancing hazard mitigation plans that identify risks, and develop strategies to reduce those risks
- Continue to streamline the evaluation process so that funds are obligated more effectively and efficiently and on a more timely basis.
- Maintain and enhance processing and information systems for managing the data on mitigation projects implemented. This data will be used to track program performance and benefits.

2007 Request	55	55	149,978
Total Change 2006-2007	0	40	100,478

FEMA requests \$149.978 million for this activity. This is an increase of \$100.478 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Pre-Disaster Mitigation (PDM) program assists States and local governments in implementing cost-effective hazard mitigation activities that complement a comprehensive mitigation program.

The PDM program provides funds to states, territories, Indian tribal governments, and communities for hazard mitigation planning and the implementation of mitigation projects prior to a disaster event. Funding these plans and projects reduces overall risks to the population and structures, while also reducing reliance on funding from actual disaster declarations. PDM grants are to be awarded on a competitive basis and without reference to State allocations, quotas, or other formula-based allocation of funds.

IV. Program Justification of Changes

**Department of Homeland Security
Federal Emergency Management Agency (FEMA)

Description of Item

Funding for this item will allow the PDM competitive grant program to assist States and communities to reach a higher level of risk management and risk reduction, through planning and mitigation actions taken before disasters occur. In addition, funding will support the FTE level necessary to manage the program and ensure that the communities that are most in need of funding receive it.

Justification

Local and State mitigation planning activities, which have intensified since the publication of mitigation planning regulations in early 2002, have resulted in an increased awareness of hazards and risks at both the State and local levels. States and localities are required to have FEMA-approved State and local mitigation plans in order to receive PDM and post-disaster Hazard Mitigation Grant Program (HMGP) project grants. While the PDM program is FEMA's only pre-disaster grant source of funding for multi-hazard mitigation planning, the competitive nature of the PDM program and the requirement for State/local hazard mitigation plans has increased the quality of applications in all FEMA mitigation grant programs. The PDM provides States and localities with an incentive to conduct mitigation

planning in a pre-disaster environment, improving the quality of mitigation proposals in both a pre- and post-disaster context and ensuring better use of PDM and HMGP funds.

Demand for pre-disaster mitigation funding has been growing steadily since the program began in FY 2003. States and communities have increased their capability to develop and successfully apply for competitive mitigation projects, and for the second year of the program (FY 2004/2005), FEMA received 821 sub-applications with a proposed Federal share of \$516.7 million. For FY 2006, FEMA received notification that planned applications in just two States totaled \$430 million for the FY 2006 competitive program. With eligible applications exceeding available resources, FEMA is better able to target PDM funds toward those projects with the highest benefit and risk-reduction potential.

One of the primary purposes of the PDM program is to provide a more consistent source of mitigation funding, to reduce loss of life and property from natural hazards, and to reduce reliance on post-disaster funding. Since February 2003, the HMGP has complemented the nationally competitive PDM, providing both pre- and post-disaster mitigation funding to reduce risk. Without this increase to strengthen the program to approximately \$150 million, the PDM program will no longer complement the Hazard Mitigation Grant Program (HMGP). Combined, these two programs will provide a combined total of approximately \$300 million annually for hazard mitigation.

Based on historical averages of mitigation grant programs, the additional \$100 million requested will provide for the protection of: over 600 additional properties from flood damage through acquisition, elevation, relocation, and/or flood proofing; 250 additional critical facilities from flood damage through drainage, infrastructure, and utilities projects; 240 additional properties from hurricane wind damage; 92 additional storm shelters to save lives from tornadoes; and 154 additional critical public facilities against seismic damage.

A recent study by the Multi-hazard Mitigation Council of the National Institute of Building Sciences determined that benefits from mitigation activities, defined as losses to society avoided, included:

- Reduced human losses
- Reduced property damage
- Reduced direct and indirect business interruption
- Reduced environmental damage
- Reduced cost of emergency response

The study found that \$1 spent on mitigation saves society an average of \$4. Based on this finding, spending an additional \$100 million in pre-disaster mitigation will result in savings of \$400 million. An analysis of mitigation activities in eight communities found that FEMA mitigation grants are not only cost-effective but often lead to additional non-federally funded mitigation activities. The study concluded that mitigation is sufficiently cost-effective to warrant federal spending both on a pre-disaster and post-disaster basis and is most effective when it is carried out on a comprehensive, community-wide, long-term basis.

Impact on Performance (Relationship of Increase to Strategic Goals)

Without the additional funding, the impact of pre-disaster mitigation activities will be minimal. Instead of being pro-active and working to prevent damage before disasters strike, communities will continue to rely on post-disaster mitigation assistance through the Disaster Relief Fund.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Federal Emergency Management Agency
Justification of Proposed Changes in National Pre-Disaster Mitigation Fund
Appropriation Language**

For a [pre-disaster]~~pre-disaster~~ mitigation grant program under title II of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. [5131 et seq., \$50,000,000] 5133), \$149,978,000, to remain available until expended: *Provided*, That grants made for [pre-disaster]~~pre-disaster~~ mitigation shall be awarded on a competitive basis subject to the criteria in section 203(g) of such Act [(42 U.S.C. 5133(g))], and notwithstanding section 203(f) of such Act, shall be made without reference to State allocations, quotas, or other formula-based allocation of funds: *Provided further*, That total administrative costs shall not exceed 3 percent of the total appropriation. (*Department of Homeland Security Appropriations Act, 2006.*)

Explanation of Changes:

No substantive changes are proposed.

PPA Mission Statement

Funding requested through this account is dedicated to competitive grants for pre-disaster mitigation (PDM). Operating independently of the Disaster Relief Fund (DRF) assures that funding remains stable from year to year and is not subject to spikes in disaster activity.

In FY 2007, FEMA will provide technical and financial assistance to States and to local and Tribal governments to assist in the implementation of pre-disaster hazard mitigation measures that are cost-effective and are designed to reduce loss of life and damage and destruction of property, including damage to critical facilities under the jurisdiction of the States or local governments. An increase in funding will allow the PDM competitive grant program to assist States and communities to reach a higher level of risk management and risk reduction, through planning and mitigation actions taken before disasters occur. The increase in total funding for this program allows for a concomitant increase in administrative expenses since up to 3 percent is allowed for such purposes. Additional administrative expenses will support the FTE level necessary to manage the program and ensure that the communities that are most in need of funding receive it.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Salaries and benefits	\$0	\$1,155	\$3,647	\$2,492

Salaries and Benefits include costs for 55 FTEs. The FY 2006 request includes an increase of \$25,000 for the proposed January 2007 2.2 percent pay raise and \$2,467,000 for the costs associated with 40 FTE to administer the program.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Travel	\$179	\$150	\$225	\$75

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2006 request includes an increase of \$75,000 associated with the additional FTE.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
GSA rent	\$74	\$180	\$628	\$448

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2006 request includes an increase of \$448,000 associated with the additional FTE.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Other services	\$7,112	\$0	\$0	\$0

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

1259

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Purchases from Government accounts	\$14	\$0	\$0	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 to 2007 Change
Grants/Subsidies/Contributions	\$159,832	\$162,891	\$145,478	(\$17,413)

Grants/Subsidies/Contributions include cash payments to States, other political subdivisions, corporations, associations, and individuals. The FY 2007 request includes a net decrease of \$17,413,000: a decrease of \$114,876,000 associated with the obligation of carryover funds in FY 2006, an increase of \$453,000 in non-pay inflation, and an increase of \$97,010,000 to allow communities to take mitigation measures before a disaster strikes.

PPA Mission Statement

The Emergency Food and Shelter (EFS) Program provides grants to nonprofit and faith-based organizations at the local level to supplement their programs for emergency food and shelter.

In FY 2005, EFS provided approximately 70.4 million meals, 9.5 million nights of shelter, and payment of more than 300,000 mortgage, rent, and utility bills. Over 12,000 nonprofit and local government agencies in 2,534 cities and counties across the United States received awards.

The FEMA FY 2007 request will continue to provide funding to supplement local efforts to provide meals, shelter, and emergency assistance for mortgage, rent, and utility payments.

Summary Justification and Explanation of Changes

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Grants/Subsidies/Contributions	\$153,000	\$151,470	\$151,470	\$0

Grants/Subsidies/Contributions include cash payments to States, other political subdivisions, corporations, associations, and individuals. The FY 2007 request is the same as the FY 2006 level.

BUDGET REQUEST AND SUPPORTING INFORMATION

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
CERRO GRANDE FIRE CLAIMS

I. Appropriation Overview

The Cerro Grande Fire Claims was established by Public Law 106-246 to provide consideration and settlement of claims arising from the Cerro Grande Prescribed Fire. Funds for administration of the compensation process and for the payment of claims are available until expended.

No additional funding is requested.

The Cerro Grande Fire Claims was established by Public Law 106-246 to provide consideration and settlement of claims arising from the Cerro Grande Prescribed Fire. Funds for administration of the compensation process and for the payment of claims are available until expended. It is anticipated that all claims will be settled by the end of FY 2006. No additional funding is requested for FY 2007.

Summary Justification and Explanation of Changes

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Salaries and benefits	\$209	\$0	\$0	\$0

Salaries and Benefits are no longer requested for this account.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Travel	\$52	\$0	\$0	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Transportation of things	\$5	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Other rent	\$2	\$0	\$0	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Communications, utilities, and misc. charges	\$1	\$0	\$0	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Advisory and assistance services	\$74	\$2	\$0	(\$2)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2007 request includes a decrease of \$2,000 since all obligations for the program are expected to be completed by the end of FY 2006.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Other services	\$3	\$0	\$0	\$0

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Operation & maintenance of facilities	\$1	\$0	\$0	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Supplies & materials	\$13	\$0	\$0	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Equipment	\$12	\$0	\$0	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Neither the FY 2006 revised enacted level nor the FY 2007 request includes funding under this object class.

	<u>2005 Actual</u>	<u>2006 Revised Enacted</u>	<u>2007 Request</u>	<u>2006 to 2007 Change</u>
Indemnities	\$1,456	\$417	\$0	(\$417)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2007 request includes a decrease of \$417,000 since all claims for the program are expected to be obligated by the end of FY 2006.

A. Mission and Description of the Federal Emergency Management Agency

The mission of the Federal Emergency Management Agency (FEMA) is to lead the Nation in mitigating, responding to, and recovering from major domestic disasters, both natural and man-made, including terrorist incidents. FEMA's major operational components include the Readiness, Mitigation, Response, and Recovery Divisions, the National Incident Management System (NIMS) Integration Center (NIC), and the Office of National Security Coordination. FEMA consists of approximately 3,000 onboard staff, 5,500 disaster reservists, and 8,900 medical reservists. In addition to its headquarters in Washington, D.C., FEMA has 10 regional offices, 2 area offices, 2 field locations, and various disaster related sites that carry out the Agency's operations throughout the U. S. and its dependent areas.

FEMA manages and coordinates the Federal response to domestic disasters of all types in accordance with the Robert T. Stafford Disaster Relief and Assistance Act. Through its programs, FEMA helps to prevent or reduce the risk to life and property from floods and other natural hazards, leads all Federal incident management planning, and provides response and recovery assistance to help minimize disruption in the lives of individuals and communities following a disaster.

Since it was created in 1979, FEMA has managed over 1,050 major disasters and 189 emergency declarations in all 50 States, as well as in the District of Columbia, Puerto Rico, Guam, the Pacific Island Trust Territories, and the U.S. Virgin Islands. During its history FEMA has helped to lead America through some of its most difficult times, including Hurricane Andrew, the Midwest Floods of 1993 and 1997, the Northridge Earthquake, the September 11th terrorist attacks, the Columbia Space Shuttle disaster, and the 2004 hurricanes. As a part of DHS, FEMA continues to be there when disaster strikes.

A Special Note Regarding Hurricane Katrina

At the time of this writing, more than 5 months have passed since the landfall of Hurricane Katrina, the most devastating natural catastrophe in the Nation's history. FEMA is evaluating its response to Katrina and is working to develop solutions for the future, while still being in the midst of the largest Federal disaster recovery operation ever undertaken. Therefore, it should be noted that the activities and performance impacts discussed in this document do not reflect lessons learned from reviews of the Katrina response, which are still in progress at the time of submission.

B. Major Activities and Key Strategic Issues

Major Activities

Readiness Program

In FY 2006, FEMA's Readiness Division will work with FEMA's Response and Recovery Divisions to ensure operational readiness for disasters of all kinds, regardless of cause. Through the NIC, the Executive Agent for the National Response Plan (NRP), Readiness also will coordinate and broker agency and interagency planning initiatives in support of operational response and recovery objectives for the NRP and the NIMS. Readiness plays a critical role in

FEMA-1

coordinating the various components of the NRP and ensures that NRP remains linked to, and grounded in the NIMS.

In FY 2006, the NIC will support both the routine maintenance and the continuous refinement of the NIMS and its components over the long term. The NIC will provide the central activity to ensure that the NIMS is a continuously improving system of response that unites all responders in the United States through common organizations, common terminology for resources, and interoperable equipment and communications. These activities will be constantly evaluated and improved based on lessons learned and on the evolution of technology and protocols as directed in Homeland Security Presidential Directive (HSPD)-5. The NIC will begin to develop and to deliver a national mutual aid and resource management system that includes first responder and emergency worker credentialing based on national standards, that supports the NIMS, and that allows Federal, State, and local governments to order and to track response resources quickly and effectively.

In FY 2006, FEMA's Emergency Management Institute (EMI) will develop, deliver, and evaluate the effectiveness and the impact of its training programs in the areas of risk management and emergency response, using a diverse training delivery system that includes residential onsite training, offsite delivery in partnership with emergency management training systems, colleges, and universities, and technology-based mediums to conduct individual training courses for emergency response personnel across the Nation. EMI directly supports the implementation of the NIMS and NRP, and its training targets a diverse audience, including FEMA's disaster workforce and the Agency's partners in disaster operations.

Mitigation Program

In FY 2006, FEMA, through its Mitigation Division, will provide technical and financial assistance to States, Tribes, and local governments for activities that mitigate the risk from future disasters, and will continue to administer more than 4.7 million flood insurance policies under the National Flood Insurance Program (NFIP). Mitigation means taking action to change conditions and behavior to protect lives, to prevent the loss of property, and to reduce Federal expenditures for disaster assistance. Mitigation is engaged in a major effort to modernize and update the Nation's flood maps, resulting in improved, digital flood maps for the entire Nation, and is continuing the Pre-Disaster Mitigation (PDM) Grant Program which enables States, Tribes, and local communities to manage risk before disasters occur through competitively awarded grants.

Response Program

In FY 2006, FEMA's Response Division will continue to integrate the Department's national emergency response teams and systems into a comprehensive and coordinated national operational capability to respond to natural and man-made major disasters and emergencies, including acts of terrorism. Two new Federal Incident Response Support Teams (FIRSTs) will be established in FY 2006. FIRSTs will be the initial Federal response asset to be deployed to a major disaster, emergency, or act of terrorism, including a weapon of mass effect (WME) event.

Response will also pursue catastrophic disaster response and recovery improvement initiatives in FY 2006 as part of a cross-functional and interagency effort to develop and to implement plans that will improve the ability of Federal, State, or local governments to respond to and to recover from catastrophic disasters quickly and effectively. To this end, Response also will continue to work with the States and localities, as well as with other Federal partners, to develop an all-hazards

FEMA-2

catastrophic disaster plan for a number of the most high-risk communities in the country. These plans will take into account the significantly improved response assets and shorter response times needed in such incidents.

Response will also demonstrate the proof of concept of hospital surge capacity for one fixed and for one mobile facility, and plans to evaluate the concept for further implementation in outyears. In FY 2006, Response will continue its work to ensure an eventual 100 percent mission- and WME-capability for all tasked FEMA emergency response teams, and will continue building logistical capability to provide essential services to an impacted community of up to 50,000, including enhancement of FEMA's capability to handle large-scale patient care and mass casualties. Overall, FEMA will continue to develop initiatives to improve support to victim populations, to improve decontamination support to an affected jurisdiction, and to increase the speed with which critical Federal and mutual aid resources can be provided.

Recovery Program

In FY 2006, FEMA's Recovery Division will lead National, State, local, and private sector efforts to restore services and to rebuild communities after acts of terrorism, natural disasters, or other emergencies, by strengthening nationwide recovery plans and capabilities and by providing scalable and robust all-hazard recovery assistance. Recovery Division programs, processes, and supporting technology must be reliable, flexible, and economical, and will focus on program activities that improve efficiency and that expedite delivery of disaster assistance to eligible individuals, State, local, and Tribal governments, and eligible private nonprofit organizations. Recovery will also work as part of a cross-cutting FEMA initiative to develop and implement plans, processes, procedures, and/or systems for catastrophic disasters that will improve the ability of Federal, State, or local governments to support victim populations quickly and effectively, will improve the speed and application of decontamination support to an affected jurisdiction, and will improve the speed with which critical Federal and mutual aid resources are or can be provided to affected jurisdictions.

National Security Program

In FY 2006, FEMA's Office of National Security Coordination will continue to carry out its mandated mission, to provide Executive Agent leadership to guarantee the survival of an enduring constitutional government by ensuring continuity of national operations in response to national emergencies. FY 2006 resources will be used to build program improvements initiated in FY 2005 by deploying new interagency contingency communications systems; by providing Continuity of Operations (COOP) planning and training to Federal departments and agencies; by leading the Federal Government's Integrated Public Alert & Warning System (IPAWS) and Emergency Alert System (EAS) initiatives; and by providing operational support to classified programs.

Key Strategic Issues

In general, FEMA faces serious challenges in achieving its all-hazards mission. Chief among those challenges is increased risk. America's metropolitan areas continue to grow in size and density, with many of the largest situated in coastal regions, along earthquake faults, or in other high-risk areas. Commercial and residential development have progressed at a rapid pace across the Nation, expanding into previously unsettled or sparsely settled areas, and exposing growing communities to new risks, especially wildfire, flooding, and erosion. To address these growing risks, FEMA

FEMA-3

will continue to emphasize planning, training, exercises, pre-disaster mitigation, and flood insurance.

The risks associated with acts of terrorism also pose a significant challenge for FEMA. FEMA's rapid and decisive response to the events of September 11, 2001, demonstrated the Agency's role in incident management. As a result, the Nation is looking to the emergency management community—FEMA in particular—to meet this challenge. Creating a single, all-hazards incident management plan from the multiple Federal response plans currently operating and implementing the NIMS are important steps in ensuring that FEMA and DHS meet the challenge. The threat of terrorist attack, especially on a mass scale, also reinforces the challenge FEMA faces in planning for and building its capability to respond to and recover from catastrophic disasters, both natural and man-made.

FEMA also faces serious challenges in maintaining and developing its workforce. Within the next 4 to 5 years, nearly half of FEMA's workforce is projected to become eligible for retirement. FEMA has committed itself to recruiting, training, and retaining a top-notch workforce and to developing a staff with the talent, skills, competencies, and dedication necessary to meet the demands of the future.

C. Resources Requested and Performance Impact

Readiness Program

In FY 2007, Readiness will work with FEMA's Response and Recovery Divisions to ensure operational readiness for disasters of all kinds, natural or man-made. Readiness also will coordinate and broker agency and interagency planning initiatives in support of operational response and recovery objectives for the NRP and the NIMS. Readiness will continue to operate and to direct the NIC. Readiness also will continue to play a critical role in coordinating the various components of the NRP and ensures that NRP remains linked to, and based upon, the NIMS.

The NIC will continue to provide the central activity to ensure that the NIMS is a continuously improving system of response that unites all responders in the United States through common organizations, common terminology for resources, and interoperable equipment and communications. These activities will be evaluated and improved constantly based on lessons learned and on the evolution of technology and protocols as directed in HSPD-5. The NIC will continue to develop and deliver a national mutual aid and resource management system that includes first responder and emergency worker credentialing based on national standards, that supports the NIMS, and that allows Federal, State, and local governments to order and to track response resources quickly and effectively. The NIC will continue to serve as the Executive Agent for the NRP.

In FY 2007, FEMA's EMI will continue to develop, deliver, and evaluate the effectiveness and the impact of its training programs in the areas of risk management and emergency response using a diverse training delivery system that includes residential onsite training, offsite delivery in partnership with emergency management training systems, colleges, and universities, and technology-based mediums to conduct individual training courses for emergency response personnel across the Nation. EMI will continue to support directly implementation of the NIMS

FEMA-4

and the NRP. The EMI training will continue to target a diverse audience, including the FEMA disaster workforce and partners involved in disaster operations.

Mitigation Program

In FY 2007, FEMA's Mitigation Program will continue to lead America in reducing threats to life and property through all-hazards risk management. Mitigation Program activities will result in the avoidance of approximately \$2 billion in potential property losses and in disaster and other costs. At least 585 communities will have taken actions to become safer from natural or man-made disasters.

In FY 2007, flood hazard identification projects (map modernization) will be completed for counties at risk for flood hazards, and will result in improved safety for 70 percent of the population through availability of accurate flood risk data in Geographic Information System (GIS) format. Completed actions will contribute to the creation of a seamless, high-quality digital flood theme that enables GIS-based risk assessment. To assist local efforts in implementing the map modernization program, Mitigation will partner with State and local governments and will provide appropriate resources for managing and maintaining flood hazard data. Modernized hurricane evacuation study guidelines will be developed and seven high-priority studies will be completed.

The NFIP outreach campaign, directed at increasing policy ownership by 5 percent through improved sales and retention, will be refined based on policy growth and goals.

The Hazard Mitigation Grant Portfolio, which includes the competitive PDM grant program, will continue to provide FEMA with the ability to assist States and communities to reach a higher level of risk management and risk reduction, through planning and mitigation actions taken before disasters occur. In FY 2007, FEMA will continue implementation of a plan to improve the delivery of all the grants in a timely and cost-effective manner. Environmental and historic preservation requirements also will be evaluated for improved process opportunities.

In concert with the NFIP and the new Severe Repetitive Loss Mitigation Programs authorized by the Flood Insurance Reform Act of 2004, 750 repetitive flood loss properties will be mitigated; performance metrics will be completed and evaluated for the National Earthquake Hazards Reduction Program; dam safety and security grant allocations will be determined using past performance; development and dissemination of building and infrastructure design guidance including seismic standards will continue; and NFIP floodplain management increased enrollment, eligibility, and enforcement actions will be continued.

A recent study by the Multihazard Mitigation Council, under the National Institute of Building Sciences, as well as OMB's Program Assessment Rating Tool (PART) analysis, recognizes the value of mitigation in limiting the loss of life and property damage from natural disasters. According to the study by the Council, mitigation is sufficiently cost-effective to warrant federal funding on an ongoing basis, both before disasters and during post-disaster recovery. In addition, mitigation is most effective when it is carried out on a comprehensive, community-wide basis over a long period of time.

Response Program

FEMA-5

In FY 2007, FEMA's Response Division will continue the long-term enhancements to integrate the Department's national emergency response teams and systems into a comprehensive and coordinated national operational capability to respond to natural and man-made major disasters and emergencies, including acts of terrorism. Response will continue to implement the NIMS, and will continue to work with all partners toward a fully mission-capable NRP. As an example, the Response Division has established a 12-hour average response time for all response teams as a goal to be implemented by FY 2009. This goal includes the procurement of equipment, transportation, and materials necessary to support mission capability.

Work will continue toward the eventual 100-percent mission- and WME-capability for all appropriate FEMA emergency response teams. Transportation plans, standardized procedures, team readiness evaluations, and remedial action plans will ensure that the average team response time is reduced from 48 hours in FY 2006 to 36 hours in FY 2007. Response will continue to acquire equipment to reduce the logistical response time from 60 hours to 48 hours to provide essential services and support to an impacted community of 50,000. The ability to handle large-scale patient care will be enhanced by expanding capabilities to handle larger numbers of mass casualties. Capability will be increased through continued augmentation of the concept and through partnership with the Department of Health and Human Services in FY 2007.

Response also will continue to pursue catastrophic disaster response and recovery improvement initiatives as part of a cross-functional and interagency effort to develop and to implement plans that will improve the ability of Federal, State, or local governments to respond to and to recover from catastrophic disasters quickly and effectively. To this end, Response will work with the States and localities, as well as with other Federal agencies, to initiate all-hazards catastrophic disaster plans for five of the most high-risk communities in the country during FY 2007.

Recovery Program

FEMA's Recovery Program will continue in FY 2007 to ensure that individuals and communities affected by disasters of all sizes, including those caused by terrorism, are able to return to normal function with minimal suffering and disruption of services. FEMA is allocating resources for this activity to improve the effectiveness and efficiency of recovery programs as delivered in the numerous disasters occurring annually, and to ensure that individual and public assistance can be provided to victims of the larger and more complex disasters that could occur as the result of terrorism or catastrophic natural events. FEMA will be applying best practices and lessons learned from the 2004, 2005, and 2006 hurricane seasons, while seeking to maintain current customer satisfaction, and while continuing to reduce costs and cycle time. Recovery also will work as part of a cross-cutting FEMA initiative to develop and to implement plans, processes, procedures, and/or systems for catastrophic disasters that will improve the ability of Federal, State, or local governments to support victim populations quickly and effectively, will improve the speed and application of decontamination support to an affected jurisdiction, and will improve the speed with which critical Federal and mutual aid resources are or can be provided to affected jurisdictions.

National Security Program

In FY 2007, FEMA's Office of National Security Coordination will continue to carry out its mandated mission, to provide Executive Agent leadership to guarantee the survival of an enduring constitutional government by ensuring continuity of national operations in response to national emergencies, whatever their cause. The Office of National Security Coordination will ensure that

FEMA-6

FEMA maintains an appropriately resourced, staffed, and equipped ability to provide Executive Agent leadership for Continuity of Government (COG), Continuity of Operations (COOP), and national contingency programs. FY 2007 resources will be used to sustain COOP, COG, and contingency programs that are well-developed and operational; to continue to enhance interagency communications to support national-level command and control systems; to develop and deploy new technologies to improve contingency system programs; to coordinate the continued deployment of the IPAWS and upgrades to the EAS initiatives; and to lead COOP and COG planning and operations.

D. How FEMA Programs and Their Performance Goals Align To and Support DHS Strategic Plan Objectives.

The following list of FEMA programs with their performance goals are followed by the DHS strategic objective or objectives they support.

Readiness Program Performance Goal - Help ensure the Nation is ready to respond to and recover from acts of terrorism, natural disasters, or other emergencies through implementation of the National Incident Management System (NIMS) and the provision of emergency management training.

3.7 Strengthen nationwide preparedness and mitigation against acts of terrorism, natural disasters, or other emergencies.

Mitigation Program Performance Goal - Reduce the impact of natural hazards on people and property through the analysis and reduction of risks and the provision of flood insurance.

3.7 Strengthen nationwide preparedness and mitigation against acts of terrorism, natural disasters, or other emergencies.

Response Program Performance Goal - Ensure the capability and readiness of all FEMA disaster response teams and logistics capabilities to respond quickly and effectively to provide assistance when and where needed.

4.1 Reduce the loss of life and property by strengthening operational response readiness.
4.2 Provide scalable and robust all-hazard response capability.

Recovery Program Performance Goal - Help individuals and communities affected by federally declared disasters return to normal function quickly and efficiently, while planning for catastrophic disaster recovery operations.

5.1 Strengthen nationwide recovery plans and capabilities.
5.2 Provide scalable and robust all-hazard recovery assistance.

National Security Program Performance Goal - Ensure all Federal Departments and Agencies have fully operational Continuity of Operations (COOP) and Continuity of Government (COG) capabilities.

3.5 Ensure the continuity of government operations and essential functions in the event of crisis or disaster.

FEMA-7

E. Performance-Based Budget Highlights by Program

For each Future Year Homeland Security Program (FYHSP), the performance goal, performance measure/s, budget including allocation of non-programmatic overhead, and full-time equivalents (FTEs) are:

Performance Goal: Help ensure the Nation is ready to respond to and recover from acts of terrorism, natural disasters, or other emergencies through implementation of the National Incident Management System (NIMS) and the provision of emergency management training.

Measure: Percent of respondents reporting they are better prepared to deal with disasters and emergencies as a result of training	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	78%	87%	80%	80%
	Actual	83%	84%	n/a	n/a
Measure: Percent of Federal, State, local, and Tribal Governments compliant with the National Incident Management System (NIMS)	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	n/a	100%	100%	100%
	Actual	n/a	82%	n/a	n/a
Program: Readiness	S Thousands*	\$345,286	\$136,334	\$105,351	118,951
	FTE*	638	620	459	498

* Dollars and FTE for FY 2004 and FY 2005 include sub-programs that are no longer part of FEMA.

Performance Goal: Reduce the impact of natural hazards on people and property through the analysis and reduction of risks and the provision of flood insurance.

Measure: Potential property losses and other costs avoided. (Corresponds to long-term PART measure, "Over the period 2007-2011, reduce potential costs from loss of life and property by \$10.5 billion.")	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	\$1.949 billion	\$1.757 billion	\$2.27 billion	\$2.4ion
	Actual	\$1.949 billion	\$1.895 billion	n/a	n/a
Measure: Percent of the population whose safety is	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	10%	50%	50%	60%

FEMA-8

improved through availability of accurate flood risk data in Geographic Information System format. (Corresponds to long-term PART measure, "By 2010, make flood risk data in Geographical Information Systems format available to 100% of the population.")	Actual	15%	38%	n/a	n/a
	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
Measure: Number of communities taking or increasing action to reduce their risk of natural or man-made disaster.	Target	500	710	585	585
	Actual	735	1,286	n/a	n/a
Measure: National Flood Insurance Program (NFIP) premium income per \$100 dollars of combined operating expense and historical losses paid. (Corresponds to PART measure, "Improve the National Flood Insurance Program income to expense ratio which measures the operating efficiency of the NFIP.")	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	\$114.4	\$115.4	\$117.4	\$118.4
Actual	\$118.6	115.4	n/a	n/a	
Measure: Annual average increase in number of flood insurance policies. (PART measure)	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	5%	5%	5%	5%
Actual	1.69%	4.61%	n/a	n/a

Information and Customer Services	906	\$ 126,158	1,790	\$ 341,900	2,155	\$ 278,990	365	\$ 174,990	-	\$ 2,000
Administration	337	\$ 215,719	532	\$ 217,000	241,000	\$ 241,000	-	\$ 4,000	-	\$ 4,000
Total	8,417	\$ 1,796,247	10,217	\$ 1,887,650	18,140	\$ 1,965,930	365	\$ 181,990	(150)	\$ (83,250)

FY 2006 amounts reflect the base-level/fund allocations pursuant to P.L. 109-148.

FY 2007 Note: The Adjudication Services Program reflects an increase in discretionary funds of \$47 million for the Business Transformation Program, the Information and Customer Services Program reflects an increase in discretionary funds of \$134.99 million for the operation and expansion of the SAVE (Systematic Alien Verification for Employment Eligibility Verification) Program, and all programs reflect a \$30 million mandatory increase for pay and non-pay adjustments from projected fee increases.

FY 2007 Note: A decrease of \$113.85 million in the Backlog Reduction Initiative Program reflects reductions due to the successful completion of backlog elimination efforts began in FY 2002 and the conclusion of associated temporary discretionary funding (\$79.2 million) and a one-time appropriation for IT Transformation/Digitization efforts (\$34.65 million).

FY 2007 Note: FTE levels shown are higher than the Budget Appendix by a total of 168 FTE dedicated to the SAVE/Basic Pilot program. These were omitted in error. The requested FTE levels are based on a preliminary estimate of needs that may change as requirements are better defined.

iii. Status of Congressionally Requested Studies and Reports

**Department of Homeland Security
U.S. Citizenship and Immigration Services
Status of Congressionally Requested Studies and Reports**

1. House Report 108-541, p. 85 and Senate Report 108-280, p. 71 directs USCIS to provide a quarterly status report on progress in eliminating the backlog. Target responses to the Committee are: February 2006 (4th Quarter); March 2006 (1st Quarter); June 2006 (2nd Quarter); September 2006 (3rd Quarter); December 2006 (4th Quarter).
2. House Report 109-79, p. 100 directs USCIS to submit a comprehensive report on the implications of requiring all U.S. employers to electronically check the legal work status of all new employees. Target date to Committee is February 2006.
3. House Report 109-79, p. 99 directs USCIS to submit a report on the technical and financial issues involved in adding biometric verification as a feature of the LPR card. Target date to the Committee is February 2006.
4. House Report 109-79, p. 100 directs USCIS to report on the nature of the connections that USCIS and the State Department use to communicate inquiries. Target date to the Committee is February 2006.
5. House Report 109-79, p. 100 directs USCIS to report on its analysis of the impact of the interim rule to permit applicants for immigration some relief of having their EAD's renewed annually. Target date to the Committee is February 2006.
6. House Report 109-79, p. 98 directs USCIS to report on the costs and benefits of adding a fifth regional service center. Target date to the Committee is February 2006.
7. Senate Report 109-83, p. 80 directs USCIS to submit a report on the costs and need to establish a subdistrict office in Montgomery County, Maryland. Target date to the Committee is February 2006.
8. House Report 109-79, p. 99 directs USCIS to submit a report on the agency's information technology efforts and how these activities align with DHS' enterprise architecture standards. Target date to the Committee is February 2006.
9. Conference Report 109-241, p.76 directs USCIS to provide a spend plan on the use of \$35,000,000 for information technology transformation efforts and to convert immigration records into digital format. Target date to the Committee is February 2006.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

U.S. CITIZENSHIP & IMMIGRATION SERVICES
SALARIES AND EXPENSES

I. Appropriation Overview

A. Mission Statement for Salaries and Expenses: Discretionary, non-fee, appropriations within the Salaries and Expenses Account (SAE) include \$47 million for U.S. Citizenship and Immigration Services (USCIS) business transformation efforts, and \$134.99 million for the Systematic Alien Verification for Entitlements (SAVE)/Employment Eligibility Verification¹ (EEV) Programs. Discretionary Funding is to both replace fees currently utilized for the SAVE/EEV program (\$20.5M), expand the SAVE system to meet the identification requirements of the Real ID Act (\$4.0M), and expand an electronic system to verify the eligibility of persons for employment in the United States (\$110.49M). The Real ID Act requires states to verify legal immigration status prior to the issuance of a driver's license or identification card. The EEV Program (formerly entitled Basic Pilot) is currently provided free of charge to employers who voluntarily verify employment eligibility.

In FY 2005, USCIS used its SAE funds to continue the employment of 450 temporary adjudication officers and over 890 field office clerical contractors, to fund increased field office overtime and operations and maintenance activities associated with core IT systems supporting the adjudication process. USCIS used \$20 million for the historical records project to convert immigration records into an electronic, digitally accessible format. In FY 2005, USCIS increased its overall production by 14.3%, processing 7.3 million applications and decreasing the backlog to 1 million immigration benefit applications (from a high of 3.8 million cases in January 2004). USCIS also met and/or exceeded cycle time targets in 14 of 16 major form types.

In FY 2006, USCIS will use the funds received from the SAE account to continue the employment of temporary and contractor staff as well as to support the operations and maintenance of critical IT systems (\$79.2 million). USCIS will continue to aggressively work towards meeting the President's goal to eliminate its backlog by fiscal year end. USCIS will also use \$34.65 million appropriated by the Congress on IT transformation and digitization efforts.

In FY 2007, USCIS will use the discretionary SAE funding to transform USCIS' business operations (\$47 million), expand operations to support implementation of the Real ID Act, and support expansion of a national electronic employment verification system as a key component of the Administration's Secure Border Initiative (\$134.99 million).

¹ The Employment Eligibility Verification (EEV) Program is the name used for the expanded Basic Pilot Program. The terminology "Basic Pilot" is retained when referring to the current program.

B. Budget Activities:Adjudication Services

Business Transformation Program – The Transformation Program, an important part of Secretary Chertoff's Second Stage Review, will be a multi-year effort to modernize USCIS processes and systems. This new business model will embrace an account-based, customer-centric, processing system and will end the traditional application-centric, or case-based processing system in use today. This Program will enable USCIS to provide immigration benefit services in a more timely, consistent, and accurate manner.

Information and Customer Services

SAVE and EEV Program - SAVE is an intergovernmental information-sharing program that verifies an individual's immigration status to ensure that only those eligible receive Federal, state, or local public benefits. The EEV Program, a key component of the Department's Secure Border Initiative, involves electronic verification checks of the Social Security Administration and DHS databases, using an automated system to verify employment authorization. These expanded programs will allow USCIS to provide more timely, consistent, and accurate information to its customers, and ensure the security of the immigration system.

C. Budget Request Summary:

USCIS requests 512 positions, 365 FTE, and \$181.99 million. The Request includes a one-time discretionary program increase of \$47 million to transform USCIS' current paper-based data systems into a modern, world-class digital processing resource that will enhance customer service, better prevent future backlogs, and improve USCIS efficiency with expanded electronic filing and strengthened security. The request also includes \$134.99 million for the SAVE and EEV Programs that will allow USCIS to operate an expanded SAVE program to implement requirements of the Real ID Act, and expand an electronic system to verify the eligibility of persons for employment in the U.S.

II. Summary of FY 2007 Budget Estimates by Program/Project Activity (PPA)

¹ FY 2006 Enacted reflects 1% across-the-board restriction pursuant to P.L. 109-148.

Note: The Adjudication Services Program reflects an increase in discretionary funds of \$47 million for the Business Transformation Program, and the Information and Customer Services Program reflects an increase in discretionary funds of \$134.99 million for the operation and expansion of the SAVE (Systematic Alien Verification for Entitlements)/EEV (Employment Eligibility Verification) Program.

Note: A decrease of \$113.85 million in the Backlog Reduction Initiative Program reflects reductions due to the successful completion of backlog elimination efforts begun in FY 2002 and the conclusion of associated temporary discretionary funding (\$79.2 million) and a one-time appropriation for IT Transformation/Digitization efforts (\$34.65 million).

III. Current Services Program Description by PPA

**Department of Homeland Security
U.S. Citizenship and Immigration Services
Salaries and Expenses
Program Performance Justification
(Dollars in thousands)**

PPA: BACKLOG REDUCTION INITIATIVE

	Perm. Pos.	FTE	Amount
2005 Actual	0	0	\$159,940
2006 Revised Enacted	0	450	\$113,850
2007 Adjustments-to-Base	0	(450)	(\$113,850)
2007 Current Services	0	0	\$0
2007 Program Change	0	0	\$0
2007 Request	0	0	\$0
Total Change 2006-2007	0	0	\$0

Note: FY 2006 Revised Enacted reflects 1% across-the-board rescission pursuant to P.L. 109-148.

The FY 2006 to FY 2007 change reflects a total decrease in 450 FTEs and \$113.85 million in discretionary funds due to the successful completion of backlog elimination efforts (\$79.2M) begun in FY 2002, and a one-time appropriation of \$34.65 million in FY 2006 for IT Transformation/ Digitization efforts.

No additional funding is requested for backlog reduction in 2007.

PPA: INFORMATION & CUSTOMER SERVICES – SAVE/EEV

	Perm. Pos.	FTE	Amount
2005 Actual	0	0	\$0
2006 Revised Enacted	0	0	\$0
2007 Adjustments-to-Base	0	0	\$0

Total Change 2006-2007	512	365	\$134,990

There are no current services adjustments. USCIS requests new discretionary funding of \$134.99 million for this activity.

CURRENT SERVICES PROGRAM DESCRIPTION:

The SAVE Program is an intergovernmental information-sharing initiative designed to aid employers in determining an applicant's/recipient's immigration status, and thereby ensure that only entitled applicants/recipients receive Federal, state, or local public benefits. The Program is an information service for benefit granting agencies, institutions, and other entities. USCIS does not make determinations on any applicant's/recipient's eligibility for a specific benefit.

The SAVE Program, in partnership with the Social Security Administration (SSA), administers the EEV Program. The EEV Program verifies the SSA and DHS databases, using an automated system to verify employment authorization of employees.

The EEV Program has been available to all employers in California, Florida, Illinois, New York, and Texas since November 1997 and to employers in Nebraska since March 1999. Currently, participation in the EEV Program is voluntary, and is free to participating employers.

The Basic Pilot Extension and Expansion Act of 2003 extended the EEV Program to November 2008, and also requires for the expansion of the Basic Pilot Program to all 50 states and the District of Columbia. A Notice was published in the Federal Register on December 20, 2004, announcing the expanded availability of the pilot and a new Web-Based Access Method for the EEV program.

The EEV Program removes the guesswork from document review during the Form I-9 process, it allows participating employers to confirm the employment eligibility of all newly hired employees; improves the accuracy of wage and tax reporting, and protects jobs for authorized United States workers.

Employment verification requires completion of the Form I-9 and review of identity and work authorization documentation. Employers who want to voluntarily participate must first register and sign a memorandum of understanding with the Social Security Administration (SSA) and USCIS, take a tutorial, and pass a mastery test. The employers are able to enter information from this process electronically into a personal computer with Internet access. The statute requires that employers using the EEV system submit information on new employees within three business days of hire. The information is automatically compared with information contained in the SSA database, and for noncitizens, with DHS data in the USCIS database. If the information matches, there is an instantaneous response back to the employer saying that the employee is authorized to work.

If the employer-submitted information is inconsistent with SSA data, the employer is immediately notified that there is a tentative nonconfirmation. The employer is then instructed to notify the employee, who has eight Federal workdays to visit a local SSA office to correct his or her record if the employee chooses to do so. If the employee visits SSA, the employer again uses the EEV system to confirm that the employee is work authorized.

If the SSA information matches but the information for a noncitizen employee is not consistent with USCIS data, a notice will be returned to the employer that the verification is in process. This means that the case has been electronically sent to a USCIS Immigration Status Verifier (ISV) who searches other databases to determine the noncitizen's current work authorization status. If the ISV cannot find information to confirm an employee's work status within one day, the employer is sent a tentative

nonconfirmation for that employee. The employer must then notify the employee who has eight Federal workdays to call an ISV at a toll-free number. If necessary to resolve the case, the ISV will ask the employee to fax a copy of his or her immigration document. The ISV must respond to the query within 10 days of the original referral. Once the ISV completes the case, the EEV system is updated and the employer notified of the finding.

During the time employees are contesting tentative nonconfirmations they must be allowed to continue working, and employers are prohibited from any verification-related adverse action against the employee, including withholding training or work assignments. If an employee chooses not to contest a tentative nonconfirmation when first told that the electronic verification was not conclusive, fails to contact SSA or USCIS, or is found through the verification process not to be work authorized, the employer may terminate his or her employment.

There are more than 150,000 agency users that request immigration status information for non-citizens and naturalized citizens applying for public benefits. Currently over 19,000 employer sites participate in the EEV Program, requesting employment status information to confirm the employment eligibility of their newly hired employees. During FY 2004, SAVE responded to over 11,000,000 queries, 11 percent of these queries (1.1M) were secondary verifications processed by USCIS' ISVs.

DHS Infrastructure Transformation Program

The Department's Infrastructure Transformation Program (ITP), led by the Office of the Chief Information Officer (OCIO), will integrate the IT infrastructures of the 22 legacy components into "One Infrastructure". Currently, most of the Department's components fund and are supported by separate and largely stove-piped IT infrastructures. This environment makes it difficult to share information across components and has resulted in redundant investments and wasted resources. The ITP will eliminate the duplicative infrastructures and provide common capabilities and services for all components to leverage.

The ITP consists of five domains with a Department component assigned as a steward responsible and accountable for the performance of each domain. The domains and their stewards are listed below:

- Network Services led by Customs and Border Protection (CBP);
- Data Center Services led by CBP;
- Email Services led by U.S. Coast Guard (USCG);
- Help Desk Services led by USCG; and
- Video Operations Services led by Federal Emergency Management Agency (FEMA).

The OCIO oversees the work of the stewards and the other components to ensure operational requirements are met and investments and resource allocations are balanced across the components.

Implementation of the ITP will eliminate the need for components to spend resources on improving their own infrastructures. Instead, some of the investment funding previously used for stovepiped infrastructures will be used to support the department-wide ITP effort. For example, CBP's IT initiatives such as the Automated Commercial Environment will benefit from the capabilities and services the ITP will provide such as network access, data center hosting, email/collaboration services, wireless access, integrated help desk, voice access, video services, and on-site support.

Rather than independently developing new capabilities or augmenting legacy capabilities within CBP, the ITP will provide enterprise-level services that will benefit all components.

By investing in the ITP, DHS components will benefit from economies of scale while promoting Department integration, and improving information sharing and interoperability. The amount of IT investment funding from components to support the ITP is still under deliberation and any such proposal will be fully vetted with the Congress prior to any actions being taken.

IV. Program Justification of Changes

**Department of Homeland Security
U.S. Citizenship and Immigration Services
Salaries and Expenses
Justification of Program Changes
(Dollars in thousands)**

Program Increase 1: SAVE/EEV Program

Strategic Goal(s) & Objective(s): 6.2 Provide efficient and responsive immigration services that respect the dignity and value of individuals.

PPA: Information and Customer Services

Program Increase: Positions 512, FTE 365, Dollars \$134,990

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									
Program Increase							512	365	\$134,990
Total Request	0	0	\$0	0	0	\$0	512	365	\$134,990

Description of Item

With respect to the SAVE Program, \$24.5 million is requested. Currently, fee funding from non-related applications are used to support this program. Of this amount, \$17.1 million covers base funding (161 positions, 161 FTE) that supports activities to ensure only eligible applicants/recipients receive Federal, state, or local public benefits. Another \$4.0 million supports expansion of SAVE to meet the requirements of the Real ID Act (23 positions, 23 FTE, \$4.0 million). The Real ID Act of 2005, signed into law by the President on May 11, 2005, requires all State Department of Motor Vehicles, (including the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, the Trust Territory of the Pacific Islands and any other territory or possession of the United States) to verify the immigration status of all non-citizen applicants for driver's licenses or identification cards. The \$4.0 million will pay the salaries of the 23 Immigration Status Verifiers that will be hired. The remaining \$3.4 million (13 positions, 13 FTE) continues to support the EEV program to help employers verify employment eligibility of employees.

With respect to the EEV program, \$110.49 million is requested. Currently, fee funding from non-related applications are used to support this program. This funding (315 positions, 168 FTE, \$110.49 million) will expand an electronic system to verify employment eligibility. This program is a key component of the Administration's Secure Border Initiative (SBI). The SBI is a comprehensive multi-year plan to secure America's borders and reduce illegal migration, which includes, among other things, increased interior enforcement of our immigration laws – including more robust worksite enforcement.

USCIS anticipates phasing in a mandatory EEV over several years. This approach will allow correction of any unanticipated problems before all 7 million employers begin using the mandatory national system.

The total cost of expanding the EEV program² (315 positions, 168 FTE, \$110.49M) is comprised of the following elements: program administration, program operations, system enhancements, and outreach and publicity.

Program Administration (48 positions, 24 FTE, \$11.7M) - includes program and policy direction for the EEV, administrative and legal support, program evaluation, and staff directly involved in administering the verification program. This would also encompass oversight of any contracts used to operate the verification system.

Program Operations (213 positions, 117 FTE, \$49.9M) - includes the costs for operating and maintaining the computer system used for automated matching with SSA and USCIS databases. This includes contractor costs for data matching, providing verification results to employers, tracking subsequent case events, and running a help desk for employers that encounter technical problems in using the system. It also includes the cost of manually verifying cases that are not resolved automatically, and resolving cases of persons who erroneously receive tentative nonconfirmations because of errors in their SSA or DHS records. Last, it includes new initiatives to review employer transaction records both electronically and manually and to institute a strong program to foster compliance with the program through random and targeted employer reviews.

Systems Enhancements (\$46.49M) - includes funding to increase the operating efficiency of the verification system by automating additional features of the program as well as increasing the accuracy of DHS databases and data on individuals that are used in the verification process. Approximately 40 percent of the funds will be used to improve data quality in the legacy systems as well as manual and automated review of data across systems to better ensure integrity. These activities include analysis of data internal to USCIS systems as well as data being received from other DHS and external agencies. Increased accuracy will result in long-term savings to the Federal government, because of reduced costs to resolve erroneous tentative nonconfirmation findings. Furthermore, it will avoid the cost and burden of these erroneous findings on both employers and employees. New development activities comprise the remaining 60 percent of the requested funding and will be used to focus on internal controls so that new data captured will have high integrity. For example, a more robust person-centric data model is under development as are a series of connectors to existing systems that will enable more robust two-way data integrity checks. The proposed system enhancements would allow the EEV database to be linked into this new system.

Outreach & Publicity (54 positions, 27 FTE, \$2.4M) - includes funding to inform employers about their responsibilities under the program and advising employers on how to get additional information, and responding to program and procedural questions from employers. The costs are directly related to the number of new employers coming into the program or verifying their current workforces. The outreach and publicity program would include not only periodic

² The cost estimates assume the requirements for the expanded Employment Eligibility Verification System as identified in the Border Protection, Antiterrorism, and Illegal Immigration Control Act of 2005 (H.R. 4437).

mailings to employers but also the officers working with the employer community, including new employers, to publicize the requirements. Their functions would include holding seminars with employers at forums including employer associations and chambers of commerce meetings and conferences within their jurisdictions, as well as answering questions from individual employers about the program.

Justification

In legacy Immigration and Naturalization Service (INS), this program was fully funded through discretionary funds. Since USCIS does not have discretionary funds for this program, and does not collect fees to fund this program, discretionary resources are both appropriate and necessary to fund up-front costs of expansion.

With respect to SAVE, funding is to both replace funding from unrelated fees that are currently utilized for base operations, and to expand the SAVE system to meet the requirements of the Real ID Act. The EEV is currently a voluntary program available free of charge to employers. Additional funding will support a mandatory national electronic employment authorization verification system requirement.

Impact on Performance (Relationship of Increase to Strategic Goals)

Discretionary funding is necessary to continue the operations of the SAVE program and meet the requirements of the Real ID Act. This will prevent the diversion of fee revenues from benefits processing and meet its Strategic Goal of providing timely, consistent, and accurate information to its customers. The discretionary funding is also necessary to expand the EEV program to support a mandatory national employment eligibility verification system requirement - a key component of the Administration's Secure Border Initiative for more robust worksite enforcement.

Program Increase 2: Business Transformation

Strategic Goal(s) & Objective(s): 6.2 - Provide efficient and responsive immigration services that respect the dignity and value of individuals. 2.6 - Ensure the security and integrity of the immigration system.

PPA: Adjudication Services

Description of Item

Requested funding of \$47 million, along with allocated fee revenue of \$65 million, will support modernization of USCIS processes and systems to improve sharing of immigration information, eliminate paper-based processing, and allow USCIS to more effectively respond to changing workload

while enhancing the integrity of the immigration systems. Additionally, it will make it easier and faster for customers to electronically file immigration applications, get updates on the status of their applications, and, as appropriate, receive immigration benefits. The USCIS Transformation Program will transition the agency from one of out-dated information technology systems operating in a forms-centric environment to a single web-based information technology tool operating in a customer-centric environment driven by performance metrics.

USCIS will fundamentally change how it interacts with its customers, how it receives, processes and exchanges information and data, how it ensures the security and integrity of the immigration system, and how it can improve administrative efficiency. The program will:

- enhance security through retrievable linked biometric and biographic data obtained on initial encounter with applicant;
- transition to a less paper-intensive systems;
- create a relationship with the customer, using accounts, rather than simply conducting a series of transactions with them;
- promote e-filing of applications; reducing the number and complexity of application forms;
- electronically distribute and adjudicate applications;
- streamline the application process, removing redundancies and reducing processing times;
- share data and processes with Department of State and Department of Labor as well as Immigration and Customs Enforcement;
- locate facilities in alignment with our customer base;
- design facilities pursuant to business reengineering to achieve maximum efficiency and a customer-friendly environment;
- create training opportunities and career development paths for USCIS personnel; and
- implement new and consistent performance measures.

In FY 2006, USCIS is using discretionary and fee funds to begin improving and automating business processes that support redesigned account-based, customer-centric operations. This includes establishing a Business Transformation Office, identifying business requirements and rules, consolidating and re-working forms and instructions, upgrading field IT infrastructure, improving the web portal environment, developing background checking systems, building a repository for storing electronic biographic and biometric information, digitizing paper files, expanding biometrics capture capacity, and acquiring the commercial off-the-shelf software licenses for electronic adjudication management. By the end of FY 2006, USCIS will have launched the initial operating capability of the new account-based system, automated the filing process for many types of applications, and built the repository for storing biographic and biometric data.

In FY 2007, USCIS plans to use both discretionary and fee funds for Business Transformation to build from the work accomplished in FY 2006, including full operation capability of the case processing system and enhancements to the customer portal for two-way account management (upgrade of e-file capabilities to support electronic multi-lingual and customer-centric entry of financial, application data, and digital documents). Additional performance improvements and new capabilities include:

- integration with a new national scheduling system,
- begin integrating old data from legacy systems into the new environment and decommission legacy systems,
- investing in training and a new human capital strategy,
- experimenting with remote adjudication/videoconferencing,

- purchasing fingerprint readers for adjudication officers,
- continuing digitization of paper files,
- reducing the scale/size of USCIS' offices from large offices into smaller more-efficient facilities located closer to its customers,
- connecting the new case processing system with other Federal entities to enhance information sharing capabilities,
- creating business intelligence tools in the new case processing system for data analysis,
- expanding card production capability, and
- enhancing performance measures.

Justification

These resources are needed for USCIS to modernize and overhaul business operations and the underlying IT that supports those operations to more efficiently and effectively meet its mission of administering the nation's immigration laws and providing the Department with the information required for enforcement purposes. Over time, a substantial portion of the cost for this multi-year program can be paid for through a reformed USCIS fee system, but discretionary resources are needed up front to kick start this process, particularly with respect to IT upgrades.

USCIS' current paper-based business processes do not sufficiently support its mission and have contributed to an immigration benefit application backlog. For example, currently:

- adjudication is performed using physical folders of information requiring the physical movement and shipping of files to process a case;
- electronically-filed applications must be converted back to paper to allow for adjudication;
- important data can be difficult to locate or share within USCIS or across the Department;
- multiple agencies have often a concurrent need to the information contained in physical files;
- background checks are often manually initiated and the results of hit resolution are not retrievably stored, requiring a repeat of old steps in new applications;
- biometrics are not retrievably stored, requiring customers to make repeated trips to Application Support Centers and preventing biometric comparisons that would reduce identity fraud; and
- adjudicators spend too much time on non adjudicative activities such as repeatedly logging into and out of multiple systems, creating screen prints to serve as a paper record of electronic activities, addressing and writing correspondence to customers, compiling data from multiple sources, and performing manual data searches.

Impact on Performance (Relationship of Increase to Strategic Goals)

USCIS expects the business transformation program will result in enhanced security as a result of linking biometric and biographic information to better ensure identity verification and by expanding biometric storage to enhance identification of potential security risks. Additionally, this program will develop more extensive and reliable systems interfaces to allow DHS Components and law enforcement to retrieve vital information about individuals and ensure through automation that background checks are completed as early in the process as possible.

The program also addresses enhanced customer service as the system will be easier for customers to navigate as delays associated with the movement of paper files will be drastically reduced. Workload will be shifted electronically as necessary to balance work nationwide, and delivery of secure documents will be faster. In addition, the program will result in increased overall efficiency as

duplicative efforts will be eliminated, interoperability of systems will be improved, and one-stop access to background and security check information will be available. Overall time spent on non-adjudicative activities such as inter-filing and file movement will also be reduced dramatically. The improvements resulting from this new business model better will also better position USCIS to support the President's goal for a Temporary Worker Program.

PPA Mission Statement

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) Ensure the security and integrity of the immigration system, (2) Provide efficient and customer-oriented immigration benefit and information services (3) Increase understanding of citizenship and its privileges and responsibilities, (4) Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) Strengthen the infrastructure necessary to achieve USCIS' mission, and (6) Operate as a high-performance organization and position USCIS as an employer of choice.

The USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving over 6 million immigration benefit applications each year. These immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is a fee-based business – therefore, its business operations and associated budget varies from year to year depending upon the number of immigration benefit applications received.

The USCIS requests 512 positions, 365 FTE, and \$137 million for the SAVE and EEV Programs that will allow USCIS to operate an expanded SAVE program pursuant to new identification requirements of the Real ID Act, and expand an electronic system to verify the eligibility of persons for employment in the United States.

H. PPA Budget Justifications (Cont'd)**Summary Justification and Explanation of Changes**

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Salaries and Benefits	\$0	\$0	\$27,375	\$27,375

Salaries and Benefits funding is for 512 positions, 365 FTE for the SAVE/EEV Programs. Staff associated with these programs are for Program Administration, Program Operations, and Outreach and Publicity activities.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Travel	\$0	\$0	\$800	\$800

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. Travel funds requested for FY 2007 are needed to support the SAVE/EEV Programs.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
GSA Rent	\$0	\$0	\$8,525	\$8,525

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 funding requested will be used for rental space to support the SAVE/EEV Programs.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Advisory and Assistance Services	\$0	\$0	\$11,500	\$11,500

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2007 funding requested will be used to obtain expert advisory services from non-federal sources to support the expansion and development of the SAVE/EEV Programs.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Other Services	\$0	\$0	\$56,490	\$56,490

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The vast majority of the costs for the FY 2007 Request are associated with systems enhancements necessary to improve data quality and instill internal controls to ensure high data integrity.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Operation & Maintenance of equipment	\$0	\$0	\$9,500	\$9,500

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2007 request is for the operating and maintenance costs of verification systems related to the SAVE/EEV programs.

H. PPA Budget Justifications (Cont'd)

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Supplies & materials	\$0	\$0	\$2,800	\$2,800

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (e) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2007 request is for office supplies and materials in support of the SAVE/EEV Programs.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Equipment	\$0	\$0	\$18,000	\$18,000

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The majority of the FY 2007 Request is related to system enhancement costs necessary to improve data quality and instill internal controls to ensure high data integrity.

BUDGET REQUEST AND SUPPORTING INFORMATION**U.S. CITIZENSHIP & IMMIGRATION SERVICES**
Immigration Examinations Fee Account**I. Appropriation Overview****A. Mission Statement for Immigration Examinations Fee Account:**

Funding from the Immigration Examinations Fee Account (IEFA) is the primary program funding source, comprising 89% of the total USCIS budget request. Fees collected from persons filing immigration benefit applications are deposited into the IEFA and used to fund the full cost of processing immigration benefit applications and associated support benefits; the full cost of providing similar benefits to asylum and refugee applicants; and the full cost of similar benefits provided to other immigrants, at no charge.

In FY 2005, USCIS made significant progress toward fulfilling the President's goal of eliminating the backlog by the end of FY 2006. USCIS increased overall production by 14.3% and decreased the backlog to 1 million immigration benefit applications from a high of 3.8 million cases in January 2004. USCIS also met and/or exceeded cycle time targets in 14 of 16 major form types. In addition, USCIS completed a total of 116,469 asylum cases in FY 2005, representing a 7% increase in productivity from the previous fiscal year, when it completed 108,950. USCIS also worked steadily with its refugee program partners to successfully meet refugee admissions levels designated by the President while ensuring that the integrity and security of the program remained intact. USCIS officers conducted refugee status interviews in over 50 locations and interviewed more than 58,937 refugee applicants from over 60 countries. As a result of these efforts, 53,813 refugees were admitted to the United States during FY 2005, an increase of almost 1,000 over FY 2004.

In FY 2006, USCIS will use IEFA funding to continue aggressively working on the backlog elimination plan to achieve the target six-month cycle time standard for all immigration benefit applications by the end of the fiscal year. USCIS will also use IEFA funding to support business transformation efforts that will support modernization of USCIS business processes and underlying systems. Automation of USCIS operations will improve sharing of immigration information, eliminate paper-based processing, and allow USCIS to more effectively respond to changing workload. Additionally, it will make it easier and faster for customers to electronically file immigration applications, get updates on the status of their applications, and, as appropriate, receive immigration benefits.

In FY 2007, USCIS will use IEFA funding to process over 6 million immigration benefit applications while maintaining backlog goals achieved at the end of FY 2006 and ensuring the security and integrity of the immigration system. USCIS plans to continue to use some IEFA funds for business transformation efforts building from the work completed in FY 2006.

B. Budget Activities:

Adjudication Services - Through a network of 250 local offices, Application Support Centers, Service Centers, Asylum offices, USCIS is responsible for the timely and quality processing of:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.;
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily;
- *Asylum and Refugee processing* - adjudicating asylum applications and the processing of refugees; and
- *Naturalization* - processing applications of those who wish to become U.S. citizens.

Information and Customer Services - Through multiple channels of available assistance, including the USCIS website, toll-free call center (National Customer Service Call Center), and face-to-face appointments; USCIS will make it easier for its customers to get the information they need, when they need it. On an annual basis, USCIS:

- Serves over 14 million customers via the National Customer Service Call Centers
- Serves approximately 5 million customers through information counters at local offices

Administration - USCIS Headquarters offices are located in Washington, DC and exist to support and guide USCIS offices around the world. These offices include Administration, Budget, Financial Management, Chief Counsel, Citizenship, Communications, Congressional Relations, Policy and Strategy, Training and Career Development, and Security and Investigations.

C. Budget Request Summary:

USCIS requests 8,610 positions, 9,527 FTE, and \$1.760 billion. Funds will support the processing of over 6 million immigration benefit applications; maintaining backlog goals achieved at the end of FY 2006, and ensuring the security and integrity of the immigration system. The requested amount is based on projected fee levels that will increase by \$30 million. Fee funds will also be used to transform USCIS' current paper-based data systems into an automated and interoperable environment that will enhance customer service, better prevent future backlogs, and improve USCIS efficiency with expanded electronic filing and strengthened security.

D. Fee Reform:

Along with transforming its business processes, redesigning forms, and improving service delivery and value to its customers, USCIS will reform its fee structure to ensure the recovery of operational costs in line with Federal fee guidelines. Currently, all application fees are not optimally aligned with the cost of each application, and improvements must be made for the long term to more effectively link regular and premium fees to specific service levels. This effort becomes even more important as USCIS operations are automated, forms are reduced and simplified, and USCIS prepares to take on substantial new activities including the President's Temporary Worker Program and a mandatory employment eligibility verification system. The Department intends to embark on a comprehensive,

long-term fee reform rulemaking process for completion in 2007 with implementation in 2008. In the short term, DHS will continue to pursue modest rulemaking and legislative changes necessary to address near-term changes in operations. The Department will consider the need for additional legislative changes as part of this fee reform initiative and may transmit legislation at a later date.

II. Summary of FY 2007 Budget Estimates by Program/Project Activity (PPA)

2007 Request	6,455	7,205	\$1,375,000
Total Change 2006-2007	0	0	\$23,000

USCIS requests \$1.375 billion to process over 6 million immigration benefit applications while maintaining backlog goals achieved at the end of FY 2006, and ensuring the security and integrity of the immigration system. Fee funds will also be used to transform USCIS' current paper-based data systems into a modern, world-class digital processing resource that will enhance customer service, better prevent future backlogs, and improve USCIS efficiency with expanded electronic filing and strengthened security. The requested base adjustment of \$23 million reflects an allocated share of a projected increase in fee collections.

CURRENT SERVICES PROGRAM DESCRIPTION:

Through a network of 250 local offices, Application Support Centers, Service Centers, Asylum offices, USCIS is responsible for the timely and quality processing of:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.;
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily;
- *Asylum and Refugee processing* - adjudicating asylum applications and the processing of refugees; and
- *Naturalization* - processing applications of those who wish to become U.S. citizens.

USCIS works in coordination with other bureaus of DHS, and with agencies such as the Departments of Labor and State, and the Federal Bureau of Investigation (to conduct background checks).

On average, USCIS annually:

- Processes over 6 million applications
- Processes close to 90,000 asylum cases
- Conducts approximately 70,000 refugee interviews, and
- Conducts the naturalization of approximately half a million new citizens.

Each year, millions of people apply for various types of immigration benefits from the U.S. government. Adjudications Officers determine eligibility for a wide variety of benefits. They review applications and often conduct interviews of the applicants. Adjudications Officers have the dual responsibility of providing courteous service to the public while being alert to the possibility of fraud and misrepresentation. District Adjudications Officers are located in offices nationwide. Center Adjudications Officers are located only in the following Service Centers: St. Albans, VT; Lincoln, NE; Irving, TX; and Laguna Niguel, CA.

The Asylum Officer determines if an applicant for asylum satisfies the requirements of the Immigration and Nationality Act. These officers must be knowledgeable of human rights conditions around the world and possess a keen insight into human behavior in order to determine the credibility and consistency of information elicited through interviews they conduct. Positions are located in Asylum Offices throughout the U.S. The Asylum Officer Corps and new Refugee Officer Corps will also help USCIS leverage specialized resources, including professional interpreters, to deliver timely and accurate provision of legal protection to individuals who have been persecuted and displaced.

In coordination with DHS and other Federal agencies, USCIS will combat immigration benefit fraud through the Office of Fraud Detection and National Security (FDNS). USCIS will continue to train FDNS staff to analyze and identify fraud patterns and trends, and document evidence of fraud for administrative action. USCIS will continue to implement fraud detection measures in Service Centers, field offices, and Refugee and Asylum programs and train adjudications staff to proactively identify fraud/security profiles while considering an application.

PPA: INFORMATION AND CUSTOMER SERVICES

	Perm. Pos.	FTE	Amount
2005 Actual	861	926	\$126,158
2006 Revised Enacted	1,655	1,790	\$141,000
2007 Adjustments-to-Base	0	0	\$3,000
2007 Current Services	1,655	1,790	\$144,000
2007 Program Change	0	0	\$0
2007 Request	1,655	1,790	\$144,000
Total Change 2006-2007	0	0	\$3,000

USCIS requests \$144 million to provide timely, consistent, and accurate information to our customers. The requested base adjustment of \$3 million reflects an allocated share of a projected increase in fee collections.

CURRENT SERVICES PROGRAM DESCRIPTION:

Through the Information and Customer Services Program, USCIS reduces the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. USCIS makes it easier for our customers to get the information they need, when they need it through multiple channels of available assistance, including the USCIS website, toll-free call center (National Customer Service Call Center), and face-to-face appointments.

On an annual basis, USCIS:

- Serves over 14 million customers via the National Customer Service Call Centers
- Serves approximately 5 million customers through information counters at local offices

Each year millions of people apply for various types of benefits under the Immigration and Nationality Act. The Immigration Information Officer (IIO) provides information about immigration and nationality law and regulations. They assist with a wide variety of requests, including questions on how to complete required forms, and explaining the administrative procedures and normal processing times for each application. IIOs provide a range of customer services, including certain case services and problem resolution assistance on applications and petitions. IIOs also process and make decisions on a limited array of applications and petitions. Positions are located throughout the country in Districts, Sub offices, and Service Centers.

Through the National Customer Service Center's four telephone centers, USCIS provides toll-free nationwide assistance to customers calling from within the U.S. Customers can access live assistance from 8:00 AM until 6:00 PM, Monday through Friday. They can also access recorded information (including information about the status of their specific case) 24 hours a day/7 days a week. Both live and recorded service is available in English and Spanish. Callers from outside the U.S. can access more limited information through a separate toll number.

USCIS receives about 1.7 million direct information and customer service related contacts. Today, over 84% of all information and customer service interactions are self-service. The self-service options give customers new choices that are simpler and more effective to both customers and USCIS. This option also results in significant cost avoidance when compared to what it would cost USCIS to provide live assistance to all these customers.

In-person service continues to be a critical component of the USCIS service model. To improve service levels, USCIS has shifted to offering most in-person service by appointment. This has helped mitigate long lines and wait times, and address customer concerns and inquiries.

To more clearly assist and communicate with customers, USCIS has developed a new series of fact sheets focused on particular kinds of customers and services available to them. It will also include a fact sheet focused on customers after they file an application, setting out criteria for case services to do a better job of responding to the questions and concerns of customers.

PPA: ADMINISTRATION

	Perm. Pos.	FTE	Amount
2005 Actual	280	337	\$215,743
2006 Revised Enacted	500	532	\$237,000
2007 Adjustments-to-Base	0	0	\$4,000
2007 Current Services	500	532	\$241,000
2007 Program Change	0	0	\$0
2007 Request	500	532	\$241,000
Total Change 2006-2007	0	0	\$4,000

USCIS requests \$241 million to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency and effectiveness of service delivery. The requested base adjustment of \$4 million reflects an allocated share of a projected increase in fee collections.

CURRENT SERVICES PROGRAM DESCRIPTION:

USCIS Headquarters offices are located in Washington, DC and exist to support and guide USCIS offices around the world.

Office of Administration plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for Acquisition and Asset Management, Facilities, Human Capital, Logistics, Occupational Safety and Health, and Workers Compensation for the operation of centrally managed, agency-wide support activities, and for the direct delivery of administrative support to Headquarters.

Office of Budget is responsible for USCIS budget formulation and execution.

Office of Chief Counsel (principal legal advisor) consists of dedicated legal divisions advising and representing USCIS Operations both at Headquarters and in the field. Divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Ethics, Field Operations, Training, and Liaison. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components and OCC field staff.

Office of Citizenship promotes civic integration and instruction and training on citizenship responsibility for legal immigrants interested in becoming naturalized citizens of the United States, including development of educational materials and community outreach activities.

Office of Communications oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs, educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.

Office of Congressional Relations advises the Director on legislative matters and serves as primary point of contact for members of Congress and congressional staffers.

Office of Ombudsman Liaison serves as the Director's representative to the DHS CIS Ombudsman and provides customer relationship management oversight and evaluation.

Performance Management Division is charged with developing the USCIS Backlog Elimination Plan and monitoring progress against the Plan; developing and managing the performance metrics for quality and production; and providing analysis of operational programs.

Office of Financial Management executes financial management for the agency.

Office of Policy and Strategy directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities, as well as for the conduct of research and analysis on immigration services issues.

Office of Security and Investigations has a range of responsibilities including oversight of COOP planning and implementation; secure communications and document storage; agency wide physical and facility security programs; and security awareness training. In coordination with Fraud Detection and National Security Division, OSI has the lead role regarding **Office of Professional Responsibility** related management inquiries.

Office of Training and Career Development provides continuous professional training and career development to all USCIS employees through a variety of career, executive and managerial development programs. Responsibilities include basic training, training management, training operations, and training support services.

IV. Program Justification of Changes

Not Applicable

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

Temporary Protected Status Fee Adjustment

Sec. XX. Temporary Protected Status Fee Flexibility.

Section 244(c)(1)(B) of the Immigration and Nationality Act as amended, 8 U.S.C. 1254a(c)(1)(B), is amended by striking the second sentence.

Explanation of Changes:

The fee for adjudicating an application for Temporary Protected Status (TPS) has been capped at \$50 since 1990. This limitation is inconsistent with the fee structure for other immigration benefit applications, which is based on the recovery of full processing costs. This amendment would permit appropriate adjustment of the TPS fee structure according to processing costs and inflation, per the regulatory process. The amendment removes the sentence "The amount of such fee shall not exceed \$50."

Amendment Authorizing Expansion of Premium Processing Fee Authority

Section XX. Premium Processing

Subsection 286(u) of the Immigration and Nationality Act, 8 U.S.C. 1356(u), is amended to read:

"(u) Premium fee for petitions and applications

- (1) The Secretary of Homeland Security is authorized to establish and collect a premium fee for employment-based petitions and applications. This fee shall be used to provide certain premium-processing services to business customers, and to make infrastructure improvements in the adjudications and customer-service processes. This fee shall be set at \$1,000, and may be adjusted according to the Consumer Price Index. The Secretary may in his unreviewable discretion establish a premium fee in excess of \$1,000 for any service relating to the immigration of any alien under section 203(b)(5) of this Act.
- (2) The Secretary of Homeland Security is authorized to establish and collect premium fees for petitions and applications other than those described in paragraph (1) of this subsection. These fees shall be used to provide certain premium-processing services to customers, and to make infrastructure or other improvements in the adjudications and customer-service processes. These fees shall not exceed \$1,000 per petition or application, and shall be established and adjusted in the unreviewable discretion of the Secretary of Homeland Security for each type of petition or application for which such a fee is provided.
- (3) The premium fees described in this subsection shall be paid in addition to any normal petition/application fee that may be applicable, and shall be deposited as offsetting collections in the Immigration Examinations Fee Account. For approval of the benefit applied for, the petitioner/applicant must meet the legal criteria for such benefit. The Secretary of Homeland Security may adjust such fees according to the Consumer Price Index.

- (4) Subchapter II of chapter 5 of Title 5, U.S. Code (commonly referred to as the "Administrative Procedure Act"), or the provisions of any other law relating to rulemaking or to publication in the Federal Register, shall not apply to the setting or adjustment of fees under this subsection. The setting or adjustment of fees by the Secretary under this subsection shall not be subject to judicial review.

Explanation of Changes:

Subsection 286(u) of the Immigration and Nationality Act (INA) authorizes a \$1,000 premium processing fee to be charged for employment-based immigration petitions and applications. Under this authority as implemented by regulation (8 C.F.R. § 103.2(f)), USCIS offers a premium processing service under which employers filing USCIS Forms I-129 seeking to sponsor aliens for certain immigrant or nonimmigrant classifications can obtain 15-day processing of their petitions by submitting the additional fee. The proposed amendment would authorize the Secretary of Homeland Security to establish premium processing fees for other applications or petitions, such as non-employment based immigration petitions and applications, employment authorization applications, or applications to change or extend nonimmigrant status. The determination whether to implement premium processing service for any specific adjudication, the terms of service, and the applicable premium fee, would be within the Secretary's discretion, but the fee could not exceed the \$1,000 charged for employment-based premium processing. Premium processing fees would be deposited, as are other adjudication fees, into the Immigration Examinations Fee Account in order to enhance USCIS customer service as well as provide the premium service itself. In order to provide the Secretary with flexibility to adjust the fees as needed, the amendment clarifies that APA rulemaking and Federal Register publication requirements do not apply. Rather, availability and terms of premium processing would be publicized through the USCIS web site. The amendment also authorizes premium fees in excess of \$1,000 for employment-based adjudications relating to the investor visa (EB-5) program for investors of at least \$500,000 in job-creating enterprises, including regional centers, for which the current \$1,000 cap does not justify the cost-effective provision of premium service.

PPA Mission Statement

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) Ensure the security and integrity of the immigration system, (2) Provide efficient and customer-oriented immigration benefit and information services (3) Increase understanding of citizenship and its privileges and responsibilities, (4) Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) Strengthen the infrastructure necessary to achieve USCIS' mission, and (6) Operate as a high-performance organization and position USCIS as an employer of choice.

The USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving over 6 million immigration benefit applications each year. These immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is a fee-based business – therefore, its business operations and associated budget varies from year to year depending upon the number of immigration benefit applications received.

The funds from the Immigration Examinations Fee Account (IEFA), Adjudication Services Program, is the primary funding source and Program supporting USCIS' mission. USCIS requests \$1.375 billion to process over 6 million immigration benefit applications, maintaining backlog goals achieved at the end of FY 2006, and ensuring the security and integrity of the immigration system. Funds from this Program will also be used for USCIS' Business Transformation Program.

H. PPA Budget Justifications (Cont'd)**Summary Justification and Explanation of Changes**

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Salaries and Benefits	\$555,316	\$638,000	\$601,600	(\$36,400)

Salaries and Benefits includes costs for 7,205 FTEs. The FY 2007 estimate includes an increase for cost-of-living adjustments, and a decrease related to expiration of term appointments for staff hired to support the backlog elimination efforts funded out of the Immigration Examinations Fee Account.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Travel	\$24,490	\$21,994	\$14,053	(\$7,941)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with federal travel regulations. The FY 2007 funding requested will be used to finance the travel and temporary duty costs of USCIS employees engaged in the day to day operations of the agency. The reduction over FY2006 reflects a planned decline in the number of employee travel assignments due to the completion of the backlog reduction program.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Transportation of Things	\$2,752	\$2,931	\$2,931	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2007 funding requested will be used to finance the transportation of furniture and other household goods associated with the rotation of overseas employees and the permanent change of station or relocation of domestically based USCIS federal employees.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
GSA rent	\$33,137	\$70,824	\$82,796	\$11,972

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 funding requested will be used to finance anticipated rent costs associated with USCIS operations.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Other Rent	\$3,296	\$1,425	\$1,425	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2007 funding requested will be used to finance the costs of non-GSA rental expenses associated with building space acquired for temporary staging and handling of benefit application and petitions received.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Communication, Utilities, and miscellaneous charges	\$3,899	\$15,399	\$18,399	\$3,000

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2007 funding requested will be used to finance local and long distance federal telephone system (FTS) lines, guard services, janitorial and other cleaning and property maintenance services acquire to support the operation of the USCIS.

PPA Mission Statement

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) Ensure the security and integrity of the immigration system, (2) Provide efficient and customer-oriented immigration benefit and information services (3) Increase understanding of citizenship and its privileges and responsibilities, (4) Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) Strengthen the infrastructure necessary to achieve USCIS' mission, and (6) Operate as a high-performance organization and position USCIS as an employer of choice.

The USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving over 6 million immigration benefit applications each year. These immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is a fee-based business – therefore, its business operations and associated budget varies from year to year depending upon the number of immigration benefit applications received.

The funds from the Immigration Examinations Fee Account (IEFA), Information and Customer Services Program, are used to provide timely, consistent, and accurate information to its customers that will reduce the frequency of repeated, redundant applicant contact with USCIS employees, thus improving agency efficiency. Through multiple channels of available assistance, including the USCIS website, toll-free call center (National Customer Service Call Center), and face-to-face appointments, USCIS will make it easier for our customers to get the information they need, when they need it.

PPA Mission Statement

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) Ensure the security and integrity of the immigration system, (2) Provide efficient and customer-oriented immigration benefit and information services (3) Increase understanding of citizenship and its privileges and responsibilities, (4) Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) Strengthen the infrastructure necessary to achieve USCIS' mission, and (6) Operate as a high-performance organization and position USCIS as an employer of choice.

The USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving over 6 million immigration benefit applications each year. These immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is a fee-based business – therefore, its business operations and associated budget varies from year to year depending upon the number of immigration benefit applications received.

The funds from the Immigration Examinations Fee Account (IEFA), Administration Program, fund USCIS Headquarters operations to support and guide USCIS offices around the world. These offices include Administration, Budget, Financial Management, Chief Counsel, Citizenship, Communications, Congressional Relations, Policy and Strategy, Training and Career Development, and Security and Investigations.

H. PPA Budget Justifications (Cont'd)**Summary Justification and Explanation of Changes**

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Salaries and Benefits	\$32,597	\$44,000	\$45,000	\$1,000

Salaries and Benefits includes costs for 532 FTEs. The FY 2007 estimate includes an increase for cost-of-living adjustments, and a decrease related to term staff for backlog elimination efforts funded out of the Immigration Examinations Fee Account.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Travel	\$1,753	\$3,847	\$3,847	\$0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance the travel and temporary duty costs of USCIS employees engaged in the day to day operations of the agency.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Transportation of Things	\$114	\$0	\$0	\$0

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance the transportation of furniture and other household goods associated with the rotation of overseas employees and the permanent change of station or relocation of domestically based USCIS federal employees.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
GSA rent	\$44,681	\$47,032	\$55,832	\$8,800

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be use to finance anticipated rent costs associated with USCIS operations.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Other Rent	\$0	\$443	\$443	\$0

Other rent includes all payments to a non-Federal source for rental space, land, and structures. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance the costs of non-GSA rental expenses associated with building space acquired for temporary staging and handling of benefit application and petitions received.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Communication, Utilities, and miscellaneous charges	\$18,173	\$7,012	\$7,012	\$0

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance local and long distance federal telephone system (FTS) lines, guard services, janitorial and other cleaning and property maintenance services acquire to support the operation of the USCIS.

H. PPA Budget Justifications (Cont'd)

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Printing	\$85	\$1,631	\$1,631	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2006 funding requested will be used to finance the costs of printing application and petition forms as well as other USCIS business materials.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Advisory and Assistance Services	\$15,117	\$2,177	\$2,177	\$0

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance advisory and assistance services obtained through competitive contract actions. Advisory and assistance services are being used by USCIS to support Information Technology and other related modernization initiatives. Advisory and assistance services are also obtained as needed to support the USCIS bi-annual fee study review, to assist with the planning and creation of a new refugee corps as well as to support improvements in the areas of facilities planning, financial systems design and employee training and career development.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Other Services	\$64,685	\$89,889	\$84,089	(\$5,800)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2007 request includes an increase for cost-of-living adjustments, plus recurring contracts that were previously funded from the discretionary backlog elimination funds. The FY 2007 funding requested will be used to finance contract services such as the mail handling, file creation, fee deposit and data entry of applications and petition information into USCIS national IT systems received within the USCIS Service Centers; operations and maintenance services on core USCIS IT systems; field office equipment maintenance contracts; contract staff to operate the card production systems used to produce green cards and work authorization documents; and contract staff taking fingerprints at Application Support Centers located throughout the United States. The USCIS relies heavily on the support of personnel and services obtained via contract actions.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Purchase from Government Accounts	\$31,480	\$31,500	\$31,500	\$0

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2007 request includes an increase for cost-of-living adjustments.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Operation & maintenance of facilities	\$0	\$710	\$710	\$0

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to obtain property maintenance services for USCIS leased buildings.

H. PPA Budget Justifications (Cont'd)

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Operation & Maintenance of equipment	\$1,714	\$1,569	\$1,569	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance the costs associated with the operation and maintenance of USCIS vehicles and their day-to-day storage.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Supplies & materials	\$1,982	\$3,300	\$3,300	\$0

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to purchase office supplies and materials required to support the day to day operations of the USCIS. Items falling under this object class definition include such common office items as pens, pencils, photo copier and printer paper, file folders etc.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Equipment	\$3,297	\$3,890	\$3,890	\$0

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2007 request includes an increase for cost-of-living adjustments. The FY 2007 funding requested will be used to finance office equipment lease agreements and associated service contracts. Items funded by this object class include fax machines, photo copiers, scanners and shredder devices.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Indemnity	\$65	\$0	\$0	\$0

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2007 budget request reflects cost-of-living adjustments.

U.S. CITIZENSHIP & IMMIGRATION SERVICES
H-1B Nonimmigrant Petitioner Account

I. Appropriation Overview

A. Mission Statement for H1-B Nonimmigrant Petitioner Account: The FY 2005 USCIS budget provided \$13 million from the H1-B Nonimmigrant Petitioner Account. These funds are the result of the H1-B Visa Reform Act of 2004, which requires employers who participate in the H1-B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base-processing fee of \$190 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives 5% of these funds, as well as the entire base-processing fee. These funds comprise approximately 1% of the total USCIS budget. The FY 2005 funding authorized was used to support Service Center contract activities and facility rent expenses related to the processing of immigration benefit applications.

In FY 2006, USCIS will use the funds provided from the H-1B Nonimmigrant Petitioner Fee Account to support Service Center contract activities and facility rent expenses that support the processing of immigration benefit applications.

In FY 2007, USCIS will again use the funds provided from the H-1B Nonimmigrant Petitioner Fee Account to support Service Center contract activities and facility rent expenses that support the processing of immigration benefit applications.

B. Budget Activities:

Adjudication Services - USCIS Service Centers are responsible for the timely and quality processing of:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.; and
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily

On average, on an annual basis, USCIS processes over 5 million immigration benefit applications at its Service Centers.

C. Budget Request Summary:

The USCIS requests \$13 million for the FY 2007 President's Request. These funds will support the processing of over 6 million immigration benefit applications; maintaining backlog goals achieved at the end of FY 2006, and ensuring the security and integrity of the immigration system.

II. Summary of FY 2007 Budget Estimates by Program/Project Activity (PPA)

III. Current Services Program Description by PPA

Department of Homeland Security
U.S. Citizenship and Immigration Services
H1-B Nonimmigrant Petitioner Account
Program Performance Justification
(Dollars in thousands)

PPA: ADJUDICATION SERVICES

	Perm. Pos.	FTE	Amount
2005 Actual	0	0	\$10,700
2006 Revised Enacted	0	0	\$13,000
2007 Adjustments-to-Base	0	0	\$0
2007 Current Services	0	0	\$13,000
2007 Program Change	0	0	\$0
2007 Request	0	0	\$13,000
Total Change 2006-2007	0	0	\$0

USCIS requests \$13 million for contract activities and facility rent expenses that support the processing of immigration benefit applications. The requested amount is set by Congressional statute providing USCIS with 5% of the fees collected for the H1-B visas (Nonimmigrant Petitioner). The fee revenues are used to support contract activities (mail, file, and data entry) and facility rent expenses related to the processing of immigration benefit applications at USCIS service centers.

CURRENT SERVICES PROGRAM DESCRIPTION:

USCIS Service Centers are responsible for the timely and quality processing of:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.; and
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily

On average, on an annual basis, USCIS processes over 5 million immigration benefit applications at its Service Centers.

PPA Mission Statement

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) Ensure the security and integrity of the immigration system, (2) Provide efficient and customer-oriented immigration benefit and information services (3) Increase understanding of citizenship and its privileges and responsibilities, (4) Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) Strengthen the infrastructure necessary to achieve USCIS' mission, and (6) Operate as a high-performance organization and position USCIS as an employer of choice.

The USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving 6 million immigration benefit applications each year. These immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is a fee-based business – therefore, its business operations and associated budget varies from year to year depending upon the number of immigration benefit applications received.

The funds from the H-1-B Nonimmigrant Petitioner Account, comprising 1% of the total USCIS budget request, are specifically targeted to contracting activities and facility rent expenses related to processing immigration benefit applications. These funds are the result of the H-1-B Visa Reform Act of 2004, which requires employers who participate in the H-1-B program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base processing fee of \$190 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives 3% of these funds, as well as the entire base processing fee. The FY 2007 requested amount will help allow USCIS to process over 6 million applications, maintaining backlog elimination goals.

Summary Justification and Explanation of Changes

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
GSA rent	\$9,700	\$7,000	\$7,000	\$0

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request has no change.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Other Services	\$1,000	\$6,000	\$6,000	\$0

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2007 request has no change. FY 2007 funding requested will be used to finance field office contract clerical staff supporting the adjudication process as well as program management support required for the continued development of e-filing capabilities.

U.S. CITIZENSHIP & IMMIGRATION SERVICES
Fraud Prevention and Detection Account

I. Appropriation Overview

A. Mission Statement for Fraud Prevention and Detection Account: The FY 2005 USCIS budget provided \$31 million from the Fraud Prevention and Detection Account. The funding received from this account was used specifically for activities related to preventing and detecting fraud of immigration benefit applications as stipulated in the L-1 Visa Reform Act of 2004, and later amended by Public Law 109-13, Section 403. This law requires petitioners who are seeking a beneficiary's initial grant of H1-B, H2-B, or L nonimmigrant classification or those petitioners seeking to change a beneficiary's employer within those classifications to pay \$500, and those seeking H2-B benefits to pay \$150, in addition to the base-processing fee of \$190 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives one-third of these funds, as well as the entire base-processing fee. These funds comprise approximately 2% of the total USCIS budget.

In FY 2005, USCIS used the funds received from the Fraud Prevention and Detection Account to expand its Fraud Detection and National Security (FDNS) Office by providing 160 additional FDNS staff positions (funded for one-half year as 80 FTEs) primarily in support of the USCIS priority to ensure the security and integrity of the immigration system. More specifically, the resources were used to augment the current anti-fraud efforts within USCIS by dedicating more staff and contractor support to conducting system checks that identified known (previously proven) fraud conspirators and their association with future filings. FDNS developed a proactive anti-fraud program that bounces key fraud indicators from past (proven) conspiracies against all incoming applications and petitions. FDNS refers matches (suspected fraud) to field FDNS immigration officers and/or ICE special agents for criminal investigations or administrative inquiry. In addition, 70 field Adjudication Officer positions (funded for one-half year as 35 FTEs) were hired in recognition that benefit fraud is often initially detected and uncovered during the interview process.

In FY 2006, USCIS will continue using the funding received from the Fraud Prevention and Detection Account to support its security related initiatives to include full-year continued funding for 160 FDNS positions (160 FTEs) and 70 field adjudication officer positions (70 FTEs). Additionally, contractor assistance to the FDNS will be funded to support the program's ongoing efforts to develop a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.

In FY 2007, USCIS will continue using the funding received from the Fraud Prevention and Detection Account to support its security related initiatives to include funding for 160 FDNS positions (160 FTEs) and 70 field adjudication officer positions (70 FTEs). Additionally, contractor assistance to the FDNS will be funded to support the program's ongoing efforts to develop a comprehensive and collaborative approach for detecting, prosecuting, and deterring immigration-related fraud.

B. Budget Activities:

Adjudication Services - FDNS was created to enhance the security and integrity of the immigration system, while simultaneously continuing to administer immigration benefits. FDNS plays a major role in accomplishing the USCIS mission of providing the right benefit to the right person at the right time, and no benefit to the wrong person. It does this by:

- Detecting and combating immigration benefit fraud
- Conducting and overseeing law enforcement (background) checks on persons seeking immigration benefits
- Performing as USCIS' primary conduit to/from the law enforcement and intelligence communities
- Identifying vulnerabilities and other weaknesses that compromise the integrity of the legal immigration system

C. Budget Request Summary:

USCIS requests \$31 million for this activity. These resources are necessary to ensure the security and integrity of the immigration system by preventing and detecting immigration benefit fraud. The requested amount is set by congressional statute providing USCIS with one-third of the fees collected for the H1-B, H2-B, & L visas and applied to fraud prevention and detection activities.

II. Summary of FY 2007 Budget Estimates by Program/Project Activity (PPA)

BUDGET ACTIVITY	DEPARTMENT OF HOMELAND SECURITY U.S. CITIZENSHIP & IMMIGRATION SERVICES (USCIS) SUMMARY OF FY 2007 BUDGET ESTIMATES BY APPROPRIATION AND PPA FRAUD PREVENTION AND DETECTION ACCOUNT (Dollars in Thousands)												
	FY 2005 Actual		FY 2006 Revised Estimate		FY 2007 President's Budget		INCREASE (G) OR DECREASE (L) FOR FY 2007			Other Changes			
	FTE	Amount	FTE	Amount	FTE	Amount	Total Changes	FTE	Amount	FTE	Amount	FTE	Amount
Adjudication Services													
Pay & Benefits	115	\$ 14,175	230	\$ 19,600	230	\$ 23,000	-	\$ 4,000	-	\$ -	-	\$ 4,000	
District Operating Expenses	-	\$ 9,000	-	\$ 9,000	-	\$ 6,000	-	\$ (3,000)	-	\$ -	-	\$ (3,000)	
Service Center Operating Expenses	-	\$ 3,000	-	\$ 3,000	-	\$ 2,000	-	\$ (1,000)	-	\$ -	-	\$ (1,000)	
Total	115	\$ 26,175	230	\$ 31,000	230	\$ 31,000	-	\$ -	-	\$ -	-	\$ -	

Note: The FY 2007 Adjudication Services PPA estimates reflect an increase in Pay & Benefits from Operating Expenses to account for underestimated payroll costs. Payroll for this new program were initially underestimated. Original cost estimates had these employees at the same cost as adjudication officers (career ladder to GS-12). Due to specialized skills, fraud officers career ladder to GS-13.

2007 Request	230	230	\$31,000
Total Change 2006-2007	0	0	\$0

USCIS requests \$31 million for this activity. These resources are necessary to ensure the security and integrity of the immigration system by preventing and detecting immigration benefit fraud. The requested amount is set by Congressional statute providing USCIS with one-third of the fees collected for the H1-B, H2-B, & L visas and applied to fraud prevention and detection activities.

CURRENT SERVICES PROGRAM DESCRIPTION:

FDNS was created to enhance the security and integrity of the immigration system, while simultaneously continuing to administer immigration benefits. FDNS plays a major role in accomplishing the USCIS mission of providing the right benefit to the right person at the right time, and no benefit to the wrong person. It does this by:

- Detecting and combating immigration benefit fraud
- Conducting and overseeing law enforcement (background) checks on persons seeking immigration benefits
- Performing as USCIS' primary conduit to/from the law enforcement and intelligence communities
- Identifying vulnerabilities and other weaknesses that compromise the integrity of the legal immigration system

The establishment of FDNS was supported by the findings and recommendations in GAO Report 02-66, "Immigration Benefit Fraud: Focused Approach is Needed to Address Problems" issued in January 2002. The report concluded that the U.S. legal immigration system is being used to further illegal activities and/or activities that threaten national security and public safety. GAO also concluded that legacy INS did not have an anti-benefit fraud strategy, had not designated it as a priority initiative, and did not have a mechanism to collect and report data to identify the volume and types of benefit fraud that exist.

Thus, FDNS, in partnership with U.S. Immigration and Customs Enforcement, Office of Investigations (ICE), has dual missions: detecting and combating fraud, and identifying threats to the national security and public safety posed by those seeking immigration benefits. This is an appropriate combination of responsibility because while the connection between immigration fraud and national security is palpable, the line that divides them is not always as clean. An analysis of the immigration history of the 9/11 terrorists reveals that all of them committed some form of immigration fraud. It is not, therefore, unreasonable to assume that those that threaten the national security of the U.S. today may also seek to evade our immigration laws through fraud.

FDNS was also tasked with directing, overseeing, and improving the completion of background checks on the millions of visa applicants, beneficiaries, and petitioners each year. As with the fraud detection mission, this task requires a delicate balance between facilitation and diligence. Over the past year, FDNS has conducted a comprehensive review of the background check process, and made a number of changes that enhance quality and processing times associated with background checks. It has placed priority emphasis on the resolution of national security hits, as well as developed a criminal alien referral policy and procedure jointly with its ICE counterparts. Since October 2004, over 1,500 criminal alien leads have been referred to ICE Investigations, and thousands of suspected absconders with Removal Orders have been reported to ICE Deportation and Removal Operations.

Because the majority of immigration benefit fraud begins with the filing of an application or petition with USCIS, it is essential to identify suspect cases as early in the process as possible, ideally before the application or petition reaches an adjudicator for decision making, and, most certainly, before an applicant or beneficiary is accorded a benefit that will enable him or her to enter or stay in the U.S. For these reasons, it is essential that USCIS develop the capacity to detect possible fraud, and work closely with ICE.

Towards this end, USCIS and ICE have developed and implemented a joint anti-fraud strategy that relies upon USCIS to detect the suspected fraud, and refer the fraud to ICE for possible criminal investigation and prosecution. The necessary structure, resources, policies, procedures, and other organizational crosswalks are now in place to support this strategy.

To enhance the capability to manage this anti-fraud and background check operation, USCIS recently developed and is in the process of implementing a new Fraud Tracking System (FTS). This system will enable FDNS to fully leverage technology in the combating of immigration fraud as well as provide a means by which law enforcement and intelligence entities (with a need to know) can access information to support operations that enhance national security. This unprecedented effort will position USCIS/FDNS to quantify and qualify the types of benefit fraud that exist, as well as identify patterns and other vulnerabilities that threaten the integrity of our immigration system. A future interface with the USCIS Central Oracle Repository (CISCOR) will allow real time, retrieval and analysis of data relating to the six million applications and petitions received by USCIS yearly.

FDNS is also responsible for reviewing operational malfunctions and systemic deficiencies, and proposing corrective action. This role includes reviewing proposed rules and regulations within USCIS. As part of the overall joint strategy and in partnership with ICE, both agencies identify vulnerabilities in the benefit fraud system and work together to eliminate the potential for exploitation of those vulnerabilities and prosecute the violators. Information on trends in fraud and criminal methodologies are shared among CIS and ICE to identify and prevent potential abuse of the system.

FDNS is USCIS' primary point of contact with, and conduit to/from, the law enforcement and intelligence communities. This includes participation in a variety of Departmental and Government-wide information sharing initiatives. As subject matter experts in immigration benefit-related laws, regulations, policies, procedures, and operational matters, and custodians of more than 100 million electronic and hard copy immigration records, USCIS (via FDNS) is now assigning officers to the Department's Homeland Security Operations Center (HSOC) and the Terrorist Screening Center (TSC). It is in the process of hiring additional personnel for assignments at DHS' Office of Information Analysis, the Department of State's (DOS) Fraud Prevention Program, and possibly other locations. FDNS is also USCIS' lead on systems-related access and information exchanges with other agencies, such as the DOS.

The FDNS Unit of USCIS has, in a very short time, created a program that addresses fraud prevention, national security and public safety in a systematic integrated way. Since October 1, 2004, USCIS calculates that in addition to the 1,500 criminal alien referrals made to ICE, FDNS Officers have also referred 1,528 benefit-fraud and 125¹ national security-related referrals to ICE for investigation. FDNS has developed standard operating procedures that take suspect cases out of the pending stream of USCIS cases, thereby facilitating the timely adjudication of cases of merit. FDNS has forged strong bonds with other DHS components as well as outside enforcement entities.

¹ This figure represents total referrals as calculated by USCIS. ICE utilizes a different system to track the number of referrals received by USCIS.

PPA Mission Statement

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to our customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals: (1) Ensure the security and integrity of the immigration system, (2) Provide efficient and customer-oriented immigration benefit and information services (3) Increase understanding of citizenship and its privileges and responsibilities, (4) Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade, (5) Strengthen the infrastructure necessary to achieve USCIS' mission, and (6) Operate as a high-performance organization and position USCIS as an employer of choice.

The USCIS is a component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits – approving over 6 million immigration benefit applications each year. These immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is a fee-based business – therefore, its business operations and associated budget varies from year to year depending upon the number of immigration benefit applications received.

The funds from the Fraud Prevention and Detection Account, comprising 2% of the total USCIS budget request, primarily supports the USCIS goal to ensure the security and integrity of the immigration system. These funds are specifically for activities related to preventing and detecting fraud of immigration benefit applications.

H. PPA Budget Justifications (Cont'd)**Summary Justification and Explanation of Changes**

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Salaries and Benefits	\$14,175	\$19,000	\$23,000	\$4,000

Salaries and Benefits includes costs for 230 FTEs. The FY 2007 funding requested will be used to support 230 full-time permanent (FTP) USCIS employees engaged in the prevention and detection of benefit fraud. The FY 2007 Request has increased due to underestimated payroll cost estimates.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
GSA rent	\$6,200	\$7,000	\$5,000	(\$2,000)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 funding requested will be used to finance anticipated rent costs associated with USCIS operations. The FY 2007 Request has decreased due to underestimated payroll cost estimates.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Communication, Utilities, and miscellaneous charges	\$3,000	\$1,000	\$1,000	\$0

Communications, utilities, and miscellaneous costs include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2007 request has no change. FY 2007 funds requested will finance cellular phones, federal telephone system (FTS) line costs, laptops and other essential communications equipment required by FDNS officers in the performance of assigned duties.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Other Services	\$2,800	\$3,000	\$1,000	(\$2,000)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. FY 2007 funding requested is needed to finance contract personnel to review and validate interagency border inspection system (IBIS) hits identified by USCIS adjudication staff during routine case processing activities. Contract staff will support FDNS staff by assisting in a more in depth review of positive hits generated from the adjudication units so as better identify cases needing greater scrutiny and possible law enforcement action. The FY 2007 Request has decreased due to underestimated payroll cost estimates.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Operation & Maintenance of equipment	\$0	\$1,000	\$1,000	\$0

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2007 request has no change. FY 2007 funding requested will be used to finance the operation and maintenance costs of FDNS electronic equipment and information technology systems.

A. Mission and Description

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by providing accurate and useful information to its customers, granting immigration and citizenship benefits, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system. USCIS has established six goals:

- Ensure the security and integrity of the immigration system,
- Provide efficient and customer-oriented immigration benefit and information services,
- Increase understanding of citizenship and its privileges and responsibilities,
- Ensure flexible and sound immigration policies and programs that meet the needs and obligations of the nation, including our international treaties on humanitarian protection and trade,
- Strengthen the infrastructure necessary to achieve USCIS' mission, and
- Operate as a high-performance organization and position USCIS as an employer of choice.

USCIS is responsible for granting or denying immigration benefits to people seeking to enter, reside, or work in the United States processing more than 6 million immigration benefit applications each year. Immigration benefits range from work authorization documents, to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States. USCIS is primarily a fee-based organization whose business operations and associated budget varies from year to year depending upon the demand for its services.

In Fiscal Year (FY) 2005, USCIS made significant progress toward fulfilling the President's goal of eliminating the backlog by the end of FY 2006. Production increased by 14.3% and the backlog decreased to 1 million immigration benefit applications from a high of 3.8 million in January 2004. USCIS also met and/or exceeded cycle time targets in 14 of 16 major form types. In addition, a total of 116,469 asylum cases were completed, representing a 7% increase in productivity from the previous fiscal year, when it completed 108,950. USCIS also worked steadily with its refugee program partners to successfully meet refugee admissions levels designated by the President while ensuring the integrity and security of the program. Officers conducted refugee status interviews in over 50 locations and interviewed more than 58,937 refugee applicants from over 60 countries. As a result of these efforts, 53,813 refugees were admitted to the United States during FY 2005, an increase of almost 1,000 over FY 2004.

B. Major Activities and Key Strategic Issues

Through a network of 250 local offices, Application Support Centers, Service Centers, Asylum offices, National Customer Service Call (NCSC) Centers, Forms Centers, and the Internet, USCIS works with applicants to collect, process, and grant a variety of benefits, such as:

- *Family-based petitions* - facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.;
- *Employment-based petitions* - facilitating the process for current and prospective employees to immigrate or stay in the U.S. temporarily;
- *Asylum and Refugee processing* - adjudicating asylum applications and the processing of refugees; and
- *Naturalization* - processing applications of those who wish to become U.S. citizens.

USCIS-1

USCIS works in coordination with other bureaus of DHS, and with agencies such as the Departments of Labor and State, and the Federal Bureau of Investigation (to conduct background checks).

On average, USCIS annually:

- Processes over 6 million applications
- Serves over 14 million customers via the National Customer Service Call Centers
- Serves approximately 5 million customers through information counters at local offices
- Processes close to 90,000 asylum cases
- Conducts approximately 70,000 refugee interviews, and
- Conducts the naturalization of approximately half a million new citizens.

USCIS recognizes that continuing to perform business as usual will not result in success, so it has launched a multi-year Business Transformation Program that represents philosophical and substantive changes from current processes. As part of the Second Stage Review initiated by Secretary Chertoff, the USCIS Transformation Program will transition the agency from one of outdated IT systems operating in a forms-centric environment to a single web-based IT tool operating in a customer-centric environment driven by performance metrics.

To maintain backlog elimination goals in the face of ever changing demands for immigration benefits, new initiatives to modernize business practices and upgrade IT have been launched and are coordinated under the transformation effort. USCIS' goal is to transform the current paper-based data systems into a modern, world-class digital processing resource that will enhance customer service, better prevent future backlogs, and improve efficiency with expanded electronic filing and strengthened security. These new initiatives will also help meet customer expectations for on-demand information and real-time electronic service over the Internet.

USCIS will also play a major role in the Administration's Secure Border Initiative (SBI). The SBI is a comprehensive multi-year plan to secure America's borders and reduce illegal migration. Homeland Security Secretary Michael Chertoff has announced an overall vision for the SBI which includes, among other things, greatly increased interior enforcement of our immigration laws – including more robust worksite enforcement. USCIS' Employment Eligibility Verification (EEV)¹ program will play a major role in this initiative as it seeks to expand the system to electronically verify the eligibility of persons for employment in the United States.

C. Resources Requested and Performance Impact

The budget includes \$1.9 billion for USCIS (\$181.9 million discretionary; \$1.8 billion mandatory), which is an increase of \$98 million and 5 percent above the FY 2006 level. Included is a one-time discretionary program increase of \$47 million for business transformation, funding of \$134.9 million for the SAVE (Systematic Alien Verification for Entitlements) and EEV Programs, and \$30 million in mandatory pay and non-pay adjustments from projected fee increases.

The request will modernize and overhaul business operations and the underlying IT that supports those operations to more efficiently and effectively meet its mission of administering the nation's immigration laws and providing the Department with the information required for enforcement

¹ Formerly titled the Basic Pilot Program.

purposes. The request also expands the SAVE program pursuant to new identification requirements of the Real ID Act, and expands the existing electronic system to verify the eligibility of persons for employment in the United States.

The investment in the Business Transformation Program will support modernization of USCIS processes and systems to improve sharing of immigration information, eliminate paper-based processing, and allow USCIS to more effectively respond to changing workload. Additionally, it will make it easier and faster for customers to electronically file immigration applications, get updates on the status of their applications, and, as appropriate, receive immigration benefits.

These requested resources are consistent with findings from the FY 2007 OMB Program Assessment Rating Tool (PART) review of Immigration Services. The review identified program management and results as areas for improvement, and noted the following:

- Modernize IT systems to better respond to fluctuating workload
- Reengineer business processes to modernize processes and systems to more efficiently adjudicate applications and effectively provide immigration benefits

USCIS is addressing both these recommendations through its Business Transformation Program.

The new business model will mark the inception of an account-based, customer-centric, processing system and the retirement of the traditional application-centric, or case-based processing system in use today. USCIS expects the Business Transformation Program will enhance security by:

- linking biometric and biographic information to better ensure identity verification;
- expanding biometric storage to enhance identification of potential security risks;
- developing more extensive and reliable systems interfaces to allow DHS Components and law enforcement to retrieve vital information about individuals; and
- ensuring through automation that background checks are completed as early in the process as possible.

The new business model will also enhance customer service as:

- the processing system will be easier for customers to navigate;
- delays associated with the movement of paper files will be drastically reduced;
- workload will be able to be shifted electronically as necessary to balance work nationwide, reducing application cycle times; and
- delivery of secure documents will be faster.

In addition, the case processing system will result in increased overall efficiency as duplicative efforts will be eliminated, interoperability of systems will be improved, and one-stop access to background and security check information will be available. Overall time spent on non-adjudicative activities such as inter-filing and file movement will also be reduced dramatically. The improvements resulting from this new business model will also better position USCIS to support the President's goal for a Temporary Worker Program workload

Immigration Security and Integrity

In FY 2005, USCIS utilized 753 FTEs and \$290 million to operate a program of comprehensive quality assurance and security measures to ensure that benefits are granted only to eligible

individuals. For FY 2006, the estimate for this program is 868 FTEs and \$292.5 million. This reflects an overall increase in 115 FTEs associated with the annualization of personnel dedicated to fraud prevention and detection activities per the L-1 Visa Reform Act of 2004.

The FY 2007 Budget estimate includes 868 FTEs and \$295.5 million. This reflects an overall increase of \$3 million for pay and non-pay adjustments from projected fee increases.

Adjudication Services

In FY 2005, USCIS utilized 7,471 FTEs and \$1,340.5 million to support the processing of immigration and citizenship benefits. For FY 2006, the estimate is 7,511 FTEs and \$1,448 million. This reflects a total increase of 40 FTEs to process non-employment based premium processing cases, and an increase in projected fee revenues due to the granting of Temporary Protected Status to certain designated countries.

The FY 2007 Budget estimate includes 7,061 FTEs and \$1,405 million. This reflects an overall decrease of 450 FTEs and \$44 million due to the completion of backlog elimination efforts begun in FY 2002 and associated temporary discretionary funding (\$79.2 million), as well as a one-time appropriation for IT Transformation/Digitization efforts (\$34.65 million). These decreases are offset by increases for the Business Transformation Program (\$47 million) and pay and non-pay adjustments from projected fee increases (\$24 million).

Information and Customer Services

In FY 2005, USCIS utilized 1,790 FTEs and \$138 million to provide timely, consistent, and accurate information to our customers. For FY 2006, the estimate is 1,790 FTEs and \$141 million. This reflects an overall increase for pay and non-pay adjustments from projected fee increases.

The FY 2007 Budget estimate is 2,155 FTEs and \$279 million. This reflects an overall increase of \$138 million due to a program increase of \$134.99 million and 365 FTEs in discretionary funds for the SAVE and EEV Programs, and \$3 million for pay and non-pay adjustments from projected fee increases.

Citizenship

In FY 2005, USCIS utilized 38 FTEs and \$6.5 million to enhance educational resources and promote opportunities to support immigrants' integration and participation in American civic culture. For FY 2006, the estimate is 38 FTEs and \$6.5 million.

The FY 2007 Budget estimate includes 38 FTEs and \$6.5 million, the same as FY 2006.

D. How USCIS Programs and Their Performance Goals Align to and Support the DHS Strategic Plan Objectives.

The following list of USCIS programs with their performance goals are followed by the DHS strategic plan objectives they support.

Immigration Security and Integrity – Enhance the integrity of the legal immigration system, and identify persons who pose a threat to national security and/or public safety.

2.6 - Ensure the security and integrity of the immigration system.

Adjudication Services – Provide immigration benefit services in a timely, consistent, and accurate manner.

6.2 - Provide efficient and responsive immigration services that respect the dignity and value of individuals.

6.3 - Support the United States humanitarian commitment with flexible and sound immigration and refugee programs.

2.6 - Ensure the security and integrity of the immigration system.

Information and Customer Services – Provide timely, consistent, and accurate information to our customers.

6.2 - Provide efficient and responsive immigration services that respect the dignity and value of individuals.

Citizenship – Enhance educational resources and promote opportunities to support immigrants' integration and participation in American civic culture.

6.1 - Increase understanding of naturalization, and its privileges and responsibilities.

E. Performance Based Budget Highlights by Program

For each USCIS program, the performance goal, key measures, total budget and FTE are:

Performance Goal: Immigration Security and Integrity – Enhance the integrity of the legal immigration system.					
Measure:	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
Conduct Benefit Fraud Assessment on X form types and report as percentage of fraudulent cases found.	Target	N/A	Baseline	3	2
	Actual	N/A	33% (I-360), 1% (I-90)	TBD	TBD
Number of form types where procedural and/or legislative changes to counteract fraud are proposed as a result of Benefit Fraud Assessments	Target	N/A	Baseline	3	2
	Actual	N/A	N/A	TBD	TBD
Program: Immigration Security and Integrity	\$ Thousands	\$257,540	\$290,186	\$292,465	\$295,408
Lead Organization: U.S. Citizenship and Immigration Services	FTE	638	753	868	868

USCIS-5

Performance Goal: Adjudication Services – Provide immigration benefit services in a timely, consistent, and accurate manner.					
Measure: Actual cycle time to process form I - 485 (Application to Register for Permanent Residence or to Adjust Status).	Fiscal Year	FY 2004	FY 2005	FY 2006	FY 2007
	Target	20 Months	15 Months	6 Months	6 Months

Lead Organization: U.S. Citizenship and Immigration Services	FTE	38	38	38	38

**Explanation of Measure: The number of significant outreach actions conducted each year divided by the number of Community Liaison Officer (CLO) FTEs will measure the average number of significant outreach actions per year per CLO. With this indicator, the Office will be able to track the progress of the efficiency of our program, and estimate how much more outreach we could accomplish with the addition of any new CLO FTE. Since the Office of Citizenship is

USCIS-6

mandated to increase the understanding of citizenship, the Office must maintain a constant and continuous outreach agenda. The CLO's fulfill this mission by working in 19 locations across the country to establish and maintain relationships with community stakeholders in order to promote civic integration of immigrants. Their work includes conferences, ceremonies, meetings, presentations, and trainings.

Total	8,417	\$1,706,371	10,207	\$1,887,850	10,122	\$1,985,990	(85)	\$98,140	365	\$181,990	(450)	(\$83,850)

¹ FY 2006 Enacted reflects 1% across-the-board rescission pursuant to P.L. 109-148.

FY 2007 Note: The Adjudication Services Program reflects an increase in discretionary funds of \$47 million for the Business Transformation Program, the Information and Customer Services Program reflects an increase in discretionary funds of \$134.99 million for the operation and expansion of the SAVE (Systematic Alien Verification for Entitlements)/EEV (Employment Eligibility Verification) Program, and all programs reflect a \$30 million mandatory increase for pay and non-pay adjustments from projected fee increases.

FY 2007 Note: An overall net decrease of \$42.85 million in the Adjudication Services Program reflects reductions due to the successful completion of backlog elimination efforts begun in FY 2002 and the conclusion of associated temporary discretionary funding (\$79.2 million) and a one-time appropriation for IT Transformation/Digitization efforts (\$34.65 million). These decreases are offset by increases for the Business Transformation Program (\$47 million) and pay and non-pay adjustments from projected fee increases (\$24 million).

FY 2007 Note: FTE levels shown are higher than the Budget Appendix by a total of 168 FTE dedicated to the SAVE/Basic Pilot program. These were omitted in error. The requested FTE levels are based on a preliminary estimate of needs that may change as requirements are better defined.

USSS - i

iii. Status of Congressionally Requested Studies and Reports

**Department of Homeland Security
U. S. Secret Service (USSS)**

Status of Congressionally Requested Studies, Reports, and Evaluations

1. House Report 109-79, page 73 recommends providing the Service with authority and funding for an additional 15 FTEs for foreign field office staffing and directs the Service to provide, no later than November 1, 2005, a report detailing where these additional FTEs will be located. The due date was changed in the Conference Report on the FY 2006 appropriation to coincide with submission of the FY 2007 budget. Target response to the Committee February 10, 2006.
2. House Report 109-79, page 73 directs the Service to submit a report that provides statistical details of training productivity for the period of fiscal year 2000 through fiscal year 2005, including: a complete breakout of the number of agents trained at the James J. Rowley Training Center and the purpose for which they received training; the number, type, and purpose of tactical and specialized training courses that have been administered; the number and type of state and local law enforcement officials that have been trained; and a detailed summary of changes in the training curriculum for both special agents and state and local officials. This report must also include an explanation of the metrics used by the Service to measure training performance and productivity. Target response to the Committee February 10, 2006.
3. House Report 109-79, page 75 directs the Secret Service to re-submit the JJRTC Master Plan, originally request in FY 2004, along with the fiscal year 2007 budget. This revised, 5-year plan should include a detailed breakout of the costs associated with current needs and challenges; a detailed breakout of the costs associated with specific proposals for enhancing the curriculum and facilities; a cost-benefit analysis of a student/trainee dormitory; the costs associated with the modernization and refurbishment of the canine training facility; and a detailed summary of how the JJRTC is supporting other federal agencies, particularly other DHS agencies. This report should include, at a minimum, historical data from fiscal year 2004, current year data from fiscal year 2005, and the five-year master plan for fiscal years 2006 through 2010. Target response to the Committee February 27, 2006. The Service is working with a contractor regarding the 5-year plan for the Rowley Training Center, and the contractor asked for more time in preparing this plan. USSS Office of Congressional Affairs discussed extending the due date for this report with both the House and Senate appropriations subcommittee staff, and the staff agreed that the date could be extended to the 27th of February.
4. House Report 109-79, page 72 and Conference Report 109-241, page 63 direct the Service to submit a workload re-balancing report along with the fiscal year 2007 budget request that provides a detailed summary of the steps the agency will take to achieve a target overtime of no more than 60 hours per special agent per month. The Committee believes that workload re-balancing should reflect an equitable split of special agent time devoted to investigations and protection of 50 percent to each as well as increased availability for training. Target response to the Committee February 10, 2006.

5. House Report 109-79, page 74 and Conference Report 109-241, page 62 direct the Secret Service to submit a NSSE Budgeting Model with the fiscal year 2007 budget request that includes a detailed accounting of the costs associated with NSSEs, including manpower projections, resources, technical support, travel, and other related expenses. This model should not only incorporate the historical cost data from previous NSSEs, it should also categorize these events in such a way that the primary variables associated with NSSEs—including geography, duration, protectees, and the nature of the given venue or event—are all considered and weighted accordingly. Target response to the Committee February 10, 2006.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

UNITED STATES SECRET SERVICE
SALARIES AND EXPENSES

I. Appropriation Overview**A. Mission Statement for Salaries and Expenses:**

The United States Secret Service (USSS) performs two critical homeland security missions: protection and criminal investigations. USSS protects the President and Vice President, their families, visiting heads-of-state/government, and other designated individuals, such as the Secretary of Homeland Security; investigates threats against these protectees; protects the White House, Vice President's Residence, Foreign Missions, and other designated buildings within the Washington, D.C. area; and designs, coordinates, and implements operational security plans for designated National Special Security Events. USSS investigates violations of laws relating to: counterfeiting of obligations and securities of the United States; financial crimes such as access device fraud, financial institution fraud, identity theft, and computer fraud; and computer-based attacks on our nation's financial, banking, and telecommunications infrastructure.

In order to accomplish both its protective and investigative missions, USSS has offices located throughout the United States and in 15 foreign countries. The employees of USSS are predominantly special agents, uniformed officers, and support personnel.

B. Budget Activities:

In FY 2006, the Service received \$1.2 billion for its Protection and Investigations Activities. Included in this amount is \$6.852 million for protective countermeasure programs. Also, this amount includes \$9.938 million to hire and train 71 additional Special Agent and support positions. Additional positions will be added to the counter surveillance unit, the counter assault team, and additional protective support technicians, physical security specialists and electronic crimes task force agents will be hired.

Activity: Protection

USSS successfully provided protection to over 160 foreign heads-of-state/government who attended the United Nations General Assembly 60th anniversary (UNGA-60) in New York City. Security plans were developed and constantly changed until the day of the event to adapt to the ever-changing number of protectees attending the event.

Also during FY 2005, USSS successfully provided protection to 53 permanent protectees, and project that in FY 2007 protection will be provided at 2,000 stops for foreign heads-of-state and their spouses visiting the country.

USSS is mandated to provide protection to former Presidents for a period of 10 years after leaving office; this protection may be extended if available intelligence indicates that the threat level warrants such an extension. In January 2009, the Service will need to have a detail fully equipped and operational for the protection of former President Bush and Mrs. Bush. Planning and staffing for the new detail will begin in FY 2007 so all will be in place and operational following the Inauguration of the new president in January of 2009.

Activity: Field Operations

Operation Firewall

The Electronic Crimes Special Agent Program (ECSAP) allows agents to not only investigate criminal violations, but to identify and address potential cyber vulnerabilities before they are exploited. This proactive nature of the program has proven invaluable to successfully preventing cyber attacks that would have otherwise resulted in the large scale financial losses to U.S.-based companies and a disruption of day-to-day services utilized by citizens of this country.

During FY 2005, USSS conducted a technologically ground-breaking cyber crime investigation known as Operation Firewall. Operation Firewall involved USSS hosting an established website that was a portal for online fraud. This website was used by criminals throughout the world to trade fraudulently obtained credit card account information.

The investigation culminated with agents nationwide and overseas executing 26 search warrants. Operation Firewall led to arrests not only in the United States, but also in Argentina, Belarus, Bulgaria, Canada, Estonia, Poland, Sweden and the United Kingdom.

To date, over 33 arrests have been made domestically and overseas. A significant number of manufacturing/identification plants, counterfeit notes (euros and dollars), counterfeit credit cards, and narcotics were seized. Upon preliminary findings, it was determined that this particular operation prevented at least one-half billion dollars in potential fraud losses.

The investigation of other ECSAP cyber crime cases has resulted in similar savings to potential victims. In FY 2006 and FY 2007, 312 new agents will participate in ESCAP training.

Supernote Investigation

The "Supernote" is a high-quality counterfeit note of federal currency first detected in 1989. The "Supernote" investigation has been ongoing since the note's first detection. USSS is working very closely with the intelligence community in analyzing Supernote distribution activity. Since 1989, USSS has seized almost \$40,000,000 of the Supernote. The quality of this family of notes, as well as the note's origin, is of great concern to the Service.

Bogotá Resident Office Recovers \$4M in Counterfeit, Arrests Seventeen

During FY 2005, agents assigned to Bogotá Colombia, working in conjunction with Bogotá government officials and confidential informants in Cali, Colombia infiltrated the Arana crime organization in Colombia. The Arana organization is suspected of being one of the largest counterfeiting groups in Colombia. At the conclusion of a four month investigation, agents from the

Bogotá Resident Office, supplemented by Miami field office agents, and in conjunction with approximately 150 Colombian police officers, executed 18 search warrants, arrested 17 members of the Arana crime organization and seized \$4 million.

During FY 2006 and FY 2007, field offices will continue conducting security "advances" and provide other direct support for protective visits within their district while also conducting criminal investigations involving counterfeiting, financial and cyber crime.

Activity: Administration

Management and Organization Division

Major accomplishments for FY 2005 include working with the Department of Homeland Security (DHS) to solicit and select a vendor to design and implement a Department-wide time and attendance system capable of capturing labor distribution.

The Management and Organization Division also developed analytical methodology to successfully complete the Office of Management and Budget's Program Assessment Rating Tool (PART). The Service received ratings of "effective" for PARTs of three USSS programs.

In FY 2006, the Management and Organization Division will be working with DHS to develop a labor distribution system that meets the unique needs of the Service. Pilots of the newly-developed system will be conducted at offices of varying scope and size. The office will also work with DHS to select a vendor to develop a Service-wide Integrated Document Management System (IDMS).

In FY 2007, the new labor distribution system and integrated document management system will be implemented and the appropriate training conducted.

Procurement Division

In FY 2005, the Procurement Division implemented a new contract writing system that has integrated with the financial management system and the property management system. The prior system was a stand alone system that was not integrated with other systems in the Service.

Procurement awarded about \$90,000,000 in procurement actions in FY 2005.

Financial Management Division

An integrated commercial off-the-shelf financial management, travel, property management, and acquisition system was implemented to support the protective and investigative missions. This implementation will support the Department of Homeland Security's goal of producing timely and accurate financial statements.

Goals and accomplishments within Human Resource divisions include the following:

Human Resources Division

- Revise the merit promotion plan for special agents
- Implement an applicant tracking system within Recruitment and Personnel Security (RPS) and Personnel (PER)
- Continue to enhance efforts to recruit, hire, and retain the brightest, most qualified applicants with diverse skills, ethnicity and backgrounds for employment
- Implement the Max Human Resources System (MaxHR)

Recruitment and Personnel Security Division

- Complete the required Department of Homeland Security (DHS) recertification for all USSS Sensitive Compartmented Information Facilities (SCIF)
- Provide classified document and security awareness for all employees
- Review all safety programs and, if necessary, implement new operational procedures to ensure compliance with required OSHA regulations

Personnel Division

- Implement Employee and Manager Self Service (HR Connect)
- Go live with Career Connector (Quick Hire)
- Implement rotational assignments to enable employees to develop additional competencies and a broader knowledge base of human resources

Activity: Training

During FY 2005, initial training was completed for 240 Special Agents, 216 Uniformed Division Officers, and approximately 120 administrative, professional, and technical positions. The James J. Rowley Training Center provided training for a total of 43,714 students. This training included 48 basic new recruit courses for 1,128 students, 609 in-service courses scheduled for 7,479 students, and 35,107 weapon re-qualifying students. The James J. Rowley Training Center anticipates similar course and student statistics in FY 2006 and FY 2007.

In FY 2006, the Office of Training intends to develop a comprehensive in-service training program for Special Agents and Uniformed Division Officers. Also planned is the formulation and development of a systemic process to meet the accreditation standards established by the Federal Law Enforcement Training Accreditation (FLETA) Board.

James J. Rowley Training Center

The following are the goals for the James J. Rowley Training Center (JJRTC) during the next two fiscal years:

- Develop a comprehensive "Master Plan" for JJRTC
- Launch the Learning Management System (LMS), which will provide access to catalog of training and web-based courses; view training histories on-line; nominate individuals for training on-line; and track resources associated with training

- Incorporate and expand the use of technology (e.g. virtual teleconference, virtual classroom and web-based) to send recurring training to the field offices when traditional instructor lead training is impractical, time sensitive or cost prohibitive

Major challenges impacting the USSS' ability to accomplish its mission during the ongoing Global War on Terror include terrorists' sustained motivation to attack U.S. interests (including its leaders and economy) and the increasing technological sophistication of the threat environment. It is imperative to equip personnel with the technological tools necessary to operate in the modern threat environment inclusive of nuclear, biological, chemical, and radiological threats to protectees, protected facilities, and protected events.

The Service continues to assess its technological capability to identify and mitigate threats to fixed and temporarily protected sites visited by the President, Vice President, and high-threat protectees. In FY 2007, the Service will enhance, upgrade, and replace several systems for existing Classified Programs that address physical, technological, electronic, and air security threats. In addition, the Service will add additional limousines to the primary Presidential/Vice Presidential armored vehicle fleet, enhancing the availability and operability of vehicles to ensure security for the President and Vice President when they are in a travel status.

Other major challenges to the USSS's ability to accomplish its mission derive from the American election cycle and term limitations. During 2007, the Service will begin preparations for the 2008 Presidential Campaign, by providing training to candidate/nominee protective detail personnel, and procuring and leasing equipment and supplies to support candidate/nominee protective operations. With President Bush completing his second and last term, and with Vice President Cheney indicating he will not be a candidate/nominee for President in 2008, the Service faces an unprecedented situation relative to candidate/nominee protection. The Service will need to provide protection for candidates and nominees from both parties in addition to protecting the sitting President and Vice President. Additional staffing is also necessary to provide protection for another former President at the completion of President George W. Bush's second term. In order to prepare strategically for inevitable and mission-critical workload increases, the Service must budget in FY 2007 for both Campaign 2008 and the President's post-presidency detail.

In summary, the environment in which the USSS must accomplish its mission in FY 2007 – FY 2011 will be characterized by the following major challenges:

- Terrorists' sustained motivation to attack U.S. leaders and economy
- Increasing technological sophistication of the threat environment
- The American election cycle

C. Budget Request Summary

USSS requests 6,628 positions, 6,613 FTE and \$1,440,478,000 for FY 2007. The total adjustments-to-base are 33 FTE and \$18,451,000. Program increases include 31 positions, 16 FTE and \$22,200,000.

Allocation of base resources within the request for 2007 in part reflects a realignment of resources necessary to maintain specific service levels for 2006.

The budget will fund the following program initiatives:

Increments over current service: Former President Bush Detail

Funding is requested to staff and support the post-presidency detail of President Bush. Although the detail will not be operational until January 20, 2009, providing funds in FY 2007 will allow for recruiting, hiring and training of personnel in advance of President Bush leaving office. Upon completion of training, these new agents will be used to support candidate/nominee protection throughout Campaign 2008. Following the Inauguration of the new president, these agents will be used to backfill senior special agents who will be required to staff the post-presidency detail. This proactive approach will allow for a smooth implementation of protection and transition of personnel without jeopardizing other critical program operations. Staffing the new detail supports accomplishment of the Domestic Protectees program performance goal to protect our nation's leaders and other protectees by ensuring protectees arrive and depart safely 100 percent of the time.

Increments over current service: Protective Terrorist Countermeasures Support Programs

USSS is requesting additional base funding to support and enhance critical operational and classified systems.

Technical Surveillance and Electronic Countermeasures

Funding will be used to upgrade, enhance, replace and maintain existing critical classified systems used to identify and mitigate technical and electronic threats to fixed and temporary protected sites visited by the President, Vice President, and other high-threat protectees. These classified countermeasures include state-of-the-art technical and electronic surveillance systems (fixed and portable) that identify and mitigate current and emerging electronic threats; the specialized software supporting these systems must be upgraded. If these systems are not upgraded, the Service's ability to identify and negate electronic devices used for intelligence intercepts and/or the activation of explosive or other hazardous devices will be compromised. The requested upgrades and enhancements will support accomplishment of the performance goal to protect our nation's leaders and other protectees.

Chemical / Biological Mitigation

Requested funding will support specialized threat-detection, including Hazardous Agent Mitigation Medical Emergency Response (HAMMER) and Rapid Intervention Safety and Command (RISC). HAMMER and RISC protect the President, Vice President, and other high-threat protectees from a variety of chemical/biological/radiological/nuclear threats, as well as provide response for medical and rescue emergencies.

Funding will allow for expansion of fixed and portable chemical/biological/radiological/nuclear surveillance and alarm systems; procurement of specialized monitoring and rescue equipment; replacement of personal protective equipment and biological and chemical detection equipment; and expansion of services required to collect, analyze, and mitigate chemical threats. Funding would provide a necessary replacement cycle for the specialized chemical and biological mitigation equipment. The requested equipment and services will support accomplishment of the performance goal to protect our nation's leaders and other protectees.

Enhancements to Communications Systems

Funding will allow for the acquisition of classified (HSDN) systems, wireless communications (Blackberry) systems and specialized encrypted radio systems, as well as allow for the establishment of a replacement cycle for existing equipment. The existing systems, both fixed and portable, require upgrades and enhancements to support critical mission requirements aligned to the performance goal to protect our nation's leaders and other protectees.

Software Application Modernization Services

Funding is required to upgrade and integrate new software in support of operational and classified systems; migrate from mainframe systems (as below); and convert operational data to a web-based system. Modernization of existing applications and migration to web-based systems will position the USSS to be interoperable with Departmental systems, systems of other organizational elements, and other government agencies. This interoperability will enhance the ability to identify and mitigate threats to persons protected by the USSS, and to homeland security in general.

Special Operations Equipment

Funding will be used to enhance, acquire, replace, and maintain specialized weapon systems and tactical equipment (high-tech night vision, tactical body armor, lasers sites) used by members of the Counter Assault Team, Counter Sniper Team, Emergency Response Team, and Counter Surveillance Team. Teams perform critical protective support missions that include identifying and mitigating threats against protectees and protected sites and venues. Team members must have functional, state-of-the-art tactical equipment and specialized weapons systems in order to successfully achieve results. Additional funding for these teams will support accomplishment of the performance goal to protect our nation's leaders and other protectees by ensuring protectees arrive and depart safely 100 percent of the time.

Primary Armored Vehicles

USSS requires funding to increase and maintain current primary Presidential/Vice Presidential armored vehicles. The vehicle carrying the President serves as the Oval Office when he travels beyond the perimeter of the White House Complex. Additional funding will allow for expansion, maintenance, and replacement of the existing Presidential/Vice Presidential armored vehicle fleet. The primary Presidential/Vice Presidential armored vehicles contain state-of-the-art technologies, including transparent armor that is vital to the ability to provide critical protection to the President and Vice President when outside of protected sites. The degree of protection afforded by these primary armored vehicles is significantly higher than it is for any other armored vehicle in the world. The availability and operability of the Service's armored fleet would be greatly enhanced through this additional funding and contribute to the accomplishment of the performance goal to protect our nation's leaders.

[Note: any discussion of vehicle capabilities must be conducted in closed sessions. A document classified "Secret" describing the performance of the above armor systems is available upon request.]

Spectrum Relocation

In December 2004, the Congress passed and the President signed the Commercial Spectrum Enhancement Act (CSEA, Title II of P.L. 108-494), creating the Spectrum Relocation Fund (SRF) to streamline the relocation of Federal systems from certain spectrum bands to accommodate commercial use by facilitating reimbursement to affected agencies of relocation costs. The Federal Communications Commission has allocated this spectrum for Advanced Wireless Services, and plans to auction it as early as June 2006. Funds will be made available to agencies following the crediting of auction receipts to the SRF, anticipated in FY 2007. Following the transfer of funds from the SRF to agency accounts, system relocation efforts will commence. The amounts reported here are the agency's estimated relocation costs, as approved by the Office of Management and Budget, and as reported to the Congress by the Department of Commerce in December 2005. Funds are mandatory and will remain available until expended, and agencies will return to the SRF any amounts received in excess of actual relocation costs.

USSS intends to implement the Commercial Spectrum Enhancement Act frequency change on all affected components (microwave systems, receivers, transmitters) beginning October, 2006. This frequency change from 1710-1755 GHZ to existing frequencies requires reprogramming of radio components only, and is estimated to cost \$106,000 over a 12 month period.

III. Current Services Program Description by PPA

Department of Homeland Security
U.S. Secret Service
Salaries and Expenses
Program Performance Justification
(Dollars in thousands)

PPA: PROTECTION

	Perm.		
	Pos.	FTE	Amount
2005 Actual	3,999	3,929	\$791,820
2006 Revised Enacted	3,822	3,804	\$758,353
2007 Adjustments to Base		18	11,004
2007 Proposed Base Realignment	65	65	32,433
Campaign Labor Adjustment	24	24	3,000
2007 Current Services	3,911	3,911	\$804,790
2007 Program Changes	31	16	22,200
2007 Request	3,942	3,927	\$826,990
Total Change 2006-2007	120	123	68,637

USSS requests \$826.99 million for this activity. This is an increase of \$68.637 million from FY 2006. Adjustments to the base include position annualization (\$979 thousand), pay annualization and pay and non-pay inflation (\$12.525 million). Proposed realignments to the base of (\$32.433 million) and 65 FTE were made based on actual 2005 spending, (-2.500 million) was realigned to the proposed new National Special Security Event (a separate no-year appropriation), which more accurately projects anticipated FY 2007 spending by PPA. The 2007 request includes the President Bush post-presidency detail (\$5 million & 16 FTE), armored vehicles (\$9 million) and classified programs (\$8.2 million). Also, 24 FTE and (3 million) has been realigned from the field operations program to the protection program to provide planning and training for the 2008 Presidential Campaign.

CURRENT SERVICES PROGRAM DESCRIPTION:

Protection is the primary mission of the Secret Service. USSS is authorized by law to protect:

- the President, the Vice President, (or other individuals next in order of succession to the Office of the President), the President-elect and Vice President-elect;
- the immediate families of the above individuals;
- former Presidents and their spouses for their lifetimes, except when the spouse re-marries (In 1997, legislation was passed limiting USSS protection to former Presidents for a period of not more than 10 years from the date the former President leaves office.);
- children of former presidents until age 16;
- visiting heads of foreign states or governments and their spouses traveling with them, other distinguished foreign visitors to the United States, and official representatives of the United States performing special missions abroad; and

- major Presidential and Vice Presidential candidates. Protection is also responsible for spouses within 120 days of a general Presidential election.

Certain protective methods are generally the same for all individuals protected. Permanent protectees, such as the President and the First Lady, have details of special agents assigned to them. Temporary protectees, such as candidates and foreign dignitaries, have details of special agents on temporary assignment from USSS field offices. USSS does not discuss methods or means in any detail; however, generally speaking, an advance team surveys each site to be visited. From these surveys, the team members determine staffing, equipment requirements, and the location of hospitals and evacuation routes for emergencies. Fire, rescue, and other public service personnel in the community are alerted. A command post is established with full communications facilities. The assistance of the military, Federal, state, county, and local law enforcement organizations is a vital part of the entire security operation.

Before the protectee's arrival, the lead advance agent coordinates the security planning with all law enforcement representatives participating in the visit. Personnel are posted and are alerted to specific problems associated with the visit. Intelligence information is discussed, identification specified, and emergency options outlined. Prior to the arrival of the protectee, checkpoints are established and access to the secured area is limited.

Protection of Persons and Facilities

The primary purpose domestic protection program is to protect our nation's leaders. To accomplish this, the program operates to ensure protectees' personal protection and to protect the buildings and grounds where these individuals reside and work (e.g., the White House Complex and the Vice President's residence). Since the September 11, 2001 attacks, there has been a significant increase in the number of protectees receiving varying levels of protection. The total number of protectees now stands at 53: 28 in the "traditional" category; 5 in the "provisional" category; and 20 in the "non-traditional" category. In the list of protectees considered "traditional," we have added the Secretary and Deputy Secretary of DHS, while maintaining the detail for the Secretary of the Treasury. Many of the new protectees fall under the category of "non-traditional" and do not consume the same level of resources as those categorized as "traditional". However, effective protection is provided to "non-traditional" protectees, and contingency plans have been developed to maximize protection immediately should circumstances warrant.

Part of the protection of persons and facilities program is the protection of foreign heads-of-state/government visiting the United States. Foreign dignitary protection includes: 1) protect visiting heads-of-state/government, and their spouses, as well as other distinguished visitors to the U.S. as directed by the President; and 2) provide external security to foreign diplomatic embassies and missions in the Washington, D.C. area (and other limited areas consistent with statute). USSS provides protection to these individuals by strategically placing human and physical assets (agents, tactical support, technical security, explosives detection, WMD detection and countermeasures, and specialized training) during their visits to the United States. All efforts are directed to ensuring that foreign dignitaries and foreign missions receive the optimal level of protection.

Foreign dignitaries who visit the U.S. often are high-profile individuals and are considered to have medium to high threat levels. Today's environment necessitates the implementation of complex security operations that involve multiple jurisdictions and functions.

The foreign protection program has the sole statutory authority to provide a dedicated police presence and response to foreign embassies and chanceries. When a "surge" in protective responsibilities in this area occurs, USSS turns to other entities (i.e., Metropolitan Police Department) for assistance in dealing with such issues as demonstration control. Currently, the Service protects 556 missions located in the Washington, D.C. area.

Protective Intelligence Activities

The protective intelligence program is responsible for overseeing the investigation and evaluation of all protective-intelligence subjects and for the receipt, analysis, and dissemination of all protective intelligence information. This mission is accomplished by the review, coordination, control and referral of information about individuals, groups and activities that pose a potential threat to persons and property.

White House Mail Screening

USSS screens White House mail to ensure it is free of harmful toxins.

PPA: FIELD OPERATIONS

	Perm.		
	Pos.	FTE	Amount
2005 Actual	1,911	1,887	\$297,413
2006 Revised Enacted	1,988	1,973	\$345,404
2007 Adjustments to Base		15	6,863
2007 Proposed Base Realignment	101	101	1,451
Campaign Labor Adjustment	(24)	(24)	(3,000)
2007 Current Services	2,065	2,065	\$350,718
2007 Program Changes			
2007 Request	2,065	2,065	\$350,718
Total Change 2006-2007	77	92	5,314

USSS requests \$350.718 million for this activity. This is an increase of \$5.314 million from FY 2006. Adjustments to the base include position annualization (\$1.617 million), pay annualization and pay and non-pay inflation (\$5.246 million). Proposed realignments to the base of (\$5.051 million) and 101 FTE were made based on actual 2005 spending, adjusted for non-recurring Katrina supplemental costs (\$-3.6 million), which more accurately projects anticipated FY 2007 spending by PPA. Also, 24 FTE and (\$-3 million) has been realigned from the field operations program to the protection program to provide planning and training for the 2008 Presidential Campaign.

CURRENT SERVICES PROGRAM DESCRIPTION:

USSS is mandated by statute and executive order to carry out two significant missions: protection and criminal investigations. USSS was established as a law enforcement agency in 1865, with an original mandate to investigate the counterfeiting of U.S. currency.

USSS exercises broad investigative jurisdiction over a wide variety of financial crimes. As the original guardian of our nation's financial payment systems, the Service has a long history of protecting American consumers and industry from financial fraud. In addition to its original mandate to combat the counterfeiting of U.S. currency, the passage of new Federal laws in 1982 and 1984 provided USSS with primary authority for the investigation of access device fraud, including credit and debit card fraud, and parallel authority with other law enforcement agencies in identity crime cases.

In the early 1990s, the investigative mission expanded to include concurrent jurisdiction with the United States Department of Justice for Financial Institution Fraud. Also during this time frame, the Internet and use of personal computers became mainstream and used worldwide. The economies of scale made personal computers and peripheral equipment affordable to even the most common of criminals.

The combination of the information revolution and the effects of globalization have caused the investigative mission to evolve dramatically. As a result, USSS has evolved into an agency that is recognized worldwide for its expertise in all types of financial crimes; and its efforts to detect, investigate and prevent financial crimes are aggressive, innovative and comprehensive.

Domestic Field Operations

To accomplish its investigative and protective responsibilities, the Service maintains a worldwide network of field offices. This includes 135 domestic offices. Agents assigned to these domestic offices are responsible for investigating violations of laws relating to counterfeiting of obligations and securities (Currency, Treasury Checks, etc.); to financial crimes that include, but are not limited to, access device fraud, financial institution fraud, identity theft, computer fraud; and to computer-based attacks on our nation's financial, banking, and telecommunications infrastructure.

In addition to investigative responsibilities, agents assigned to these offices spend significant time augmenting permanent and temporary protective details, including the Presidential Protective Division, the Vice Presidential Protective Division, other permanent protective details, as well as temporary details for visiting heads of state/heads of government.

International Field Office Administration, Operations and Training

USSS maintains 19 foreign field offices in 15 countries. Similar to domestic counterparts, agents assigned to these offices are responsible for investigating violations of criminal statutes falling under the investigative mission. However, without arrest authority, agents liaison with their foreign law enforcement counterparts in order to accomplish their investigative responsibilities. Additionally, these agents augment any protective mission falling within their geographic area of responsibility. Relationships established from conducting criminal investigations greatly enhance the ability to provide a safe and secure environment for the people it protects while they travel overseas.

Electronic Crimes Special Agent Program (ECSAP) and the Electronic Crimes Task Force (ECTF)

In response to the emerging trends involving the use of computers and peripheral devices, USSS established the Electronic Crimes Special Agent Program, or ECSAP. Special Agents involved with ECSAP are computer investigative specialists, qualified to conduct examinations on many types of

electronic evidence, including computers, personal data assistants, telecommunications devices, electronic organizers, and other electronic media. ECSAP is the only program of its kind in the country with the level of expertise and culture of partnership building with stakeholders across the spectrum of critical infrastructure in the United States. Currently, there are over 200 Special Agents participating in ECSAP.

In addition to ECSAP, USSS established a domestic network of 15 Electronic Crimes Task Forces (ECTFs). The concept of the ECTF model is truly unique since it brings together not only Federal, state and local law enforcement officials from a specific region, but also prosecutors, private industry, and academia. These task forces provide a productive framework and collaborative crime-fighting environment in which the resources of its participants are combined to effectively and efficiently make a significant impact in preventing and detecting electronic crimes.

PPA: ADMINISTRATION

	Perm.		
	Pos.	FTE	Amount
2005 Actual	356	337	\$212,248
2006 Revised Enacted	507	507	\$241,511

2007 Proposed Base Realignment	(159)	(159)	(40,164)
2007 Current Services	348	348	\$204,612
2007 Program Changes			
2007 Request	348	348	\$204,612
Total Change 2006-2007	(159)	(159)	(36,899)

USSS requests \$204.612 million for this activity. This is a decrease of \$36.899 million from FY 2006. Adjustments to the base include pay annualization and pay and non-pay inflation (\$3.265 million). Proposed realignments to the base (-\$40.164 million) and 7 FTE were made based on actual 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

CURRENT SERVICES PROGRAM DESCRIPTION:

Administration is responsible for:

- (1) tracking, monitoring, executing, and reporting the financial activities;
- (2) improving the efficiency and productivity of personnel;
- (3) conducting analyses of program objectives and strategies to examine operational and cost factors impacting the continued viability of ongoing activities and the feasibility of proposed initiatives;
- (4) procuring quality goods and services in a timely fashion;
- (5) administering the design, construction, acquisition, assignment, maintenance, and disposal of properties.

Headquarters, Management and Administration

Headquarters, Management and Administration develops and administers policies, plans, and procedures in budget, finance, accounting, financial systems, statements, and relocation and travel services. It exercises accountability over the collection and disposition of financial resources and examines and processes documents for payment of contracts, purchase orders, invoices and recurring expenses, including reservations and payments for travel and relocation services. Administration also provides management and program analysis support to all operational and administrative programs involving studies of organizational structuring, workflow efficiencies, and staffing allocations. It maintains organization charts and Functional Responsibility Statements for all offices. In addition, it establishes, develops, implements, and manages the strategic planning process and coordinates participation in all Treasury and Government-wide management improvement and evaluation programs. These tasks serve to assist the executive level in formulating organizational direction.

Administration purchases goods via procurement services within the scope of the law and regulations and provides value-added procurement solutions to ensure that government assets and resources are wisely managed.

Finally, Headquarters, Management and Administration promotes fairness, consistency, and efficiency in the utilization of staffing, scheduling, and travel logistics through the Logistics Resource Center. It analyzes staffing needs and travel logistics alternatives to provide for more informed decision-making by balancing cost considerations with operational needs.

National Center for Missing and Exploited Children

Language contained in the Violent Crime Reduction Trust Fund legislation in 1995 directed USSS to provide forensic support to the National Center for Missing and Exploited Children. USSS conducts forensic support including polygraph examinations, handwriting examinations, voiceprint comparisons, audio and video enhancements, age progressions/regressions, and fingerprint research and identification.

PPA: TRAINING

	Perm.		
	<u>Pos.</u>	<u>FTE</u>	<u>Amount</u>
2005 Actual	278	273	\$51,107
2006 Revised Enacted	280	280	\$54,559
2007 Adjustments to Base			919

2007 Program Changes			
2007 Request	273	273	\$58,158
Total Change 2006-2007	(7)	(7)	3,599

USSS requests \$58.158 million for this activity. This is an increase of \$3.599 million from FY 2006. Adjustments to the base include pay annualization and pay and non-pay inflation (\$919 thousand). Proposed realignments to the base of (\$2.680 million) and -7 FTE were made based on actual 2005

spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

CURRENT SERVICE PROGRAM DESCRIPTION:

Rowley Training Center

The James J. Rowley Training Center (JJRTC) is located outside of the nation's capital in Laurel, Maryland, and is comprised of almost five-hundred acres of land, twenty-eight buildings, and six miles of roadway.

Its current workforce of approximately 300 personnel includes instructors, tactical and weapons systems specialists, curricula design staff, computer and web-based faculty/technicians, executive training advisors, administrative support, and maintenance staff.

JJRTC develops, administers, and coordinates training programs for employees, and for other federal law enforcement agencies and law enforcement officials from various state and local police departments. JJRTC provides all basic, in-service, and specialized skills training for Special Agents, Uniformed Division Officers, Special Officers and other professional personnel. It provides training for the executive, managerial, supervisory, administrative support, cyber/IT solutions, and foreign language training for all USSS components.

JJRTC provides specialized operational training for the Service's tactical elements (counter-assault, counter-sniper, and emergency response teams), which include the core components of the protective methodology. The training facility evaluates, selects, and trains all explosive detection canines/tactical canines, and administers and coordinates fitness, control tactics, vehicle operation training, emergency medicine, and water safety programs. The JJRTC conducts research and testing of munitions, and related equipment technology, and administers the acquisition, storage, maintenance, and issuance of firearms, operational weapons and ammunition to all personnel.

The Service's current Strategic Plan provides the following primary objectives with regard to future mission-driven training protocols:

- Enhance JJRTC to provide an academic environment that promotes in-depth critical thinking and innovative strategies in the areas of physical protection, site event security, threat/risk assessments, protection intelligence/counter terrorism techniques, emergency preparedness, criminal investigations, protection of critical financial infrastructure, and executive/management development.
- Maximize training opportunities by using emerging technologies, such as 3-D modeling, computer-generated simulation training, and distance learning.
- Develop and implement training programs consistent with the core mission for Federal, state, local, and foreign law enforcement partners in the areas of electronic crimes, counterterrorism/protection, cyber/counterfeit investigations, threat/risk assessment, and operational security for National Special Security Events.
- Establish partnerships with academic institutions and professional associations to assess, confirm, and ensure innovative training methodologies.

USSS - 17

The events of September 11th, 2001, demonstrated that our adversaries are capable of attacking our nation on a grand scale and employing extensive research and surveillance methodologies, acquiring substantial skills and instruction, and striking their targets without warning. Protecting our leaders, critical and financial infrastructures, and communities is a formidable challenge. By providing state-of-the-art training, and tapping into the network of Federal, state and local law enforcement, academia and the private sector, USSS believes it will continue to develop an effective system of defense for our country.

The Rowley Training Center supports the protection and criminal investigation missions and is maintained by the Acquisition, Construction, Improvements, and Related Expenses account.

DHS Infrastructure Transformation Program

The Department's Infrastructure Transformation Program (ITP), led by the Office of the Chief Information Officer (OCIO), will integrate the IT infrastructures of the 22 legacy components into "One Infrastructure". Currently, most of the Department's components fund and are supported by separate and largely stove-piped IT infrastructures. This environment makes it difficult to share information across components and has resulted in redundant investments and wasted resources. The ITP will eliminate the duplicative infrastructures and provide common capabilities and services for all components to leverage.

The ITP consists of five domains with a Department component assigned as a steward responsible and accountable for the performance of each domain. The domains and their stewards are listed below:

- Network Services led by Customs and Border Protection (CBP);
- Data Center Services led by CBP;
- Email Services led by U.S. Coast Guard (USCG);
- Help Desk Services led by USCG; and
- Video Operations Services led by Federal Emergency Management Agency (FEMA).

The OCIO oversees the work of the stewards and the other components to ensure operational requirements are met and investments and resource allocations are balanced across the components.

Implementation of the ITP will eliminate the need for components to spend resources on improving their own infrastructures. Instead, some of the investment funding previously used for stovepiped infrastructures will be used to support the department-wide ITP effort. For example, CBP's IT initiatives such as the Automated Commercial Environment will benefit from the capabilities and services the ITP will provide such as network access, data center hosting, email/collaboration services, wireless access, integrated help desk, voice access, video services, and on-site support. Rather than independently developing new capabilities or augmenting legacy capabilities within CBP, the ITP will provide enterprise-level services that will benefit all components.

By investing in the ITP, DHS components will benefit from economies of scale while promoting Department integration, and improving information sharing and interoperability. The amount of IT investment funding from components to support the ITP is still under deliberation and any such proposal will be fully vetted with the Congress prior to any actions being taken.

Current Service Levels									
Program Increase							31	16	5,000
Total Request							31	16	5,000

Description of Item

Funding is requested to begin acquiring the staffing and support required for a new President Bush post-presidency detail. Although the detail will not be operational until January 20, 2009, providing funds in FY 2007 will allow for recruiting, hiring and training of some of the additional personnel in advance of President Bush leaving office. Upon completion of training, these new agents will be used to support candidate/nominee protection throughout Campaign 2008. Following the Inauguration of the new President, these agents will be used to backfill senior special agents who will be required to staff the new detail. This proactive approach will allow for a smooth implementation of protection and transition of personnel without jeopardizing other critical program operations.

Justification

As with former Presidents Clinton and Bush, it is anticipated that the current President will be active and maintain a high profile after he leaves office. In light of the current post-September 11th threat environment, it also is expected that he will continue to be the focal point of terrorists' aggression directed toward the United States. Consequently, significant assets will be required to provide security to the former President. In light of the ongoing war in Iraq, and the fact that President Bush is a target for terrorist activity, the President's post-presidency detail will require significantly more resources than are currently staffing other former Presidents.

The requested resources will ensure the Service effectively addresses the myriad threats expected to be directed at President Bush. In recent years, threats directed at former Presidents have increased consistent with the sustained, elevated post-September 11th threat climate associated with the Global War on Terror. This increase in threat activity requires the Service to dedicate more human and technical resources to the protective missions. This increased workload creates greater demands upon

field agents, as they investigate and assess each threat, perform protective advance and support assignments, and supplement detail staffing as necessary.

Based on the frequent domestic and international travel of Former Presidents Clinton and George H.W. Bush, it is anticipated that President Bush will be very active and travel extensively. When traveling overseas, U.S. leaders are particularly vulnerable, as the threat climate is increased and recent terrorist activity indicates a shift in focus from mass killings to political assassinations. To provide an appropriate level of security during domestic and international travel, the Service historically relies on field office personnel to supplement the protective detail.

By appropriately planning for and staffing the protective effort needed for the new detail, adverse consequences (e.g., loss of life and social impact associated with the attack on or assassination of a former President) will be reduced. If USSS does not obtain funding for this new protective detail requirement, the ability to provide an appropriate level of protection will be severely jeopardized.

Impact on Performance (Relationship of Increase to Strategic Goals)

Funding supports 16 FTE in preparation for the formation of the new detail. Although the detail will not be operational until January 20, 2009, providing funds in FY 2007 allows for recruiting, hiring, and training of a portion of the total number of personnel needed for this additional protective responsibility in advance of President Bush leaving office. Upon completion of training, the new agents will support candidate/nominee protection throughout the 2008 Presidential Campaign. Following the Inauguration of the new President, new agents will be used to backfill some of the senior special agents who will be required to staff the new detail. This proactive approach allows for a smooth implementation of protection and transition of personnel without jeopardizing other critical program operations.

As with Former Presidents Clinton and Bush, the current President is likely to be active and maintain a high, international profile after leaving office. In recent years, threats directed at Former Presidents have increased due to the Global War on Terror and other factors. The current President's role in that War is such that he is expected to continue to attract terrorists' attention after leaving office. Projected threat levels require the USSS to dedicate more human and technical resources to protective missions, and create a greater demand upon field agents, as they investigate and assess threats, perform protective advance and support assignments, and supplement detail staffing as necessary.

Description of Item

Funding is requested to support and enhance critical operational and classified programs and to expand and maintain the current primary Presidential/Vice Presidential armored vehicles.

Justification

The following are the components of the request:

Technical Surveillance and Electronic Countermeasures Programs (\$3.6M): Funding would be used for the upgrading, enhancing, replacing and maintaining of existing critical classified programs operating to identify and mitigate technical and electronic threats to fixed and temporary protected sites visited by the President, Vice President and high-threat Protectees. Classified programs require upgrades to specialized software and systems to maintain the state-of-the-art technical and electronic surveillance systems (fixed and portable) used to identify and mitigate current and emerging electronic threats. These countermeasure systems identify and negate electronic threats used for intelligence intercepts and/or the activation of explosive or other hazardous devices.

Enhance Chemical / Biological Mitigation Programs (\$0.9M): Funding is for specialized Service programs, including the Hazardous Agent Mitigation Medical Emergency Response (HAMMER) and Rapid Intervention Safety and Command (RISC) programs. These specialized programs are used to protect the President, Vice President, and high-threat protectees from a variety of chemical/biological/radiological/nuclear threats, as well as provide response for medical and rescue emergencies. Resources provide for the expansion of fixed and portable surveillance and alarm systems, specialized monitoring and rescue equipment, and replacement of protective equipment, and for services required to collect, analyze, and mitigate chemical threats. In particular, resources support a necessary replacement cycle for specialized chemical and biological equipment.

Enhancements to Communications Systems (\$1.5M): The Service requires state-of-the-art communications systems that operate under a variety of environmental and protective security conditions. Existing fixed and portable systems require upgrades and enhancements to support critical mission requirements. Funding would allow for the acquisition of classified (HSDN) systems, wireless communications systems and specialized encrypted radio systems, to support the protective and

investigative missions, as well as allow for the establishment of a replacement cycle for existing equipment.

Software Application Modernization Services (\$1.8M): Funding is for the upgrade and integration of new software in support of operational and classified programs, and migration from mainframe systems and data conversion to a web-based system. Migration to a web-based system is critical for future inter-operability with DHS and other organizational elements for threat identification and mitigation.

Special Operations Equipment (\$0.4M): Funding would be used for the enhancement, acquisition, replacement and maintenance of specialized weapon systems and tactical equipment (high-tech night vision, tactical body armor, lasers sites) used by specialized members of the Counter Assault, Counter Sniper, Emergency Response and Counter Surveillance teams. The programs have been increased to meet critical protective support missions and can not be sustained with current funding. Equipment is critical to protective mission requirements.

Primary Armored Vehicle Program (\$9.0M): Funding will increase and maintain the current primary Presidential/Vice Presidential armored vehicles. The Service currently has seven (7) Presidential/Vice Presidential armored vehicles. The program would allow for the expansion to twelve (12) primary armored vehicles to permit: pre-staging of vehicles when the President is visiting multiple cities, keeping vehicles in the Washington, DC area and allowing for preventive maintenance. Presidential and Vice Presidential armored vehicles contain state-of-the-art technologies including transparent armor vital to protection outside of protected sites. Armored vehicles play an important role in overall protection of the Service's protectees. Components and sub-systems of the primary armored vehicles contain integrated techniques and specific modifications to the standard armored automotive technologies. The cost of a primary limousine is proportional to its complex design, to include assembly line and mold development and construction. In addition, the Service currently has limited base funding for the routine maintenance and replacement of its standard armored vehicle program. The funding it does have in its base budget is used for the replacement of "cut and stretch" limos, armored all-terrain vehicles, follow-up motorcade vehicles and armored glass replacement. "Cut and stretch" vehicles are currently utilized to protect foreign dignitaries and other high-threat protectees.

[Note: any discussion of vehicle capabilities must be conducted in closed sessions. A document classified "Secret" describing the performance of the above armor systems is available upon request.]

Impact on Performance (Relationship of Increase to Strategic Goals)

Objective 3.4 of the DHS Strategic Plan is to "Secure the physical safety of the President, Vice President, visiting world leaders and other Protectees." Through a \$17.2 million increase to Protective Terrorist Countermeasures Support, USSS significantly enhances its ability to meet the above objective.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

Department of Homeland Security
United States Secret Service
Justification of Proposed Changes in Salaries and Expenses
Appropriation Language

For necessary expenses of the United States Secret Service, including purchase of not to exceed [614] ~~755~~ vehicles for police-type use, of which [655] ~~624~~ shall be for replacement only, and hire of passenger motor vehicles; purchase of American-made motorcycles; hire of aircraft; services of expert witnesses at such rates as may be determined by the Director of the Secret Service; rental of buildings in the District of Columbia, and fencing, lighting, guard booths, and other facilities on private or other property not in Government ownership or control, as may be necessary to perform protective functions; payment of per diem or subsistence allowances to employees where a protective assignment during the actual day or days of the visit of a protectee requires an employee to work 16 hours per day or to remain overnight at his or her post of duty; conduct of and participation in firearms matches; presentation of awards; travel of Secret Service employees on protective missions without regard to the limitations on such expenditures in this or any other Act; research and development; grants to conduct behavioral research in support of protective research and operations; and payment in advance for commercial accommodations as may be necessary to perform protective functions; [\$1,200,083,000] ~~\$1,240,478,000~~, of which not to exceed \$25,000 shall be for official reception and representation expenses; of which not to exceed \$100,000 shall be to provide technical assistance and equipment to foreign law enforcement organizations in counterfeit investigations; of which [\$2,389,000] ~~\$2,266,000~~ shall be for forensic and related support of investigations of missing and exploited children; and of which [\$5,500,000] ~~\$5,445,000~~ shall be a grant for activities related to the investigations of exploited children and shall remain available until expended: Provided, That up to \$18,000,000 provided for protective travel shall remain available until September 30, [2007] ~~2008~~: [Provided further, That of the total amount appropriated, not less than \$5,000,000 shall be available solely for the unanticipated costs related to security operations for National Special Security Events, to remain available until expended]: Provided further, That the United States Secret Service is authorized to obligate funds in anticipation of reimbursements from Federal agencies and entities, as defined in section 105 of title 5, United States Code, receiving training sponsored by the James J. Rowley Training Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available under this heading at the end of the fiscal year.

Explanation of Changes

755 – Authority to purchase 131 new vehicles is in accordance with the need to the purchase of 100 vehicles for use during the 2008 presidential campaign, and to purchase 31 vehicles for the additional special agent staffing contained in the FY 2007 budget.

[\$1,200,083,000] ~~\$1,240,478,000~~ – proposed reduction of \$2,500,000 for the new National Special Security Events fund. There are no other substantive changes.

[\$2,389,000] ~~\$2,266,000~~ – includes application of 1 percent rescission.

[\$5,500,000] **\$5,445,000** -- includes application of 1 percent rescission.

[2007] **2008** -- No substantive changes proposed.

[Provided further, That of the total amount appropriated, not less than \$5,000,000 shall be available solely for the unanticipated costs related to security operations for National Special Security Events, to remain available until expended] - Proposing that \$2,500,000 be provided for in a new appropriation to be known as the Special Event Fund.

Authorization Cites

The Secret Service is established in 18 U.S.C. 3056 and 3 U.S.C. 202. 18 U.S.C. 1029 and 1030 specifically authorize the Service to investigate offenses under those sections.

PPA Mission Statement

Protection of Persons and Facilities - Secure the physical safety of the President, Vice President, their families, and other individuals as designated by statute and facilities under our protection from all threats. Secure the physical safety of visiting heads of state, heads of government, and their spouses, and other distinguished visitors to the United States as directed by the President. Provide external security to foreign diplomatic embassies and missions in the Washington, DC area (and other limited areas, consistent with statute). Secure the physical safety of Presidential and Vice Presidential nominees, candidates, and spouses.

In order to protect our Nation's leaders, the Secret Service operates to ensure protectees' physical protection and to protect the buildings and grounds where they reside and work. The requested amount addresses the following USSS strategic challenges: terrorists' sustained motivation to attack U.S. interests (including its leaders), and the increasing technological sophistication of the threat environment.

H. PPA Budget Justifications**Summary Justification and Explanation of Changes**

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Salaries and Benefits	\$575,697	\$527,467	\$591,300	\$63,833

Salaries and Benefits includes costs for 3,451 FTEs, including 16 FTE resulting from a program increase for the President Bush Post-Presidency Detail. The FY 2007 request includes an increase of \$8,026,000 in pay annualization, \$1,334,000 in second-year annualization of positions, and \$2,039,000 resulting from the President Bush post-presidency detail. Includes \$106,541,000 for Mandatory Retirement, a \$2,163,000 increase from FY 2006. Proposed realignments to the base of \$50,271,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Travel	\$69,992	\$55,973	\$56,798	\$825

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2007 request includes increases of \$219,000 in second-year annualization of positions, \$792,000 in non-pay inflation, and \$747,000 for the President Bush post-presidency detail. Proposed realignments to the base of (\$933,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Transportation of Things	\$245	\$396	\$353	(\$43)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2007 request includes an increase of \$58,000 in non-pay inflation and \$116,000 for the for the President Bush post-presidency detail. Proposed realignments to the base of (\$217,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
GSA rent	\$29,095	\$26,147	\$31,400	\$5,253

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request includes an increase of \$158,000 in second-year annualization of positions, \$586,000 in non-pay inflation, and \$145,000 for the President Bush post-presidency detail. Proposed realignments to the base of \$4,364,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

H. PPA Budget Justifications

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Communication, Utilities, and miscellaneous	\$10,390	\$2,420	\$9,925	\$7,505

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2007 request includes an increase of \$265,000 in non-pay inflation and \$51,000 for the President Bush post-presidency detail. Proposed realignments to the base of \$7,189,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Printing	\$65	\$50	\$50	\$0

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2007 request includes a decrease of \$14,000 in second-year annualization of positions, a \$9,000 increase in non-pay inflation, and a \$14,000 increase for the President Bush post-presidency detail. Proposed realignments to the base of (\$9,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Other Services	\$6,028	\$35,745	\$26,070	(\$9,675)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY2007 request includes a decrease of \$128,000 in second-year annualization of positions, a \$1,120,000 increase in non-pay inflation, a \$407,000 increase for the President Bush post-presidency detail, and a \$4,050,000 increase for protective terrorist countermeasures. Proposed realignments to the base of (\$15,124,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Supplies & materials	\$6,194	\$5,805	\$6,662	\$857

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2007 request includes increases of \$9,000 in second-year annualization of positions, \$125,000 in non-pay inflation, and \$87,000 for the President Bush post-presidency detail. Proposed realignments to the base of \$636,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

PPA Mission Statement

National Special Security Events - Plan and implement security designs for designated National Special Security Events (NSSEs). Ensure the physical protection of the President, the public, and other Secret Service protectees who participate in NSSEs.

Security at NSSEs is strategically crucial to homeland security in that NSSEs, by definition, involve persons, institutions, and landmarks that are integral to the governance of the Nation, vital to national and/or global economic stability, or symbolically important to American citizens. The requested amount provides funding for the design, coordination, and implementation of operational security plans for NSSEs.

PPA Mission Statement

Protective Intelligence - Investigate subjects (individuals and groups) and activities that pose threats to protectees and protected events.

The Secret Service analyzes threats, investigates threats, and conducts intelligence advances in order to minimize the risk of harm to protected persons, property, and events. The requested amount funds these activities in a strategic environment characterized by terrorists' sustained motivation to attack these targets, and by the increasingly technological sophistication of the threat environment.

PPA Mission Statement

Field Operations, International Field Operations - Provide a comprehensive, international-coordinated response to new threats to the integrity of U.S. currency and other transnational crimes.

International field resources are focused on achieving DHS' strategic objective of economic security (e.g., foreign counterfeiting of U.S. currency). These field offices also provide a "surge capacity" of protective function in the event of protectees' travel abroad. The requested amount funds field offices in 15 countries in a strategic context of: the worldwide spread of the internet and other consumer-friendly technologies that facilitate electronic commerce, the increasing criminal exploitation of those technologies, and dollarization (when a foreign country replaces its national currency with the U.S. dollar).

PPA Mission Statement

Electronic Crimes Special Agent Program (ECSAP) Electronic Crimes Task Forces (ECTF) - Through the ECSAP, train special agents to detect network intrusions and conduct examinations on all types of electronic evidence, including computers, personal data assistants, telecommunications devices, electronic organizers, scanners, and other electronic equipment. Through the ECTF, form partnerships with private industry, academia, other federal law enforcement, and state and local law enforcement to prevent, detect, mitigate, and aggressively investigate attacks on our nation's financial infrastructures.

The ECSAP Program and ECTFs combat those who seek to defraud financial institutions or private industry through electronic or digital media. The requested amount funds these entities in a strategic environment characterized by a rise in electronic financial transactions and associated criminal activity.

PPA Mission Statement

National Center for Missing and Exploited Children - Language contained in the Violent Crime Reduction Trust Fund legislation in 1995 directed the U. S. Secret Service to provide forensic support to the National Center for Missing and Exploited Children (NCMEC). Since that time, forensic support has included polygraph examinations, handwriting examinations, voiceprint comparisons, audio and video enhancements, age progressions/regressions, and fingerprint research and identification.

Requested funding provides state of the art forensics support to the National Center for Missing and Exploited Children. In a strategic context characterized by predators determined to abuse the nation's children, the Secret Service's technologies provide critical support to associated investigations.

PPA Mission Statement

Rowley Training Center - Ensure Secret Service employees possess the skills and knowledge to successfully accomplish the protective and investigative missions. Assist employees in maximizing their potential and be able to meet the challenges of the 21st century. Provide innovative training opportunities that emphasize risk management and the judgement skills needed to support the Service's mission.

Requested funding will ensure that the Secret Service's most important resource - its employees - has the knowledge and skills needed to meet the demands of the Service's protective and investigative mission. In a strategic context of heightened threat, the Service must ensure that its training outpaces the threat environment.

H. PPA Budget Justifications**Summary Justification and Explanation of Changes**

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Salaries and Benefits	\$39,811	\$43,114	\$44,510	\$1,396

Salaries and Benefits includes costs for 273 FTEs. The FY 2007 request includes an increase of \$639,000 in pay annualization. Includes \$8,106,000 for Mandatory Retirement, a \$116,000 decrease from FY 2006. Proposed realignments to the base of \$873,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Travel	\$5,843	\$2,631	\$6,609	\$3,978

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2007 request includes \$63,000 in non-pay inflation. Proposed realignments to the base of \$3,915,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Transportation of Things	\$52	\$225	\$54	(\$171)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. The FY 2007 request includes \$5,000 in non-pay inflation. Proposed realignments to the base of (\$176,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
GSA rent	\$990	\$1,177	\$1,103	(\$74)

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request includes \$47,000 in non-pay inflation. Proposed realignments to the base of (\$121,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

H. PPA Budget Justifications

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Communication, Utilities, and miscellaneous	\$946	\$56	\$866	\$810

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2007 request includes \$22,000 in non-pay inflation. Proposed realignments to the base of \$788,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Printing	\$0	\$78	\$2	(\$76)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2007 request includes \$1,000 in non-pay inflation. Proposed realignments to the base of (\$77,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Other Services	\$1,295	\$4,559	\$2,867	(\$1,692)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2007 request includes \$89,000 in non-pay inflation. Proposed realignments to the base of (\$1,781,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
Supplies & materials	\$1,068	\$1,201	\$1,223	\$22

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2007 request includes \$10,000 in non-pay inflation. Proposed realignments to the base of \$12,000 were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

H. PPA Budget Justifications

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Equipment	\$1,103	\$1,498	\$899	(\$599)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2007 request includes \$32,000 in non-pay inflation. Proposed realignments to the base of (\$631,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Land & Structures	\$0	\$19	\$25	\$6

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2007 request includes \$12,000 in non-pay inflation. Proposed realignments to the base of (\$6,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
Indemnity	\$0	\$1	\$0	(\$1)

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. Proposed realignments to the base of (\$1,000) were made based on actual FY 2005 spending, adjusted for non-recurring costs, which more accurately projects anticipated FY 2007 spending by PPA.

BUDGET REQUEST AND SUPPORTING INFORMATION**UNITED STATES SECRET SERVICE**
Acquisition, Construction, Improvements and Related Expenses**I. Appropriation Overview****A. Mission Statement for Appropriation Name:**

The United States Secret Service (USSS) performs two critical homeland security missions: protection and criminal investigations. The Service protects the President and Vice President, their families, visiting heads-of-state/government, and other designated individuals, such as the Secretary of Homeland Security; investigates threats against these protectees; protects the White House, Vice President's Residence, Foreign Missions, and other designated buildings within the Washington, D.C. area; and designs, coordinates, and implements operational security plans for designated National Special Security Events. USSS investigates violations of laws relating to: counterfeiting of obligations and securities of the United States; financial crimes such as access device fraud, financial institution fraud, identity theft, and computer fraud; and computer-based attacks on our nation's financial, banking, and telecommunications infrastructure. In order to accomplish both its protective and investigative missions, the Service has offices located throughout the United States and in 15 foreign countries. Employees are predominantly special agents, uniformed officers, and support personnel.

B. Budget Activities:**Rowley Training Center**

The Acquisition, Construction, Improvements, and Related Expenses account is used to maintain the Rowley Training Center, which supports protection and criminal investigation missions.

C. Budget Request Summary:

USSS requests \$3,725,000 to maintain the Rowley Training Center located in Beltsville, Maryland.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

UNITED STATES SECRET SERVICE
SPECIAL EVENTS FUND

I. Appropriation Overview**A. Mission Statement for Special Event Fund:**

The Special Event Fund is a no-year fund established to house funding for National Special Security Events (NSSEs) and Presidential Campaigns. Funding for campaign events allows the Secret Service to protect major Presidential and Vice Presidential candidates and nominees and their spouses, and President-elect and Vice President-elect and their immediate families. By statute, campaign events commence operation within 120 days of a Presidential Election and continue 24 hours a day, everyday, during that time period. Special agents from Secret Service field offices are temporarily detailed to form protective details for candidates, nominees, and their spouses. Special agents coordinate with the military and Federal, state, county, and local law enforcement organizations to ensure the success of security operations.

Due to the unique nature of these activities, the Secret Service is proposing to separate these activities from the Salaries and Expense appropriation. The Secret Service does not know when NSSEs will occur or how many there will be. In any given fiscal year, the Service could have a multiple number of events, thus exhausting the funding source, or there may not be any events during the year. As a result, the Secret Service believes that it is a good idea to separate these no-year funds from day-to-day operating funds.

By statute and Presidential Decision Directive-62 [PDD-62], the Secret Service is designated as the lead agency for designing, coordinating, and implementing operational security plans for NSSEs. As with campaign events, special agents coordinate with the military and Federal, state, county, local, and international law enforcement organizations to ensure the success of NSSE security operations.

Campaign funding is a mandatory workload increase, and funding is needed for this event three out of every four fiscal years. The Service hopes to establish a base for the campaign that will be available, thus removing it from the normal budget process.

B. Budget Activities:**Candidate Protection Program**

The 2004 Presidential Campaign and the 2005 Presidential Inaugural were the first such protective events conducted in the post-9/11 environment. Campaign protection successfully concluded following the election, with protection being provided at 884 different stops. The Inauguration took place with integrated multi-agency security protocols in place that afforded the optimal level of protection for protectees, invited guests and the general public.

Planning for the 2008 Presidential Campaign will begin in FY 2007. Equipment required for the protective details will be purchased and the Service will begin to project staffing needed for the candidate/nominee details during 2008 campaign operations.

Campaign protection training will begin in FY 2007. Personnel will travel to Washington, DC to receive candidate/nominee protective detail training and advance operations training at the Service's Rowley Training Center. The Service is also anticipating the requirement to train approximately 2,000 other Homeland Security agents to assist with campaign protection.

National Special Security Events

USSS plans and implements security designs for designated National Special Security Events (NSSEs) to ensure the physical protection of the President, the public and other protectees who participate in NSSEs.

The events of September 11, 2001, demonstrated that our adversaries are capable of attacking our nation on a grand scale and employing extensive research and surveillance methodologies, acquiring substantial skills and instruction, and striking their targets without warning. Funding to protect our leaders and communities is critical.

C. Budget Request Summary:

USSS requests a total of \$20,900,000 within a new Special Event Fund. This includes \$18,400,000 for campaign/nominee protection and related expenses and \$2,500,000 for NSSEs.

III. Current Services Program Description by PPA**Department of Homeland Security
United States Secret Service****Special Event Fund
Program Performance Justification**
(Dollars in thousands)**PPA: Candidate Nominee Protection**

	<u>Perm.</u>		
	<u>Pos.</u>	<u>FTE</u>	<u>Amount</u>
2005 Actual			
2006 Revised Enacted			
2007 Adjustments to Base			
2007 Current Services			
2007 Program Changes			\$18,400
2007 Request			\$18,400
Total Change 2006-2007			

USSS requests \$18.4 million for this activity, which had no funding in FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:**Campaign Protection**

USSS provides protection to major Presidential and Vice Presidential candidates. It also provides protection to their spouses within 120 days of a general Presidential election. Protective details are activated only after established criteria are met. The Service has no base funding for this activity as the campaign protection funding was non-recurred from the base following the last presidential campaign. Funding for the 2008 Presidential Campaign will be requested in three phases. In FY 2007, funding will be requested to purchase equipment and to train personnel on campaign procedures; in FY 2008 funding will be requested for candidate/nominee protection, residence security and the conventions; in FY 2009 funding will be needed for nominee protection, to protect the President-elect, Vice President-elect, and for the inauguration.

After FY 2009, the amount requested for campaign protection will equal one-quarter the total amount needed for the quadrennial campaign cycle thus smoothing out the funding requirements of campaign protection.

Program Increase									\$18,400
Total Request									\$18,400

Description of Item

Funding is for the purchases of new vehicles, equipment, and office space in preparation for the 2008 Campaign. Procurement would occur in FY 2007. The equipment and services will be pre-positioned throughout the country to support the increased protective mission as the candidates/nominees travel throughout the country.

The following is the object class detail for the 2008 Presidential Campaign (\$18.4 million):

- Training (\$2.345 million)
- Transportation of things (\$5 thousand)
- Printing (\$7 thousand)
- Services (\$810 thousand)
- Supplies (\$265 thousand)
- Equipment (\$14.968 million)

Justification

USSS is mandated by law (Title 18 U.S.C., section 3056) to provide protection and security for "Major Presidential and Vice Presidential candidates and, within 120 days of the general Presidential election, the spouses of such candidates." The Service must make preparations for the 2008 Presidential Campaign during 2007 with training to candidate protective detail personnel, and procuring and leasing equipment and supplies to support candidate/nominee protective operations. Some base funding will be used to purchase vehicles and equipment; however, the Service does not have base funding available to cover all of the costs involved with meeting the increased protective responsibilities during this quadrennial event. Historically, the Service has requested and received an increase in funding for campaign-related activities; this amount is later non-recurred from the base budget.

During FY 2007, personnel will travel to Washington, DC, to receive current candidate/nominee protective detail training and advance operations training for myriad threats, at the Service's Rowley Training Center. Personnel will also instruct at regional training centers to provide protective detail support training and candidate/nominee protective intelligence threat assessments training. An estimated 2,000 other Homeland Security federal agents will assist the Service with campaign protection support. The majority of the costs related training are travel expenses incurred in bringing personnel to Washington, DC, or to transport trainers to conduct regional training.

Vehicles will be purchased for use as limousine and follow-up protective vehicles for the candidate/nominee protective details. The vehicles will be partially armored and outfitted with specialized communications equipment, emergency lights, and other protective equipment, and will be strategically positioned throughout the country in preparation for candidate/nominee campaigning. The Service does not have enough of these critical protective vehicles within its current fleet to accommodate this temporary increase in the protective workload. Following the campaign the vehicles will be used to replace older vehicles in the Service's protective vehicle fleet.

In preparing for the 2008 Presidential Campaign, the Service will incur costs covering the installation of light armor, communications and security equipment in campaign vehicles, and the rental of temporary office space and other contractual services. Homeland Secure Data Network (HSDN) systems will be leased and are critical for the transmission of classified messages used to interpret threat assessments and disseminate threat information to candidate detail operations, coordinating centers and convention sites. Additionally, reimbursable travel expenses will be incurred for explosive ordinance disposal (EOD) military personnel attending campaign protective support training.

Encrypted digital radio systems, and associated communications systems and equipment will be purchased for utilization by the protective details, campaign coordinating centers, protected candidate/nominee residences, convention sites, and debate sites.

To ensure the integrity of protective sites during the presidential campaign, unique protective identification/credentials are required. Identification includes lapel emblems for candidate/nominees and their staffs, lapel emblems for other federal agents assisting the Service, and temporary identification lapel emblems and credentials for other persons working at protected sites or for persons attending events at or around protected sites. Specialized credentialing equipment will be purchased to produce secure photograph identification/credentials for distribution by the Service, as needed.

Computer equipment and associated hardware and software will be purchased for use by the Service at temporary office locations to support candidate/nominee protective details, and to disseminate information to coordinating centers, multi-agency command posts, and residence security offices.

Protective and specialized surveillance equipment and other equipment will be purchased to support the protection of candidates/nominees. The state-of-the-art protective equipment includes specialized detection systems, area surveillance systems, portable sensors and alarms, portable magnetometers, portable x-ray systems, medical and rescue equipment, vehicle crash barriers, and explosive/chemical/biological protection systems.

Due to the increase in protection requirements during a campaign, the Service does not have sufficient protective equipment available within its inventory to pre-position these necessary tools throughout the

country for all of the protective requirements anticipated during the 2008 Campaign. At the conclusion of a presidential campaign this protective equipment will be redistributed to appropriate Secret Service offices to replace outdated protective equipment, as needed.

Walk-thru magnetometers will be purchased to support the candidate/nominee protected sites, debates sites, and the political convention sites. The magnetometers will be strategically and economically positioned in field offices around the country where the heaviest campaign travel is expected. The equipment will be transported to protected sites and convention/debate cities as needed. The Service intends to use magnetometers and x-ray systems to screen personnel and packages entering candidate/nominee protected sites. As a result, additional magnetometer units and x-ray systems are required. Following the campaign, these technically up-to-date magnetometers and x-ray systems will replace older units in the Service's inventory.

Counter surveillance operations are valuable tools used in "proactive" protection methods. The units specialize in assessing vulnerabilities in order to predict a threat or attack, and then establish countermeasures in the security planning to mitigate the threat. Specialized surveillance equipment, which includes state-of-the-art night vision goggles, laser range finders, surveillance cameras and thermal imagers, will be required for use by personnel conducting these surveillance operations in support of the increased protective details and protected campaign sites. The surveillance equipment will be strategically positioned throughout the country in preparation for candidate/nominee campaigning. The Service does not currently have enough of this type of specialized surveillance equipment to accommodate the increased protective workload engendered by a campaign.

The increase in protective requirements for candidates/nominees details and protected sites requires the establishment of temporary offices to support mission requirements. General office equipment and supplies will be required and purchased in FY 2007 to allow for the items to be packaged and shipped. Funds would be used to acquire general office equipment, supplies, and administrative services to include printing and transportation.

Impact on Performance (Relationship of Increase to Strategic Goals)

Title 18 U.S.C. §3056 mandates the Secret Service to provide protection and security for major presidential and vice presidential candidates, and their spouses. During FY 2007, the Secret Service will be required to prepare for the 2008 Presidential Campaign by providing training to candidate protective detail personnel, and procuring and leasing equipment and supplies to support candidate/nominee protective operations. The equipment and services will be pre-positioned throughout the country to support the increased protective mission as the candidates/nominees travel throughout the country. The Service plans to utilize some base funding to purchase vehicles and equipment; however, the Service does not have base funding available to cover all the costs of supporting the increased protective responsibilities during this quadrennial event.

Based on historical averages, the Service is planning for 1,298 additional protection days during the 2008 Campaign. Aside from a small nucleus of personnel assigned to plan for the campaign, there is no separate workforce on stand-by to staff candidate/nominee protective details or campaign events. The Service plans to reallocate approximately 250 FTE from investigative operations to support the campaign, and to provide training to an estimated 2,000 agents from other federal law enforcement entities the Service will utilize on an as needed basis. Public Law 94-524 requires the Secret Service to reimburse incremental costs incurred by these other entities in support of the Secret Service's protective activities.

PPA Mission Statement

National Special Security Events - Plan and implement security designs for designated National Special Security Events (NSSEs). Ensure the physical protection of the President, the public, and other Secret Service protectees who participate in NSSEs.

Security at NSSEs is strategically crucial to homeland security in that NSSEs, by definition, involve persons, institutions, and landmarks that are integral to the governance of the Nation, vital to national and/or global economic stability, or symbolically important to American citizens. The requested amount provides funding for the design, coordination, and implementation of operational security plans for NSSEs.

PPA Mission Statement

Candidate Nominee Protection - Secure the physical safety of Presidential and Vice Presidential nominees, candidates, and spouses.

In order to protect our Nation's leaders, the Secret Service operates to ensure protectees' physical protection and to protect the buildings and grounds where they reside and work. The requested amount addresses the following USSS strategic challenges: terrorists' sustained motivation to attack U.S. interests (including its leaders), the increasing technological sophistication of the threat environment, and the unprecedented protective challenge presented by the 2008 campaign.

H. PPA Budget Justification**Summary Justification and Explanation of Changes**

	2005	2006	2007	2006 to 2007
	Actual	Revised Enacted	Request	Change
Travel	\$0	\$0	\$2,345	\$2,345

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2007 request includes increases for the 2008 Presidential Campaign.

	2005	2006	2007	2006 to 2007

I. STRATEGIC CONTEXT FOR THE FY 2007-2011 BUDGET

This document presents justification of the FY 2007 budget by demonstrating how funding enables the United States Secret Service (USSS) to achieve its strategic goals, and how the Service manages the achievement of those goals through performance goals, measures, and reports.

A. Mission and Description of the United States Secret Service

USSS performs two critical homeland security missions: protection and criminal investigations. The Service protects the President and Vice President, their families, visiting heads-of-state/heads of government, and other designated individuals, such as the Secretary of Homeland Security; investigates threats against these protectees; protects the White House, Vice President's Residence, Foreign Missions, and other designated buildings within Washington, D.C.; and designs, coordinates, and implements operational security plans for designated National Special Security Events. The Service investigates violations of laws relating to: counterfeiting of obligations and securities of the United States; financial crimes such as access device fraud, financial institution fraud, identity theft, and computer fraud; and computer-based attacks on our nation's financial, banking, and telecommunications infrastructure.

In order to accomplish both its protective and investigative missions, the Service has offices located throughout the United States and in 15 foreign countries. Employees consist predominantly of special agents, uniformed officers, and support personnel.

B. Major Activities and Key Strategic Issues

The environment in which USSS must accomplish its mission in FY 2007 - FY 2011 will be characterized by the following major challenges:

- Terrorists' sustained motivation to attack U.S. leaders and economy
- Increasing technological sophistication of the threat environment
- The American election cycle and term limitations

The primary challenges impacting USSS's ability to accomplish its mission during the ongoing Global War on Terror include *terrorists' sustained motivation to attack U.S. interests* (including its leaders and economy) and *the increasing technological sophistication of the threat environment*. It is imperative to staff the Service with adequate levels of personnel, and to equip them with the technological tools necessary to operate in the modern threat environment inclusive of nuclear, biological, chemical, and radiological threats to protectees, protected facilities, and protected events.

Other major challenges to USSS's ability to accomplish its mission derive from *the American election cycle and term limitations*. During 2007, preparations will begin for the 2008 Presidential Campaign, by providing training to candidate/nominee protective detail personnel, and procuring and leasing equipment and supplies to support candidate/nominee protective operations. With President Bush completing his second and last term, and with Vice President Cheney indicating he will not be a candidate/nominee for President in 2008, the Service faces an unprecedented situation relative to candidate/nominee protection. No prospective presidential candidate will be a sitting President or Vice President under Secret Service protection, resulting in an increase in the number of individuals requiring protection. Additional staffing is also necessary to provide protection for another former president at the completion President George W. Bush's second term. In order to prepare strategically for inevitable and mission-critical workload increases, the Service must budget in FY 2007 for both Campaign 2008 and the addition of a new protective detail.

C. Resources Requested and Performance Impact

Increments over current service: FY 2008 Campaign

During FY 2007, USSS will be required to make preparations for the 2008 Presidential Campaign by providing training to candidate protective detail personnel, and procuring and leasing equipment and supplies to support candidate/nominee protective operations. In order to have vehicles, equipment, and office space in place for the 2008 campaign, the procurement of these items must be accomplished during FY 2007. The equipment and services will be pre-positioned throughout the country to support the increased protective mission as the candidates/nominees travel throughout the country. The equipment and services procured with this funding support accomplishment of the Campaign Protection program performance goal to protect our Presidential and Vice Presidential candidates and nominees by ensuring protectees arrive and depart safely 100 percent of the time.

Increments over current service: Bush Post-Presidency Detail

Funding is requested to staff and support the President's post-presidency detail. Although the detail will not be operational until January 20, 2009, funds allocated in FY 2007 will allow for limited recruiting, hiring and training of personnel in advance of President Bush leaving office. Upon completion of training, these new agents will be used to support candidate/nominee protection throughout Campaign 2008. Following the Inauguration of the new president, these agents will be used to backfill senior special agents who will be required to staff the new detail. This funding will allow for partial implementation of new protection duties and transition of personnel. If funded, staffing the new detail would support the accomplishment of the Domestic Protectees program performance goal to protect our Nation's leaders and other protectees by ensuring protectees arrive and depart safely 100 percent of the time. Funding this initiative also would support accomplishment of investigative program performance goals, as fewer special agents would be drawn from field offices to support increasing protective requirements.

Protective Terrorist Countermeasures Support

USSS is requesting additional base funding to support and enhance critical operational and classified systems.

Technical Surveillance and Electronic Countermeasures

Funding will be used to upgrade, enhance, replace and maintain existing critical classified systems used to identify and mitigate technical and electronic threats to fixed and temporary protected sites visited by the President, Vice President, and other high-threat protectees. These classified countermeasures include state-of-the-art technical and electronic surveillance systems (fixed and portable) that identify and mitigate current and emerging electronic threats; also, the specialized software supporting these systems must be upgraded. If these systems are not upgraded, USSS's ability to identify and negate electronic devices used for intelligence intercepts and/or the activation of explosive or other hazardous devices may be compromised. The requested upgrades and enhancements will support accomplishment of the performance goal to protect our nation's leaders and other protectees.

Chemical / Biological Mitigation

Funding will support specialized threat-detection, including Hazardous Agent Mitigation Medical Emergency Response (HAMMER) and Rapid Intervention Safety and Command (RISC). HAMMER and RISC protect the President, Vice President, and other high-threat protectees from a variety of Chemical/Biological/Radiological/Nuclear threats and respond to medical and rescue emergencies.

Funding will allow for expansion of fixed and portable Chemical/Biological/Radiological/Nuclear surveillance and alarm systems; procurement of specialized monitoring and rescue equipment; replacement of personal protective equipment and biological and chemical detection equipment; and expansion of services required to collect, analyze, and mitigate chemical threats. Funding would provide a necessary replacement cycle for the specialized Chemical and Biological Mitigation Program equipment. The requested equipment and services will support accomplishment of the performance goal to protect our nation's leaders and other protectees.

Enhancements to Communications Systems

Funding will allow for the acquisition of classified (HSDN) systems, wireless communications (Blackberry) systems and specialized encrypted radio systems, as well as allow for the establishment of a replacement cycle for existing equipment. The existing systems, both fixed and portable, require upgrades and enhancements to support critical mission requirements aligned to the performance goal to protect our nation's leaders and other protectees.

Software Application Modernization Services

Funding is required to upgrade and integrate new software in support of operational and classified systems; migrate from mainframe computer systems; and convert operational data to a web-based system. Modernization of existing applications and migration to web-based systems will position USSS to be interoperable with Departmental systems, systems of other organizational elements, and other government agencies. This interoperability will enhance the ability to identify and mitigate threats to protected persons.

Special Operations Equipment

Funding will be used to enhance, acquire, replace, and maintain specialized weapon systems and tactical equipment (high-tech night vision, tactical body armor, lasers sites) used by members of the Counter Assault, Counter Sniper, Emergency Response, and Counter Surveillance teams. Teams perform critical protective support missions that include identifying and mitigating threats against protectees and protected sites and venues. Team members must have functional, state-of-the-art tactical equipment and specialized weapons systems in order to successfully achieve results. Staffing of these teams has been increased with the realignment of resources from other Secret Service programs in order to address the demand for protective support missions which cannot be sustained with current funding limitations. Along with the need for increased staffing comes the need for additional equipment. Additional funding for these teams will support accomplishment

of the performance goal to protect our nation's leaders and other protectees by ensuring protectees arrive and depart safely 100 percent of the time.

Primary Armored Vehicles

Funding will increase and maintain current primary Presidential/Vice Presidential armored vehicles. The vehicle carrying the President serves as the Oval Office when he travels beyond the perimeter of the White House Complex. Additional funding will allow for expansion, maintenance, and replacement of the existing Presidential/Vice Presidential armored vehicle fleet. The primary Presidential/Vice Presidential armored vehicles contain state-of-the-art technologies, including transparent armor that is vital to the ability to provide critical protection to the President and Vice President when outside of protected sites. The degree of protection afforded by these primary armored vehicles is significantly higher than it is for any other armored vehicle in the world. The availability and operability of the armored fleet would be greatly enhanced through this additional funding and contribute to the accomplishment of the performance goal to protect our nation's leaders.

[Note: any discussion of vehicle capabilities must be conducted in closed sessions. A document classified "Secret" describing the performance of the above armor systems is available upon request.]

Cite the PART and Performance Information

The following is the PART schedule:

- **FY 2006:** Foreign Protectees and Foreign Missions; Protective Intelligence
- **FY 2007:** Domestic Protectees (incorporated the Campaign Protection program by permission of OMB)
- **FY 2008:** Investigations

Results of completed PARTs are as follows:

- **Foreign Protectees and Foreign Missions** (89 out of 100 – “Effective”)
- **Protective Intelligence** (95 out of 100 – “Effective”)
- **Domestic Protectees** (96 out of 100 – “Effective”)

OMB PARTs of Foreign Protectees/Foreign Missions, Protective Intelligence, and Domestic Protectees found that these programs meet their performance targets, collaborate with partner agencies to achieve results, and allocate resources effectively and efficiently.

PART results influenced the FY 2007 budget request as follows:

USSS believes that *performance and risk* should be the dual pillars of resource allocation. Initiatives requested in the FY 2007 budget meet both imperatives:

- *Performance:* The Service has received across-the-board “Effective” PART ratings for all of its protective programs: Domestic Protectees, Foreign Protectees and Foreign Missions, and Protective Intelligence. (Campaign Protection, with OMB’s permission, was included in Domestic Protectees for PART purposes). These PART ratings demonstrate that USSS delivers a considerable “return on investment” for funds appropriated to its protective programs. As such, requested increases are consistent with both the letter and spirit of the President’s focus on budget and performance integration.
- *Risk:* Increased investments in protective programs’ manpower and equipment are vital due to the threat, vulnerability, and consequence associated with (a) a campaign in which neither candidate will be a Presidential or Vice Presidential incumbent, (b) the addition of a Former President with an internationally high profile, and (c) the known and anticipated physical, technological, electronic, and air space threats to Presidential and Vice Presidential protection.

D. How Secret Service Programs Align To and Support DHS Strategic Plan Objectives

Domestic Protectees program performance goal - Protect our nation's leaders and other protectees.

DHS Strategic Objective 3.4 - Secure the physical safety of the President, Vice President, visiting world leaders, and other protectees.

Foreign Protectees and Foreign Missions program performance goal - Protect visiting world leaders.

DHS Strategic Objective 3.4 - Secure the physical safety of the President, Vice President, visiting world leaders, and other protectees.

Protective Intelligence program performance goal - Reduce threats posed by global terrorists and other adversaries.

DHS Strategic Objective 3.4 - Secure the physical safety of the President, Vice President, visiting world leaders, and other protectees.

Financial Investigations program performance goal - Reduce losses to the public attributable to counterfeit currency, other financial crimes, and identity theft crimes under the jurisdiction of USSS, which threaten the integrity of our currency and the reliability of financial payment systems worldwide.

DHS Strategic Objective 3.3 - Protect against financial and electronic crimes, counterfeit currency, illegal bulk currency movement, and identity theft.

Infrastructure Investigations program performance goal - Reduce losses to the public attributable to electronic crimes and crimes under the jurisdiction of USSS that threaten the integrity and reliability of the critical infrastructure of the country.

DHS Strategic Objective 3.3 - Protect against financial and electronic crimes, counterfeit currency, illegal bulk currency movement, and identity theft.

Campaign Protection program performance goal - Protect our Presidential and Vice Presidential Candidates and Nominees.

DHS Strategic Objective 3.4 - Secure the physical safety of the President, Vice President, visiting world leaders, and other protectees.

E. Performance Based Budget Highlights by Program

Performance Goal: Protect our Nation's leaders and other protectees.						
Measure: % of Instances Protectees Arrive and Depart Safely.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	100%	100%	100%	100%	100%
	Actual	100%	100%	100%		
Program: Domestic Protectees**	\$ Thousands	\$770,206	\$819,927	\$792,670	\$810,560	\$846,455
	FTE	2,952	3,140	3,358	3,374	3,404

Performance Goal: Protect our Presidential and Vice Presidential Candidates and Nominees.						
Measure: % of Instances Protectees Arrive and Depart Safely.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	100%	100%	N/A	N/A
	Actual	N/A	100%	100%	N/A	N/A
Program: Campaign Protection** (combined with Domestic Protectees for PART evaluation)	\$ Thousands	\$10,870	\$64,557	\$24,500	\$0	\$21,400
	FTE	24	236	120	0	24

Performance Goal: Protect visiting world leaders.						
Measure: % of Instances Protectees Arrive and Depart Safely - Foreign Dignitaries.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	100%	100%	100%	100%	100%
	Actual	100%	100%	100%		
Program: Foreign Protectees/Foreign Missions**	\$ Thousands	\$103,289	\$105,406	\$124,807	\$129,134	\$130,781
	FTE	455	527	659	659	659

Performance Goal: Reduce threats posed by global terrorists and other adversaries.						
Measure: Number of Protective Intelligence Cases Completed.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	4,000	4,500	4,000	4,000	3,300
	Actual	3,927	3,992	4,614		
Program: Protective Intelligence**	\$ Thousands	\$85,662	\$65,653	\$68,857	\$71,225	\$72,534
	FTE	494	441	441	446	450

Performance Goal: Reduce losses to the public attributable to counterfeit currency, other financial crimes, and identify theft crimes that are under the jurisdiction of USSS, which threaten the integrity of our currency and the reliability of financial payment systems worldwide.						
Measure: Counterfeit Passed per Million Dollars of Genuine U.S. Currency.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	\$74	\$74	\$74	\$74	\$74
	Actual	\$58	\$60	\$80		
Measure: Financial Crimes Loss Prevented (Billions).	Target	\$1.5	\$1.0	\$1.5	\$1.5	\$1.5
	Actual	\$2.5	\$1.7	\$1.80		
Program: Financial Investigations	\$ Thousands	\$259,836	\$251,262	\$315,794	\$341,612	\$340,571
	FTE	1,858	1,689	1,684	1,796	1,778

Performance Goal: Reduce loses to the public attributable to electronic crimes and crimes under the jurisdiction of USSS that threaten the integrity and reliability of the critical infrastructure of the country.						
Measure: Financial Crimes Loss Prevented,(Millions)	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	Baseline	\$150	\$150	\$150

Additional Details:
 Maritime Security activities include the following programs: Regional Identification, Port, Waterway and Canal Security and Defense Backstop.
 Non-residential activities include the following programs: Assets and Business Modernization, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement.
 FY 2009 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund. FY 2010 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund. FY 2011 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund. FY 2012 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund.
 FY 2009 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund. FY 2010 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund. FY 2011 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund. FY 2012 funding for the Maritime Security, Assets to Operations, Asset Environmental Protection, Using Assets Resources, Using Assets for Other Law Enforcement, and Assets to Operations programs was allocated to the Maritime Security Fund.
 FY 2009 included several medical malpractice settlements of medical personnel, \$11,811,000 in Operating Expenses, \$4,382,000 and FTE 431,000 in Appropriation, Commodity and Information.

iii. Status of Congressionally Requested Studies and Reports**Department of Homeland Security****U. S. Coast Guard****Status of Congressionally Requested Studies, Reports and Evaluations**

1. Senate Report 108-280, page 49 and Conference Report 108-774 page 56 directs the National Academy of Sciences (NAS) to study the role of Coast Guard icebreakers. Target final NAS response to Committee September 2006.
2. House Report 109-79, page 60 directs the Coast Guard to submit reports on the results of port security terrorism exercises to the Committee every six months. Target response to Committee February 2006, August 2006.
3. House Report 109-79, page 61 directs the Coast Guard to continue to adhere to reporting requirements prior to moving any sector commands. Target response to Committee 30 days prior to command structure implementation.
4. Senate Report 109-83, page 55 directs the Coast Guard to submit a report on its plans to meet fisheries enforcement needs. Target response to Committee February 2006.
5. Senate Report 109-83, page 55 directs the Coast Guard to issue a report on the status of family housing needs on a State-by-State basis. Target response to Committee February 2006.
6. Conference Report 109-241, page 58 directs the Coast Guard to report on status of evaluations to reduce occupational safety and health risks. Target response to Committee December 2005.
7. Public Law 108-7, page 422 directs the Commandant of the Coast Guard to submit a quarterly report on the agency's mission hour emphasis. Target response to Committee January 2006, April 2006, July 2006, October 2006.
8. Public Law 108-7, page 422 directs the Commandant of the Coast Guard to submit a quarterly report on all major Coast Guard acquisition projects. Target response to Committee January 2006, April 2006, July 2006, October 2006.
9. House Report 109-79, page 67 directs that the Coast Guard submit a Maritime Safety and Security Teams (MSSTs) policy report with the fiscal year 2007 budget request. Target response to Committee February 2006.

10. Senate Report 109-83, page 61 expects the Coast Guard to submit a comprehensive capital investment plan. Target response to Committee February 2006.
11. Conference Report 109-241, page 60 directs the Coast Guard to conduct an operational gap analysis for all Deepwater assets. Target response to Committee February 2006.
12. Conference Report 109-241, page 59 directs the Coast Guard to submit a review of the Revised Deepwater Implementation Plan. Target response to Committee February 2006.
13. Conference Report 109-241, page 60 directs the Coast Guard to submit a comprehensive review of the Revised Deepwater Implementation Plan every five years beginning in fiscal year 2011. Target response to Committee February 2006.
14. Conference Report 109-241, page 60 directs the Coast Guard to provide a patrol boat availability report. Target response to Committee February 2006.

U. S. Coast Guard**Operating Expenses****I. Appropriation Overview****A. Mission Statement for Operating Expenses:**

The Coast Guard's Operating Expenses (OE) budget request seeks funding for the annualization of prior-year, part-year funding and non-pay cost of living increases, operating and maintenance funding for assets procured in prior years, and allow for the introduction of new initiatives that enhance the Coast Guard's maritime safety and security capabilities.

B. Budget Activities:

Operating Expenses will provide support for our traditional missions that include Search and Rescue (SAR), Marine Safety, Aids to Navigation (AtoN), Ice Operations, Marine Environmental Protection (MEP), Living Marine Resources (LMR), Drug Interdiction, Migrant Interdiction, Other Law Enforcement, Ports, Waterways and Coastal Security (PWCS) and Defense Readiness.

C. Budget Request Summary:

The Coast Guard requests \$5,518,843,000 and 46,284 FTE in FY 2007 to introduce the new initiatives. In particular, funding will reflect the newest mission requirement to support the National Capital Region Air Defense (NCRAD) capability. To improve U.S. Government's ability to respond to maritime terrorist threats, the budget requests funds for further development of the Maritime Security Response Team (MSRT). In support of the President's National Strategy for Maritime Security, maritime domain awareness will be enhanced through the production of field infrastructure to sustain the expansion of the Secret Internet Protocol Router Network (SIPRNET) to Coast Guard field commands, establishment of a counterintelligence directorate and additional funding for Sector Command Center (SCC) personnel. Funding is also requested to streamline and refine the Coast Guard's financial tracking and reporting practices to ensure compliance with Congressional, Office of Management and Budget (OMB) and DHS financial reporting requirements. And lastly, funding is requested to support the consolidation of DHS entities in the National Capital Region through the move of all Washington D.C.-based Coast Guard units to the Saint Elizabeths campus on the east bank of the Anacostia River.

The Coast Guard requests 46,527 positions, 46,284 FTE, and \$5,518,843,000. The Adjustments-to-Base is 169 positions, 350 FTE, and \$30,459,000. The program increases included 180 positions, 91 FTE, and \$77,829,000 to:

CG-OE-2

- Relocate Coast Guard headquarters from Washington, D.C. area to the Saint Elizabeth campus on the east bank of the Anacostia River (\$50,200,000)
- Procure Self-Contained Breathing Apparatuses (SCBAs) for all personnel serving on Coast Guard cutters (\$7,200,000)
- Build additional maritime security response capability through the creation of a Maritime Security Response Team (MSRT) - a rapidly deployable, highly trained unit outfitted with specialized tactical equipment to perform opposed insertions/boardings, serve high risk arrest warrants and other offensive CT activities within the maritime environment (\$3,074,000 and 30 FTE)
- Execute the National Capital Region Air Defense (NCRAD) mission (\$13,934,000 and 61 FTE)
- Enhance Maritime Domain Awareness (MDA) through the expansion of SIPRNET capability, establish the Coast Guard Counterintelligence program and provide prototype Sector Command Centers (SCC) and Joint Harbor Operation Center (JHOC) operations support (\$6,421,000)
- Establish a Financial Audit Remediation and Internal Controls Program (\$2,000,000)

NOTE 1: Funding shown does not include \$236,750,000 appropriated for the Medicare-Eligible Retiree Healthcare Fund contribution in FY 2005. It was separated out of the Operating Expenses appropriation for presentation purposes only. Beginning in FY 2006, the contribution was no longer allocated to the Operating Expenses appropriation, but to the Medicare-Eligible Retiree Healthcare Fund Contribution appropriation.

NOTE 2: FY 2005 column does not reflect a \$9.453M anticipated reimbursable not yet received.

NOTE 3: FY 2005 numbers display supplemental funding (\$38M DOD transfer and \$145.685M hurricane supplemental) as a non-add, as the assumption is that all supplemental funding has been obligated and is reflected in the PPA spread.

III. Current Services Program Description by PPA

Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)

PPA I: PERSONNEL RESOURCES

	Perm		
	Pos	FTE	Amount
2005 Actual¹	39,387	39,717	\$2,612,475
2006 Revised Enacted	39,764	39,891	2,716,842
2007 Adjustments-to-Base	156	280	64,325
2007 Current Services	39,920	40,171	2,781,167
2007 Program Change	180	91	7,109
2007 Request	40,100	40,262	2,788,276
Total Change 2006-2007	336	371	71,434

The Coast Guard requests \$2.8 billion for this activity. This is an increase of \$71 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

Requests funding for expenses related to compensation and benefits for active duty military personnel. This category includes pay, allowances, employer's share of FICA, Social Security credits and other expenses associated with compensating military personnel. Costs related to compensation are calculated by using the Coast Guard's Standard Personnel Cost (SPC) tables. These annually updated tables provide a detailed calculation for each billet, broken down by rank/rate, whether or not the billet is assigned in the country (INCONUS) or out of the country (OCONUS – which includes AK and HI), medical costs and permanent change of station (PCS) costs. Calculations for medical cost estimates are the same for each billet. Calculations for PCS moves and base pay are based upon rank and location of billet. Pay estimates also take into consideration OMB published pay inflation factors for the fiscal year in question.

The Coast Guard committed to our people...and our people committed to the Coast Guard.

An investment in active duty military personnel will ensure that the service will remain "Semper Paratus" (Always Ready). The service was founded as a military, multi-mission, maritime service and continues to be ready, aware and responsive across the full range of the Coast Guard's eleven mission programs. As the Nation's maritime first responder, the Coast

¹ For comparability, funding shown does not include \$236,750,000 apportioned for the Medicare-Eligible Retiree Healthcare Fund contribution in FY 2005. It was separated out of the Operating Expenses appropriation for presentation purposes only. Beginning in FY 2006, the contribution was no longer allocated to the Operating Expenses appropriation, but to the Medicare-Eligible Retiree Healthcare Fund Contribution appropriation.

Guard must not only be effective in its daily operations, but must also remain ready for emergencies and contingencies; it must be aware of maritime conditions and activities in order to detect, deter and defeat threats early; and when called it must be responsive with the right capabilities at the right time.

Dedicated Coast Guard personnel, as members of one of the Nation's five Armed Services, conduct the missions that protect the public, the environment and U. S. economic interests – in the Nation's ports and waterways, along the coast, on international waters and in any maritime region required to support Homeland National Security. What makes the Coast Guard unique is that in executing the diverse missions assigned, contradictory mandates are harmonized by its military workforce. Coast Guard personnel are charged to be sailors, police, warriors, humanitarians, regulators, stewards of the environment, diplomats and guardians of the coast – military, multi-mission and maritime. Coast Guard forces are flexible, rapidly deployable and able to respond to crises with a full range of capabilities. Coast Guard forces capitalize upon their multi-mission synergies to prevent maritime incidents, protect the U. S. Maritime Domain, and respond to and recover from incidents that do occur.

Funding requested will support the anticipated FY 2007 pay raise for all military service members (pay inflation rate is currently estimated at 2.2%), annualize military FTE introduced in FY 2006, and also provide new personnel for the Maritime Security Response Team (30 FTE) and the National Capital Region Air Defense (NCRAD) initial crews (61 FTE).

PPA II: CIVILIAN PAY AND BENEFITS

	Perm		
	Pos	FTE	Amount
2005 Actual	6,308	5,676	\$480,873
2006 Revised Enacted	6,414	5,952	526,182
2007 Adjustments-to-Base	13	70	43,252
2007 Current Services	6,427	6,022	569,434
2007 Program Change
2007 Request	6,427	6,022	569,434
Total Change 2006-2007	13	70	43,252

The Coast Guard requests \$569.4 million for this activity. This is an increase of \$43.3 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

Requests funding for expenses related to compensation and entitlements for Federal civilian employees. The workforce is composed of General Schedule (GS) personnel, Administrative Law Judges (AL), Senior Executive Service (SES) personnel, personnel whose salaries are Administratively Determined (AD) (e.g. Coast Guard Academy civilian faculty members), Wage Grade (WG) positions employed in industrial operations and "Non-Ceiling" (NC) employees (e.g., cooperative education students, student aids, summer interns, and federal junior fellows). Costs related to compensation are calculated by using the Coast Guard's Standard Personnel Cost (SPC) tables. These annually updated tables provide a detailed calculation for each billet, broken down by pay grade and whether or not the position is

CG-OE-6

assigned in the country (INCONUS) or out of the country (OCONUS – which includes AK and HI). Calculations for base pay are based upon position and location of position, and also take into consideration OMB published pay factors for the fiscal year in question.

The Coast Guard committed to our people...and our people committed to the Coast Guard.

The Coast Guard's civilian personnel are dedicated professionals who contribute daily across the full range of the Coast Guard's eleven mission programs. Civilian personnel stand side-by-side military personnel in filling the rolls of this nation's maritime first responder. Civilian personnel help maintain daily mission effectiveness, help prepare for emergencies and contingencies and help to ensure maritime domain awareness. These dedicated personnel support and conduct the missions that protect the public, the environment and U. S. economic interests – in the Nation's ports and waterways, along the coast, on international waters in any maritime region required to support national security.

Funding requested will support the anticipated FY2007 pay raise for all civilian personnel (pay inflation rate is currently estimated at 2.2%) and annualize civilian FTE introduced in FY 2006.

In FY 2005, Coast Guard military service members, civilian employees and auxiliaries:

- Responded to more than 32,000 calls for assistance and saved the lives of over 5,500 mariners in distress and rescued an additional 33,735 in response to Hurricane Katrina.
- Conducted more than 115,800 recreational vessel safety checks and more than 20,000 inspections of commercial vessels.
- Ensured, through its Vessel Traffic Service, the safe passages of more than one million commercial vessels through congested harbors.
- Maintained more than 50,000 Federal aids to navigation along 25,000 miles of marine transportation routes.
- Provided ice safety information through International Ice Patrol sorties, to facilitate the movement of 1,128,235 tons of cargo during the North Atlantic ice season.
- Issued over 270,000 certificates of documentation to vessel owners and operators.
- Boarded more than 6,000 fishing vessels to enforce safety and fisheries management regulations, a 30 percent increase over 2004.
- Responded to 23,904 reports of water pollution or hazardous material releases resulting in 4,015 pollution response cases.
- Prevented more than 338,000 pounds of cocaine and over 10,000 pounds of marijuana from reaching the U. S.
- Interdicted nearly 9,500 undocumented migrants attempting to enter the country illegally by sea.
- Conducted more than 268,000 surface patrols and 5,800 air patrols for port security.
- Conducted more than 26,000 port security boardings.
- Escorted over 10,000 vessel transits in U. S. ports.

CG-OE-7

PPA III: TRAINING AND RECRUITING

	Perm		
	Pos	FTE	Amount
2005 Actual	\$122,163
2006 Revised Enacted	175,359
2007 Adjustments-to-Base	2,481
2007 Current Services	177,840
2007 Program Change	3,036
2007 Request	180,876
Total Change 2006-2007	5,517

The Coast Guard requests \$181.1 million for this activity. This is an increase of \$5.5 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

This request funds the Coast Guard's professional training and education programs, as well as operation and maintenance of the seven major Coast Guard training centers and the Coast Guard Academy/Leadership Development Center. It requests funding for all Coast Guard recruiting operations, ensuring that sufficient numbers of qualified individuals enter the military workforce to account for normal attrition factors and position growth. Coast Guard recruiting is a nationwide endeavor; as such, recruiters cover broad geographic areas with diverse socioeconomic conditions in competing for a limited pool of qualified recruits. Additionally, this request includes funding for tuition, travel and per diem for formal training and education performed as temporary additional duty (TAD) by military service members and civilian personnel. "Formal training and education" is defined as structured, curriculum-based instruction and applied exercises for the attainment and retention of skills and knowledge required to accomplish specific job tasks. This training and education is usually conducted by dedicated resident staffs in classrooms, but may also include exportable training, correspondence courses and/or computer-based training, which follow a formal schedule with supporting lesson plans requiring interaction or evaluation of the students or participants. The requested funding is required to ensure that the training infrastructure is adequately resourced to provide Coast Guard personnel with the tools and training necessary for the missions assigned and to ensure that, when called upon, the Coast Guard is responsive with the right capabilities at the right time. From entry-level personnel through senior leadership, the Coast Guard focuses its training resources to embed those competencies that will maximize operational capabilities. The full gamut of the Coast Guard's capabilities and competencies was on display in FY 2005, from hurricane and pollution response to record-setting levels of drug interdiction to sustained defense operations in the Persian Gulf. The foundation of a high level of workforce performance and continued mission success is the Coast Guard's training and education programs. Additionally, new and augmented capabilities, such as Coast Guard participation in the inter-agency capable Maritime Security Response Team (MSRT), require specialized training in order to be effectively deployed.

CG-OE-8

Funding requested will support non-pay related inflation costs to support training centers and recruiting office operations. It will also support required training for the Coast Guard members of a new Maritime Security Response Team and personnel assigned to the NCRAD mission.

PPA IV: OPERATING FUNDS AND UNIT LEVEL MAINTENANCE

	Perm Pos	FTE	Amount
2005 Actual	\$1,120,578
2006 Revised Enacted	947,400
2007 Adjustments-to-Base	56,601
2007 Current Services	1,004,001
2007 Program Change	57,573
2007 Request	1,061,574
Total Change 2006-2007	114,174

The Coast Guard requests \$1.1 billion for this activity. This is an increase of \$114 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

Requests funding to units, facilities and activities that are under the direct operational and administrative control of the Coast Guard's Atlantic Area or Pacific Area Commanders. These include Maintenance Logistics Commands (MLCs), Integrated Support Commands (ISCs), High and Medium Endurance Cutters (WHECs/WMECs), Communication Stations, Maritime Safety and Security Teams (MSSTs), and Area Offices as applicable, for supplies, materials and services that allow the Coast Guard to sustain an operations tempo with an immediate response capability for Coast Guard missions. Maintenance of the cutters' hulls, mechanical systems, electrical equipment, and small boats; procurement of supplies and materials utilized for unit "housekeeping" and administration, spare parts, fuel and energy; funding of personnel support programs; and other materials consumed all contribute directly to mission effectiveness.

As a result of resources received, several Coast Guard programs have been able to set increasing targets of performance in the five-year outlook. For example, the planned FY 2007 Drug Interdiction performance increase of 4% in the cocaine removal rate is possible, due in part to continued funding for Airborne Use of Force (AUF) initiatives and recent increases in Maritime Patrol Aircraft (MPA). The funds requested for the National Capitol Region Air Defense initiative and Maritime Security Response Team are critical to reducing the risk of attacks against high value assets and key infrastructure, a goal most closely aligned with the Ports, Waterways and Coastal Security (PWCS) mission-program. In addition, the funds requested ensure no degradation to other mission-programs by providing funds for additional airframes to sustain the increased mission demand.

Other increases in Coast Guard performance are better explained through the *holding steady* of performance levels against a more challenging future environment. An example is the Living Marine Resources (Domestic Fisheries Enforcement) mission-program, which has forecasted

CG-OE-9

its FY 2007 performance (97% compliance) at FY 2006 levels. Recent trends favor the growth of more-difficult-to-enforce regulations, such as individual fishing quotas and larger closed areas. The Merchant Mariner Licensing and Documentation program, by centralizing critical security vetting and mariner credentialing processes in a new and enhanced National Maritime Center, will dramatically improve security on our Nation's waterways, while facilitating efficient service to mariners.

The planned relocation to Alaska of a more capable high endurance cutter and the associated decommissioning of the cutters STORIS and GENTIAN (reflecting a cost savings of \$3.6M) are examples of positive steps the Coast Guard is taking to increase efficiencies within its budget while maintaining high mission performance. Other efficiencies include personnel reductions and management efficiencies that contribute to streamlining overhead costs – these efforts will allow us to re-direct funding towards sustaining our current operational tempo.

Requested funds will support the annualization of new operations introduced in FY 2006 and account for non-pay related inflation associated with maintenance and procurement of supplies and consumables. Funding will also provide initial operating funding for the NCRAD mission; support an aggressive financial audit remediation effort to establish a more refined financial accountability process; establish a Counterintelligence program for the Coast Guard; and begin initial phases of Coast Guard Headquarters move to the Saint Elizabeths campus.

PPA V: CENTRALLY MANAGED ACCOUNTS

	Perm		
	Pos	FTE	Amount
2005 Actual	\$192,820
2006 Revised Enacted	183,150
2007 Adjustments-to-Base	22,226
2007 Current Services	205,376
2007 Program Change	2,578
2007 Request	207,954
Total Change 2006-2007	24,804

The Coast Guard requests \$208 million for this activity. This is an increase of \$24.8 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

This Project, Program/Activity (PPA) represents centrally managed accounts at Coast Guard Headquarters, which provide service to the entire Coast Guard. Some of the larger central accounts include: the Federal Telephone System (FTS), Standard Workstation recapitalization, Coast Guard Data Network (CGDN), postal expenses, Government Services Administration (GSA) rent, ammunition replenishment, and DHS Working Capital Fund. To remain ready, aware and responsive in all Coast Guard missions, this PPA maintains a continuous and consistent level of service which directly affects the operation and management of the Coast Guard in a broad range of areas.

For example, the FTS, Standard Workstation, CGDN, and Information Technology (IT)

CG-OE-10

services contained within the DHS Working Capital Fund all provide dependable voice and data communications critical to Coast Guard operations. The FTS account pays for all telephone communications in the Coast Guard. Operationally, telephone and Standard Telephone Equipment (STE) [formerly known as STU-III] communications are the primary means of passing time critical operational information. The Coast Guard depends upon STE communications to update the Electronic Key Material System (EKMS) codes to relay timely and secure voice information. As progress is made towards e-Coast Guard both for administration and operations, the Coast Guard is becoming more and more dependent upon the enterprise applications available on the Coast Guard Standard Workstation. Coast Guard field units require access to Coast Guard data systems to update operational databases such as the Marine Information for Safety and Law Enforcement (MISLE) and the Abstract of Operations (AOPS) systems; these critical databases capture marine safety and law enforcement data for underway and shore-based Coast Guard boarding teams. Of equal importance is maintaining the CGDN, which is the backbone of the Coast Guard's IT and communication systems. All operational message traffic and electronic communication through the Standard Workstation passes through this data network.

In addition to the above mentioned C4&IT examples, the Coast Guard ammunition replenishment account is critical to maintaining Coast Guard boarding officer and cutter combat team proficiency, through the use of live ammunition when training in small arms and cutter weapon systems. Other accounts such as the Postal Account, GSA Rent and DHS-shared services in the Working Capital fund maintain a single-point for payment, which maximizes management efficiencies. Because these accounts are centralized within this PPA, the Coast Guard maintains positive control on projections, spending and reconciliation of these necessary services which support Coast Guard infrastructure. With a reliable means to account and pay for these necessary services, the Coast Guard support infrastructure is in place to support the Coast Guard in carrying out the eleven mission programs.

Funding requested will support the procurement of Secret Internet Protocol Router Network (SIPRNET) capability for field units, and account for non-pay related inflation related to increased GSA rent costs, postage rates and communications services (such as phone and internet).

PPA VI: INTERMEDIATE AND DEPOT LEVEL MAINTENANCE

	Perm		
	Pos	FTE	Amount
2005 Actual	\$711,934
2006 Revised Enacted	630,547
2007 Adjustments-to-Base	72,649
2007 Current Services	703,196
2007 Program Change	7,533
2007 Request	710,729
Total Change 2006-2007	80,182

The Coast Guard requests \$710.9 million for this activity. This is an increase of \$80.2 million over FY 2006.

CG-OE-11

CURRENT SERVICES PROGRAM DESCRIPTION:

This request provides service-wide funding for the Coast Guard's base level operating expense (OE) funded maintenance for the service's shore facilities, vessels and aircraft. The Coast Guard maintains its aircraft, vessels and shore infrastructure using organic maintenance and repair infrastructure in conjunction with contracted depot-level maintenance activities. A mature project planning and execution program exists within the Coast Guard to provide routine unit-level and depot-level maintenance. Where expertise or infrastructure does not exist organically within the service, the Coast Guard uses contracted resources to provide the requisite maintenance support.

The Coast Guard's maintenance planning process involves every level of the organization including: (1) field level input provided in casualty, mishap and annual unit engineering reports; (2) engineering/support provider input in the form of regional maintenance data/trend analysis, observations of experienced support/engineering personnel and prioritization of issues/needs; and (3) Coast Guard Headquarters involvement in the collation of CG-wide data/trend analysis, input from the Atlantic and Pacific Area Commanders and their support providers, and development of corrective strategies.

Aircraft. Request includes service-wide funding to support the major maintenance and repair of Coast Guard aircraft not appropriated in the Coast Guard Acquisition, Construction and Improvements (AC&I) appropriation. This category includes: materials, services and supplies necessary for depot-level repair, maintenance, modification and overhaul of aircraft and aircraft equipment, including associated avionics; transportation of aircraft and aeronautical materials and equipment; and procurement and overhaul of aircraft ground handling and support equipment. Request also includes funding for general expenses related to inventory and engineering design, alteration and modification services in support of the Coast Guard aircraft.

This funding request supports intermediate and depot-level aircraft repair. Coast Guard rotary wing aircraft and fixed wing HU-25s are continuously rotated out of operational service to allow for programmed depot maintenance (PDM) at the Coast Guard Aircraft Repair and Supply Center (ARSC) in Elizabeth City, NC. This funding also provides for contractor support to conduct PDM on the service's HC-130Hs, as ARSC does not have this capacity. All PDM is based upon established service standards. The purpose of the aircraft PDM program is to (1) provide periodic inspection of areas of an aircraft which are not accessible without extensive disassembly, (2) perform heavy maintenance which is beyond the capability of operating units, and (3) incorporate changes and modifications which are too extensive to perform at the operating unit level.

Vessels. Request includes service-wide funding to support the major maintenance and repair of Coast Guard vessels not appropriated in the Coast Guard Acquisition, Construction and Improvements (AC&I) appropriation. Request includes funding to support the procurement, installation, replacement and support of standard hull, mechanical, electrical and electronic systems not provided in the Coast Guard's Acquisition, Construction and Improvements (AC&I) appropriation. Request also includes funding for general expenses related to inventory and engineering design, alteration and modification services in support of the Coast Guard

CG-OE-12

vessels.

Coast Guard vessels are regularly scheduled for programmed depot maintenance based upon established service standards. In addition to ship repair work provided by the Coast Guard Yard in Curtis Bay, MD, the Coast Guard routinely uses ship repair facilities/contractors to complete depot level maintenance via competitive contracts. The Coast Guard manages vessel base OE legacy asset maintenance funding using standard support levels (SSLs) established for each vessel class of asset at the time of asset acquisition and adjusted annually for inflation. Actual expenditures vary from the SSL as the Coast Guard's maintenance managers shift resources to deal with their most immediate fleet maintenance challenges, often using funds from another vessel's SSL or outside sources to ensure availability of the most critical Coast Guard assets.

Shore Infrastructure. Request includes service-wide funding for major, nonrecurring facility maintenance to ensure the integrity of the shore infrastructure, maximize facility economic life and avoid large recapitalization expenses. This request includes funding for repairs, rebuilding, renovation, improvement and other services provided by the Coast Guard's Civil Engineering program not appropriated in the Coast Guard's AC&I appropriation. This category includes support of Coast Guard owned buildings, structures, grounds, roads, towers and runways. It also includes support for fixed Aids to Navigation (AtoN) structures (ashore and offshore); major non-consumable equipment used to support the shore plant (e.g., generators, compressors, concrete mixers, truck cranes); underground storage tanks; non-consumable ATON equipment in lighthouses and lighted ranges (light and sound signals, and power systems); Coast Guard housing; and morale, well-being and recreational facilities.

Funding requested will support the first phase of the Self-Contained Breathing Apparatus purchase (which will replace the obsolete Oxygen-Breathing Apparatus (OBA)) on all cutters in the Coast Guard, exit costs related to the closure of Long-Range Aids to Navigation (LORAN)-C system and other non-pay related inflation associated with the maintenance of shore, cutter and aircraft infrastructure.

DHS Infrastructure Transformation Program

The Department's Infrastructure Transformation Program (ITP), led by the Office of the Chief Information Officer (OCIO), will integrate the IT infrastructures of the 22 legacy components into "One Infrastructure". Currently, most of the Department's components fund and are supported by separate and largely stove-piped IT infrastructures. This environment makes it difficult to share information across components and has resulted in redundant investments and wasted resources. The ITP will eliminate the duplicative infrastructures and provide common capabilities and services for all components to leverage.

The ITP consists of five domains with a Department component assigned as a steward responsible and accountable for the performance of each domain. The domains and their stewards are listed below:

- Network Services led by Customs and Border Protection (CBP);
- Data Center Services led by CBP;
- Email Services led by U.S. Coast Guard (USCG);
- Help Desk Services led by USCG; and

CG-OE-13

- Video Operations Services led by Federal Emergency Management Agency (FEMA).

The OCIO oversees the work of the stewards and the other components to ensure operational requirements are met and investments and resource allocations are balanced across the components.

Implementation of the ITP will eliminate the need for components to spend resources on improving their own infrastructures. Instead, some of the investment funding previously used for stovepiped infrastructures will be used to support the department-wide ITP effort. For example, CBP's IT initiatives such as the Automated Commercial Environment will benefit from the capabilities and services the ITP will provide such as network access, data center hosting, email/collaboration services, wireless access, integrated help desk, voice access, video services, and on-site support. Rather than independently developing new capabilities or augmenting legacy capabilities within CBP, the ITP will provide enterprise-level services that will benefit all components.

By investing in the ITP, DHS components will benefit from economies of scale while promoting Department integration, and improving information sharing and interoperability. The amount of IT investment funding from components to support the ITP is still under deliberation and any such proposal will be fully vetted with the Congress prior to any actions being taken.

CG-OE-14

III. Current Services Program Description by PPA

**Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)**

Transfers to and from Other Accounts **\$5,000**

A. National Capital Region Transfer From CBP..... **\$5,000**

Strategic Goal(s) & Objectives: 2.4, 3.4, 7.5

PPA Breakdown - National Capital Region Transfer from CBP		Total (\$000)
PPA III: Training and Recruiting		
	Recruiting and Training Centers	15
PPA IV: Operating Funds and Unit Level Maintenance		
	Atlantic Area / 5th District	4,190
	Headquarters Directorates	336
PPA VI: Intermediate and Depot Level Maintenance		
	Aircraft Maintenance	459
		5,000

The Air Defense mission in the National Capital Region rests with the Department of Defense (DOD) under the construct of OPERATION NOBLE EAGLE. Through a Memorandum of Understanding, DOD has assigned this requirement to the Department of Homeland Security (DHS). As the Coast Guard is the agency within the Department best suited to execute this mission, it has been designated for this mission. Resources found within other DHS agencies operating base that support this mission will be transferred to the Coast Guard, resulting in a \$5 million operating funds transfer from Customs and Border Protection's (CBP) base to the Coast Guard to support its execution of the Air Intercept mission.

C. Non-Pay Adjustments

1. Non-Pay Inflation.....\$44,008

Strategic Goal(s) & Objectives: 7.7

PPA Breakdown - Non-Pay Inflation		Total (\$000)
PPA I: Military Personnel		
	Military Health Care	9,385
	Permanent Change of Station	1,688
PPA III: Training and Recruiting		
	Training and Education	1,429
	Recruiting and Training Centers	1,590
PPA IV: Operating Funds and Unit Level Maintenance		
	Atlantic Area / 5th District	3,769
	Pacific Area / 11th District	4,255
	1st District	1,073
	7th District	1,363
	8th District	907
	9th District	608
	13th District	463
	14th District	337
	17th District	555
	Headquarters Units	2,389
PPA V: Centrally Managed Accounts		
	Central Accounts	3,287
PPA VI: Intermediate and Depot Level Maintenance		
	Aircraft Maintenance	3,979
	Electronics Maintenance	1,757
	Civil/Ocean Engineering and Shore Facility Maintenance	2,722
	Vessel Maintenance	2,452
		44,008

Coast Guard operations rely heavily upon contract support for items such as capital asset maintenance, domestic services, cutter and aircraft deployment logistics, food services and procurement. Price escalation for goods and services during FY 2006 must be accommodated. Funding is requested at the non-pay inflation rate of 1.7% to ensure that maintenance and logistics contracts are adequately funded

CG-OE-18

**Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)**

to maintain essential services and enable the Coast Guard to execute its statutory responsibilities for the American public in FY 2006.

2. Operational Adjustments\$66,764

Strategic Goal(s) & Objectives: 2.1, 7.3, 7.4, 7.6, 7.7

PPA Breakdown - Operational Adjustments		Total (\$000)
PPA I: Military Personnel		
	Military Pay and Allowances	105
PPA III: Training and Recruiting		
	Recruiting and Training Centers	700
PPA IV: Operating Funds and Unit Level Maintenance		
	Atlantic Area / 5th District	7,000
	Pacific Area / 11th District	8,500
	1st District	3,000
	7th District	4,800
	8th District	1,300
	9th District	1,000
	13th District	800
	14th District	900
	17th District	1,800
	Headquarters Directorates	1,067
	Headquarters Units	200
PPA V: Centrally Managed Accounts		
	Central Accounts	9,641
PPA VI: Intermediate and Depot Level Maintenance		
	Aircraft Maintenance	13,724
	Electronics Maintenance	3,950
	Civil/Ocean Engineering and Shore Facility Maintenance	4,477
	Vessel Maintenance	3,800
		66,764

GSA Rent and Security Charges (\$5, 541): This request provides funding for GSA lease expenses associated with rental costs increasing faster than COLA (\$5.105M), changes in GSA basic security service costs (\$436K), and additional space requirements to accommodate new billets.

Postal Account – Postal Rate Increases in FY 2006 (\$500): Request funding to cover increased postage costs. The U.S. Postal Service, FY 2006 rate increase will result in additional official mail costs

CG-OE-19

Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)

for all of Coast Guard units that use postage meters or penalty mail stamps. The amount requested will ensure that the postal account is fully funded to make required payments to the U.S. Postal Service for Coast Guard mailings.

Depot Level Maintenance Exceeding Non-Pay COLA (\$21,300): This request seeks to ensure adequate funding, for depot level maintenance, adjusted for industry specific inflation that exceeds the 1.7% Non Pay COLA. Estimate is based on the industry standard.

Energy Account Increase (\$30,000): This request will fund current energy cost shortfalls and offset expected future year price increases. The Coast Guards Energy Account pays for all aircraft, cutter and shore side fuel oil, electricity, natural gas. In September 2004 the Defense Energy Support Center (DESC), the Department of Defense (DOD) service that purchases and provides fuel to all DOD and Coast Guard activities, substantially increased all of its contract fuel prices for FY 2005. Fuel funding, which includes cutters, aircraft and small boats in the Energy Budget Model, accounts for 63 percent of the total budget model. With the substantial increase in fuel prices in FY 2005, an increase in Coast Guard Deepwater assets, and an expanding Coast Guard-wide consumption of electricity, natural gas and heating oil, the Energy Account must be increased to ensure Coast Guard energy needs are fully funded.

DoD Authorization Act (\$105): Active Duty and Reserve Coast Guard members are entitled to benefits enacted in the annual National Defense Authorization Act (NDAA). In FY 2007, the Coast Guard requests funding associated with potential NDAA items, including temporary lodging expenses for dependents of deceased members and to pay interest to members for pay in arrears more than one month.

Government Services Increase (\$1,067): This request will provide funding for the Coast Guard to reimburse the National Telecommunication and Information Administration (NTIA), Office of Spectrum Management, for increased operating expenses incurred for the management of approximately 17,000 radio frequency assignments, supporting all CG missions. NTIA, within the Department of Commerce, under delegated authority from the President, manages the use of the federal radio frequency spectrum. The payment of this fee allows the Coast Guard to maintain frequency authority on its assigned frequencies. Under Public Law NTIA shall charge federal agencies for costs incurred for spectrum management, analysis, operations, and related services. Pursuant to the NTIA Organization Act, 47 U.S.C. 902-903, NTIA shall not authorize any spectrum use or provide any spectrum functions without reimbursement. In addition the request will provide funding for records storage to the National Archives.

Operational Adjustments (\$8,251): This request allocates additional funding for the Program, Project and Activity (PPA) V (Central Accounts) and PPA VI (Intermediate and Depot Level Maintenance) Accounts. Reducing aviation inventory level stocking gaps to better manage operational risk exposure, increasing facility and infrastructure maintenance due to excessive coastal maritime exposure, and providing additional maintenance on our legacy patrol boats and aging inland Aids To Navigation (AtoN) assets have place increased demands on PPA VI. PPA V has also realized limited funding

CG-OE-20

**Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)**

availability to keep up with the demand of its recurring "bills". Specifically, this will fund ammunition and armament to sustain field operations as they continue to grow, GSA Security Assessments at GSA leased facilities and the increased demand for buoy maintenance.

D. Operating and Maintenance Funds for New Facilities

1. Shore Facility and ATON Infrastructure Follow-On.....\$3,347

Strategic Goal(s) & Objectives: 2.1, 2.2, 2.3, 2.4, 3.1, 3.6, 3.7, 4.2, 4.3, 5.2, 7.7

PPA Breakdown - Shore Facility and ATON Infrastructure Follow-On		Total (\$000)
PPA III: Training and Recruiting		
Recruiting and Training Centers		380
PPA IV: Operating Funds and Unit Level Maintenance		
Atlantic Area / 5th District		82
Pacific Area / 11th District		165
1st District		200
7th District		12
8th District		14
9th District		35
13th District		356
17th District		136
Headquarters Directorates		475
PPA VI: Intermediate and Depot Level Maintenance		
Electronics Maintenance		82
Civil/Ocean Engineering and Shore Facility Maintenance		1,410
		3,347

This request provides follow-on operations and maintenance funding for AC&I shore facility projects scheduled for completion prior to FY 2007. This funding includes the day-to-day operation and maintenance costs (i.e. energy requirements, utility service, routine repairs and maintenance, housekeeping costs, and non-capital equipment) as well as major, non-recurring repair costs (i.e. building improvement, rehabilitation, etc.) anticipated throughout the life of each asset. Since such costs increase with facility age, a historically based average is used to cover non-recurring needs which typically include replacing roofs and heating, ventilation, and air-conditioning systems; improving energy efficiency; upgrading major electrical services; renovating; and other middle and later life facility needs. Also requests funding for resources to operate and maintain Aids to Navigation (AtoN) acquired in FY 2006. These new aids are required to mark new or considerably altered waterways created by major dredging project in Pascagoula, MS, and Cape Fear, NC.

CG-OE-21

**Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)**

2. Defense Message System (DMS) Follow-On.....\$700

Strategic Goal(s) & Objectives: 1.1, 1.3, 1.4, 2.1

PPA Breakdown - Defense Message System (DMS) Follow-On		Total (\$000)
PPA II: Civilian Personnel (1 FTP, 1 FTE)		
	Civilian Pay and Allowances	67
PPA IV: Operating Funds and Unit Level Maintenance		
	Headquarters Directorates	1
PPA V: Centrally Managed Accounts		
	Central Accounts	7
PPA VI: Intermediate and Depot Level Maintenance		
	Electronics Maintenance	625
		700

Request funding to support the Defense Messaging System (DMS) for all 30,000 Coast Guard military messaging users and 24 X 7 Local Control Center (LCC) operations. This includes costs for DMS component hardware, software and training, as well as additional circuit costs and hardware/software upgrades required at the LCC to support all DMS users. Also requests funding for a permanent civilian billet to replace the temporary billet managing this system. DMS is a DOD mandated program that will replace the antiquated Automated Digital Network (AUTODIN) record messaging system.

3. High Frequency (HF) Recapitalization and Modernization Follow-On.....\$150

Strategic Goal(s) & Objectives: 1.1, 1.3, 1.4, 2.1

PPA Breakdown - High Frequency (HF) Recapitalization and Modernization Follow-On		Total (\$000)
PPA VI: Intermediate and Depot Level Maintenance		
	Electronics Maintenance	150
		150

This request ensures the newly-installed high-frequency systems (the recapitalization and modernization project begun in FY 2002 and continuing through FY 2006) are adequately supported throughout their life cycle.

Pacific Area / 11th District		7
1st District		11
7th District		16
8th District		13
9th District		12
13th District		1
14th District		2
Headquarters Directorates		300
PPA V: Centrally Managed Accounts		
Central Accounts		24
PPA VI: Intermediate and Depot Level Maintenance		
Electronics Maintenance		80
Vessel Maintenance		36
		785

This request provides personnel and follow-on funding for up to 12 Response Boat – Mediums (RB-M) acquired with funding provided in the FY 2006 Appropriations Bill. The RB-M standardizes the Coast Guard’s boat forces by replacing the aging 41-foot Utility Boat (UTB) fleet, which has approached its 25-year service life, and all other medium-sized Non-Standard Boats (NSB) at multi-mission stations. Increased small boat capacity directly supports the Commandant’s Ports, Waterways, and Coastal Security Plan and enhances the Coast Guard’s Search and Rescue and Law Enforcement missions.

Central Accounts		271
PPA VI: Intermediate and Depot Level Maintenance		
Aircraft Maintenance		3,329
Civil/Ocean Engineering and Shore Facility Maintenance		763
		11,212

Request additional personnel and operating funds to support a 2,000 additional operational flight hours for C-130Js acquired through funding provided in the FY 2001 Military Construction (MILCON) Appropriation Bill and delivered to the Coast Guard in FY 2003 and 2004. This funding is needed to enable the C130Js achieve operational capability and to be introduced into the CG fleet in FY 2008. In order to achieve these additional flight hours, funding of this item must be coupled with the Coast Guard's separate AC&I \$5 million request which funds the purchase of spare parts and operation of the Acquisition Project Office (APO); otherwise there will be insufficient funding for simulator training and spare parts to support the additional flight hours.

CG-OE-24

Program Performance Justification
(Dollars in thousands)**

6. Maritime Domain Awareness Follow-On\$10,601

Strategic Goal(s) & Objectives: 1.1, 1.2, 1.4, 2.1, 2.3, 2.5

PPA Breakdown - Maritime Domain Awareness Follow-On		Total (\$000)
PPA I: Military Personnel (6 FTP, 3 FTE)		
Military Pay and Allowances		179
Military Health Care		19
Permanent Change of Station		51
PPA II: Civilian Personnel (9 FTP, 5 FTE)		
Civilian Pay and Allowances		446
PPA III: Training and Recruiting		
Training and Education		12
Recruiting and Training Centers		6
PPA IV: Operating Funds and Unit Level Maintenance		
Atlantic Area / 5th District		2,560
Pacific Area / 11th District		1,516
7th District		10
Headquarters Directorates		4,885
Headquarters Units		801
PPA V: Centrally Managed Accounts		
Central Accounts		116
		10,601

Maritime Domain Awareness Follow-On (\$6,605): Request funding for contractor support and Sector Command Center (SCC) build out at the following locations: Miami (full staff), San Diego (full staff), Charleston (full staff), Boston (partial staff), and New York (partial staff).

Maritime Awareness Global Network (MAGNET) Follow-On (\$996): In the FY 2003 Transportation Appropriations bill, the Coast Guard was provided with \$5 million in AC&I funding to construct MAGNET, for storage and dissemination of maritime information. This critical information serves the Coast Guard's operational community, various law enforcement organizations, DHS, the Navy and other U. S. military and intelligence organizations. Request will support operation and maintenance of this system.

National Automatic Information System (NAIS) Follow-On (\$3,000): This funding allows for the deployment of 80 NAIS receivers and transmitters per the Memorandum of Agreement with the National Oceanic and Atmospheric Administration (NOAA) National Data Buoy Center (NDBC). Leveraging the NDBC's network of weather buoys and Coastal-Marine Automated Network (C-MAN) stations around the U. S. coastal waters allows for two-way communication systems and obtaining

Request funding for operations support to portable mission planning systems (laptops and communications gear) so that aircraft can feed the Coast Guard the Common Operational Picture (COP) – this allows for increased maritime domain awareness by providing near real-time sighting information into Marine Information for Safety and Law Enforcement (MISLE) and the COP; it also improves communication by automating position reporting information and providing text messaging capability with shore stations.

Off-Cycle Crew Support Unit (OCCSU) Phase One Staffing Follow-On (\$496): Alameda, CA will become the home for four National Security Cutters (NSCs). The OCCSU will serve as a support unit facility to NSC off-going crews who will provide shore side support. This funding will support seven personnel to begin the stand up of the OCCSU that is critical to the successful integration of the first NSC into the operational fleet.

Operate National Security Cutter (\$879): This funding is to operate the first National Security Cutter, to be delivered in August 2007. In addition, funding is identified to support the Pre-Commissioning Detachment (PRECOMDET) for the second NSC.

Deepwater Asset and Upgrade Follow-On Operating Costs (\$3,360): Request funding for maintenance support to the SIPRNET capability on Deepwater cutters – secure internet availability with which to pass and receive classified intelligence and information to and from DOD assets and other critical players.

Maritime Patrol Craft Follow-On (\$4,348): This provides for 3,500 flight hours for three CASA MPA aircraft and aircraft personnel to operate and maintain the third of three CASA MPA. Two aircraft were funded in FY 2003, with a third in FY 2005, and all aircraft are expected to complete Operational Testing & Evaluation (OT&E) in FY 2006. These 3,500 flight hours, along with 100 annualized OE hours expected in FY 2006, combine to provide three MPA aircraft with 1,200 hours each.

Covert Surveillance Follow-On (\$1,413): Provides initial personnel, 600 flight hours and training to operate three covert surveillance aircraft.

Vessel Maintenance		(2)
		0

USCGC Storis will be decommissioned and replaced by the High Endurance Cutter, USCGC Munro. Savings from the Storis decommissioning will be used to fund USCGC Munro's relocation from Alameda, CA to Kodiak, AK. Storis, in its current state, is limited in capability – and, as the Storis was commissioned on September 24, 1945, is now also well past its useful service life. Decommissioning the cutter will generate savings, and the replacement of it with a WHEC will increase effectiveness in Alaska's Area of Responsibility (AOR) until new Deepwater replacements come on line. This move is cost-neutral, as the recurring savings generated by STORIS will cover the cost of the move and increase in support costs for the WHEC in that operating area. This request reflects two-quarter fiscal year savings, as the WHEC will be moved during the summer months to coincide with the personnel transfer season; full savings will be annualized in FY 2008 and reflect the full adjustment in the base to support the WHEC in Alaska.

		0

Request recurring technical base adjustments which either 1) moves funding to the appropriate PPA for compliance with Coast Guard financial management policy, or 2) is a result of billet conversions, upgrades or other personnel transactions. All requested adjustments retain the original intent and purpose of the dollars appropriated; however, the PPA to properly execute these items is different than originally appropriated. For example, the Coast Guard has adopted the policy of permanently distributing unit level training funds to the field. In order to efficiently execute this policy using our accounting structure, the funds need to be moved from PPA III (Training and Recruiting) to PPA IV (Operating and Maintenance). In addition, personnel funding transactions involve converting military billets to civilian positions and civilian position upgrades. Billet conversions are in accordance with GAO guidance to change military billets funded in PPA I (Military Pay and Allowances) with inherently civilian job functions, to civilian positions funded in PPA II (Civilian Pay and Allowances), and civilian upgrades are funded by operational commanders in PPA IV that need to be executed from PPA II.

b) Exit Costs.....\$11,814

**Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Program Performance Justification
(Dollars in thousands)**

PPA Breakdown - Exit Costs		Total (\$000)
PPA IV: Operating Funds and Unit Level Maintenance		
Headquarters Directorates		1,225
PPA VI: Intermediate and Depot Level Maintenance		
Civil/Ocean Engineering and Shore Facility Maintenance		10,589
		11,814

This item reflects FY 2007 savings associated with the closure of the U. S. Long Range Aids to Navigation (LORAN)-C system; this is phase I of a four-phase project. Cost reductions reflect termination of operations at 24 LORAN stations (LORSTAs) nationwide and the LORAN Support Unit in Wildwood, NJ and reduction in staff at the Coast Guard's Engineering Logistics Command, Navigation Center and Coast Guard Headquarters commensurate with the termination of LORAN support. The Coast Guard has found that, while the Global Positioning System (GPS) is vulnerable to localized interference (both intentional and unintentional), adequate GPS backup systems are currently in place for the Maritime Transportation System (MTS). In short, LORAN is not required as a backup for the maritime mode. One-time costs to decommission the 24 LORSTAs, including environmental clean-up, is estimated at approximately \$119 million. These costs will be funded through the recurring savings generated from the operations base that will no longer be needed upon the closure of the LORSTAs. To execute this trade off using recurring savings to fund exit costs, while remaining cost neutral, a phased approach will be taken. The \$11.8 million reduction in phase I reflects the reduction of approximately half of the LORAN staff; the other half will be retained to assist in closure efforts, to include property disposal, remediation and the reprogramming of rated-personnel billets. As the termination progresses through phases II through IV, the remaining personnel will be phased out in conjunction with the completion of follow-on tasking required to divest of this program.

4. Personnel Efficiencies (\$5,000)

PPA Breakdown - Personnel Efficiencies		Total (\$000)
PPA I: Military Personnel (-50 FTE)		
Military Pay and Allowances		(5,000)
		(5,000)

This item represents workforce management efficiencies gained by reducing FTE working in various low priority capacities for the Coast Guard.

Total Request	0	0	0	0	0	0	0	0	2,000

Description of Item

This will enhance mission performance in the preparation of Coast Guard financial statements and financial management oversight in addition to improving the policies, process, and internal controls over Coast Guard financial reporting processes.

Justification

Chief Financial Officer (CFO) audits through the establishment of an Audit Remediation and Internal Controls Program. The Audit Remediation and Internal Controls Program will have the necessary personnel and tools to implement the Coast Guard financial audit remediation strategy which will result in a "clean" opinion on Financial Statements through process improvements, a staffed Internal Control Program, and financial system certification and accreditation.

Impact of Performance

The Coast Guard will be able to correct prior year audit deficiencies and findings and will be adequately staffed and prepared to manage the annual CFO audit process. Ultimately, request for Financial Audit Remediation will enable the Coast Guard to meet its financial management performance goals as well as meet Congressional, OMB, and DHS financial reporting requirements.

Current Services Level							0	0	0
Program Increase							0	0	7,200
Total Request	0	0	0	0	0	0	0	0	7,200

Description of Item

The Self-Contained Breathing Apparatus (SCBA) migration project, phase I of a three-phase project, will replace all Oxygen-Breathing Apparatus (OBA) with SCBAs aboard all Coast Guard cutters and training commands.

Justification

Over the past 30 years, all shore-based federal and DOD fire fighters, the Military Sealift Command, all western navies, all merchant ships, the U. S. Air Force and all U. S. Navy flight deck personnel have adopted and use exclusively the open circuit SCBA. The Navy has recently begun a project to replace all their OBAs with SCBAs. This leaves the Coast Guard as the only fire fighting organization in the U. S. that uses OBAs.

Impact of Performance

This project will outfit all Coast Guard cutters and training facilities with SCBAs, provide training, spare parts, refill compressors, extra bottles, storage space modifications and disposal costs of the obsolete OBA system. Ultimately this project will increase the Coast Guard's all-hazard response capability.

Current Services Level							0	0	0
Program Increase							0	0	50,200
Total Request	0	0	0	0	0	0	0	0	50,200

Description of Item

This FY 2007 request will fund the Coast Guard's first year share of construction costs for a new headquarters at the St. Elizabeths campus.

Justification

GSA has proposed to redevelop the west campus of St. Elizabeths Hospital and has identified the USCG HQ relocation and consolidation for the initial phase of a project which is envisioned to eventually include other federal tenants with similar security requirements. In accordance with GSA policy, tenants are required to budget and fund certain aspects of building design and construction, as well as other tenant specific requirements of the project. The GSA schedule is to construct the new Coast Guard HQ facility in two phases, with tenant funding requirements in each year from FY 2007 through FY 2011, with the bulk occurring in FY 2007, FY 2008 and FY 2009.

Impact of Performance

Phase I will construct office space and structured parking to consolidate the Coast Guard HQ. Phase II will construct a command center and other shared-use space that will support the Coast Guard and other future agencies that might occupy the campus. Construction completion and building commissioning is estimated late FY 2010/early FY 2011. Ultimately this will foster coordination and efficiency within the Department of Homeland Security.

Program Increase							0	0	6,421
Total Request	0	0	0	0	0	0	0	0	6,421

Description of Item

This request supports a number of initiatives designed to enhance MDA. Funds will provide the necessary field infrastructure to expand SIPRNET capability, which will protect Coast Guard systems from exploitation. Funding will support phase I of a five-phase project to establish the Coast Guard Counterintelligence program. Funding will also provide prototype Sector Command Centers (SCC) and Joint Harbor Operation Center (JHOC) operations support.

Justification

Field commands from the Area to Sector level will be able to improve their organic capacity to collect and analyze sensor and intelligence inputs at the port level. As a member of the Intelligence Community, the Coast Guard is required, per Executive Order 12333, to establish and implement a Counterintelligence program that will protect intelligence sources, methods and related information and activities from unauthorized disclosure. This will provide for the protection of information, personnel and facilities from espionage, sabotage, terrorism, and other hostile actions by all adversaries. The JHOC support is aligned with the agreement between the CG & Navy to provide capability at key ports

where there are shared responsibilities for escort and monitoring of Navy capital assets (high value units), including Jacksonville, FL and Seattle, WA.

Impact of Performance

This initiative ties directly to the DHS awareness and interagency coordination strategic goals.

C. Enhance Capability

1. National Capital Region Air Defense\$8,934

**Department of Homeland Security
U. S. Coast Guard
Operating Expenses
Justification of Program Changes
(Dollars in thousands)**

Description of Item

This funding, along with \$5 million transferred from the base funding of Customs and Border Protection, will provide personnel and operating funds to operate five additional HH-65C helicopters to support the NCRAD mission.

Justification

Together with the \$49M requested in the AC&I account for helicopter acquisition, this will increase the Coast Guard's operational fleet of helicopters from 84 to 89 HH-65Cs. These helicopters and personnel will be permanently based at Air Station Atlantic City, NJ. Three of five of these helicopters and two helicopters crews will be standing strip alert in the National Capital Region at any given time. The remaining two helicopters will remain at Air Station Atlantic City to support unit training and required maintenance.

Impact of Performance

NCRAD directly supports the DHS strategic objectives to coordinate the physical safety and continuity of the United States government with military, Federal and state and local partners.

2. Maritime Security Response Team (MSRT)\$3,074

Strategic Goal(s) & Objectives: 2.4, 4.2

Program Increase							60	30	3,074
Total Request	0	0	0	161	0	20,008	221	30	23,082

Description of Item

Funding requested will be used by the Coast Guard to work with the Departments of Defense and Justice to transform the existing E-MSST, limited in capability, to an MSRT. This request will support a joint response capability with DOD/Navy and DOJ/FBI to provide, highly trained operators outfitted with specialized tactical equipment to perform opposed insertions/boardings, serve high risk arrest warrants, and other offensive CT activities within the maritime environment. Final details of the operational plan for this program will be developed with the other Departments participating in establishing the function.

Justification

The Maritime Transportation Security Act of 2002 (MTSA) provided the Secretary of Homeland Security with the authority to establish teams to deter, protect against, and rapidly respond to threats of maritime terrorism. In response, the Department established the Maritime Safety and Security Team (MSST) program at 13 ports across the country. In FY 2006, the Coast Guard made permanent one prototype Enhanced Maritime Safety and Security Team (E-MSST) providing a unique counter-terrorism and law enforcement response capability for scheduled events.

As part of the President's new National Strategy for Maritime Strategy, the Coast Guard will work jointly with the Departments of Defense and Justice to develop an offensive capability to counter maritime terrorist threats. While this program is still in the planning phases, the objective is to build a new, Maritime Security Response Team that will complement existing U.S. capabilities and protect the nation from marine-borne terrorist attack.

Impact of Performance

Through close cooperation with the United States Special Operations Command (US SOCOM), the Department of Defense, the Federal Bureau of Investigations and other interagency partners, the Coast Guard will begin to achieve its role under the DHS counterterrorism prevention and response strategic goals.

CG-OE-46

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
U. S. Coast Guard
Justification of Proposed Changes in Operating Expenses
Appropriation Language**

For necessary expenses for the operation and maintenance of the Coast Guard, not otherwise provided for; purchase or lease of not to exceed twenty-five passenger motor vehicles for replacement only; payments pursuant to section 156 of Public Law 97-377, (42 U.S.C. 402 note) and recreation and welfare; [\$5,410,555,000] \$5,518,843,000 of which [\$1,200,000,000] \$340,000,000 shall be for defense-related activities; of which [\$24,500,000] \$24,255,000 shall be derived from the Oil Spill Liability Trust Fund to carry out the purposes of section 1012(a)(5) of the Oil Pollution Act of 1990; and of which not to exceed \$3,000 shall be for official reception and representation expenses: *Provided*, That none of the funds appropriated by this or any other Act shall be available for administrative expenses in connection with shipping commissioners in the United States: *Provided further*, That none of the funds provided in this Act shall be available for expenses incurred for yacht documentation under 46 U.S.C. 12109 of Title 46, United States Code, except to the extent fees are collected from yacht owners and credited to this appropriation: (*Department of Homeland Security Appropriations Act, 2006.*)

[For an additional amount for “Operating Expenses” for necessary expenses related to the consequences of hurricanes and other natural disasters, \$132,000,000, to remain available until expended, of which up to \$400,000 may be transferred to “Environmental Compliance and Restoration” to be used for environmental cleanup and restoration of Coast Guard facilities; and of which up to \$525,000 may be transferred to “Research, Development, Test, and Evaluation” to be used for salvage and repair of research and development equipment and facilities: *Provided*, That the amount provided under this heading is designated as an emergency requirement pursuant to section 402 of H. Con. Res. 95 (109th Congress), the concurrent resolution on the budget for fiscal year 2006.] (*Department of Defense Appropriations Act, 2006.*)

Explanation of Changes:

No substantive changes proposed.

NOTE 1: These numbers are estimates only; the Coast Guard is currently working to improve its processes to effectively capture costs via object class, with an accurate correlation to PPA. FY 2007 represents the first year the Coast Guard has displayed numbers in this fashion.

NOTE 2: FY 2006 actuals will provide us accurate base data for projections in future budgets. In addition, these numbers do not reflect supplementals received.

PPA Mission Statement

This PPA requests funding for expenses related to compensation for active duty military personnel. This category also includes pay, allowances, employer's share of FICA, Social Security credits and other expenses associated with compensating military personnel. Requested funding will compensate our 40,100 Full-Time Military personnel as they serve as the Nation's First Responder across all of the Coast Guard's 11 missions.

CG-OE-58

Summary Justification and Explanation of Changes

Salaries and Benefits

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	2,165,964	\$ 2,281,027	\$ 2,328,353	\$ 47,326

Salaries and benefits funds provide for compensation directly related to duties performed for the Coast Guard by active duty military personnel. This includes costs for 40,262 FTE. The FY 2007 request includes funding for the proposed pay raise (currently predicted at 2.2%), medical benefits, other mandatory personnel entitlements and program increases (371 FTE increase over FY06). Personnel increases are accounted for through the annualization of FTE introduced in FY 2006, personnel brought on to support the additional C-130J flight hours, a pre-commissioning detachment for the second National Security Cutter, maintenance crews for Airborne Use of Force (AUF), and initial crews for the National Capital Region Air Defense (NCRAD) mission and Maritime Security Response Team.

Travel

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	193,538	\$ 198,450	\$ 196,627	\$ (1,823)

Request funds cover the travel costs of Coast Guard military servicemembers, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 reflects a decrease from FY 2006 as a result of management efficiencies.

Transportation of things

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	59,292	\$ 61,023	\$ 61,315	\$ 292

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Funding primarily supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves. The FY 2007 request includes additional funding required for transportation costs associated with the addition of 371 FTE and adjustments to accommodate inflationary increases in costs.

Other rent

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	13,460	\$ 10,149	\$ 14,998	\$ 4,849

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). In FY 2007, new funding required leased hangar space for the National Capital Region Air Defense (NCRAD) mission helicopters at Reagan National Airport in Washington, D. C.

CG-OE-59

Medical care

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 118,350	\$ 120,115	\$ 122,950	\$ 2,835

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. Specifically, funding supports medical care costs for 46,829 military service members. The FY 2007 request includes an adjustment for medical cost increases due to inflation.

Subsistence and support of persons

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 13,785	\$ 10,393	\$ 15,360	\$ 4,967

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. Specifically, funding supports berthing and subsistence of Coast Guard personnel in support of temporary assigned duty (TAD). The majority of the increase in need for this object class is contributed to the personnel assigned to the National Capital Region Air Defense mission, as well as annualization of FY 2006 prior year funding.

Supplies and materials

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 48,068	\$ 35,685	\$ 48,673	\$ 12,988

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request does not support any new initiatives; all funding requested over FY 2006 levels represents anticipated non-pay related inflation to procure supplies and materials for Coast Guard field units.

NOTE 2: FY 2006 actuals will provide us accurate base data for projections in future budgets. In addition, these numbers do not reflect supplementals received.

CG-OE-61

PPA Mission Statement

This PPA requests funding for expenses related to compensation and entitlements for federal civilian employees. The workforce is composed of General Schedule (GS) personnel, Administrative Law Judges (ALJ), Senior Executive Service (SES) personnel, personnel whose salaries are Administratively Determined (AD) (e. g. Coast Guard Academy civilian faculty members), Wage Grade (WG) positions employed in industrial positions, and "Non-Ceiling" (NC) employees (e. g. cooperative education students, student aids, summer interns and federal junior fellows) and civilian employees not otherwise covered by other PPAs. Requested funding will compensate the 6,427 Full-Time Personnel, who all contribute in a support, administrative or supervisory role in executing the Coast Guard's 11 missions.

Summary Justification and Explanation of Changes**Salaries and Benefits**

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	468,216	\$ 518,799	\$ 559,669	\$ 40,870

Salaries and benefits funds provide for compensation directly related to duties performed for the Coast Guard by Federal civilian employees. This includes costs for 6,022 FTE. The FY 2007 request includes funding for the proposed pay raise (currently predicted at 2.2%), medical benefits, other mandatory personnel entitlements. Although no new civilian FTE are being requested in FY 2007, an additional 70 FTE are requested to annualize FTE introduced in FY 2006.

Travel

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	10,186	\$ 6,138	\$ 8,193	\$ 2,055

Requested funds cover the travel costs of Coast Guard civilian employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request primarily covers non-pay related inflation costs attributed to travel, as well as some follow-on travel costs related to Maritime Domain Awareness initiatives introduced in FY 2006.

Transportation of things

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	2,471	\$ 1,245	\$ 1,572	\$ 327

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Funding primarily supports the shipment of civilian personnel's household goods in conjunction with the acceptance of a new position. The FY 2007 request includes additional funding required for transportation costs associated with the addition of 70 FTE and adjustments to accommodate inflationary increases in costs.

CG-OE-63

PPA Mission Statement

Requests funding for the Coast Guard's professional training and education programs, and operation and maintenance of the six Coast Guard Training Centers and the Coast Guard Academy. Provides funding for tuition, travel and per diem for formal training and education performed as Temporary Assigned Duty (TAD) for military and civilian personnel. "Formal training and education" is defined as structured, curriculum-based instruction and applied exercises for the attainment and retention of skills and knowledge required to accomplish specific job tasks. Requested funding will ensure a level of capabilities and competencies commensurate with the response posture the Coast Guard has displayed in recent years, such as operational response to Hurricane Katrina, Operation Iraqi Freedom, 9/11 terrorist attacks and other events requiring a rapid response capability.

Summary Justification and Explanation of Changes**GSA rent**

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$	3,269	\$ 4,855	\$ 5,036	\$ 181

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request primarily represents non-pay related inflation attributed to GSA rental costs.

Other rent

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$	407	\$ 880	\$ 624	\$ (256)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). In FY 2007, new funding required is attributed to rental fees for records storage at the National Archives.

Communication, utilities, and misc charges

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$	8,255	\$ 12,372	\$ 11,922	\$ (450)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. The FY 2007 request reflects a decrease in need as a result of management efficiencies.

Printing and reproduction

	2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$	491	\$ 731	\$ 745	\$ 14

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2007 request includes the annualization of FY 2006 funding for print services, which includes printing of training publications, Coast Guard manuals and other supporting materials.

	Actual		Revised Enacted		Request		Change
\$	4,582	\$	7,416	\$	7,687	\$	271

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities. The FY 2007 request reflects non-pay related inflation attributed to contract staff support.

Other services

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	28,994	\$	43,068	\$	39,834	\$	(3,234)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. The FY 2007 request includes a reduction in this object class as a result of management efficiencies found within this area.

Purchases of goods & svcs. from gov't accounts

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	2,566	\$	3,920	\$	3,743	\$	(177)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Specifically, funds support the purchase of goods and services from other government agencies including interagency service requirements (e.g. MIPR). The FY 2007 request shows a decrease in funding as a result of management efficiencies.

Operation & maintenance of facilities

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	10,017	\$	12,983	\$	12,734	\$	(249)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Specifically, funds support contracted janitorial, landscaping, security, and environmental services (e.g. hazardous materials disposal) associated with the operation of Coast Guard facilities. The FY 2007 request reflects a decrease in funding requested as a result of management efficiencies.

CG-OE-65

Medical care

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	6,613	\$	10,340	\$	10,940	\$	600

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. Specifically, funding supports medical care costs for 46,829 military members. The FY 2007 request reflects a decrease in funding due to management efficiencies.

Operation and maintenance of equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	16,617	\$	23,307	\$	28,440	\$	5,133

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. Specifically, funding supports contracted specialized maintenance and minor repair of Coast Guard operational assets (e.g. cutters, boats, and aircraft) and supporting systems. The FY 2007 request includes funding for inflation exceeding non-pay COLA, calculated using industry standards.

Subsistence and support of persons

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	2,017	\$	3,333	\$	2,934	\$	(399)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. Specifically, funding supports berthing and subsistence of Coast Guard personnel in support of temporary assigned duty (TDY). The FY 2007 request shows a decrease in funding as a result of management efficiencies.

Supplies and materials

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	27,273	\$	35,707	\$	35,616	\$	(90)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request does not reflected funding for any new initiatives; it only covers the anticipated non-pay related inflation associated with purchasing supplies and materials in FY 2007 at the field unit level.

CG-OE-66

Equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	8,947	\$	13,222	\$	13,233	\$	11

This object class covers the purchase of capitalized and non-capitalized assets. For example, this object class enables the Coast Guard to purchase furniture for the cadets at the Coast Guard Academy and survival suits for the rescue swimmers deployed to the frigid waters of Alaska. The FY 2007 request shows a decrease in funding as a result of management efficiencies.

Land and structures

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	1,974	\$	3,015	\$	7,191	\$	4,177

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Specifically, the FY 2007 request supports minor construction or improvements to Coast Guard shore facilities.

Insurance claims and indemnity

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	142	\$	210	\$	198	\$	(13)

This covers indemnities for fire, flooding and casualty as related to the Response-Boat Medium acquired in FY 2006. Although the FY07 request shows a decrease over FY 2006, indemnities related to this boats are still in effect.

NOTE 1: These numbers are estimates only; the Coast Guard is currently working to improve its processes to effectively capture costs via object class, with an accurate correlation to PPA. FY 2007 represents the first year the Coast Guard has displayed numbers in this fashion.

NOTE 2: FY 2006 actuals will provide us accurate base data for projections in future budgets. In addition, these numbers do not reflect supplementals received.

PPA Mission Statement

Requests funding to units, facilities and activities that are under the direct operational and administrative control of the Coast Guard's Atlantic Area and Pacific Area Commanders. These include Maintenance and Logistics Commands (MLCs), Integrated Support Commands (ISCs), High Endurance Cutters (WHECs), Medium Endurance Cutters (WMECs), Polar Icebreakers, Communications Stations, Sector Commands, Stations, Marine Safety and Security Teams (MSSTs) and Area offices as applicable. Request includes funding to sustain normal operating costs that include energy, parts and supplies for routine maintenance of operational assets and shore facilities and administrative supplies.

CG-OE-68

Summary Justification and Explanation of Changes

GSA rent

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	29,988	\$ 26,228	\$ 29,557	\$ 3,329

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request primarily represents non-pay related inflation attributed to GSA rental costs, as well as funding for leased facilities to support additional FTE requested for Airborne Use of Force (AUF).

Other rent

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	3,729	\$ 4,754	\$ 3,660	\$ (1,094)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). In FY 2007, new funding required is attributed to rental fees for records storage at the National Archives, and leased hangar space for the National Capital Region Air Defense (NCRAD) mission helicopters at Reagan National Airport in Washington, D. C.

Communication, utilities, and misc charges

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	75,722	\$ 66,843	\$ 69,970	\$ 3,127

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. The FY 2007 request includes funding to provide Secret Internet Protocol Router Network (SIPRNET) for the first National Security Cutter (NSC), data costs related to the National Automatic Information System (NAIS), user charges for the National Telecommunication and Information Administration, funding to support Sector Command Center communications equipment, and finally, funding to account for the increase in postage fees.

Printing and reproduction

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	4,503	\$ 3,950	\$ 4,373	\$ 423

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2007 request includes the annualization of FY 2006 funding for print services, and follow-on printing costs associated with Maritime Domain Awareness initiatives.

CG-OE-69

Advisory and assistance services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	42,026	\$ 40,064	\$ 45,113	\$ 5,050

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities. The FY 2007 request includes contracted technical support for Financial Audit Remediation, and administrative support for our Maritime Domain Awareness (MDA) personnel.

Other services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	265,956	\$ 232,678	\$ 233,786	\$ 1,108

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. The FY 2007 request includes a reduction in this object class as a result of management efficiencies found within this area.

Purchases of goods & svcs. from gov't accounts

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	23,539	\$ 21,179	\$ 21,968	\$ 789

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Specifically, funds support the purchase of goods and services from other government agencies including interagency service requirements (e.g. MIPR). The FY 2007 request includes the annualization of FY 2006 initiatives, as well as an increase in security services for GSA leased facilities.

Operation & maintenance of facilities

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	91,881	\$ 70,144	\$ 74,737	\$ 4,593

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Specifically, funds support contracted janitorial, landscaping, security, and environmental services (e.g. hazardous materials disposal) associated with the operation of Coast Guard facilities. The FY 2007 request includes increased shore support costs associated with the operation of a High Endurance Cutter in Kodiak, AK, upon its move from Alameda, CA, as well as follow-on funding to support shore infrastructure constructed in 2005 and 2006 that will be completed in FY 2007.

CG-OE-70

Medical care

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 60,660	\$ 55,862	\$ 64,206	\$ 8,344

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. Specifically, funding supports medical care costs for 46,829 military members. The FY 2007 request represents adjustments for medical cost increases due to predicted inflation rates.

Operation and maintenance of equipment

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 152,423	\$ 125,921	\$ 166,915	\$ 40,995

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. Specifically, funding supports contracted specialized maintenance and minor repair of Coast Guard operational assets (e.g. cutters, boats, and aircraft) and supporting systems. The FY 2007 request includes funding for inflation exceeding non-pay COLA, calculated using industry standards, and funding to support Maritime Patrol Aircraft, SIPRNET infrastructure contributing to Maritime Domain Awareness, procurement of spare parts and cannisters for the Self-Contained Breathing apparatus, and equipment related to the National Capital Region Air Defense (NCRAD) mission.

Subsistence and support of persons

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 18,501	\$ 18,008	\$ 17,220	\$ (788)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. Specifically, funding supports berthing and subsistence of Coast Guard personnel in support of temporary assigned duty (TAD). The FY 2007 request primarily supports personnel assigned to the National Capital Region Air Defense (NCRAD) mission, as well as the annualization of FY06 initiatives.

CG-OE-71

Supplies and materials

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	250,173	\$ 192,910	\$ 209,035	\$ 16,125

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request does not reflect funding for any new initiatives; it only covers the anticipated non-pay related inflation associated with purchasing supplies and materials in FY 2007 at the field unit level.

Equipment

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	82,067	\$ 71,434	\$ 77,664	\$ 6,230

This object class covers the purchase of capitalized and non-capitalized assets. The FY 2007 request includes the procurement of the Self-Contained Breathing Apparatuses (SCBAs), equipment for the second National Security Cutter (NSC); Chemical, Biological Radiological, Nuclear Emissions (CBRNE) detection gear for the Maritime Security Response Team (MSRT); and equipment needed to support new shore facilities constructed in 2005 and 2006 that are completed by FY 2007.

Land and structures

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	18,111	\$ 16,286	\$ 42,207	\$ 25,921

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Specifically, the FY 2007 request supports minor construction or improvements to Coast Guard shore facilities required to support the Nationwide Automatic Identification System (NAIS).

Insurance claims and indemnity

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	1,299	\$ 1,137	\$ 1,161	\$ 24

This covers indemnities for fire, flooding and casualty as related to the Response-Boat Medium acquired in FY 2006.

PPA Mission Statement

This request provides funding for accounts centrally managed at Coast Guard Headquarters such as: Federal Telephone System (FTS) accounts, Standard Workstation recapitalization, ammunition replenishment, recapitalization of buoys, GSA Rent, postal expenses and Mass Transit benefits. Request ensures critical support elements are provided to the workforce, allowing them to execute their roles in supporting Coast Guard operations. Lease of adequate office space, effective communications (computers, phones, etc) and operational gear (ammunition) are all par of those critical support requirements.

CG-OE-73

Summary Justification and Explanation of Changes

GSA rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	5,160	\$	5,070	\$	5,790	\$	720

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request primarily represents non-pay related inflation attributed to GSA rental costs, as well as funding for leased facilities to support additional FTE requested for Airborne Use of Force (AUF).

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	642	\$	919	\$	717	\$	(202)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). In FY 2007, new funding required is attributed to rental fees for records storage at the National Archives, and leased hangar space for the National Capital Region Air Defense (NCRAD) mission helicopters at Reagan National Airport in Washington, D. C.

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	13,030	\$	12,922	\$	13,707	\$	785

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. The FY 2007 request includes data costs related to the National Automatic Information System (NAIS), user charges for the National Telecommunication and Information Administration, and funding to account for the increase in postage fees.

Printing and reproduction

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	775	\$	764	\$	857	\$	93

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2007 request includes the annualization of FY 2006 funding for print services.

CG-OE-74

Advisory and assistance services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	7,232	\$ 7,745	\$ 8,837	\$ 1,092

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities. The FY 2007 request includes non-pay related inflation related to support of current contract and advisory staffs.

Other services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	45,763	\$ 44,981	\$ 45,797	\$ 816

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. The FY 2007 request includes non-pay inflation related to current services provided by other non-Federal sources.

Purchases of goods & svcs. from gov't accounts

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	4,050	\$ 4,094	\$ 4,303	\$ 209

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Specifically, funds support the purchase of goods and services from other government agencies including interagency service requirements (e.g. MIPR). The FY 2007 request includes the annualization of FY 2006 initiatives, as well as an increase in security services for GSA leased facilities.

Operation & maintenance of facilities

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	15,810	\$ 13,560	\$ 14,640	\$ 1,080

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Specifically, funds support contracted janitorial, landscaping, security, and environmental services (e.g. hazardous materials disposal) associated with the operation of Coast Guard facilities. The FY 2007 request includes follow-on funding to support shore infrastructure constructed in 2005 and 2006 that will be completed in FY 2007.

CG-OE-75

Medical care

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	10,438	\$ 10,799	\$ 12,577	\$ 1,778

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. Specifically, funding supports medical care costs for 46,829 military members. The FY 2007 request includes an adjustment for medical cost increases due to inflation.

Operation and maintenance of equipment

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	26,228	\$ 24,343	\$ 32,697	\$ 8,355

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. Specifically, funding supports contracted specialized maintenance and minor repair of Coast Guard operational assets (e.g. cutters, boats, and aircraft) and supporting systems. The FY 2007 request includes funding for inflation exceeding non-pay COLA, calculated using industry standards, SIPRNET infrastructure contributing to Maritime Domain Awareness and procurement of spare parts and cannisters for the Self-Contained Breathing apparatus.

Subsistence and support of persons

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	3,184	\$ 3,481	\$ 3,373	\$ (108)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. Specifically, funding supports berthing and subsistence of Coast Guard personnel in support of temporary assigned duty (TDY). The FY 2007 request primarily supports the annualization of FY 2006 initiatives.

Supplies and materials

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	43,048	\$ 37,293	\$ 40,948	\$ 3,655

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request does not reflected funding for any new initiatives; it only covers the anticipated non-pay related inflation associated with purchasing supplies and materials in FY 2007 at the field unit level.

CG-OE-76

Equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	14,121	\$	13,810	\$	15,214	\$	1,404

This object class covers the purchase of capitalized and non-capitalized assets. For example, this object class enables the Coast Guard to purchase furniture for the cadets at the Coast Guard Academy and survival suits for the rescue swimmers deployed to the frigid waters of Alaska. The FY 2007 request includes the procurement of the Self-Contained Breathing Apparatuses (SCBAs), equipment for the second National Security Cutter (NSC); Chemical, Biological Radiological, Nuclear (CBRNE) detection gear for the Maritime Security Response Team (MSRT); and equipment needed to support new shore facilities constructed in 2005 and 2006 that are completed by FY2007.

Land and structures

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	3,116	\$	3,148	\$	8,268	\$	5,120

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Specifically, the FY 2007 request supports minor construction or improvements to Coast Guard shore facilities required to support the Nationwide Automatic Identification System (NAIS).

Insurance claims and indemnity

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	224	\$	220	\$	227	\$	8

This covers indemnities for fire, flooding and casualty as related to the Response-Boat Medium acquired in FY 2006.

Full Time Equivalents		-	-	-	-

NOTE 1: These numbers are estimates only; the Coast Guard is currently working to improve its processes to effectively capture costs via object class, with an accurate correlation to PPA. FY 2007 represents the first year the Coast Guard has displayed numbers in this fashion.

NOTE 2: FY 2006 actuals will provide us accurate base data for projections in future budgets. In addition, these numbers do not reflect supplementals received.

PPA Mission Statement

Request provides service-wide funding to support the major maintenance and repair of Coast Guard aircraft not appropriated in the Coast Guard Acquisition, Construction & Improvements (AC&I) appropriation. This includes materials, services and supplies necessary for depot-level repair of buildings, structures, ground, towers, runways, aids to navigation, aircraft and aircraft equipment.

CG-OE-78

Summary Justification and Explanation of Changes

GSA rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	19,052	\$	17,456	\$	19,789	\$	2,332

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request primarily represents non-pay related inflation attributed to GSA rental costs, as well as funding for leased facilities to support additional FTE requested for Airborne Use of Force (AUF).

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	2,369	\$	3,164	\$	2,450	\$	(714)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.). In FY 2007, new funding required is attributed to rental fees for records storage at the National Archives, and leased hangar space for the National Capital Region Air Defense (NCRAD) mission helicopters at Reagan National Airport in Washington, D. C.

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	48,108	\$	44,488	\$	46,846	\$	2,358

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs. The FY 2007 request includes funding to provide Secret Internet Protocol Router Network (SIPRNET) for the first National Security Cutter (NSC), data costs related to the National Automatic Information System (NAIS), user charges for the National Telecommunication and Information Administration, funding to support Sector Command Center communications equipment, and finally, funding to account for the increase in postage fees.

CG-OE-79

Printing and reproduction

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	2,861	\$ 2,629	\$ 2,928	\$ 299

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2007 request includes the annualization of FY 2006 funding for print services, and follow-on printing costs associated with Maritime Domain Awareness initiatives.

Advisory and assistance services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	26,700	\$ 26,664	\$ 30,204	\$ 3,539

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities. The FY 2007 request includes contracted technical support for Financial Audit Remediation, and administrative support for our Maritime Domain Awareness (MDA) personnel. (efficiencies?)

Other services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	168,969	\$ 154,860	\$ 156,521	\$ 1,661

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. The FY 2007 request includes a reduction in this object class as a result of management efficiencies found within this area.

Purchases of goods & svcs. from gov't accounts

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	14,955	\$ 14,096	\$ 14,708	\$ 612

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Specifically, funds support the purchase of goods and services from other government agencies including interagency service requirements (e.g. MIPR). The FY 2007 request includes the annualization of FY 2006 initiatives, as well as an increase in security services for GSA leased facilities.

CG-OE-80

Operation & maintenance of facilities

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	58,375	\$ 46,685	\$ 50,037	\$ 3,352

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Specifically, funds support contracted janitorial, landscaping, security, and environmental services (e.g. hazardous materials disposal) associated with the operation of Coast Guard facilities. The FY 2007 request includes increased shore support costs associated with the operation of a High Endurance Cutter in Kodiak, AK, upon its move from Alameda, CA, as well as follow-on funding to support shore infrastructure constructed in 2005 and 2006 that will be completed in FY 2007.

Medical care

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	38,539	\$ 37,179	\$ 42,986	\$ 5,807

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. Specifically, funding supports medical care costs for 46,829 military members. The FY 2007 request includes a base adjustment, and an increase in medical care funding for additional personnel (371 FTE) included in the FY 2007 budget and to adjust for medical cost increases due to inflation.

Operation and maintenance of equipment

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	96,838	\$ 83,807	\$ 111,751	\$ 27,944

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. Specifically, funding supports contracted specialized maintenance and minor repair of Coast Guard operational assets (e.g. cutters, boats, and aircraft) and supporting systems. The FY 2007 request includes funding for inflation exceeding non-pay COLA, calculated using industry standards, and funding to support Maritime Patrol Aircraft, SIPRNET infrastructure contributing to Maritime Domain Awareness, procurement of spare parts and cannisters for the Self-Contained Breathing apparatus, and equipment related to the National Capital Region Air Defense (NCRAD) mission.

Subsistence and support of persons

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	11,754	\$ 11,986	\$ 11,529	\$ (456)

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. Specifically, funding supports berthing and subsistence of Coast Guard personnel in support of temporary assigned duty (TDY). The FY 2007 request primarily supports personnel assigned to the National Capital Region Air Defense (NCRAD) mission, as well as the annualization of FY06 initiatives.

CG-OE-81

Supplies and materials

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	158,942	\$ 128,392	\$ 139,950	\$ 11,558

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request does not reflected funding for any new initiatives; it only covers the anticipated non-pay related inflation associated with purchasing supplies and materials in FY 2007 at the field unit level.

Equipment

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	52,140	\$ 47,543	\$ 51,996	\$ 4,453

This object class covers the purchase of capitalized and non-capitalized assets. For example, this object class enables the Coast Guard to purchase furniture for the cadets at the Coast Guard Academy and survival suits for the rescue swimmers deployed to the frigid waters of Alaska. The FY 2007 request includes the procurement of the Self-Contained Breathing Apparatuses (SCBAs), equipment for the second National Security Cutter (NSC); Chemical, Biological Radiological, Nuclear (CBRNE) detection gear for the Maritime Security Response Team (MSRT); and equipment needed to support new shore facilities constructed in 2005 and 2006 that are completed by FY2007.

Land and structures

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	11,506	\$ 10,839	\$ 28,258	\$ 17,419

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. Specifically, the FY 2007 request supports minor construction or improvements to Coast Guard shore facilities required to support the Nationwide Automatic Identification System (NAIS).

Insurance claims and indemnity

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	825	\$ 757	\$ 777	\$ 21

This covers indemnities for fire, flooding and casualty as related to the Response-Boat Medium acquired in FY 2006.

U. S. Coast Guard
Environmental Compliance and Restoration

I. Appropriation Overview

A. Mission Statement for Environmental Compliance and Restoration:

Environmental Compliance and Restoration (EC&R) will provide for (1) environmental cleanup and restoration of current and formerly contaminated Coast Guard facilities, and (2) engineering fixes on Coast Guard assets for the purpose of complying with environmental laws to prevent contamination or preclude environmental damage from developing. Failure to meet restoration or compliance responsibilities could subject to Coast Guard to fines, penalties, or shutdown of operational assets by environmental regulators. In addition, Coast Guard EC&R funding supports site investigation and remediation activities at older shore facilities slated for property divestiture or transfer actions; this primarily includes divestiture of lighthouses in support of the National Historic Lighthouse Preservation Act.

B. Budget Activities:

Environmental Compliance and Restoration activities support for our traditional missions that include Search and Rescue (SAR), Marine Safety, Aids to Navigation (AtoN), Ice Operations, Marine Environmental Protection (MEP), Living Marine Resources (LMR), Drug Interdiction, Migrant Interdiction, Other Law Enforcement, Ports, Waterways and Coastal Security (PWCS) and Defense Readiness.

C. Budget Request Summary:

The Coast Guard requests 25 positions, 24 FTE, and \$11,880,000 (\$9.14 million in project funding, \$2.74 million in personnel funding) in FY 2007 to provide for environmental remediation and restoration of Coast Guard facilities, including Kodiak, AK, Elizabeth City, NC and Baltimore, MD. The adjustment to base is a decrease of \$400,000. No program increase is requested for FY 2007.

2006 Revised Enacted	25	24	12,280
2007 Adjustments-to-Base	(400)
2007 Current Services	25	24	11,880
2007 Program Change	0
2007 Request	25	24	11,880
Total Change 2006-2007	(400)

The Coast Guard requests \$11.9 million for this activity. This is a decrease of \$400 thousand over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

The FY 2007 budget requests \$11.88 million to remain available until expended, including \$9.14 million in project funding and \$2.74 million in personnel funding, to carry out the Coast Guard's Environmental Compliance and Restoration (EC&R) functions under Chapter 19 of Title 14, United States Code.

These responsibilities include environmental cleanup and restoration of current and former contaminated Coast Guard facilities, and engineering repairs on Coast Guard assets for the purpose of complying with environmental laws to prevent contamination or preclude an environmental liability from developing. Failure to meet restoration or compliance responsibilities could subject the Coast Guard to fines, penalties or shutdown of operational assets by environmental regulators. The Coast Guard will continue its policy of addressing the most serious contaminated problems first, including contamination remediation efforts started during previous fiscal years.

In FY 2007, with \$11.88 million in EC&R funding, the Coast Guard can meet all legally mandated cleanup/remediation efforts in Kodiak, AK; Elizabeth City, NC; and Baltimore, MD. The Coast Guard will continue to place emphasis on divestiture efforts that involve cleanup projects at older shore facilities and lighthouses. The Coast Guard

CG-EC&R-4

1650

will also continue surveying efforts, through the aids to navigation (AToN) battery recovery program, to identify outstanding batteries and plan for necessary recovery and disposal efforts. Funds will also be programmed for compliance efforts to construct or improve hazardous waste storage facilities, storage tank spill containments and equipment wash down facilities to meet environmental regulations. Funds requested in FY 2007 will be adequate to continue to perform all of these activities.

PPA Mission Statement

Environmental Compliance and Restoration (EC&R) will provide for (1) environmental cleanup and restoration of current and formerly contaminated Coast Guard facilities, and (2) engineering fixes on Coast Guard assets for the purpose of complying with environmental laws to prevent contamination or preclude environmental damage from developing. Failure to meet restoration or compliance responsibilities could subject to Coast Guard to fines, penalties, or shutdown of operational assets by environmental regulators. In addition, Coast Guard EC&R funding supports site investigation and remediation activities at older shore facilities slated for property divestiture or transfer actions; this primarily includes divestiture of lighthouses in support of the National Historic Lighthouse Preservation Act.

CG-EC&R-14

Summary Justification and Explanation of Changes

Salaries and Benefits

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 2,568	\$ 2,720	\$ 2,843	\$ 123

Salaries and Benefits include costs for 24 FTEs. The FY 2007 request includes an increase of \$123K to account for inflation and planned internal personnel reprogramming issues.

Travel

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 76	\$ 58	\$ 48	\$ (10)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

Advisory and assistance services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 695	\$ 465	\$ 441	\$ (24)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

Other services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 13,027	\$ 8,166	\$ 7,764	\$ (402)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

CG-EC&R-15

Operation & maintenance of facilities

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	267	\$	202	\$	169	\$	(33)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

Operation and maintenance of equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	-	\$	535	\$	503	\$	(32)

Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

Supplies and materials

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	148	\$	112	\$	94	\$	(18)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are in use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

Equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	28	\$	22	\$	18	\$	(4)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Change is indicative of savings generated by program management review. Net savings is being redirected towards direct environmental remediation expenses.

U. S. Coast Guard
Reserve Training

I. Appropriation Overview

A. Mission Statement for Reserve Training:

Reserve Training (RT) will provide trained units and qualified personnel to be available for active duty in the Coast Guard in time of war or national emergency. In addition, the Coast Guard Reserve may be called upon to provide units and personnel to fill the needs of the Coast Guard at such times as the national security may require should these needs exceed the capacity of the Coast Guard's active duty force.

B. Budget Activities:

Reserve forces contribute to all Coast Guard missions, including Search and Rescue (SAR), Marine Safety, Aids to Navigation (AtoN), Ice Operations, Marine Environmental Protection (MEP), Living Marine Resources (LMR), Drug Interdiction, Migrant Interdiction, Other Law Enforcement, Ports, Waterways and Coastal Security (PWCS) and Defense Readiness

C. Budget Request Summary:

The Coast Guard requests 536 positions, 536 FTE, and \$123,948,000 in FY 2007; this will provide necessary resources for the training, operation and administration of the Coast Guard Reserve Program, ensuring that the Reserve component is prepared to respond when called upon. The adjustment to base is \$6,138,00; no program increase is required FY2007.

PPA I: PAY, BENEFITS AND ALLOWANCES

	Perm Pos	FTE	Amount
2005 Actual	534	532	\$90,248
2006 Revised Enacted	536	536	98,992
2007 Adjustments-to-Base	5,614
2007 Current Services	536	536	104,606
2007 Program Change
2007 Request	536	536	104,606
Total Change 2006-2007	5,614

The Coast Guard requests \$104.6 million for this activity. This is an increase of \$5.6 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

This request for pay, benefits and allowances funds costs associated with salaries, benefits and other compensation for full-time staffs that support the 8,100 members of the Coast Guard's Selected Reserve. The Coast Guard Reserve is the Coast Guard's surge capacity military workforce, and provides a cost-effective method of augmenting operations in response to major contingencies, such as natural and man-made disasters, maritime homeland security and national defense. Readiness is the foundation of the Coast Guard's ability to prevent and respond to incidents of national significance. A cornerstone of readiness is the Coast Guard Reserve. Readiness is the key to daily mission performance as well as the capacity to respond to national incidents. In FY 2005, the Coast Guard Reserve was an invaluable part of the Coast Guard's heroic response to hurricanes Katrina and Rita, as well as a provider of support to Operation Enduring Freedom and Operation Iraqi Freedom. The Coast Guard Reserve provides an outstanding return on investment; even when not mobilizing in response to contingency operations, reservists provide valuable augmentation of the active duty workforce while performing mobilization training during their Inactive Duty Training (IDT) and Active Duty Training (ADT) periods. The 536 full time equivalents included in this request include both active duty military personnel and full time civilian employees who manage the Reserve program through performance such tasks as recruiting, formal training, personnel management and resource/program management.

CG-RT-4

III. Current Services Program Description by PPA

**Department of Homeland Security
U.S. Coast Guard
Reserve Training
Program Performance Justification
(Dollars in Thousands)**

Funding requested will support the projected pay raise (currently estimated at 2.2%) for all active duty military service members and civilian personnel, as well as benefits that include High-Priority Unit and affiliation bonuses and entitlement pay. No additional FTE are requested.

PPA II: OPERATIONS, MAINTENANCE AND ADMINISTRATION

	Perm Pos	FTE	Amount
2005 Actual	\$19,217
2006 Revised Enacted	18,818
2007 Adjustments to Base	524
2007 Current Services	19,342
2007 Program Change
2007 Request	19,342
Total Change 2006-2007	524

The Coast Guard requests \$19.3 million for this activity. This is an increase of \$524 thousand over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

This request for operations, maintenance and administration funds the costs related to the training of reservists (initial and continuing training), the costs of administering the Reserve program and the portion of organizational costs shared by the Reserve Training appropriation for the day-to-day operation and maintenance of the Coast Guard Reserve program. Reservists attend many of the same classroom based training as members of the active component, and the Reserve Training appropriation provides funding for the portion of overhead and course-specific costs incurred by the Coast Guard Training Centers in training reservists. Similar Reserve Training cost sharing applies in other arenas, as well, such as military health care. By providing funding for enterprise-wide services used by reservists, the Reserve Training appropriation ensures that the equipment and facilities necessary to attract and maintain a high-caliber reserve force are in place without eroding the resource base that is necessary to perform these same tasks for the active duty military workforce. While they are not full time employees, Coast Guard reservists are boarding officers; they are small boat coxswains; they are contingency planners and marine inspectors. The Coast Guard Reserve is an extraordinary force multiplier upon which our nation can confidently rely in times of

exceptional need, embodying the very essence of the Coast Guard's motto: Semper Paratus (Always Ready).

Funding requested represents non-pay related inflation associated with the purchase of supplies and materials to sustain current operating levels.

ADJUSTMENTS-TO-BASE

INCREASES

\$6,138,000

A. ANNUALIZATION OF PRIOR YEAR

FUNDING.....2,616,000

Strategic Goal(s) & Objectives: 1.1, 1.2, 1.3, 1.4, 2.1, 2.3, 2.4, 2.5, 2.6, 3.1, 3.2, 3.6, 3.1, 3.2, 3.6, 3.7, 4.2, 4.3, 5.1, 5.2, 6.3, 6.4, 7.2, 7.3, 7.4, 7.5, 7.6, 7.7

This item reflects FY 2007 savings associated with the termination of one-time costs for program start-up and exit transactions that were funded in FY 2006.

B. FY 2007 PAY INCREASE

1. MANDATORY PERSONNEL

ENTITLEMENTS.....3,228,000

Strategic Goal(s) & Objectives: 7.3

Request funding for military and civilian reserve pay raises, mandatory military entitlement increases and medical inflation costs above the non-pay Cost of Living Allowance (COLA).

- Request three quarter funding for the FY 2007 proposed military and civilian pay raise effective January 1, 2007.
- Request funding for DOD personnel and policy mandates and projected mandatory military entitlement increases the Coast Guard anticipates incurring as a result of the FY 2007 National Defense Authorization Act.

C. NON -PAY

ADJUSTMENTS.....\$294,000

Strategic Goal(s) & Objectives: 7.7

CG-RT-6

III. Current Services Program Description by PPA

**Department of Homeland Security
U.S. Coast Guard
Reserve Training
Program Performance Justification
(Dollars in Thousands)**

Request the non-pay COLA for the Coast Guard Reserve program. Price escalation of goods and services during FY 2006 must be accommodated. Funding is requested to ensure that maintenance and logistics contracts are adequately funded to sustain essential services and enable the Coast Guard to effectively execute its Reserve program and its statutory responsibilities to the American public in FY 2007.

CG-RT-7

IV. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
U. S. Coast Guard
Justification of Proposed Changes in Reserve Training
Appropriation Language**

For all necessary expenses of the Coast Guard Reserve, as authorized by law; operations and maintenance of the reserve program, personnel and training costs, equipment and services; [\$117,810,000] \$123,948,000. (*Department of Homeland Security Appropriation Act, 2006.*)

Explanation of Changes:

No substantive changes proposed.

* These numbers are estimates only; the Coast Guard is currently working to improve its processes to effectively capture costs via object class, with an accurate correlation to PPA. FY07 represents the first year the Coast Guard has displayed numbers in this fashion. FY06 actuals will provide us accurate base data for projections in future budgets. In addition, the Coast Guard transitioned from using four PPAs to two PPAs in FY07 to ensure accuracy in reporting of these estimates. As such, in order to show trends and a basis for analysis for FY07 to prior years, the Coast Guard converted the displays in FY05 and FY06 to two PPAs.

PPA Mission Statement

This PPA requests funding for expenses related to compensation for active duty military service members and civilian personnel who support the Reserve Training program. This category also includes pay, allowances, employer's share of FICA, Social Security credits and other expenses. Requested funding will compensate our 536 full-time personnel.

PPA Mission Statement

Requested funding supports operations, maintenance and administrative expenses associated with training the 8,100 Coast Guard Reservists that are currently part of the Selective Reserve.

CG-RT-17

Summary Justification and Explanation of Changes

Salaries and Benefits

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 88,285	\$ 96,918	\$ 102,499	\$ 5,581

Salaries and benefits funds provide for compensation directly related to duties performed for the Coast Guard by active duty military and civilian personnel who support the Reserve Training program. This includes costs for 536 FTE. The FY 2007 request includes funding for the proposed pay raise (currently estimated at 2.2% for both military and civilian in FY 2007) and inflation related to medical benefits and other mandatory personnel entitlements.

Subsistence and support of persons

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 1,076	\$ 1,115	\$ 1,133	\$ 18

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging and care of persons, including prisoners. Specifically, funding supports berthing and subsistence of Coast Guard personnel in support of anticipated temporary assigned duty (TAD) during FY 2007. The FY 2007 request includes the anticipated increase in cost for berthing and subsistence.

Supplies and materials

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 884	\$ 959	\$ 974	\$ 15

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request includes the anticipated increase for cost of personnel issued materials.

CG-RT-18

Summary Justification and Explanation of Changes

Travel

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	15,987	\$ 14,937	\$ 15,353	\$ 416

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request includes the anticipated non-pay related inflation for travel expenses.

Transportation of things

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	1	\$ 1	\$ 1	\$ -

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves.

Printing and reproduction

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	168	\$ 157	\$ 162	\$ 5

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports and other Coast Guard directives. The FY 2007 request includes the anticipated non-pay related inflation for printing services.

Other services

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	2,906	\$ 2,720	\$ 2,796	\$ 76

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions. The FY 2007 request includes anticipated non-pay related inflation to procure these supplies and services.

Purchases of goods & svcs. from gov't accounts

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	2	\$ 2	\$ 2	\$ -

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Specifically, funds support the purchase of goods and services from other government agencies including interagency service requirements (e.g. MIPR).

Operation & maintenance of facilities

CG-RT-19

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 35	\$ 34	\$ 34	-

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. Specifically, funds support contracted janitorial, landscaping, security, and environmental services (e.g. hazardous materials disposal) associated with the operation of Coast Guard facilities.

Supplies and materials

2,005 Actual	2,006 Revised Enacted	2,007 Request	2006 - 2007 Change
\$ 135	\$ 954	\$ 981	\$ 27

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies.

Equipment

2,005 Actual	2,006 Revised Enacted	2,007 Request	2006 - 2007 Change
\$ 11	\$ 11	\$ 11	-

This object class covers the purchase of capitalized and non-capitalized assets. For example, this object class enables the Coast Guard to purchase furniture for the cadets at the Coast Guard Academy and survival suits for the rescue swimmers deployed to the frigid waters of Alaska.

Insurance claims and indemnity

2,005 Actual	2,006 Revised Enacted	2,007 Request	2006 - 2007 Change
\$ 2	\$ 2	\$ 2	-

This covers indemnities for fire, flooding and casualty.

U. S. Coast Guard**Acquisition, Construction and Improvements****I. Appropriation Overview****A. Mission Statement for Acquisition, Construction and Improvements:**

The acquisition, construction and improvements appropriation will finance the acquisition of new capital assets, construction of new facilities and physical improvements to existing facilities and assets. The appropriation covers Coast Guard-owned and operated vessels, shore facilities and other equipment such as computer systems, as well as the personnel needed to manage acquisition activities.

B. Budget Activities:

Projects supported with this funding, once completed, will serve in executing our traditional missions that include Search and Rescue (SAR), Marine Safety, Aids to Navigation (AtoN), Ice Operations, Marine Environmental Protection (MEP), Living Marine Resources (LMR), Drug Interdiction, Migrant Interdiction, Other Law Enforcement, Ports, Waterways and Coastal Security (PWCS) and Defense Readiness.

C. Budget Request Summary:

The Coast Guard requests 728 positions, 652 FTE and \$1,169,537 in FY 2007 to support the following projects:

- Deepwater (\$934 million),
- Response Boat-Medium (\$25 million),
- Rescue 21 (\$40 million),
- Nationwide Automatic Identification System (\$11 million),
- National Capital Region Air Defense (\$49 million),
- Maritime Security Response Team (\$1.7 million),
- High Frequency recapitalization (\$2.5 million),
- Shore facilities and aids to navigation (\$26 million,) and
- AC&I personnel (\$81 million).

NOTE: FY 2005 numbers display supplemental funding (\$34M DOD transfer and \$40.2M hurricane supplemental) as a non-add, as the assumption is that all supplemental funding has been obligated and is reflected in the PPA spread.

III. Current Services Program Description by PPA

**Department of Homeland Security
U. S. Coast Guard
Acquisition, Construction and Improvements
Program Performance Justification
(Dollars in thousands)**

PPA I: VESSELS AND CRITICAL INFRASTRUCTURE PROJECTS

	Perm Pos	FTE	Amount
2005 Actual	\$20,640*
2006 Revised Enacted	96,160
2007 Request	24,750
Total Change 2006-2007	(71,410)

The Coast Guard requests \$24.8 million for this activity. This is a decrease of \$71.4 million over FY 2006.

PROGRAM DESCRIPTION:**Primary operational resource supported: Surface assets, Command and Control**

Requested funding represents the initial acquisition, development or construction of any vessel costing more than \$1 million per vessel or \$8 million per project or cutter class/boat class. It also represents the improvement, renovation, upgrade, replacement or alteration of any vessel which exceeds \$1 million per vessel and \$8 million per project or cutter class/boat class, or costing more than \$10 million regardless of the cost per vessel. Our primary project for this funding in FY 2007 is the Response Boat-Medium acquisition.

PPA II: INTEGRATED DEEPWATER SYSTEMS

	Perm Pos	FTE	Amount
2005 Actual	\$757,181*
2006 Revised Enacted	923,769
2007 Request	934,431
Total Change 2006-2007	10,662

The Coast Guard requests \$934.4 million for this activity. This is an increase of \$10.7 million over FY 2006.

PROGRAM DESCRIPTION:**Primary operational resource supported: All**

* FY 2005 actual figures do not include obligations from projects that are no longer reflected in the Coast Guard's Capital Investment Plan, such as the Great Lakes Ice Breaker (GLIB) project.

CG-AC&I-4

To continue to meet America's 21st century maritime threats and challenges, the Coast Guard initiated the Integrated Deepwater System (IDS) Program, the largest and most innovative acquisition in the Coast Guard's history. At full implementation, the Integrated Deepwater System comprises three classes of new cutters and their associated small boats, upgraded legacy cutters, a new fixed-wing manned aircraft fleet, a combination of new and upgraded helicopters, and both cutter-based and land-based unmanned air vehicles. All of these highly capable assets will be linked with state-of-the-art Command, Control, Communications and Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) systems, and will be supported by an integrated logistics regime. Given its importance, it comprises its own PPA sub-categories.

- Aircraft
- Surface
- Other

PPA III: OTHER EQUIPMENT

	Perm Pos	FTE	Amount
2005 Actual	\$165,116*
2006 Revised Enacted	64,350
2007 Request	<u>103,506</u>
Total Change 2006-2007	39,156

The Coast Guard requests \$103.5 million for this activity. This is an increase of \$39.2 million over FY 2006.

PROGRAM DESCRIPTION:

Primary operational resource supported: Command and Control, Intelligence

Funding requested will procure hardware &/or software. This includes the initial acquisition, development or construction of any system, software or equipment costing over \$1 million per usable segment or item, or \$10 million total project cost; it also includes the improvement, renovation, upgrade, replacement or alteration of equipment or hardware which exceeds \$1 million per usable segment or item or \$10 million total project cost, regardless of the per site cost.

PPA IV: AIRCRAFT

	Perm Pos	FTE	Amount
2005 Actual	\$38,144*
2006 Revised Enacted	19,800
2007 Request	<u>0</u>
Total Change 2006-2007	(19,800)

* FY 2005 actual figures do not include obligations from projects that are no longer reflected in the Coast Guard's Capital Investment Plan, such as the Great Lakes Ice Breaker (GLIB) project.

CG-AC&I-5

The Coast Guard does not request funding for this activity. Aircraft projects, beginning in FY 2007, are reflected under the Integrated Deepwater Systems PPA.

PPA V: SHORE FACILITIES AND AIDS TO NAVIGATION

	Perm		
	Pos	FTE	Amount
2005 Actual	\$5,225*
2006 Revised Enacted	31,383
2007 Request	25,850
Total Change 2006-2007	(5,533)

The Coast Guard requests \$25.9 million for this activity. This is a decrease of \$5.5 million over FY 2006.

PROGRAM DESCRIPTION:

Primary operational resource supported: Shore units

Requested funding supports civil engineering work activities, including:

- Maintenance, Repair, and In-Kind Replacements- activities needed to keep a building or infrastructure operational, specifically focusing on physical continuity.
- Alterations - Work required to adjust interior arrangements or other physical characteristics of an existing facility/structure, so that it may be more effectively adapted to or utilized for a new or changed use.
- Improvements - Activities that enhance the mission (and functional) capabilities of a building or infrastructure.
- Code Compliance - Activities solely required to bring a facility back into code, including life safety, fire, seismic, health and safety, occupational health and safety, and environmental codes and environmental and energy regulations.
- Demolition - Demolition activities, partial demolition activities in preparation for other categories of work, and work related to divestiture activities.

PPA VI: PERSONNEL AND RELATED SUPPORT

	Perm		
	Pos	FTE	Amount
2005 Actual	696	616	\$73,000*
2006 Revised Enacted	699	616	72,765
2007 Request	728	652	81,000
Total Change 2006-2007	29	36	8,235

The Coast Guard requests \$81 million for this activity. This is an increase of \$8.2 million and 36 FTE over FY 2006.

* FY 2005 actual figures do not include obligations from projects that are no longer reflected in the Coast Guard's Capital Investment Plan, such as the Great Lakes Ice Breaker (GLIB) project.

CG-AC&I-6

PROGRAM DESCRIPTION:

Primary operational resource supported: All

AC&I has a specific annual appropriation to fund "personnel compensation and benefits and related costs." Annual AC&I personnel compensation appropriation, rather than the multi-year project funds, must be used to fund all AC&I related personnel costs.

* FY 2005 actual figures do not include obligations from projects that are no longer reflected in the Coast Guard's Capital Investment Plan, such as the Great Lakes Ice Breaker (GLIB) project.

A. Justification of Proposed Legislative Language

Department of Homeland Security
U. S. Coast Guard
Justification of Proposed Changes in Acquisition, Construction, and Improvements
Appropriation Language

For necessary expenses of acquisition, construction, renovation, and improvement of aids to navigation, shore facilities, vessels, and aircraft, including equipment related thereto; and maintenance, rehabilitation, lease and operation of facilities and equipment, as authorized by law; [\$1,141,800,000] \$1,169,537,000, of which [\$20,000,000] \$19,800,000 shall be derived from the Oil Spill Liability Trust Fund to carry out the purposes of section 1012(a)(5) of the Oil Pollution Act of 1990 (33 U.S.C. 2712(a)(5)); of which [\$18,500,000] \$24,750,000 shall be available until September 30, [2010] 2011, to acquire, repair, renovate, or improve vessels, small boats, and related equipment; [of which \$20,000,000 shall be available until September 30, 2010, to increase aviation capability]; of which [\$65,000,000] \$103,506,000 shall be available until September 30, [2008] 2009, for other equipment; of which [\$31,700,000] \$25,850,000 shall be available until September 30, [2008] 2009, for shore facilities and aids to navigation facilities; of which [\$73,500,000] \$81,000,000 shall be available for personnel compensation and benefits and related costs; and of which [\$933,100,000] \$934,431,000 shall be available until September 30, [2010] 2011, for the Integrated Deepwater Systems program: Provided, That the Commandant of the Coast Guard is authorized to dispose of surplus real property, by sale or lease, and the proceeds shall be credited to this appropriation as offsetting collections and shall be available until September 30, [2007] 2008: [Provided further, That the Secretary of Homeland Security shall submit to the Committees on Appropriations of the Senate and the House of Representatives, in conjunction with the President's fiscal year 2007 budget, a review of the Revised Deepwater Implementation Plan that identifies any changes to the plan for the fiscal year; an annual performance comparison of Deepwater assets to pre-Deepwater legacy assets; a status report of legacy assets; a detailed explanation of how the costs of legacy assets are being accounted for within the Deepwater program; an explanation of why many assets that are elements of the Integrated Deepwater System are not accounted for within the Deepwater appropriation under this heading; a description of the competitive process conducted in all contracts and subcontracts exceeding \$5,000,000 within the Deepwater program; a description of how the Coast Guard is planning for the human resource needs of Deepwater assets; and the earned value management system gold card data for each Deepwater asset: Provided further, That the Secretary shall submit to the Committees on Appropriations of the Senate and the House of Representatives a comprehensive review of the Revised Deepwater Implementation Plan every five years, beginning in fiscal year 2011, that includes a complete projection of the acquisition costs and schedule for the duration of the plan through fiscal year 2027: Provided further, That the Secretary shall annually submit to the Committees on Appropriations of the Senate and the House of Representatives, at the time that the President's budget is submitted under section 1105(a) of title 31, a future-years capital investment plan for the Coast Guard that identifies for each capital budget line item-- (1) the proposed appropriation included in that

CG-AC&I-9

budget; (2) the total estimated cost of completion; (3) projected funding levels for each fiscal year for the next five fiscal years or until project completion, whichever is earlier; (4) an estimated completion date at the projected funding levels; and (5) changes, if any, in the total estimated cost of completion or estimated completion date from previous future-years capital investment plans submitted to the Committees on Appropriations of the Senate and the House of Representatives: Provided further, That the Secretary shall ensure that amounts specified in the future-years capital investment plan are consistent to the maximum extent practicable with proposed appropriations necessary to support the programs, projects, and activities of the Coast Guard in the President's budget as submitted under section 1105(a) of title 31 for that fiscal year: Provided further, That any inconsistencies between the capital investment plan and proposed appropriations shall be identified and justified.] (*Department of Homeland Security Appropriations Act, 2006.*)

[SEC. 527. (a) From the unexpended balances of the United States Coast Guard "Acquisition, Construction, and Improvements" accounts specifically identified in the Joint Explanatory Statement (House Report 108-10) accompanying Public Law 108-90 for the Fast Response Cutter/110-123 foot patrol boat conversion, and in the Joint Explanatory Statement (House 108-774) accompanying Public Law 108-334 for the Integrated Deepwater System patrol boats 110-123 foot conversion, \$78,630,689 are rescinded.

(b) For necessary expenses of the United States Coast Guard for "Acquisition, Construction, and Improvements", an additional \$78,630,689, to remain available until September 30, 2009, for the service life extension program of the current 110-foot Island Class patrol boat fleet and accelerated design and production of the Fast Response Cutter.] (*Department of Homeland Security Appropriations Act, 2005.*)

[SEC. 544. Of funds made available for the United States Coast Guard in previous appropriations Acts, \$6,369,118 are rescinded, as follows: (1) \$499,489 provided for "Coast Guard, Acquisition, Construction, and Improvements" in Public Law 105-277; (2) \$87,097 provided for "Coast Guard, Operating Expenses" in Public Law 105-277; (3) \$269,217 provided for "Coast Guard, Acquisition, Construction, and Improvements" in Public Law 107-87; (4) \$8,315 provided for "Coast Guard, Acquisition, Construction, and Improvements" in Public Law 106-69; and (5) \$5,505,000 for "Coast Guard, Acquisition, Construction, and Improvements" in Public Law 108- 90.] (*Department of Homeland Security Appropriations Act, 2005.*)

Explanation of Changes:

No substantive changes proposed.

FY 2007 C-Stage
(dollars in thousands)**

RESPONSE BOAT - MEDIUM (RB-M)**\$24,750****Project Description, Justification and Scope**

The Response Boat - Medium (RB-M) project will procure 180 new small boats to recapitalize the aging 41-foot Utility Boats (UTB) and other large Non-Standard Boats (NSB) with assets more capable of meeting all of the Coast Guard's multi-mission operational requirements (e.g., Search and Rescue, including Recreational Boating Safety; Marine Environmental Protection; Living Marine Resources; Ports, Waterways, and Coastal Security; and Defense Readiness).

The legacy 41' UTB was built by the Coast Guard from 1973 to 1980 and is a key asset for multi-mission station-based Coast Guard response within the coastal zone. The 41' UTB entered service in 1973, replacing the 40' UTB that began service in 1951. Although designed specifically for Search and Rescue (SAR), the 41' UTBs have been employed as multi-mission assets. Now at the end of their service life, the 41' UTBs are experiencing rising maintenance costs and declining readiness levels resulting in loss of mission performance and effectiveness.

The Coast Guard mission has changed since the 41' UTB was built, and it has changed dramatically post 9/11. RB-M offers a number of opportunities for improvements over the existing fleet of 41' UTBs and non-standard boats in performance, crew efficiency and operational availability. Several program requirements, and much operational commander input, indicates a need for an RB-M that is substantially faster than the 41' UTB to support new Homeland Security operations (40+ knots vs. 26 knots). This will result in greater SAR mission effectiveness, and a more capable platform for Enforcement of Laws and Treaties (ELT), Ports, Waterways, and Coastal Security (PWCS), and Defense Operations missions. Integrated navigation and sensing systems, compliant with international radio-telephony standards made possible by technological advances in the past decade, means the RB-M can better identify search objects, further improving mission capability. Interoperability of the RB-M with Rescue-21 will greatly enhance the overall command and control, as well as crew safety, in the Coastal Zone. Crew efficiency can be greatly improved in a number of areas relating to human engineering. Providing secure seating for every crewman in an environmentally controlled cabin will allow longer missions with less fatigue. Providing self-fendering will allow more efficient boarding and towing operations. Placing emphasis on survivor water-recovery significantly improves crew efficiency. Reducing the amount of maintenance time will improve operational availability. Some of the methods for achieving this include: placing emphasis on the ability to quickly maintain and replace RB-M components; providing improved depot level maintenance support; and providing maintenance relief RB-Ms to substitute for station boats during major maintenance and casualty repairs. The RB-M is also being built to dimensions that will allow for commercial overland transportation to support deployed surge operations and technical data formatted to support the ongoing organizational logistics transformation.

The RB-M Acquisition Strategy is two phased: Phase 1 - full and open competitive Request For Proposal (RFP), selecting three contractors to build test boats, and then developmental testing and evaluation to validate RB-M requirements. Phase 2 - competitive RFP limited to the three Phase 1 contractors for production and logistics support for approximately 180 boats that meet the Coast Guard's multi-mission requirements.

The RFP for the test boats was released 09 August 2002 and contracts for three test boats were awarded 02 May 2003. The test boats were delivered 29 October 2003. The Coast Guard conducted extensive in-water developmental testing and evaluation after accepting the Phase 1 test boats. Personnel from Coast Guard Multi-

RESPONSE BOAT - MEDIUM (RB-M) \$24,750

Mission Stations who operate and maintain small boats on a daily basis participated in the in-water testing. The Naval Surface Warfare Center Carderock Division, Combatant Craft Department, conducted the technical analysis of the data gathered from the acceptance, performance, mission effectiveness, and supportability testing. The evaluation results were used to validate government requirements and verify industry's ability to meet those requirements using non-developmental state of the market technology at a reasonable price. Select portions of the Phase 1 test results were also furnished to the Phase 1 contractors for additional research and development, and for use in developing their Phase 2 proposals.

The funding requested herein will allow the RB-M project to continue low rate initial production of approximately 6-10 hulls. Entry into full rate production will occur in future years, at a rate of approximately 30 boats annually, pending availability of funds.

Significant Changes

The project is currently in the Capability Development & Demonstration phase of the major acquisition process. The project received Key Decision Point Two approval from the DHS Investment Review Board on 17 March 2005, which gave the Coast Guard the authority to release the production contract Request For Proposal (RFP). The RFP includes options for Low Rate Initial Production (LRIP) and Full Production quantities. The RFP was released 26 April 2005 with non-price proposals received on 26 July 2005 and price proposals received on 16 August 2005. Source Selection Teams evaluated the initial proposals. The Contracting Officer was unable to award based on initial offers. The Contracting Officer established the competitive range, held discussions with the offerors, and requested Final Proposal Revisions (FPR). FPRs were received from the offerors on 22 December 2005. Evaluation of the offerors has since commenced, with the source selection process following evaluations. Contract award for the RB-M production contract is expected in the 2nd quarter FY2006.

Method of Performance

The RB-M Project Management Team will use an Earned Value Management System (EVMS) that meets American National Standards Institution (ANSI)/Electronic Industries Alliance (EIA) Standard 748 and has taken steps during this phase (Capability Development and Demonstration Phase) of the acquisition process to design an earned value management framework for effective project management and controls. The RB-M Project is leveraging the lessons learned from other agency acquisition programs and using those insights in managing the

RESPONSE BOAT - MEDIUM (RB-M) **\$24,750**

cost, schedule, and technical performance during the project life cycle. The RB-M Project has hired Booz Allen Hamilton to provide earned value consulting expertise. Working with Booz Allen, the RB-M Project has developed ANSI 748-A compliant earned value requirements for the Phase 2 Request For Proposals which was released in the 3rd quarter FY 2005, and developed contract language identifying earned value deliverables such as Cost Performance Reports and Integrated Master Schedule(s).

The Project is also making preparations for the Integrated Baseline Review (IBR). The IBR will be conducted jointly with the successful contractor following Phase 2 award. The IBR is intended to provide a mutual understanding of risks inherent in contractors' performance plans and underlying management control systems and is an essential element of the RB-M Project's risk management approach.

MARITIME PATROL AIRCRAFT (MPA) **\$77,616**

Project Description, Justification and Scope

DESCRIPTION:

This funding request buys one MPA (#6), a CASA CN-235 300M, and necessary missionization and logistics equipment to outfit previously acquired MPAs (#4, #5, & #6) to "mission ready" status. Upon completion of the activity funded by this request, the Coast Guard will have sufficient operational aircraft for two CN-235 300M air stations.

CAPABILITY ACQUIRED/MAINTAINED:

The CASA CN-235 300M will be equipped with systems (communication, navigation and surveillance) that allow the aircraft to operate worldwide in civilian and military airspace in support of Coast Guard missions.

Purchased in compliance with the Buy American Act, the CASA CN-235 300M is the perfect complement for the Coast Guard fleet of long-range, heavy-lift HC-130 aircraft. Its high-efficiency turbo prop design allows both sustained surveillance and quick response speeds in the role of a maritime patrol aircraft. Once closer to targets of interest, the infrared/electro-optical sensor can further classify and identify these targets in virtually all weather conditions. These features allow the Coast Guard to monitor the movement of high interest vessels and quickly locate mariners in distress.

The state-of-the-art cockpit design provides pilots with superior situational awareness, reduced workload and safety, allowing them to concentrate more on the mission. Human factors engineering is also evident in the mission system pallet, which controls the tactical workstation. Systems operators can collect, compile and transfer vital information in real time to operational commanders on ship or on shore, hundreds of miles from the aircraft. Satellite radios provide clear and uninterrupted voice and data exchange. Advanced electronic support measures that can automatically detect friendly and unknown vessels; vessel "fingerprints" add another layer of defense to homeland security missions.

The CASA CN-235 300M also provides great mission flexibility. The hydraulically operated rear ramp allows for easy roll-on / roll-off provisions. This quick change feature allows ground crews to re-configure the aircraft from maritime patrol, to medical evacuation, to passenger or freight transport. Its medium size and high-lift wing design allow take-off and landing at short, unpaved landing areas, further enhancing the Coast Guard's ability to aid first responders in all types of national, state and local emergencies.

PERFORMANCE:

The CASA CN 235-300M is a transport and surveillance, fixed-wing aircraft that will be used to perform search and rescue, enforcement of laws and treaties (including illegal drug interdiction), marine environmental protection, military readiness and International Ice Patrol missions, as well as provide cargo and personnel transport. It can perform aerial delivery of search and rescue equipment such as rafts, pumps and flares, and it can be used as an On Scene Commander platform. As the medium range maritime patrol aircraft, the CASA delivers maritime domain awareness essential to achieving mission success in the following strategic goals and mission programs:

MARITIME SAFETY

CG-AC&I-24

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

MARITIME PATROL AIRCRAFT (MPA)**\$77,616**

- Search and Rescue – The CASA will be outfitted with a very capable C4ISR suite that includes a multi-mode surface and air search radar (MMR), Electro Optical (EO) device, and Infrared (IR) sensor to find and observe a wide range of targets. The aircraft will have a Line of Bearing indicator and Distress Call Monitoring on various distress frequencies. It will also be equipped with search windows and the crew will be outfitted with night vision devices to further enhance the crew's ability to detect, classify, and identify targets. With a rear cargo loading ramp that can be opened in-flight, the CASA is capable of aerial delivery of equipment (i.e. life rafts, communications kits, and de-watering pumps) and personnel. With an endurance of 10.7 hours, the CASA can also serve as On-Scene Commander, guiding and assisting rotary wing assets.

PROTECTION OF NATURAL RESOURCES

- Marine Environmental Protection (MEP) – Visual surveillance and the C4ISR suite on the CASA will be employed to monitor and map oil-covered water surfaces. The MMR can detect differences in backscatter between water and oil-covered water due to the dampening effects of oil on small wind-generated waves, while the EO/IR sensor can detect the small temperature variation between clear and oil-covered water. The common operational picture (COP) provides the capability to navigate to previously marked pollution areas and update them based on current C4ISR and visual indications.
- Living Marine Resources Enforcement (LMR) – The CASA will employ all sensors (MMR, EO, and IR) to provide surveillance of protected and/or closed offshore areas and ensure the protection of LMR. In addition to the sensors and communications capabilities already described, the CASA will also be equipped with an Automatic Identification System (AIS) to monitor surface vessels. The information will include the ship's name, position, course, and speed. The use of AIS will make the job of vessel identification easier, permitting the CASA to remain at altitude instead of having to make a low pass to visually identify the vessel. and other hazardous chemical discharges.

MARITIME SECURITY

- Port, Waterways, and Coastal Security (PWCS) – The MPA will be able to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. The MPA will conduct maritime interdiction operations, provide outer-harbor security, conduct search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.
- Undocumented Migrant Interdiction Operations – The C4ISR suite, including the same sensors described in the Search and Rescue Mission will be employed to provide surveillance, detection, classification and identification in this mission-program. With multiple communications including Ultra High Frequency/Very High Frequency (UHF/VHF), High Frequency (HF), and International Maritime Satellite (INMARSAT), the CASA will be able to share important information with other operational units and command centers. This information will contribute to a Common Tactical Picture (CTP) and Common Operational Picture (COP) through a networked Command and Control (C2) system that provides for data sharing via INMARSAT.

CG-AC&I-25

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

MARITIME PATROL AIRCRAFT (MPA) \$77,616

- **Illegal Drug Interdiction** – The same sensors and communications equipment that will support migrant operations will also be utilized to support this mission-program. Through effective use of the CTP/COP, the CASA will be able to direct Coast Guard surface assets to intercept and prosecute suspect vessels.
- **Other Law Enforcement (OLE)** – The use of all sensors and communications equipment will be utilized for the OLE mission. Sharing information and data through the use of the C2 system and the CTP/COP will result in increased Maritime Domain Awareness.

NATIONAL DEFENSE – The CASA plays a minimal role in National Defense Missions but can support through surveillance and transport roles.

- Port Operations, Security, and Defense (POSD)
- General Defense Operations (GDO)
- Peacetime Military Engagement (PME)
- Maritime Intercept Operations (MIO)
- Environmental Defense Operations (EDO)

OTHER

- As a secondary mission, the CASA serves as a logistics transport aircraft.

Type of Contract: Indefinite Delivery, Indefinite Quantity with award terms
Contract options: 5-year base with five, 5-year subsequent award term periods

SUBCONTRACTORS

Airframe: EADS CASA CN-235 300M (Madrid, Spain)
Avionics: Rockwell Collins (Cedar Rapids, IA)
Power Plant: General Electric CT7-9C3 engine (Lynn, MA)
Propulsion: Hamilton Sundstrand 14RF-37 (Windsor Locks, CT)
Sensors: Telephonics APS-143V3 Multi-Mode RADAR (Farmingdale, NY)
FLIR Systems Star Sapphire III (Portland, OR)
EDO ALR-95 (Morgan Hill, CA)
Mission System: Lockheed Martin (Egan, MN)
Communications: Wulfsberg RT50000 (Prescott, AZ)
Miscellaneous: CG Maritime Patrol Aircraft Conversion, ARSC (Elizabeth City, NC)
Mission System Integration, ARINC (Annapolis, MD)
Mission System Operator Training and Maintenance, ProSoft (Phoenix, AZ)

KEY EVENT

	FY
MPA 1/2/3 Delivery	2007
MPA 1/2/3 Initial Operating Capability (IOC)	2008
MPA 1/2/3 Full Operating Capability (FOC)	2008
MPA 4/5 Delivery	2008
MPA 4/5 Initial Operating Capability (IOC)	2009
MPA 4/5 Full Operating Capability (FOC)	2009

Significant Changes

The \$67.32M provided in FY 2006 funded two baseline aircraft. Therefore, \$36.5M of the \$77.6M will be used to buy a second mission system pallet, integrated logistics support and a partial amount of the required initial spares – all of which are necessary to make these aircraft “mission-ready.” The remaining \$41M will be used to buy one CN-235 300M Maritime Patrol Aircraft, MPA #6, in a configuration ready to fully execute Coast Guard missions. Upon completion of the activity funded by this request, the Coast Guard will have sufficient operational aircraft for two CN-235 300M air stations.

VERTICAL TAKE-OFF AND LANDING (VTOL) UNMANNED AIR VEHICLE (UAV) \$4,950

Project Description, Justification and Scope

DESCRIPTION:

Funding will be utilized to conduct VUAV testing. The VUAV project plan has been adjusted and one air vehicle, one Ship Control Station (SCS), and one Ground Control Station (GCS) can be procured with the funds appropriated in FY 2006. FY 2007 funds will test this equipment.

CAPABILITY ACQUIRED/MAINTAINED:

The Eagle Eye uses Bell Helicopter's tilt-rotor technology to provide a unique surveillance platform capable of landing and taking off from flight-deck equipped cutters. A single Pratt & Whitney turboshaft engine provides sufficient power to drive the twin tilt-rotors and carry a 300 pound payload. The sophisticated sensors integrated into the Eagle Eye include a Telephonics RDR 1700 surface search radar for long-range target detection and a FLIR Systems Star Safire Infrared/electro-optical turret that provides medium range, low light identification capabilities. Information gathered by these sensors can be transferred in real time back to the ship via encryption-capable VHF and UHF radios. Precise navigation is provided by an on-board global positioning system (GPS). The Eagle Eye can also use its airplane mode to provide extended patrols or a four-hour loiter time over a target if high interest. A Tactical Common Data Link (TCDL) provides positive, uninterrupted operator control, using a redundant flight control system, from take off to final approach back to the cutter. An automated landing system called UAV Common Automatic Recovery System (UCARS) completes the otherwise risky task of all-weather ship board landing. Windows-based architecture allows an intuitive man-machine interface to conduct operator-designed flight profiles. A large display screen on the ship or ground control station provides a clear picture of where the Eagle is at all times.

PERFORMANCE:

The VUAV is discussed in terms of "force packages" under the National Security Cutter and Offshore Patrol Cutter and greatly facilitates achieving mission success in the Congressionally-mandated missions. On a typical mission the Eagle Eye will take off from the cutter's flight deck using the hover mode. It will transition to the airplane mode and climb to around 8000 feet to maintain a clean, line of sight radio link. The aircraft will patrol a designated area and gather useful intelligence that is processed on the cutter. The Eagle Eye will return to the cutter and touch down using the UCARS. The aircraft is easily stowed in the cutter's hangar until needed for another mission. The Eagle Eye is a truly transformational asset for the Coast Guard's Deepwater program. It delivers an intelligence, surveillance and reconnaissance capability for much less cost than manned aircraft. Its generous payload allows for added sensor capability to meet changing demands of global shipboard operations.

HH-60 CONVERSION PROJECTS**\$49,302****Project Description, Justification and Scope****DESCRIPTION:**

- 1) HH-60T Avionics Upgrade — Funds replacement/modernization of obsolete HH-60T avionics to the improved HH-60T avionics suite, including aircraft electrical wiring and connectors to resolve and prevent discrepancies.
- 2) HH-60J Service Life Extension Program (SLEP) — Replaces electrical wiring /connectors not addressed during the avionics upgrade to maintain structural and electrical integrity.
- 3) HH-60J Radar/FLIR – Funds replacement of the HH-60J RDR-1300 monochrome weather-search radar with commercial off-the-shelf (COTS) equipment and upgrades of first generation Forward Looking Infrared (FLIR) equipment.
- 4.) HH-60J Engine Sustainment – Funds a targeted recapitalization of hot section components, addressing obsolescence/support issues associated with the Digital Electronic Control Unit. Initiates performance based logistics support to increase the mean-time-between engine failures, thereby increasing current-engine availability.

CAPABILITY ACQUIRED/MAINTAINED:

The Sikorsky HH-60J Jayhawk is the Coast Guard's medium range recovery helicopter. Two GE T700 engines, each rated at around 1600 shaft horsepower provide adequate power for a gross takeoff weight of 22000 pounds. The HH-60J is well suited for operations in challenging weather conditions. A flight management and navigation system provides the aircrews with global positioning system (GPS) navigation and some auto pilot capabilities. All-weather operation is rounded out with a weather radar and an effective anti-ice system that allows cold weather operation in the Northeast U.S. and Alaska. The aircraft is also equipped with night-vision compatible displays that allow aircrews to complete missions in almost zero light conditions.

The HH-60J is larger and more powerful than the Coast Guard's HH-65 helicopter. Because of the extended-capacity fuel tanks, the HH-60J is often called on for search and rescue missions far offshore. It is capable of flying up to 300 miles offshore, staying on scene for about 45 minutes, picking up six or more survivors, and then returning to shore with adequate fuel to divert to another landing area if required. All weather flight capabilities are provided by a basic flight management system.

The replacement of the HH-60J avionics system is currently underway. The Coast Guard's Integrated Deepwater System is developing the prototype upgraded model that will be called the HH-60T. Taking advantage of the U.S. Army and U.S. Navy Common Avionics Architecture System (CAAS) cockpit, the HH-60J will receive the same capabilities as U.S. Special Forces and presidential HH-60 aircraft. The CAAS cockpit will integrate state-of-the-market technology, upgrading flight management, navigation, and automatic pilot features. It will also increase operational availability and reduce maintenance and supply costs. This project also involves installation of an upgraded multi-mode radar and infrared/electro-optical sensors that will provide the HH-60J with a common command, control and surveillance system to integrate with the Deepwater Common Operating Picture (COP).

The HH-60J has provided support for National Special Security Events. The Coast Guard has used the technology developed by the U.S. Navy to install Airborne Use of Force capabilities in a few helicopters. The Deepwater program will provide the funding and management to configure the entire HH-60 fleet with weapons

CG-AC&I-34

**U.S. COAST GUARD JUSTIFICATION

FY 2007 C-Stage
(dollars in thousands)**

HH-60 CONVERSION PROJECTS**\$49,302**

and small arms protection capabilities. Because of its power and size, the HH-60J is the ideal aircraft to provide law enforcement personnel with a platform to rapidly deploy to potentially hostile vessels by rappelling down ropes from the cabin.

PERFORMANCE:

There are 41 HH-60Js across the continental United States and Alaska providing support to the following Congressionally-mandated missions:

- Search and Rescue (SAR) – The HH-60J will be outfitted with a very capable C4ISR suite that includes a multi-mode surface and air search radar (MMR), Electro Optical (EO) device, and Infrared (IR) sensor to find and observe a wide range of targets. The aircraft will have a Line of Bearing indicator and Distress Call Monitoring on various distress frequencies. It will also be equipped with GPS and the crew will be outfitted with night vision devices to further enhance the crew's ability to detect, classify, and identify targets.
- Marine Environmental Protection (MEP) – Visual surveillance and the C4ISR suite on the HH-60J will be employed to monitor and map oil-covered water surfaces. The MMR can detect differences in backscatter between water and oil-covered water due to the dampening effects of oil on small wind-generated waves, while the EO/IR sensor can detect the small temperature variation between clear and oil-covered water. The COP provides the capability to navigate to previously marked pollution areas and update them based on current C4ISR and visual indications.
- Living Marine Resources (LMR) – The HH-60J will employ all sensors (MMR, EO, and IR) to provide surveillance of protected and/or closed offshore areas and ensure the protection of LMR.
- Port, Waterways, and Coastal Security (PWCS) – The HH-60 will be able to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. The HH-60 will conduct maritime interdiction operations, provide outer-harbor security, escort high-value assets, and conduct search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.
- Undocumented Migrant Interdiction Operations (UMIO) – The C4ISR suite, including the same sensors described in the Search and Rescue Mission will be employed to provide surveillance, detection, classification and identification in the UMIO mission. With multiple communications including UHF/VHF, HF, the HH-60J will be able to share important information with other operational units and command centers. This information will contribute to a Common Tactical Picture (CTP) and Common Operational Picture (COP) through a networked Command and Control (C2) system that provides for data sharing.
- Drug Interdiction – The same sensors and communications equipment that will support UMIO will also be utilized to support the DRUG mission. Through effective use of the CTP/COP, the HH-60J will be able to intercept as well as direct Coast Guard surface assets to intercept and prosecute suspect vessels.

CG-AC&I-35

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

HH-60 CONVERSION PROJECTS **\$49,302**

- Other Law Enforcement (OLE) – The use of all sensors and communications equipment will be utilized for the GLE mission. Sharing information and data through the use of the C2 system and the CTP/COP will result in increased Maritime Domain Awareness.
- National Defense – The HH-60J plays a minimal role in National Defense Missions but can support through surveillance and transport roles.
 - Port Operations, Security, and Defense (POSD)
 - General Defense Operations (GDO)
 - Peacetime Military Engagement (PME)
 - Maritime Intercept Operations (MIO)
 - Environmental Defense Operations (EDO)

COST ESTIMATE OF WORK TO BE FUNDED THIS FISCAL YEAR

ITEM	QUANTITY	TOTAL
HH-60T Avionics Upgrade	NRE/Prototype*	\$29,106
HH-60J SLEP (Re-Wire)	NRE/Initial Production**	\$3,366
HH-60J Radar/FLIR	NRE/Prototype***	\$8,415
HH-60J Engine Sustainment	NRE****	\$8,415
	Total	\$49,302

* The net cost to upgrade 41 HH-60s is approximately \$3.37M/aircraft. This includes non-recurring engineering (NRE), initial parts sparing, training, simulator, etc. FY 2007 funding will support prototype test and evaluation, completion of the second MH-60T (validation/verification aircraft), purchasing production parts inventory and initial production ramp up. Full production of HH-60Ts is forecast to begin late FY07/early FY08. The planned production rate is 9 per year.

** Funding will support non-recurring (pre-production) engineering (NRE) and initial production ramp up. The net cost to re-wire 41 HH-60s is approximately \$470K/aircraft. Production will occur at the Aircraft Repair and Supply Center in Elizabeth City, NC in conjunction with routine planned depot level maintenance. Initial production commences in FY07. The planned production rate is 9 aircraft per year.

*** Funding will support non-recurring engineering (NRE) 2 radar units for operational testing, 2 EO/IR units for integration with the HH-60T avionics upgrade, and 8 additional EO/IR units. The net cost to complete 41 HH-60s is approximately \$900K/aircraft.

**** Funding will support non-recurring engineering (NRE) and initial contracting for engine parts to build engine upgrade kits. The net cost to upgrade the Coast Guard's HH-60 GE-T-700 engine inventory (102 engines) is approximately \$332K per engine. Full production is planned to begin in FY 2008.

HH-60T Avionics Upgrade Installations Begin	2006

Significant Changes

This year's budget request is a 60 percent increase over the amount appropriated for HH-60 projects in FY06. This growth in funding requirements reflects the reliance of the Revised Deepwater Implementation Plan upon the HH-60 aircraft. Previously, the original Deepwater system projected retiring all the HH-60 aircraft and replacing them with a fleet of new helicopters. The Revised Deepwater Implementation Plan retains the Coast Guard's HH-60 fleet and upgrades and converts them to serve as a long-term element of the Deepwater system. This funding continues ongoing HH-60 sustainment projects, and initiates a multi-year conversion and upgrade project for the HH-60s.

HC-130H CONVERSION PROJECTS**\$53,955****Project Description, Justification and Scope****DESCRIPTION:**

Requested funds will finance the following projects for the 16 HC-130H aircraft to be retained as part of our Deepwater fleet:

- 1) HC-130H Avionics Modernization Program (AMP) – Funds replacement of aging and obsolete HC-130H avionics suite.
- 2) HC-130H Surface Search Radar – Funds replacement of increasingly unreliable and obsolete APS-137 radar.

The Lockheed HC-130H is the Coast Guard's long-range surveillance aircraft. This four-engine, turbo-prop aircraft is used extensively throughout the United States, the Pacific, and the Caribbean in support of search and rescue, homeland security, pollution prevention, logistics, personnel transport, and ice patrol missions.

CAPABILITY ACQUIRED/MAINTAINED:

The HC-130H is powered by four Allison T56-A15 engines driving Hamilton Standard four bladed propellers. When all fuel tanks are filled, the aircraft is capable of extended range (>2600 miles in low-altitude flight). With reduced fuel loads, the aircraft can carry a 40,000 pound payload. A large cargo compartment area, easily accessed through a large rear ramp, can accommodate a wide range of cargo. Its high-lift capability allows takeoff and landings from short, unpaved landing strips.

To keep HC-130H fleet in service, upgrades to the avionics, sensors and fuselage are required. The Integrated Deepwater System is currently funding the program to replace the APS-137 surface search radar. This effective but maintenance-intensive radar has suffered from degraded reliability for several years. A prototype effort to replace the APS-137 with a Selex system is currently underway. The Selex system retains the same capabilities for surface search, yet boasts an impressive reliability factor. The avionics suite on the HC-130H has been in service since the aircraft were delivered in the mid 1980s. The new digital cockpit, with multi-function displays and reliable engine and propeller indicators, will provide aircrews with increased situational awareness and reduced cockpit workload.

PERFORMANCE:

With its flight management and sensor systems, the HC-130 is a very capable maritime patrol aircraft. It is equipped with a powerful surface search radar that can detect surface targets from over 50 miles away. Once closer to the target, the sensor operator uses the Forward Looking Infrared (FLIR) and electro-optical sensor to classify and identify the target, even in night or very low-light conditions. It includes a flight management system with automatic pilot and precise global positioning system (GPS) navigation equipment, which allows the pilot to prosecute the mission while ensuring pinpoint accuracy of the aircraft's position and the position of the target vessels. A large scanner window on either side of the cargo compartment provides aerial observers with a bird's eye view of search areas during visual conditions. The HC-130H supports the following strategic goals and mission programs:

MARITIME SAFETY

- Search and Rescue – The HC-130H has a C4ISR suite that includes a Multi-Mode Radar (MMR), Electro-Optical (EO) device, and Infrared (IR) sensor to find and observe a wide range of targets. The aircraft has

HC-130H CONVERSION PROJECTS \$53,955

a Line of Bearing indicator and Distress Call Monitoring on various distress frequencies. It is also equipped with search windows and the crew has night vision devices to further enhance their ability to detect, classify, and identify targets.

PROTECTION OF NATURAL RESOURCES

- Living Marine Resources Enforcement (LMRE) – The HC-130H employs all sensors, MultiMode Radar (MMR), ElectroOptical and Infrared (EO/IR) to provide surveillance of protected and/or closed offshore areas and ensure the protection of LMRE.

- Marine Environmental Protection (MEP) – Visual surveillance and the side-looking radar on the HC-130H are employed to monitor and map oil-covered water surfaces. The MMR can detect differences in backscatter between water and oil-covered water due to the dampening effects of oil on small wind-generated waves, while the EO/IR sensor can detect the small temperature variation between clear and oil-covered water.

MARITIME SECURITY

- Port, Waterways, and Coastal Security (PWCS) – The HC-130H conducts thorough and sustained surveillance of an assigned area of operations, and dispatches appropriate assets to investigate any threat to security. The HC-130H participates in maritime interdiction operations, provide outer-harbor security, and conducts search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.

- Undocumented Migrant Interdiction – The C4ISR suite, including the same sensors described in Search and Rescue are employed to provide surveillance, detection, classification and identification in this mission-program. With multiple communications including UHF/VHF, HF, the HC-130H can share important information with other operational units and command centers.

- Illegal Drug Interdiction – The same sensors and communications equipment that support migrant interdiction are also utilized to support the mission. With its interoperable communications suite the HC-130H can intercept as well as direct Coast Guard surface assets to intercept and prosecute suspect vessels.

- Other Law Enforcement (OLE) – The use of all sensors and communications equipment are utilized for the OLE mission.

NATIONAL DEFENSE – The HC-130H plays a minimal role in National Defense but can support surveillance and transport roles.

- Port Operations, Security, and Defense (POSD)
- General Defense Operations (GDO)
- Peacetime Military Engagement (PME)
- Maritime Intercept Operations (MIO)
- Environmental Defense Operations (EDO)

HC-130H CONVERSION PROJECTS**\$53,955****Significant Changes**

This year's budget request is a 500 percent increase over the amount appropriated for HC-130H projects in FY06. This growth in funding requirements reflects the reliance of the Revised Deepwater Implementation Plan upon the HC-130H aircraft. Previously, the original Deepwater system projected retaining six HC-130J aircraft while retiring the entire HC-130H fleet. The Revised Deepwater Implementation Plan retains 16 HC-130H aircraft along with the six HC-130J aircraft. This funding request is the first increment of a five year upgrade and conversion plan that will ensure that the 16 HC-130H aircraft have maximum utility as a long-term element of the Deepwater system.

HH-65 CONVERSION PROJECTS**\$32,373****Project Description, Justification and Scope****DESCRIPTION:**

Funds complete Phase I of the Multi-Mission Cutter Helicopter (MCH) Conversion of all 95 HH-65s in the Coast Guard fleet. Phase I consists of the purchase and installation of new engines and engine control systems that restore safety and reliability of the aircraft power plant for the 84 operational HH-65 helicopters in June 2007 and the remaining 11 aircraft as they complete their depot maintenance thereafter. Along with completing the re-engining, these funds will begin Phase II of the HH-65 conversion to the MCH which includes a service-life extension to refurbish the airframe, tail drive shaft and Fenestron anti-torque device, strengthened landing gear, new radar, a new C4ISR suite and an integrated cockpit.

CAPABILITY ACQUIRED/MAINTAINED:

The Eurocopter HH-65 Dolphin is the Coast Guard's short range recovery helicopter. Currently, there are three different versions of this twin engine helicopter; the base 'A' model, the 'B' model that includes electronics upgrades, and the 'C' model that incorporates the 'B' model changes along with an upgraded engine system.

The HH-65 is primarily constructed of composite structures that provide reduced weight, increased strength, and resistance to corrosion. One of the most recognizable features of the HH-65 is its unique shrouded tail rotor called a fenestron. The HH-65 incorporates a sophisticated flight management system that allows all-weather operation, precise navigation, and automatic pilot features. If desired, the pilot can select a function that will mark a position in open water, calculate the best flight profile, and automatically fly the helicopter to a 50 foot hover right over the desired position.

The Coast Guard's Integrated Deepwater System is currently replacing the engines on all 95 of the HH65s. This new Turbomeca 2C2 engine system provides aircrews with a 40% increase in engine power, and resolves safety and reliability issues associated with the existing engines. As of December 2005, 18 of these 'C' model aircraft have been delivered to operational units. Deepwater is also developing a common command, control, and surveillance system for the HH-65 that will allow the aircrews to collect, transmit and receive information to operational commanders in real time. Additionally, an Airborne Use of Force (AUF) package is being developed. This package includes an automatic weapon, aircrew protection, and communications systems that are compatible with local, state, and Federal law enforcement, and other first responders.

When these projects are completed, the upgraded HH-65 will be referred to as the MCH. It will be a much more capable asset with increased aircraft performance, state-of-the-market avionics and surveillance equipment, and provisions for weapons. The MCH modification includes a Service Life Extension Program (SLEP) to refurbish the Dolphin airframe, new Fenestron anti-torque device, new engines, upgraded main gearbox, increased fuel capacity, strengthened landing gear, and a C4ISR suite refresh and integrated cockpit.

PERFORMANCE:

The MCH will be primarily based from shore units located on each coast, as well as the Great Lakes region, Alaska, Hawaii, and Puerto Rico. Due to its size and weight, the HH-65 will easily integrate with the National Security Cutter and Offshore Patrol Cutters, enhancing the operational capabilities of these assets in support of the following Congressionally-mandated missions:

CG-AC&I-45

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

HH-65 CONVERSION PROJECTS**\$32,373****MARITIME SAFETY**

- Search and Rescue – The MCH will be outfitted with a very capable C4ISR suite that includes a multi-mode radar (MMR), Electro Optical (EO) device, and Infrared (IR) sensor to find and observe a wide range of targets. The aircraft will have a DF-430 UHF/VHF/FM Radio Direction Finder, Distress Call Monitoring on various distress frequencies and a Global Positioning System. The crew will be outfitted with night vision devices to further enhance the crew's ability to detect, classify, and identify targets.

PROTECTION OF NATURAL RESOURCES

- Marine Environmental Protection (MEP) – Visual surveillance and the C4ISR suite on the MCH will be employed to monitor and map oil-covered water surfaces. The MMR can detect differences in backscatter between water and oil-covered water due to the dampening effects of oil on small wind-generated waves, while the EO/IR sensor can detect the small temperature variation between clear and oil-covered water. The Common Operational Picture (COP) provides the capability to navigate to previously marked pollution areas and update them based on current C4ISR and visual indications.
- Living Marine Resources Enforcement (LMR) – The MCH will employ all sensors (MMR, EO, and IR) to provide surveillance of protected and/or closed offshore areas and ensure the protection of LMR.

MARITIME SECURITY

- Port, Waterways, and Coastal Security (PWCS) – The HH-65 will be able to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. The HH-65 will conduct maritime interdiction operations, provide outer-harbor security, escort high-value assets, and conduct search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.
- Undocumented Migrant Interdiction – The C4ISR suite, including the same sensors described in the Search and Rescue Mission will be employed to provide surveillance, detection, classification and identification in this mission-program. With multiple communications including UHF/VHF, HF, the MCH will be able to share important information with other operational units and command centers. This information will contribute to a Common Tactical Picture (CTP) and Common Operational Picture (COP) through a networked Command and Control (C2) system that provides for data sharing.
- Illegal Drug Interdiction – The same sensors and communications equipment that will support migrant interdiction will also be utilized to support this mission-program. Through effective use of the CTP/COP, the MCH will be able to intercept as well as direct Coast Guard surface assets to intercept and prosecute suspect vessels.
- Other Law Enforcement (OLE) – The use of all sensors and communications equipment will be utilized for the OLE mission. Sharing information and data through the use of the C2 system and the CTP/COP will result in increased Maritime Domain Awareness.

ARMED HELICOPTER FOR HOMELAND SECURITY (AUF) \$25,740

Project Description, Justification and Scope

DESCRIPTION:

This request funds equipment (armory, weapons, gun mounts, ammunition) and aircraft modifications to provide armed helicopter capability for 2 HH-60 and 34 HH-65 aircraft at seven CG Air Stations. The specific asset mix may change with future developments and changing priorities. Arming of helicopters at remaining Air Stations will occur in subsequent phases.

CAPABILITY ACQUIRED/MAINTAINED:

Since September 11, 2001, the Coast Guard's Helicopter Interdiction Squadron (HITRON) and its eight leased aircraft have been called upon to provide the only DHS AUF presence to meet emerging maritime homeland security needs. For example, in 2004, the Coast Guard's armed helicopters successfully enforced security zones at National Special Security Events (NSSEs) such as the G8 summit in Georgia and the Democratic and Republican National Conventions. In addition to handling NSSEs and other scheduled high security events, Coast Guard aircraft are tasked with patrolling critical infrastructure elements all around the country. Conducting these additional homeland security AUF operations is critical to preventing terrorist attacks in U.S. ports; however, it also detracts from HITRON's performance of counter drug operations. Considering the vast amount of critical infrastructure within the maritime transportation system and the current and projected threat environment, it is anticipated that demand for this capability will continue to grow.

Due to a shortage of armed helicopters, homeland security aviation patrols are currently being conducted largely by unarmed aircraft that can do little more than observe and request surface response. In one case in FY 2004, to provide AUF capability to respond to direct intelligence concerning potential terrorist activities in Valdez, AK, an armed MH-68 helicopter was transported cross-country from Jacksonville, FL, considerably delaying response time to an emerging maritime security threat.

Consistent with the U. S. Coast Guard's strategy for Homeland Security, integration of organic AUF capability will increase the Department's ability to stop maritime threats, including small craft and/or personnel as required, and will play a crucial role in establishing an integrated, interoperable border and port security system.

COST ESTIMATE OF WORK TO BE FUNDED THIS FISCAL YEAR

CONTRACTOR

Coast Guard Aircraft Repair & Supply Center (ARSC), Elizabeth City, NC

Type of Contract: Government Work Order

Significant Changes

In 2005, the Revised Deepwater Implementation Plan made AUF a performance requirement of the Deepwater system. Consistent with this, funding for AUF is now sought as part of the Integrated Deepwater System funding request.

In order to meet other emerging capital acquisition priorities, the original three-phase plan scheduled for completion in FY07 has been changed into a five-phase plan to be completed in FY09.

HC-130J FLEET INTRODUCTION**\$4,950****Project Description, Justification and Scope****DESCRIPTION:**

The Coast Guard has 6 C-130J aircraft in its inventory. While missionization efforts are underway, the aircraft are being flown as logistics and training aircraft. This funding is requested to purchase spare parts, fund simulator training, and fund the operation of the Acquisition Project Office that will manage these aircraft throughout the missionization process. Without this funding, the additional 2000 flight hours funding requested through a separate OE funding request cannot be realized. This funding is required to ensure full fleet introduction of the C-130Js in FY08. Previous AC&I funding provided for the C130Js only addressed equipment missionization of these aircraft. This request facilitates their entry into operational service as missionized C-130J long range maritime patrol aircraft. This is projected to occur in FY08.

The Lockheed C-130 is the Coast Guard's long-range surveillance aircraft. This four-engine, turbo-prop aircraft is used extensively throughout the United States, the Pacific, and the Caribbean in support of search and rescue, homeland security, pollution prevention, logistics, personnel transport and ice patrol missions.

While the baseline aircraft has been delivered, the Acquisition Project Office (APO) must still accomplish a number of tasks, along with oversight of the aircraft's missionization to ensure successful fielding of these aircraft, to include:

- Continued procurement of initial stock of spare parts;
- Selection and procurement of sufficient training systems for both flight crews and maintenance crews;
- Flight time required for initial crew qualification;
- Maintenance Planning/Completion of Maintenance Procedure Cards;
- Establishing, testing and institutionalizing Coast Guard unique normal operating procedures; and
- Enrollment of aircraft into the Coast Guard maintenance tracking and database.

CAPABILITY ACQUIRED/MAINTAINED:

The Coast Guard's C-130J is based on the robust C-130 series aircraft design, but new engines, propellers, avionics and cargo handling equipment quickly set this new aircraft apart from its predecessor. The C-130J will assume the traditional duties of the C-130H, which include search and rescue, homeland security, pollution prevention, logistics and personnel transport.

With its Allison AE2100 engines and Dowty six-bladed propellers, the C-130J boasts advanced performance over the H model by a 20 percent increase in speed, a 40 percent increase in range and a 40 percent higher cruising altitude. It can climb higher and faster than the H model, yet takeoff and land on shorter runways.

A completely redesigned cockpit with an integrated digital flight management system allows the C130J to be operated by a two-person flight deck crew as compared to the four to five person crew of the H model. Dual heads up displays provide pilots with essential flight information and increase safety during low level maneuvers, including takeoffs and landings in reduced visibility. A high resolution ground mapping radar, integrated with on-board global positioning system (GPS) and inertial navigation system, provides aircrews with precise navigation and situational awareness. An enhanced cargo handling system provides loadmasters with the ability

(dollars in thousands)**

HC-130J FLEET INTRODUCTION \$4,950

to automatically calculate weight and balance data, and quickly change cargo compartment configuration to accommodate different payloads.

The C-130J Missionization project will configure the aircraft with equipment to perform traditional Coast Guard operational missions. The C-130J Missionization Project leverages the technology that was developed by Integrated Coast Guard Systems for the CASA CN235 Maritime Patrol Aircraft. The missionization suite includes a surface search radar, a forward-looking infrared (FLIR)/electro-optical sensor, satellite and emergency response radios, all controlled through a flight deck mounted operator station.

PERFORMANCE:

With its flight management and sensor systems, the C-130J will be a very capable maritime patrol aircraft. It will be equipped with a powerful surface search radar that can detect surface targets from over 50 miles away. Once closer to the target, the sensor operator will use the Forward looking Infrared (FLIR) and electro-optical sensor to classify and identify the target, even in night or very low-light conditions. A flight management system that includes an automatic pilot and precise global GPS navigation equipment allows the pilot to concentrate on the details of the mission, while being ensured of pinpoint accuracy of his position and the position of the target vessels. The C-130H supports the following strategic goals and mission programs:

- Search and Rescue – The C-130J will be outfitted with a very capable C4ISR suite that includes a multi-mode surface and air search radar (MMR), Electro Optical (EO) device, and Infrared (IR) sensor to find and observe a wide range of targets. The aircraft will have a Line of Bearing indicator and Distress Call Monitoring on various distress frequencies.
- Marine Environmental Protection (MEP) – Visual surveillance and the C4ISR suite on the C-130J will be employed to monitor and map oil-covered water surfaces. The MMR can detect differences in backscatter between water and oil-covered water due to the dampening effects of oil on small wind-generated waves, while the EO/IR sensor can detect the small temperature variation between clear and oil-covered water. The Common Operational Picture (COP) provides the capability to navigate to previously marked pollution areas and update them based on current C4ISR and visual indications.
- Living Marine Resources Enforcement (LMRE) – The C-130J will employ all sensors (MMR, EO, and IR) to provide surveillance of protected and/or closed offshore areas and ensure the protection of LMRE.
- Port, Waterways, and Coastal Security (PWCS) – The C-130J will be able to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. The C-130J will participate in maritime interdiction operations, provide outer-harbor security, conduct search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.
- Undocumented Migrant Interdiction – The C4ISR suite, including the same sensors described in the Search and Rescue Mission will be employed to provide surveillance, detection, classification and identification

(dollars in thousands)**

HC-130J FLEET INTRODUCTION \$4,950

in this mission-program. With multiple communications including UHF/VHF, HF, the C-130J will be able to share important information with other operational units and command centers. This information will contribute to a Common Tactical Picture (CTP) and Common Operational Picture (COP) through a networked Command and Control (C2) system that provides for data sharing.

- Drug Interdiction – The same sensors and communications equipment that will support Migrant Interdiction will also be utilized to support the counter drug mission. Through effective use of the CTP/COP, the C-130J will be able to intercept as well as direct Coast Guard surface assets to intercept and prosecute suspect vessels.

- Other Law Enforcement (OLE) – The use of all sensors and communications equipment will be utilized for the GLE mission. Sharing information and data through the use of the C2 system and the CTP/COP will result in increased Maritime Domain Awareness.

NATIONAL DEFENSE – The C-130J plays a minimal role in National Defense Missions but can support through surveillance and transport roles in the following missions.

- Port Operations, Security, and Defense (POSD)
- General Defense Operations (GDO)
- Peacetime Military Engagement (PME)
- Maritime Intercept Operations (MIO)
- Environmental Defense Operations (EDO)

KEY EVENT	FY
Definitized Contract signed for C-130J Missionization	2005
Preliminary Design Review	2006
Critical Design Review	2006
First Aircraft Enters Modification	2007
Aircraft 1 & 2 Delivered	2007
Aircraft 3 through 6 Delivered	2008

Significant Changes

Prior year funding was derived from a Department of Defense (DOD) appropriation and was applied to acquiring and missionizing the aircraft. The APO has been able to remain functioning with support, but these DOD-sourced funds are no longer available to support the APO as they have been expended to fund contractor work on the missionization project. This year's Coast Guard funding request ensures continued oversight of the missionization process and introduction of the aircraft into as long range maritime patrol aircraft by financing the facility that manages that process. Missionization and final introduction of all six HC-130Js is on schedule to occur in FY08.

NATIONAL SECURITY CUTTER (NSC) **\$417,780**

Project Description, Justification and Scope

DESCRIPTION:

Funds long lead material and construction for the fourth NSC, as well as funding the initial outfitting, stocking of general consumables, and testing to achieve full operational capability for all four NSCs funded to date.

CAPABILITY ACQUIRED/MAINTAINED:

The NSC is one of the surface components of the Integrated Deepwater System that will be capable of extended on-scene presence, long transits and forward deployment. It will be equipped with systems (communication, navigation and surveillance) that will allow the cutter and its deployed air and boat assets to operate and conduct a daily search of potentially 56,000 square miles of ocean in support of all congressionally mandated Deepwater missions.

The NSC is the largest of the new IDS surface assets (418'), whose inherent capabilities are a vast improvement over legacy 378' High Endurance Cutters. The NSC will be by far the most sophisticated and capable cutter the Coast Guard has ever operated. It will have a range of 12,000 NM and an underway endurance of 60 days. The crewing concept will decouple the ship operational tempo from the personnel tempo, enabling the vessel to deploy 230 days annually while maintaining the current personnel tempo of 185 days away from homeport, a 24% increase in ship annual operating days compared to the High Endurance Cutter. The cutter will be capable of patrolling singly or with multiple U.S. Coast Guard vessels, U.S. Navy vessels or vessels from other nations' navies or coast guards. The NSC will conduct proactive and reactive patrols within its assigned operating areas and will provide a robust Command and Control capability for duties as Commander, Task Unit and On-Scene Commander. It will be capable of performing all maritime DHS missions, non-General Defense Operations and General Defense Operations with the Navy, as well as Maritime Intercept Operations, Port Operations, Security and Defense, and Peacetime Military Engagements. When engaged in those missions, the NSC will be capable of detecting, classifying and tracking surface targets of interest (TOI) that range in size from makeshift rafts to large commercial vessels, as well as air TOI as small as single-engine civil aircraft.

The NSC's capabilities include:

- Engage and defeat terrorists and ensure survivability.
- Carry and deploy multiple airframes, such as 1 helicopter and 2 Vertical Unmanned Aerial Vehicles (VUAVs), or 2 helicopters, or 4 VUAVs.
- Carry and deploy multiple Short Range Prosecutor (SRP) and Long Range Interceptor (LRI) cutter boats.
- Conduct boat and flight operations in high sea states due to improved sea keeping capability.
- Support the full range of Coast Guard missions and Coast Guard intelligence element operations through greatly improved intelligence gathering and C4ISR capabilities, including a Sensitive Compartmented Information Facility (SCIF). These intelligence and C4ISR capabilities also enhance the NSC's self-defense capabilities and facilitate operations with networked DHS, DOD and national assets.
- Maintain presence and perform limited command-and-control operations in biologically, chemically or radiologically contaminated environments for up to 36 hours.
- Operate with US Navy Battle Groups with a maximum sustained speed of 28 knots.

PERFORMANCE:

CG-AC&I-60

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

NATIONAL SECURITY CUTTER (NSC) **\$417,780**

The NSC is a major contributor to overall Deepwater system performance, particularly when operating at the hub of a cutter/small boat/VUAV force package. NSC intelligence collection, analysis and dissemination, along with C4ISR capabilities, improve system responsiveness and help to prevent security incidents from developing. NSCs become the hub of multi-unit, multi-mission operations and are essential to achieving mission success in the following strategic goals and mission programs:

MARITIME SAFETY

- Search and Rescue (SAR) – The NSC will be able to search for and locate distressed mariners and recover them from positions of peril; provide medical advice, assistance, or evacuation; and when necessary, provide subjects safe transport to shore side locations. As a second priority, the NSC will be able to support recovery or control of damage to distressed vessels and other property by controlling or terminating flooding, fighting fires, dewatering, providing mechanical assistance, and towing stricken vessels. The NSC will have stern ramps and a side davit to rapidly launch and retrieve small boats. The NSC will have a Rescue Access Station to embark and load a non-stern ramp capable boat, to deploy a rescue swimmer, and to pick survivors from the water. With sustained presence, the NSC can also serve as On-Scene Commander, guiding and assisting rotary wing assets.

PROTECTION OF NATURAL RESOURCES

- Living Marine Resources Enforcement (LMR) – The NSC will enforce laws and treaties pertaining to LMR, including fisheries and marine mammal protection. The cutter will be able to provide sustained presence throughout the U.S. Exclusive Economic Zone (EEZ) and along its boundary, as well as in international areas of interest to the U.S. It will conduct at sea boardings and inspections to deter illegal or unauthorized LMR activity by documenting violations and arrest and seize vessels engaged in LMR violations if directed. The NSC will also be equipped with an Automatic Identification System (AIS) to monitor surface vessels. The information will include the ship's name, position, course, and speed and will make the job of vessel identification easier.

- Maritime Environmental Pollution (MEP) – The NSC will be able to detect maritime pollution in the U.S. EEZ, limited to verification of the type of material in the water, evidence gathering, and documentation. It will respond to 29 CFR 1910.120 Hazardous Material accidents. Additionally, the NSC will conduct surveillance operations to detect significant discharges of oil or hazardous substances for subsequent monitoring, mitigation, and removal actions. The Common Operational Picture (COP) will provide the capability to navigate to previously marked pollution areas and update them based on current C4ISR and visual indications.

MARITIME SECURITY

- Port, Waterways, and Coastal Security (PWCS) – The NSC will be able to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. The NSC will conduct maritime interdiction operations, provide outer-harbor security, escort high-value assets, and conduct search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.

- Undocumented Migrant Interdiction Operations – The C4ISR suite will be employed to provide surveillance, detection, classification, and identification in this mission-program. Through sustained on-scene

CG-AC&I-61

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

NATIONAL SECURITY CUTTER (NSC) \$417,780

presence, the NSC will also have the capability of prosecuting TOI, including interdiction, embarkation, and disembarkation, including rescuing a large number of people simultaneously when a typically unseaworthy or overloaded craft sinks or capsizes. These situations require rescue administrative processing and retaining persons onboard (sheltering, feeding, and providing basic sanitation and medical services, as well as migrant and own ship security).

- **Illegal Drug Interdiction** – The same sensors and communications equipment that will support migrant interdiction will also be utilized to support this mission-program. Through effective use of the CTP/COP, the NSC will be able to intercept and prosecute suspect vessels.

- **Other Law Enforcement** – The NSC will conduct proactive patrols as well as reactive response to intelligence information, utilizing all sensors and communications equipment to fulfill this mission. Sharing information and data through the use of the C2 system and the CTP/COP will result in increased Maritime Domain Awareness. The NSC will have both active and passive, to detect and track vessels or aircraft engaged in, or suspected of illicit activities. It will identify, classify, and sort targets of interest (TOIs). After interdicting suspicious vessels, it will be able to conduct at sea boardings and perform custodial functions associated with seizing vessels or making at sea arrests.

NATIONAL DEFENSE– The NSC defense and security-related capabilities and extreme range and endurance make them particularly suited for deployments overseas and in regions such as the Pacific Ocean where they can disrupt security incidents well before they threaten U.S. coastlines.

- **Defense Readiness** – The NSC will integrate with the DoD in the full range of maritime operations including surveillance, visit, board, search, seize, and unit defense. It will be capable of operating worldwide with sustained presence in an area of responsibility resulting from its capability for underway replenishment including FAS and VERTREP. The cutter will provide hard kill of subsonic anti-ship cruise missile with CIWS and soft kill capability with NULKA/SRBOC, reduced radar cross-section, reduced infrared signature, and ESM capability. The NSC will provide Mk 3 57 mm gun weapons system with optical and infrared fire control to achieve mission kill on a high-speed patrol craft beyond intermediate caliber effective range. The cutter will be able to provide berthing and logistics support for additional personnel deployed for defense operations. The NSC shall also have the ability to maintain station on an aircraft carrier conducting flight operations and to take station on, maneuver around, and escort commercial shipping steaming at operational speed. The cutter will have the ability to launch and recover Navy and NATO Vertical Take-Off and Landing (VTOL) aircraft, including armed helicopters and fuel Navy and NATO VTOL aircraft.

- **Peacetime Military Engagement (PME)** – The NSC will engage in military activities involving other nations to promote and maintain the security environment in peacetime, including nation-building activities. It will be able to maintain forward presence; render humanitarian assistance; conduct professional exchanges; and participate in combined operations, training, exercises, and other military or diplomatic activities. The PME mission may involve long transits and extended operations with deployments of two to four months, for which the NSC will be well suited.

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

NATIONAL SECURITY CUTTER (NSC) \$417,780

- Maritime Intercept Operations (MIO) – The NSC will conduct thorough and sustained surveillance of an assigned area of responsibility and detect and intercept all shipping, operating either independently or integrated with DoD and other agency assets. Additionally, the cutter will be able to dispatch trained boarding or inspection teams, providing for their logistics, support, transportation, and protection.
- Environmental Defense Operations (EDO) – The NSC will be able to detect potential threats to the physical environment and investigate those threats. The cutter will conduct operations to mitigate known environmental harm and intercept persons suspected of causing such harm. This will include mitigation of environmental exploitation designed to disrupt defense operations.

FAST RESPONSE CUTTER (FRC)**\$41,580****Project Description, Justification and Scope****DESCRIPTION:**

This appropriation completes funding production of FRC 1. In accordance with Public Law 109-90, additional funding from the rescission of funds from the 110-123 conversion project will be utilized for the production of the FRC. The FRC was originally scheduled to join the Integrated Deepwater System (IDS) System of Systems in 2018 however the deteriorating condition of the 110' patrol boat necessitated moving the design forward for earlier introduction of the FRC into the IDS System of Systems.

CAPABILITY ACQUIRED/MAINTAINED:

Patrol Boats are a critical Coast Guard response and prosecution asset for all mission areas and are integral to the Integrated Deepwater System due to the capability they provide to the system. The FRC will have valuable new capabilities that are not found on the legacy 110' WPB including a 30MM gun (25MM to be installed on 1st of Class with block upgrade to 30MM once the system is certified by Navy), Deepwater interoperability, an enhanced C4ISR suite, vastly improved quality of life and a basic ship defense threat receiver system. The FRC is currently in the Detailed Design stage, with delivery of the first cutter planned for FY08. The FRC design has evolved to meet post 9/11 mission requirements. The original steel-hulled FRC design with an expected service life of 15-20 years has been modified to incorporate a state of the art composite hull with at least a 35-year hull-life. The FRC will receive enhanced Maritime Security Capabilities that will support Homeland Security and Homeland Defense in American waters through increased speed and lethality. The FRC will have a top speed of 30 knots, providing exceptional response and reaction capability and allowing for more time on station protecting port approaches. The FRC will receive critical DHS and DOD communications interoperability improvements including Military Satellite Communications (MILSATCOM) and local responder-interoperable radio communications. The main gun will be remotely operated and fully integrated with the radar and infrared sensors such that the cutter and high-value assets under its protection can be protected from a USS COLE-like incident.

PERFORMANCE:

The FRC is a critical part of the Deepwater system and a maritime security workhorse, patrolling in both coastal and high seas areas. Improved interoperability, C4ISR, COP and sensors enhances surveillance and identification performance over existing capabilities of the legacy 110' patrol boat. With its high readiness, speed, adaptability and endurance, the FRC can respond quickly and effectively to emerging security and safety issues essential to achieving mission success in the following strategic goals and mission programs:

MARITIME SAFETY

- Search and Rescue -The FRC has the capability to search for and locate distressed mariners and recover them from positions of peril; provide medical assistance, or evacuation; connectivity for medical consultation and when necessary, provide subjects safe transport to shore side locations. The FRC has the capability to attempt to control damage to distressed vessels and other property by controlling or terminating flooding, fire fighting, providing dewatering equipment, providing mechanical assistance, and towing stricken vessels. The FRC has a stern ramp to rapidly launch and retrieve the Short Range Prosecutor (SRP). The FRC has the capability to integrate, coordinate, and assist with a large number of SAR assets during surge events requiring a response to marine rescues during weather anomalies such as hurricanes or gale-force winds, ocean liner rescue operations,

CG-AC&I-66

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

FAST RESPONSE CUTTER (FRC) \$41,580

and downed airline rescue operations. These cutters also remain at a high level of readiness in port for extended periods of time as determined by the Operational Commander.

PROTECTION OF NATURAL RESOURCES

- Living Marine Resources Enforcement (LMR) – The FRC has the capability to enforce laws and treaties pertaining to LMR, including fisheries and marine mammal protection. The FRC has the capability of sustained presence within the U.S. EEZ, and has the capability of conducting at sea boardings and inspections to deter illegal or unauthorized activity by documenting violations. The FRC, if required, may take possession of the vessel and then escort or tow it to port. The crew is capable of arresting, detaining and transporting suspects for further transfer ashore.

- Maritime Environmental Pollution (MEP) – The FRC can conduct surveillance and inspection operations to detect significant discharges of oil, hazardous substances, debris, and ballast water for subsequent monitoring, mitigation, and removal actions in the U.S. EEZ. These operations involve verification of type of material in water, evidence gathering, and documentation and is limited to visual determination of the type of pollutant, thickness and extent; day or night and in moderate weather conditions.

MARITIME SECURITY

- Port, Waterways, and Coastal Security (PWCS) – The FRC will be able to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. The FRC will conduct maritime interdiction operations, provide outer-harbor security, escort high-value assets, and conduct search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. The protection of logistics in support of contingency operations is of the highest priority.

- Undocumented Migrant Interdiction Operations – The FRC has the capability to conduct shipboard migrant interdiction operations, including detection, tracking, interdiction, embarkation and disembarkation, rescue administrative processing, and retaining onboard. Targets include slow-moving rafts, small sailing vessels, small sport fishing vessels, high-speed “go fast” type vessels, and small motor freighters attempting to make the voyage to the United States, Puerto Rico, or other U.S. territories. Migrants aboard larger freighters or older fishing craft may be taken to a staging area for further transport to U.S. shores by pick-up vessels such as smaller sport fishing vessels, pleasure craft, and/or “go fast” type boats. The FRC is capable of patrolling areas where suspected illegal migration may occur, and dispatching boarding teams to suspect vessels and subsequently escorting them to their final disposition. When conducting this mission-program, both proactive and reactive, the FRC is capable of sustained presence, and has the capability to rescue a large number of people simultaneously in the event that the typical un-seaworthy or overloaded craft sinks or capsizes during the attempted voyage. This capability is facilitated by using a Jacob’s ladder and/or cargo net on one side of the cutter. The FRC is capable of embarking 150 migrants for at least 24 hours, providing physical security, food, water, sanitation, basic medical services, shelter (separate from own forces) and administrative processing.

- Illegal Drug Interdiction – The FRC has the capability to conduct drug interdiction, including surveillance, visible deterrence in areas where the possibility of contraband smuggling exists, response to

CG-AC&I-67

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS

(dollars in thousands)**

FAST RESPONSE CUTTER (FRC) \$41,580

intelligence information and known incidents of drug smuggling, and dispatch a boarding team. The cutter intercepts, takes possession of contraband and the smuggling vessel. The crew is capable of arresting, detaining and transporting suspects for further transfer ashore. The FRC possesses the capability for integration and interoperability in communications, speed, sensors, and endurance with DOD and other government agency assets. The FRC has a stern ramp for rapid launch and retrieval of a small boat. The cutter has 30 knot capability for rapid interdiction of targets of interest and is equipped with a deck mounted gun and small arms.

- Other Law Enforcement – The FRC has the capability to enforce laws additional to those inherent in the primary mission-programs previously mentioned. The capability includes proactive patrols as well as reactive response to intelligence information. The sensors are effective during day/night, and in all weather and sea conditions. The FRC has the ability to conduct at sea boardings and if necessary take possession of the vessel and escort or tow it to port. The cutter has an integrated architecture of surveillance sensors, operational databases, decision support systems, and communication equipment to collect, process, and disseminate operational information to other Coast Guard units as well as other agencies in a timely manner.

NATIONAL DEFENSE – The cutter is designed to provide support to the DOD in a variety of roles and missions. The FRC has the capability to integrate with the DOD in the full range of maritime operations, including surveillance, visit, board, search, seize, and unit defense. The FRC conducts National Defense Maritime Operations worldwide in low threat environments.

- o FRC support for National Defense is provided through the following:
 - § General Defense Operations (GDO)
 - § Maritime Interception Operations (MIO)
 - § Coastal Sea Control Operations (CSCO)
 - § Military Environmental Response Operations (MERO)
 - § Theatre Security Cooperation (TSC)
- o Representative activities that the FRC conducts in support of national defense include:
 - § Limited military sealift and commercial shipping escort
 - § Limited Combat Search and Rescue
 - § Surveillance and interdiction
 - § Visit, board, search, and seizure
 - § Force protection of military shipping at U.S. seaports of embarkation and overseas ports of debarkation
 - § Domestic port security and coastal defense, providing part of the overall capability for the defense of the U.S. homeland
 - § Other duties as may be assigned: Coastal/Riverine Interdiction, Special Operations Forces (SOF) Insertion/Support
 - § Naval Coastal Defense Operations discussed in more detail below.

OTHER PERFORMANCE – The FRC operates as required to meet assigned Coast Guard missions, in every ocean of the world. This class is not designed to operate in polar regions or ice-covered waters but has the capability for cold weather operations. Designed underway operations at Condition IV are seven days. Operations generally take place within 300 miles of homeport or advance shore base when deployed. When

Significant Changes

This request completes funding of FRC 1 and will allow its construction. Last year's funding amount was based on an earlier, incorrect, estimate of the cost of FRC 1 and was to have funded its testing and any follow on work. Those funds were dedicated to design and initiation of construction and were supplemented by rescinded and reappropriated 123' WPB project funds in FY06.

IDS SMALL BOATS**\$1,188****Project Description, Justification and Scope**

DESCRIPTION: Funds production of one Long Range Interceptor (LRI-2) and one Short Range Prosecutor (SRP-13)

CAPABILITY ACQUIRED/MAINTAINED:

The LRI is a 36-foot small boat carried by each National Security Cutter (NSC) and Offshore Patrol Cutter (OPC). The LRI provides enhanced capabilities compared to the legacy cutter boats such as higher speeds, extended range, better sea-keeping ability, and greatly improved communications and connectivity to the parent cutter. The LRI can operate beyond sight of the cutter (over the horizon) to deploy boarding parties, pursue and interdict targets of interest, and perform Search & Rescue operations.

The SRP is a 24-foot small boat that has similar capabilities as the LRI, but will operate within sight of the parent cutter. The SRP will be carried by every Deepwater surface platform.

PERFORMANCE

IDS patrol boats are discussed in terms of "force packages" under the NSC and OPC, serving to facilitate mission success. IDS small boats allow their parent cutters to conduct search and rescue operations (such as removing migrants from an overloaded boat) and law enforcement operations (such as placing a boarding team on a high interest vessel). The LRI provides significantly improved performance over existing cutter small boats, to include increased speed, passenger (boarding team) carrying capacity, communications, endurance and range. By operating beyond the line of sight of the cutter, the LRI acts as a significant force multiplier, enabling improved identification and prosecution of targets of interest.

MEDIUM ENDURANCE CUTTER SUSTAINMENT \$37,818

Project Description, Justification and Scope

DESCRIPTION:

Funds support the Mission Effectiveness Project (MEP) for 270' and 210' Medium Endurance Cutters (WMEC). The project includes replacing major sub-systems such as small boat davits, oily water separators, air conditioning & refrigeration plants, and evaporators. The main propulsion control and monitoring systems will also be upgraded. This work will be performed by the Coast Guard's skilled workforce at the Coast Guard Yard, Curtis Bay, MD.

270' WMEC cutter class MEP is a two-phase project is estimated at approximately \$7.5M per phase. Each phase is budgeted for the year the work is to be accomplished.

210' WMEC Cutter Class MEP is a single phase project is estimated at approximately \$5.5M per cutter.

CAPABILITY ACQUIRED/MAINTAINED:

This funding will ensure that the 270' and 210' WMEC cutter classes will be available to meet all required missions until applicable assets in the IDS program replace them. These cutters must be retained in operational service until IDS assets assume their operational workload, per the revised Deepwater implementation plan. Each 270' and 210' WMEC provides 185 days of mission performance annually; any loss of that capability puts achievement of long-term DHS performance goals at risk. Additionally, the WMEC MEP will improve fleet operating and cost performance by replacing obsolete engineering subsystems with reliable equipment.

PERFORMANCE:

Mission Level Performance: With the capabilities previously described, the 270' and 210' WMECs will be utilized to achieve mission success in the following Congressionally-mandated mission areas:

- Search & Rescue
- Defense Readiness
- Ports, Waterways and Coastal Security
- Drug Interdiction
- Undocumented Migrant Interdiction Operations
- Living Marine Resources

System Level Total Ownership Cost: Replacing obsolete equipment will result in greater standardization, capability and reliability across the two cutter classes. Each cutter will complete the program with new equipment and improved logistical support, allowing for the continued operation of the current WMEC fleet in a more economical manner until their IDS counterparts are delivered.

COST ESTIMATE OF WORK TO BE FUNDED THIS FISCAL YEAR

FY 2007 C-Stage
(dollars in thousands)**

C4ISR**\$60,786****Project Description, Justification and Scope****DESCRIPTION:**

C4ISR refers to the systems and subsystems that are part of the Deepwater Command, Control, Communications, Computer, Intelligence, Surveillance and Reconnaissance (C4ISR) System. The C4ISR system is designed to support designated Coast Guard commanders in the exercise of authority while directing all assigned forces and first responders across the range of Coast Guard Deepwater operations. The types of work that the C4ISR system accomplishes is to:

- Collect, process, integrate, analyze, evaluate or interpret available information concerning the maritime areas of the United States, specifically focused on preventing terrorist or other illegal acts like drug smuggling and simultaneously assisting mariners in distress or aiding maritime shipping;
- Systematically observe the Maritime Domain consisting of the Ports, Waterways and Coastal on the water's surface and above the water by visual, audio, electronic, photographic or other means; and
- Obtain, by visual observation or other detection methods, information about the activities and possible threats from terrorists and criminal, while concurrently observing and assisting legitimate users in American Ports, Waterways and Coastal regions.

Simply put, C4ISR is the "eyes, ears and nervous system" of Deepwater, allowing the Coast Guard to see, hear and communicate what is happening in America's Maritime Regions. This is accomplished using modern electronic components such as radios, satellite communications and sensors that can improve visual sightings in almost total darkness and radars that can detect maritime targets in all weather conditions. By using an interoperable network to bring all of this data together, the data is transformed into useable information for a common operating picture (COP). The FY 2007 request will fund improvements to C4ISR, enabling earlier awareness of events through the more effective gathering of terrorism-related information, analysis and coordination, leading to the appropriate response — all critical to detecting, deterring and defeating terrorist attacks and criminal activities.

When Deepwater's C4ISR modernization and recapitalization is completed, cutters and aircraft will no longer operate as relatively independent platforms, with only limited awareness in the maritime region. Instead, they will have the benefit of receiving information from a wide variety of ships and sensors — enabling them to share this common operating picture. Besides the common operating picture, the Coast Guard also requires improvement on existing legacy cutters, adding sensors that will see further and in poor visibility, as well as the communication equipment to move this vastly increased amount of data ashore. There it can be changed into useable information and even communicated back to cutters and aircraft to take enforcement action.

The past year saw the completion of the first increment of Deepwater upgrades to all major legacy cutters' systems for communications to move increased amounts of information (mostly classified) faster, as well as to more cutters and aircraft. These upgrades have contributed in important ways to the Coast Guard's interdiction of illegal migrants and record seizures of illegal drugs during 2005. The Coast Guard has included within this funding request for the all three C4ISR parts; 1) the common operating picture – COP, 2) cutter upgrades, and 3) shore upgrades to process this important and rapidly growing amount of data and information from the C4ISR system in one budget item. The reason that all three are combined when compared to prior budgets is conform to

CG-AC&I-78

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

C4ISR**\$60,786**

manner that Congress appropriated the fiscal year 2006 C4ISR funds. However, individual budget information for all three C4ISR parts is still being provided in this single budget item.

COP - \$40,986K funds Increment 2 in the detailed design and development of the C4ISR Common Operating Picture (COP) and its associated activities. The Integrated Deepwater System (IDS) C4ISR Implementation Plan provides for a common C4ISR design for all IDS assets which will improve the Coast Guard's overall Surveillance, Detection, Classification, and Identification capabilities. C4ISR Increment 2 also includes the design work for Phase II of the Multi-mission Cutter Helicopter, International Ice Patrol and the Long Range Search aircraft (HC-130) further increasing the capabilities of each asset in every mission which assigned.

Cutter - \$14,256K funds procurement, development, integration and component-level test, installation, and system-level test of new C4ISR hardware and software improvements for two 270' Medium Endurance Cutters (WMEC) which includes:

- CG Common Command and Control System (CG-C2) hardware and software.
- Integrated Communications Systems including: Boarding Party Communications, Law Enforcement/Marine Band Radio, MF/HF Frequency Band Voice & Data Automatic Link Establishment (MF/HF ALE) Radio, UHF band Navy Data Link Radio, and an Integrated Voice Communications Distribution System.
- Logistics Information Management Systems Computing Environment, including hardware and software.
- Improved sensors, including new Radio Direction Finding System and Identification Friend or Foe Transponder & Interrogator System.

Shore - \$5,544K funds the Medium and High Frequency Band Automatic Link Establishment (MF/HF ALE) and Deepwater enterprise C4ISR design infrastructure to Communication Stations and International Ice Patrol OPCEN. It includes procurement, development, integration, component-level tests, installation, and system-level tests of the new hardware and software.

CAPABILITY ACQUIRED/MAINTAINED:

C4ISR system upgrades are designed to improve the Surveillance, Detection, Classification, and Identification capabilities of each asset. This is a core component of the IDS which benefits all Coast Guard mission areas and specifically and directly supports the Coast Guard's MDA initiative. The common design promotes operational and equipment familiarity among Coast Guard personnel assigned to IDS assets. This reduces training costs as Coast Guard operators and maintenance personnel only need to be trained once on a specific piece of equipment, but can be assigned among many assets and be immediately effective in their duties. The C4ISR improvements give each cutter, aircraft, shore command, and intelligence center the command and control systems to fully receive, display, and share Common Operational Picture (COP) information. By becoming full COP participants, each unit will receive relevant MDA information. Each unit can plan operationally effective missions as they will have a clear picture of the threat they face. Accurate knowledge of the maritime domain, provided through the COP, will also ensure that an effective but efficient level of resources is allocated to combating the known threat, gaining an assurance the threat will be contained and defeated far from America's shores. Because the C4ISR system upgrades have the ability to distribute operationally critical information quickly and seamlessly to state, local, and national agencies who will be COP participants, they can leverage information generated by IDS assets for their own effective operational planning and response.

CG-AC&I-79

ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

C4ISR**\$60,786****PERFORMANCE:**

The C4ISR suite establishes the ability to achieve mission success as it provides coordinated tactics, integrated intelligence, multi-agency interoperability and common situational awareness necessary to fulfill the missions with the currently planned force mix and is essential to achieving mission success in the following Congressionally-mandated missions:

MARITIME SAFETY

- Search and Rescue – The very capable C4ISR suite will be outfitted in every asset will include a radar, Electro Optical (EO) device, and Infrared (IR) sensor to find and observe a wide range of targets. It will have a Line of Bearing indicator and Distress Call Monitoring on various distress frequencies. And the crew will be outfitted with night vision devices to further enhance the crew's ability to detect, classify, and identify targets.

PROTECTION OF NATURAL RESOURCES

- Living Marine Resources Enforcement (LMR) – C4ISR will employ all sensors to provide surveillance of protected and/or closed offshore areas and ensure the protection of LMR.
- Marine Environmental Protection (MEP) – The C4ISR suite will be employed to monitor and map oil-covered water surfaces. The radars can detect differences in backscatter between water and oil-covered water due to the dampening effects of oil on small wind-generated waves, while the EO/IR sensor can detect the small temperature variation between clear and oil-covered water. The COP provides the capability to navigate to previously marked pollution areas and update them based on current C4ISR.

MARITIME SECURITY

- Port, Waterways, and Coastal Security (PWCS) – C4ISR will be a central enabling tool to conduct thorough and sustained surveillance of an assigned area of operations, and dispatch appropriate assets to investigate any threat to security. C4ISR will be essential to the conduct of maritime interdiction operations, outer-harbor security, escort high-value assets, search and rescue, and other operations in support of PWCS. The primary objective is to ensure that port and harbor areas are maintained free of threats and to support re-supply of other deployed forces. C4ISR and COP are essential tools in PWCS decision-making and law enforcement.
- Undocumented Migrant Interdiction – The C4ISR suite, including the same sensors described in Search and Rescue will be employed to provide surveillance, detection, classification and identification in this mission-program. Multiple communications including UHF/VHF, HF, and INMARSAT will be enable the sharing important information between operational units and command centers. This information will contribute to a Common Tactical Picture (CTP) and Common Operational Picture (COP) through a networked Command and Control (C2) system that provides for data sharing via INMARSAT.
- Illegal Drug Interdiction – The same sensors and communications equipment that will support migrant interdiction will also be utilized to support this mission. Through effective use of the CTP/ COP, C4ISR will be able to direct Coast Guard surface assets to intercept and prosecute suspect vessels.

CG-AC&I-80

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

C4ISR **\$60,786**

- Other - Law Enforcement (O-LE) – The use of all sensors and communications equipment will be utilized for the O-LE mission. Sharing information and data through the use of the C2 system and the CTP/COP will result in increased Maritime Domain Awareness.

NATIONAL DEFENSE – The C4ISR suite plays a role in National Defense Missions and supports the following missions specifically through better Maritime Domain Awareness.

- Port Operations, Security, and Defense (POSD)
- General Defense Operations (GDO)
- Peacetime Military Engagement (PME)
- Maritime Intercept Operations (MIO)
- Environmental Defense Operations (EDO)

Complete International Ice Patrol Upgrade	2009

Significant Changes

This year's budget request is a 40 percent increase over the amount appropriated for C4ISR in FY06. This growth in funding requirements reflects the central role that the network plays in the Deepwater system. In past years, C4ISR funding has not matched planned levels and has caused slips in delivery schedule of upgrades to legacy

CG-AC&I-82

(dollars in thousands)**

C4ISR **\$60,786**

cutters and shore facilities, reducing overall performance of the current Deepwater assets. To keep the C4ISR project accomplishments noted below on schedule the full amount of this funding request is needed.

- C4ISR upgrades have significantly improved operational effectiveness to 39 Legacy Cutters (378' WHECs, 270' WMECs, and 210' WMECs). 38 of 39 cutters have Enterprise Communications Wide Area Network, that permits classified (e-mail, chat, web access) communications.
- INMARSAT-B Channel Upgrades have doubled the bandwidth from 64kbps to 128kbps and permitted bandwidth sharing (completed on 25 of 39 cutters)
- 27 of 39 cutters now have Automatic Identification System (AIS)
- ECWAN/SIPRNET upgrades have changed the legacy single unit case prosecution into jointly coordinated, multi-unit success stories. Units have near real time, covered tactical communications, reducing the number of unnecessary vessel intercepts.
- AIS provides greatly improved navigational safety awareness for the cutters and commercial mariners. Further development of AIS capabilities will enhance local tactical pictures onboard Deepwater resources.
- Command Center Upgrades - District Seven Command Center partially completed. First Command Center upgrade is scheduled for Jan 06 and will continue until Jun 07. Communication Area Master Station (CAMS) upgrades (Communication Area Master Station Atlantic and Pacific CAMSLANT/CAMSPAC) continue including breaking ground at CAMSLANT this winter.

DEEPWATER LOGISTICS**\$42,273****Project Description, Justification and Scope**

Description:

This fiscal year 2007 request will fund continued development of logistics engineering, implement Logistics Information Management Systems (LIMS) capability at Shore Sites and upgrade facilities that will house new assets. This investment is necessary to ensure that Deepwater assets delivered to the Coast Guard have the necessary logistics and maintenance support to maximize their operational effectiveness. The specific elements of these project requests are:

LIMS - \$17,325K will be utilized to execute the revised Logistics project plans synchronized with the overall Revised Deepwater Implementation Plan. This intensive and time-sensitive system support development effort is necessary for the successful fielding of assets for achievement of targeted operational effectiveness goals. The three primary areas of logistics engineering include a) Business Process Development b) Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) equipment support, and c) network-based Logistics Information Management System (LIMS) development.

Shore Facilities with Logistics Responsibilities - \$495K will be utilized to install LIMS at Aircraft Training Center (ATC) Mobile, AL.

Facilities for New Cutters and Planes - \$24,453K will execute the revised shore facility project plan to provide adequate support infrastructure for the new Deepwater assets. These FY 2007 funds are needed for timely completion of shore facility upgrades required to support the asset delivery schedule in the Revised Deepwater Implementation Plan in Panama City, FL; Miami, FL; San Juan, PR; Kodiak, AK; Alameda, CA; Petaluma, CA; and Mobile, AL.

Deepwater Logistics is designed to support the Deepwater System as new assets and capabilities are delivered or as current Coast Guard aircraft are converted into Deepwater end-state assets. Logistics support is designed to be provided by LIMS, which requires installation at specific Coast Guard Shore Units that will be responsible for providing Logistics support.

The other main component of logistics is the facilities that will become the homes to these assets (new ships and planes as well as converted legacy aircraft). These facilities fall into one of two categories: 1) current Coast Guard facilities that are modified to be used for the new and/or converted assets, such as lengthening piers for a longer ship, and 2) newly acquired facilities, including land and the associated buildings that will be the new homes to the Deepwater ships and aircraft.

Logistics support includes the following functional work: 1) maintenance, 2) manpower considerations for the assets such as the design of controls for engineers on ships and flight controls on aircraft, 3) supply support in terms of parts, 4) special equipment used for testing and calibrating the cutters and planes, 5) providing the technical manuals related to operations and maintenance, 6) all aspects of training and training tools, 7) computer support for the asset (if not already included in the C4ISR budget), and 8) all of the physical movement and care of the parts, equipment components and supplies, including packaging, handling, storage and transportation.

CG-AC&I-86

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

DEEPWATER LOGISTICS**\$42,273**

LIMS will automatically collect and process logistics data; the system can then be used to project support requirements and trends, and eventually provide readiness assessments instantly to operational commanders. This will relieve the Coast Guard workforce of the hard work associated with current keying in millions of individual data items across the Coast Guard. Also, within LIMS is the Learning Management System (LMS), which will schedule, track and distribute all training and training requirements for Coast Guard personnel. With its ability to bring the right information to the right people at the right time, LIMS is expected to make life better for the personnel involved in logistics and provide operationally relevant information to Coast Guard operators. Coast Guard crews will have maintenance support technologies to provide step-by-step computer generated instructions and 24-hour expert assistance made available through remote support services. Increased reliability of Coast Guard cutters and aircraft will result in more operational time for these assets.

Improved cost management will be an important feature that this investment in LIMS will provide by:

- Improving logistics operations and improving rules, tools and processes to reduce costs through adoption and institutionalization of best public and private sector business practices;
- Significantly improving inventory accuracy of all items;
- Reducing costs by eliminating inventory at multiple locations; and
- Improving customer support by collaborating with private industry to develop effective support arrangements (such as service support agreements and other agreements).

Simply put, improved logistics is one way to keep a resourceful and thrifty Coast Guard operating better. It can stop an expensive practice of using one asset for spare parts to keep other like assets operating, which has been used frequently enough in the past that the term "parts cannibalization" has been coined. This inefficient practice can be avoided by using LIMS to bring together and transform the data into an electronic status system indicating, Coast Guard-wide, the location and availability of needed parts. If the part is available, LIMS will auto-generate the shipping documents to transfer that item to the unit who needing the part.

These logistics improvements will allow the Coast Guard to manage facilities with fewer personnel focused on logistics, keep less "safety stock" due to better inventory accuracy and remove inefficiencies that delay critical assets from being ready to operate. In addition, LIMS information will be available at higher levels in the organization to determine asset or class-wide equipment issues.

Establishing a responsive Integrated Logistics System early in system deployment will provide benefits in reduced life cycle cost and increased operational effectiveness. Integrating enterprise-wide processes across lines of maintenance, supply support, technical manuals, support and test equipment, computer support, facilities and transportation will assist in moving the Coast Guard towards an efficient centralized business model. Incorporating sound Human Systems Integration (HSI) processes, which include labor, personnel, training, human factors engineering and system safety, can significantly improve human performance and reduce operational costs by reducing personnel costs.

The C4ISR equipment support area includes training and maintenance analyses and the full suite of support products for both operators and maintainers. C4ISR equipment provides Maritime Domain Awareness across

CG-AC&I-87

ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

DEEPWATER LOGISTICS \$42,273

surface, air and shore assets; ensuring adequate C4ISR logistics support preserves and protects this substantial investment. Performing complex reliability, maintainability and availability analyses are necessary to measure and baseline C4ISR supportability goals. Establishing accurate baselines are crucial for future configuration management, and for exercising effective and efficient equipment and supply chain management.

Investing in LIMS is central to our network-centric system. LIMS provides the ability, using collected data, to bring the right information to the right people at the right time. It streamlines parts ordering and management, facilitates maintenance functions, and provides an innovative training delivery system. Interconnected processes accessed via an on-line support infrastructure will improve each IDS unit's operational effectiveness by providing responsive maintenance support, establishing and maintaining inventory levels, and automatically ordering parts. This ensures that each asset remains available for its planned operational hours. This same feature also manages Total Ownership Costs as the inventory tracking system determines equipment and spare parts usage rates and determines efficient inventory levels. For example, logisticians will be able to quickly forecast support requirements and trends, as well as reduce single point failures. Designers will be able to more easily introduce proven state-of-the-market technology, assess design trade-offs, and use concurrent engineering to create assets with improved maintainability. The data also supports a "remove-and-replace" concept for components and modules that will simplify repair tasks. To facilitate development and delivery, LIMS is now part of the C4ISR Increment 1.

Significant Changes

This year's budget request is a 80 percent increase over the amount appropriated for logistics in FY06. This growth in funding requirements reflects the central role that logistics play in supporting the Deepwater system as it is delivered. The planning lead time for shore installations is particularly long and requires funding in a timely fashion to ensure piers and airfields are ready when needed to accommodate the NSC and the MPA as they begin to enter service.

SYSTEMS ENGINEERING & INTEGRATION**\$35,145****Project Description, Justification and Scope****DESCRIPTION:**

Systems engineering and integration work touches every facet of the Deepwater enterprise—encompassing the integration of such areas as human-capital management, information technology, capital investment planning for air and surface platforms, integrated logistics, command, control, and computers, intelligence, surveillance, and reconnaissance, and, most importantly, the fleet operator.

Specifically, the systems integrator is responsible for the following tasks and system elements:

- System of systems engineering including system architecture development, operational effectiveness analysis, Total Ownership Cost management, and enterprise-level requirements management.
- Enterprise-level system integration.
- Enterprise-level program management.
- Developmental test and evaluation.
- Quality assurance.
- Integrated product and process development.
- Transition plan management.
- System and domain level integrated support plans.
- IDS Implementation Plan and Integrated Master Schedule maintenance and management.

CAPABILITY ACQUIRED/MAINTAINED:

The Deepwater solution is designed to incorporate off-the-shelf systems and components where possible. Therefore Systems Engineering and Integration are essential to ensuring interoperability at the unit, system, and organizational levels both internal to the Coast Guard and with other DHS and DOD assets. Effective systems integration—bringing things technically and operationally together so they operate as a whole—will minimize the cost of asset acquisition, operations, and maintenance; maximize the assets' ability to interoperate with each other (and those of other agencies), and minimize the overall project risk.

The Coast Guard is planning an integrated system of aviation, cutter, and shore assets that are interoperable through a comprehensive C4ISR detection and communications structure. Without Systems Engineering and Integration the assets and sub-systems in the IDS program would be implemented in an inefficient and ineffective manner. One example involves the delivery of upgraded capabilities to legacy cutters; including a classified Local Area Network, upgraded INMARSAT B satellite communications, Automatic Identification System (AIS), and Law Enforcement Radio. This project provides significantly increased capabilities and Maritime Domain Awareness to the legacy cutters. The application of Systems Engineering and Integration to these upgrades emphasizes a system wide view of the project with the result that corresponding upgrades also be accomplished at shore-side command centers. This permits the cutters to send and receive important operational information; further increasing Maritime Domain Awareness and maximizing operational effectiveness. Failure to utilize Systems Engineering and Integration could potentially result in upgrading just the cutters alone and would only marginalize the benefits of the C4ISR upgrades.

System engineering evaluations are performed across the system, subsystem, and component levels to analyze products and capabilities for both interoperability and system commonality. These efforts culminate in the ability

CG-AC&I-93

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

SYSTEMS ENGINEERING & INTEGRATION \$35,145

to determine and document predicted total system performance for numerous configurations and scenarios. Deepwater's systems engineering has the responsibility for the overall technical configuration-development process—culminating in a program management plan that encompasses all management areas.

PERFORMANCE:

Systems Engineering and Integration are essential to maximizing Operational Effectiveness of all IDS assets and directly supports mission success in the Coast Guard. System Engineering and Integration is also providing significant operational concept development and earlier identification of total ownership cost. It also fully supports the federal government's acquisition approach by specifying that the total system of systems be well-defined before full procurement commences. It will also result in a lower overall projected bid cost to the federal government (compared to the government estimate).

SYSTEMS ENGINEERING & INTEGRATION **\$35,145**

Method of Performance

Per Section 1.H.1 of Deepwater Exhibit 300, "Description of Performance Based Management System", an Earned Value Management System (EVMS) is used for the system integrator contract work under each of the various Delivery Task Orders (DTOs). The Dekker Trakker software program that meets ANSI/EIA Standard 748 is being used by the Deepwater Program. Dekker Trakker is the tool that is used by the Systems Integrator to resource load schedules, track progress and record expenses. An additional Earned Value viewing tool also being used is Dekker iPursuit which is the viewing tool that allows Deepwater personnel to view monthly Cost Performance Reports. The iPursuit program also allows for extensive insight into the data that was used to generate the Cost Performance Reports. For example, it can provide a breakdown of cost and schedule variances by Work Breakdown Structure (WBS).

(dollars in thousands)**

GOVERNMENT PROGRAM MANAGEMENT **\$48,975**

Project Description, Justification and Scope

DESCRIPTION:

This provides funding for government program management and oversight. Program management funds provide support for administration, technical reviews, technology analysis, performance monitoring of both the Program and the System Integrator, Operational Test and Evaluation, Transition Management and Risk Management. The growth in the funding request this year reflects a programmatic decision for the government to assume some of the duties previously accomplished by the system integrator.

CAPABILITY ACQUIRED/MAINTAINED:

Deepwater program management gives the Coast Guard the capability to protect the government's interests during the Deepwater acquisition, ensure the System Integrator delivers products and services to the Coast Guard that both meet the terms and conditions of the contract, and provide the capabilities and performance the Coast Guard requires to accomplish assigned missions. It is the responsibility of the Coast Guard to ensure that the products delivered by the System Integrator meet the government's performance specifications. The Coast Guard does this through a staff at the Program Management Office, as well as several other contractor and government locations. The staff includes a number of government military service members, civilian employees and support contractors experienced in all phases of large, complex acquisition programs. Many of the program management staff members participate as members on Integrated Product Teams charged with the day-to-day implementation of the IDS.

There are major milestones and reviews (e.g., Preliminary Design Review, Production Readiness Review, etc.) associated with IDS as the program progresses through Concept & Technology Development, System Development and Demonstration, Production and Deployment, and the Operations and Support Phases. Coast Guard program management staffs participate in these reviews, some of which are held at the contractor's facility, to ensure the System Integrator and the program are performing satisfactorily.

Technology is constantly changing, and over the projected 40 year life of the IDS there will be several technology refreshes or upgrades. Government program management staff is charged with analyzing the capability and applicability of new technologies proposed by the System Integrator.

Program management funding also supports performance monitoring of both the IDS and the System Integrator. This is accomplished through the use of a variety of tools such as the Earned Value Management System (EVMS) and monthly Quad Charts. EVMS permits the Coast Guard to closely follow the cost and schedule performance of the System Integrator while Quad Charts provide a review of program cost, schedule and performance criteria.

The Operational Tests and Evaluation (OT&E) funds the Navy's Commander Operational Test and Evaluation Forces (COMOPTEVFOR) for the execution of Deepwater Operational Testing. While developmental testing and evaluation is the responsibility of the contractor to verify the technical capabilities, OT&E is an inherently governmental responsibility to validate the usability. COMOPTEVFOR serves as the technical advisor to the Coast Guard and is responsible for overseeing and contributing to the conduct of independent tests for the early involvement, review and assessment of system, as well as asset operational performance.

CG-AC&I-97

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

GOVERNMENT PROGRAM MANAGEMENT \$48,975

Program management funding also supports the transition of IDS assets to the Coast Guard. Coast Guard program management staff serves as a liaison or bridge between the System Integrator and the operational user.

Deepwater Performance/Risk Management gives the Coast Guard the ability to project the future performance of IDS assets and the operational performance of the entire IDS System of Systems. It also allows the Coast Guard to protect the government's interests by translating the technical capabilities of assets into operational outcomes.

COST ESTIMATE OF WORK TO BE FUNDED THIS FISCAL YEAR

GOVERNMENT PROGRAM MANAGEMENT**\$48,975****Method of Performance**

Per Section 1.H.1 of Deepwater Exhibit 300, "Description of Performance Based Management System", an Earned Value Management System (EVMS) is used for the system integrator contract work under each of the various Delivery Task Orders (DTOs). The Dekker Trakker software program that meets ANSI/EIA Standard 748 is being used by the Deepwater Program. Dekker Trakker is the tool that is used by the Systems Integrator to resource load schedules, track progress and record expenses. An additional Earned Value viewing tool also being used is Dekker iPursuit which is the viewing tool that allows Deepwater personnel to view monthly Cost Performance Reports. The iPursuit program also allows for extensive insight into the data that was used to generate the Cost Performance Reports. For example, it can provide a breakdown of cost and schedule variances by Work Breakdown Structure (WBS).

In addition to EVMS, the program has the following three overarching aspects against which system implementation is measured.

1. USCG STRATEGIC GOALS - Mission-Program Measurements:

MARITIME SAFETY

- Search and Rescue (SAR) - percentage of lives saved in cases with Deepwater system assets.
- Marine Safety - International Ice Patrol/Limits of All Known Ice Broadcasts (IIP/LAKI): maintain 95% accuracy of all LAKI broadcasts.

PROTECTION OF NATURAL RESOURCES

- Living Marine Resources (LMR) - percentage of Deepwater Living Marine Resources Law Enforcement (LE) boardings without significant violations.

MARITIME SECURITY

- Illegal Drug Interdiction - Cocaine Seizure Rate: percent of cocaine shipped through transit zone that is seized by Deepwater assets.
- Undocumented Migrant Interdiction: percentage of total migrant flow interdicted with Deepwater assets.
- Other Law Enforcement (OLE) - Foreign Fishing Vessel (FFV) Incursions: percentage of foreign fishing vessels detected in the U.S. Exclusive Economic Zone (EEZ) interdicted with Deepwater assets.

NATIONAL DEFENSE

- Defense Readiness (DR) - maintain 100% combined percentage of military readiness of WHECs and WPBs (110') to support Department of Defense requirements.

2. READINESS PERFORMANCE MEASUREMENTS: cutter availability, aircraft availability, and aircraft dispatch reliability index.

CG-AC&I-100

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

GOVERNMENT PROGRAM MANAGEMENT \$48,975

3. OPERATIONAL PERFORMANCE MODELING: Using the Center for Naval Analysis IDS Asset Assessment Tool (CIATT) model the number of square miles of ocean in which the Deepwater assets can detect, identify, and prosecute targets in the Deepwater operating area.

FY 2007 C-Stage
(dollars in thousands)**

NATIONWIDE AUTOMATIC IDENTIFICATION SYSTEM (NAIS) **\$11,238**

Project Description, Justification and Scope

The mission of the Nationwide Automatic Identification System (NAIS) is to develop and install a nationwide infrastructure to detect, identify, track and exchange information with vessels operating AIS in or approaching U.S. waters. NAIS will leverage the full capability of AIS-technology to enhance U.S. Coast Guard and Department of Homeland Security (DHS) operational mission performance to protect the public and to serve national maritime interests.

The Maritime Transportation Security Act of 2002 (46 USC §70113) directed DHS to implement a system to collect, integrate and analyze information concerning certain vessels operating in or bound for waters subject to the jurisdiction of the United States. NAIS will support this Congressional requirement and will serve as a centerpiece to the Coast Guard and DHS' effort to build Maritime Domain Awareness (MDA) as described in the National Plan to Achieve Maritime Domain Awareness and will contribute to the successful execution of the National Strategy for Maritime Security, Homeland Security Presidential Direction (HSPD)-13.

NAIS is expected to consist of a system of AIS receivers, transmitters, transceivers, repeaters and other equipment located on shore-side installations and remote platforms potentially including buoys, offshore platforms, aircraft and spacecraft as needed to receive, distribute, and use the information transmitted by vessels that operate AIS equipment and transmit data to these vessels. Some of this equipment already exists as interim capability, and the Coast Guard will leverage as much of the interim capability as possible to complete the NAIS project.

NAIS will send and receive AIS messages, via a Very High Frequency (VHF) data link, to and from AIS equipped vessels, Aids to Navigation, and Search and Rescue (SAR) aircraft. NAIS will leverage several types of platforms (including existing government resources to the extent possible) to support AIS receive and transmit infrastructure. While some support receive-only capabilities (e.g., satellites, buoys, and aircraft), others may support receive and transmit capabilities (e.g., towers and platforms). AIS message data will be transported between system components over a Wide-Area Network (WAN) and diverse, remote site connectivity.

NAIS will process (e.g., validate, filter, etc.) and store the data. Some NAIS functions may require integrating with existing systems. These systems, while not part of NAIS, are included in the context of the systems' operations. Primarily, it is expected that these systems (e.g., Ports and Waterways Safety System [PAWSS], Sector Command Centers [SCC], Maritime Information Safety and Law Enforcement [MISLE], Vessel Traffic Services [VTS]) will provide data processing functions (e.g., vessel tracking correlation, intelligence processing, anomaly detection) and user interfaces necessary to meet all the requirements for fully using AIS data.

NAIS will complement other surveillance and intelligence systems greatly aiding the essential process of identifying vessels requiring further investigation and action. NAIS information will be displayed in the Coast Guard's national maritime Common Operational Picture (COP) and shared, along with correlated data and intelligence as appropriate, with Deepwater assets and other Federal agencies. Unclassified portions of the COP will also be available to state and local government port partners in support of security and safety operations. This information will be invaluable to agencies, such as Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), and the Transportation Security Administration (TSA), as it will provide real-time location data on all major cargo and other commercial vessels in the maritime domain.

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

NATIONWIDE AUTOMATIC IDENTIFICATION SYSTEM (NAIS) \$11,238

The funding requested supports management and execution of the multi-year NAIS project. Funding provided in FY 2007 will be used for initial implementation of the production system providing full AIS capability beginning in Tier I, II and III strategic ports or in other ports and critical coastal areas of the country where some AIS capability does not already exist. This potentially includes areas such as Baltimore, MD; Philadelphia, PA; Savannah, GA; Portland, OR; Chicago, IL; Freeport, TX and Port Canaveral, FL.

Significant Changes

The NAIS project office has implemented AIS in Vessel Traffic System (VTS) Puget Sound and VTS San Francisco, thereby ensuring all Coast Guard VTSs are AIS capable. Additionally, several prototype systems have been implemented by the project in advance of the full NAIS deployment. The prototype efforts include AIS installations in Alaska, on Gulf of Mexico offshore platforms and on several National Data Buoy Center weather buoys, and creation of a centralized server for AIS data at the Coast Guard Operations Systems Center (OSC). Collectively, these efforts are providing useful information for the nationwide design and advance operational AIS capability in many areas of the country.

The NAIS project is performing market research as part of the concept and technology development phase of the Coast Guard and DHS major acquisition process. The NAIS project office has issued two Requests for Information (RFIs) and conducted follow-on industry meetings with those who replied to the RFIs. Currently, the NAIS project office is analyzing the information provided to determine capabilities within the market to satisfy the Coast Guard NAIS requirements, and to establish an optimal acquisition strategy.

RESCUE 21**\$39,600****Project Description, Justification and Scope**

The Rescue 21 project represents a quantum leap in technology, enhancing effectiveness across all coastal missions. The VHF-FM short-range communication system is the backbone of the Coast Guard's National Distress and Response System (NDRS). The basic components of NDRS include radios, transceivers, towers for antennas and an interconnecting network. It is the foundation for coastal Search and Rescue (SAR), and the last line of defense for Maritime Homeland Security (MHS). Rescue 21:

- Eliminates many existing gaps ("dead zones") while ensuring continuous, enhanced VHF-FM (line-of-site) marine radio coverage out to 20 nautical miles from shore in the coastal zone (from a low-powered 1-watt transmission); higher-powered radios may be heard even farther offshore.
- Features a digital voice recording capability with immediate playback, improving the ability to review and decipher garbled or unclear transmissions - critical to search and rescue planning and response.
- Provides greatly improved direction finding capability (within two compass degrees) for more timely response to mariners in distress.
- Increases the number of voice and data channels from one to six, allowing watch standers to conduct multiple operations, while offering protected (secure) communications for Law Enforcement and MHS operations when needed.
- Offers asset tracking capabilities to streamline coordination of rescues, while also increasing the safety of our own crews.

Helps provide a Common Operational Picture (COP) that will assist in Maritime Domain Awareness (MDA) by maintaining communications with mariners, and by facilitating the timely flow of information between the Coast Guard and other government and law enforcement agencies.

Funds requested for FY 2007 will specifically accomplish the following tasks:

System Design:

Woods Hole, MA
Boston, MA

Infrastructure Preparation:

New Orleans, LA
Charleston, SC
Fort Macon, NC
Cape Hatteras, NC

System Installation:

New Orleans, LA
Astoria, OR
North Bend, OR
Portland, OR
Baltimore, MD
Hampton Roads, VA
Philadelphia, PA

RESCUE 21**\$39,600****Significant Changes**

The Rescue 21 Project has recently realized several important milestones:

- The project delivered the first fully operational systems to Atlantic City, NJ and Chincoteague, VA, on Dec. 20, 2005.
- The Department of Homeland Security in 2005 granted approval for the project to enter full rate production of the ground sub-system.
- Low Rate Initial Production systems planned to be installed and tested in FY 2006 are Mobile, AL, St. Petersburg, FL, Seattle, WA and Port Angeles, WA.
- Additional Full Production Regions in FY 2006 include Key West, FL, Miami, FL, and Mayport, FL.

Rescue 21 is already saving lives:

- A mobile Disaster Recovery System (DRS), a component of Rescue 21, was deployed to restore communications with mariners in the Pt. Sulphur region of Louisiana after Hurricane Katrina struck. The DRS is still providing communications support for the area.
- A recent SAR case in Ocean City Inlet, Md. (Nov. 13, 2005) demonstrated the value of the enhanced VHF-FM radio coverage and direction-finding capability of the system leading to the rapid rescue of three fishermen from a capsized vessel. The system pinpointed the precise latitude/longitude of the capsized vessel, despite the fact the original distress call reported the position of the boat to be nearly three miles from its actual location.

HIGH FREQUENCY (HF) RECAPITALIZATION \$2,475

Project Description, Justification and Scope

This initiative recapitalizes the Coast Guard's High Frequency (HF) communications system, including replacement of 44 twenty-five-year-old, unserviceable, shore-side, high power HF transmitters. This FY 2007 request will partially fund the recapitalization of the HF communications system as part of a multiple-year installation schedule. As a signatory nation of the International Safety Of Life At Sea (SOLAS) treaty, the United States is required to continuously monitor several HF emergency and distress channels to respond to at-sea emergencies and requests for assistance, and to provide warnings to ships relating to "...gales, storms, and tropical storms" by radio messages. This information is provided by the Coast Guard via HF transmitters in the form of text and fax messages. Existing HF transmitters are available for operational use only 72 percent of the time due to the frequency of failure, far from meeting the 95 percent availability industry standard. Maintenance of the existing HF system is no longer a viable option because spare parts are no longer being manufactured for these obsolete radios. Excessive system downtime and subsequent lack of adequate HF communications coverage prevents the Coast Guard from consistently meeting United States SOLAS obligations. Without system recapitalization continuing in FY 2007, the Coast Guard will be unable to meet SOLAS mandates regarding HF communications by the end of CY 2008, when existing transmitters are predicted to completely fail based on the current trend of equipment casualty.

Unfortunately, many of these HF requirements cannot be accomplished or replaced with satellite communication (SATCOM) systems. Not all Coast Guard vessels and aircraft have SATCOM capability, and satellite coverage is not available in all Coast Guard operating areas. Replacement of shore-side, high power HF radios will improve effectiveness through increased system reliability, throughput, and reduced operating and maintenance costs. It will also increase interoperability with international commercial maritime and distress systems, SOLAS and non-SOLAS vessels, and DHS, DOD, allied and other government assets, thus contributing to the integrated, interoperable maritime security screening system envisioned in the Maritime Strategy for Homeland Security.

Significant Changes

There was no funding requested in the previous budget submission.

Method of Performance

Contract oversight for the procurement of these radios lies with Customs and Border Patrol (CBP); the Coast Guard procures these radios from CBP through this contract.

Performance of the new transmitters will be measured by the success rate of HF communications. Two basic measures are used: 1) the availability to make a transmission (is the transmitter working) and 2) feedback from the maritime public on whether or not the transmission was received.

NATIONAL CAPITAL REGION AIR DEFENSE (NCRAD) - AC&I **\$48,510**

Project Description, Justification and Scope

This project represents the first of a two-year project to acquire a total of seven HH65C additional helicopters to support the NCRAD mission. This request will provide funding to acquire the first five helos, including the costs of the airframes, engines, avionics and equipment that match current USCG HH65C helicopter configurations. The Coast Guard is still investigating whether it will be more cost-effective to purchase new helos or to buy used airframes and convert them. This request also includes funding for aircraft Ground Support Equipment (GSE) and necessary tools.

The five helos purchased with this request will be based out of Coast Guard Air Station Atlantic City, NJ. Three of these aircraft will be forward deployed to Reagan Washington National Airport with two crews on strip alert. The remaining two of five aircraft will be located at Air Station Atlantic City to support training and unit maintenance requirements. In addition to these five aircraft, two more will be needed in the future to indirectly support the NCRAD mission. One will be assigned to Coast Guard Aviation Training Center Mobile, AL to support increased fleetwide HH65 training requirements and the last helo will be a support aircraft, assigned to Program Depot Level Maintenance (PDM).

This AC&I project also funds the shore facilities needed to support additional aircrews required for five additional HH-65C helicopters to be based at Air Station Atlantic City, NJ. This request funds the construction of additional hangar, office and parking space at the air station. Air Station Atlantic City facilities are needed to accommodate the newly-assigned helicopters and maintenance personnel.

Primary responsibility for air defense of the NCRAD rests with DOD under OPERATION NOBLE EAGLE. Within the Department of Defense, the North American Aerospace Defense Command (NORAD) is responsible for execution of the air defense mission. The U.S. Coast Guard has been selected as the agency within DHS to execute the NCR air defense mission for low / slow flyers.

Significant Changes

There was no previous budget submission.

NATIONAL CAPITAL REGION AIR DEFENSE (NCRAD) - AC&I \$48,510

Compliance with Public Laws, Regulations, Standards & Executive Orders

DOD requested DHS provide a capability for low/slow flyer intercept under OPERATION NOBLE EAGLE to ensure unity of command. As a result, DHS determined USCG is the best resource for this mission. DHS authorizes direct liaison between Coast Guard and DoD for OPERATION NOBLE EAGLE requirements. Coast Guard integrates into OPERATION NOBLE EAGLE Concept of Operations (CONOP), plans, protocols and exercises. Coast Guard NCRAD aviation assets will operate under Tactical Control (TACON) of DOD.

Coast Guard HH-65Cs and associated aircrews will provide two aircraft/aircrews on five-minute strip alert at all times at Reagan Washington National Airport's Signature Aviation hanger. Alert crews will stand 12-hour watches in support of OPERATION NOBLE EAGLE.

The primary mission is to determine intent and compel intercepted aircraft to clear/depart NCR protected airspace. USCG aircraft will only escort intercepted aircraft to landing locations when specifically directed to do so by TACON. The Department of Homeland Security's Customs and Border Protection (CBP) directorate will coordinate with the USCG for an orderly transition and assumption of the NCR mission.

COUNTER-TERRORISM (CT) TRAINING INFRASTRUCTURE - SHOOTHOUSE \$1,683

Project Description, Justification and Scope

This request provides for the construction of a shoothouse training facility at Camp Lejeune, NC, for the Special Mission Training Center (SMTTC) to use to train the Maritime Security Response Team (MSRT).

The MSRT relies on interagency support and conducts a majority of its required training at Camp Lejeune's training center. However, Camp Lejeune's training throughput is expanding rapidly with the recent establishment of the Marine Corps Special Operations Forces command; shooter training throughput will increase by at least 450 Marines. Included in the Coast Guard's FY 2007 Operating Expense (OE) request is funding for the addition of a third Direct Action Section (DAS) for MSRT, which provides the personnel for a 24 x 7 response capability. A MSRT with three DAS's requires training approximately four days per week (160 days/year). Additionally, an Advanced Tactics Operations Course (ATOC), Basic Tactics Operational Course (BTOC) and Tactical Training Course (TTC) are also required, adding another 60-70 training days/year; the Coast Guard's total annual shoothouse requirement equates to more than 220 days/year. The Coast Guard has received outstanding support from the Marine Corps at Camp Lejeune, but the Marines' training needs will supercede the Coast Guard's, resulting in a shortfall of at least six months of shoothouse facility training time per year. Therefore, in order for the MSRT to be assured facility availability to meet its required training, this AC&I request provides funds to build a shoothouse at Camp Lejeune.

In addition to the overall availability concerns, the new shoothouse will also greatly improve the MSRT's ability to train and maintain proficiency in Close Quarters Combat (CQC) skills. The current facility at Camp Lejeune is one floor, and therefore, cannot support Advanced Tactics Training, which includes multi-floor, stairwell incursion, mechanical breaching, live ballistic breaching and other advanced techniques. The current facility has no ventilation for lead exposure and has no video capability (post exercise replay for lessons learned analysis). The current facility has concrete walls with no ballistic arresting capability; therefore, live ammo cannot be used. Live ammo is needed on at least 20% of CQC training for penetration planning and execution training.

The MSRT has gained valuable knowledge and expertise while training with Marine Corps forces at Camp Lejeune; constructing a facility for the MSRT in the same location would not only accommodate the team's facility needs, but would foster an ever greater, more positive relationship with the Department of Defense (DOD), one of the partner agencies supporting the development of the MSRT. As one of the few training facilities in the Nation that provides this type of waterborne specialized training, much could be gained by having Coast Guard and DOD forces training together.

In summary, this request addresses a critical range availability issue for MSRT. This is a critical training infrastructure issue for the MSRT.

SURVEY & DESIGN **\$2,600**

Project Description, Justification and Scope

The Coast Guard's FY2007 survey and design budget proposal includes survey and design funding essential to the following AC&I shore projects:

- Station Fire Island Waterfront rehab. Project will replace portions of wharf, piers, and construct new wave barrier. (\$260K)
- CGC HICKORY River tender cutter support bldg. Project will provide 2,300 general square footage of shops, storage and admin space for cutter support team. (\$100K)
- PACAREA Establish Bay Area Sector Command Center (SCC). Project will provide a new sector command center operations center. (\$750K)
- ISC Alameda Bay Area Sector Command building. Project will consolidate Sector command functions for the San Francisco Bay Area. (\$950K)
- Group Cape May Consolidate Station/Aids to Navigation Team (ANT) Facility. Project will provide new consolidated station and ANT facilities. (\$100K)
- Group Woods Hole Replace admin bldg, Phase I. Project will replace and right-size station and ANT facilities. (\$100K)
- Air Sta Elizabeth City Admin/office/shops building. Project will consolidate several aviation functions into one facility. (\$100K)
- AC&I Admin Expenses (\$240K)

Funding will provide in-house capability for planning and engineering studies, project design, master plans, appraisals, real property requirements and other architectural/engineering efforts.

Project survey, planning and design are essential to the efficient management and execution of the shore capitalization and investment program. Completing proper planning and design helps to ensure that major AC&I projects are properly assessed, planned and prioritized prior to seeking project appropriations. The projects supported by this request contribute to the long-range plans and support of operational units. This request also funds the contract administration/project management for shore construction projects in the minor AC&I program.

Significant Changes

Funding, although requested, was not provided in the FY06 appropriation for survey and design projects.

MINOR AC&I SHORE CONSTRUCTION PROJECTS **\$2,850**

Project Description, Justification and Scope

This program provides funds for minor AC&I shore facility construction projects. These projects are less complex and require less advance planning than their major AC&I counterparts. The overall cost for minor AC&I shore facility projects range between \$750,000 and \$1,500,000. Planned projects for FY 2007 are as follows:

- a. Station Fire Island, New York waterfront rehabilitation (\$1.4M). This project will (1) replace portions of the existing wharf and piers, (2) renew electrical, water and sewage shore ties and (3) construct a new steel wave barrier.
- b. CGC HICKORY cutter support building, Alaska (\$1.45M). This project provides 2,300 general square footage of storage, shop and administrative spaces for a cutter support team assigned to CGC HICKORY.

Significant Changes

Funding for minor AC&I shore construction projects, although requested, was not provided in the FY06 appropriation.

STATION NEAH BAY BREAKWATER COMPLETION \$1,100

Project Description, Justification and Scope

This request provides funding for the completion of the Station Neah Bay breakwater project. Station Neah Bay is located on the Straits of Juan de Fuca in Puget Sound, WA. During the winter months, deep sea swells, combined with wind driven waves, produce a highly unstable and hazardous environment for Coast Guard small boats moored at the station's 700 foot pier.

A recent wind and wave study performed at Station Neah Bay determined that the breakwater should be 30 feet longer than originally planned. Therefore, this request includes funds for construction of an additional 30 feet of breakwater so that the breakwater can adequately and effectively protect Coast Guard boats moored at Station Neah Bay.

Significant Changes

The lack of Survey and Design funding in FY 2006 necessitated the need to fund survey and design requirements directly from project funds. Requested funding will allow for the completion of the project as originally planned, as well as provide for the construction of the additional 30 feet of breakwater.

ISC SEATTLE AND SECTOR OPERATIONS FACILITY, PHASE II \$2,600

Project Description, Justification and Scope

This budget request is intended to complete the Coast Guard Sector Puget Sound shore operations building and command center, essential to maintaining, monitoring and orchestrating operations throughout the region. The request was prompted by evolving and increasing command and control requirements in the post 9-11 era. The Coast Guard received \$16 million to construct the Seattle shore operations building beginning FY 2003. Specifically, this funding will enable the Coast Guard to construct/equip the Sector Puget Sound facility to meet the additional requirements to support Maritime Domain Awareness (MDA) including:

- Unclassified voice and data systems;
- Classified Local Area Network (LAN) connectivity; and
- Re-location of Rescue 21 equipment, legacy voice radio communications, secure spaces, Incident Command Post (ICP) and watch equipment

Funding will also provide the Command, Control, Communications, Computers and Information Technology (C4IT) necessary for a seamless transition from existing equipment to minimize the off-air time of the Sector Command Center.

Significant Changes

There were no funds requested in FY06 for this project.

REBUILD STATION & WATERFRONT AT BASE GALVESTON, PHASE I \$5,200

Project Description, Justification and Scope

This two-phase project will replace the existing, obsolete station building and small boat moorings at Station Galveston, TX, with a fully functional, multi-mission facility and small boat moorings. Funding requested in phase I will replace station facilities with a 13,500 gross square footage multi-purpose station building, including new shops, command center, administrative spaces and watch stander berthing. Phase II includes: (1) replacing existing small boat moorings (circa 1950) with covered 47' Motor Life Boat (MLB) moorings; (2) renovating/replacing the wharf, boat ramps and piers; and (3) dredging the boat basin, which has silted in over time.

The current station building, a converted boathouse built in 1937, is substandard and lacks adequate space for assigned vessels. Numerous OSHA violations have been documented. The existing mooring, constructed in the early 1950's, have reached the end of their useful service lives, and there is no existing fender system to protect the piers or the vessels. This project will provide appropriately sized facilities, enhance the station's ability to perform maintenance on their vessels, and provide a better work environment for station personnel.

Significant Changes

There was no previous budget submission for this project.

SECTOR LONG ISLAND SOUND MULTIPURPOSE BUILDING COMPLETION \$1,000

Project Description, Justification and Scope

This project will complete the renewal of the former Group-Marine Safety Office (MSO) building in New Haven, CT. The current facility is deteriorated and functionally obsolete. The health and safety violations within the existing facility are significant, including sprayed asbestos ceilings, vinyl asbestos floor tiles and asbestos insulation throughout the building. Additionally, the building was originally designed as a barracks facility; however, this building now serves as the Sector Long Island Sound operational command center and main administrative building. A new facility is required to provide the multi-purpose functionality necessary to coordinate operations and provide administrative oversight across the Sector area of responsibility.

This project will provide Sector Long Island Sound personnel with a new facility that eliminates the serious health and safety violations present in the current building, while providing a right-sized, functional working environment for Sector personnel.

Significant Changes

Due to a lack of survey and design funding in fiscal year 2006, it was necessitated that the Coast Guard fund these requirements directly from appropriated project funds. As a result, this project was split into two phases to complete work deferred from the original project to account for survey and design requirements.

COAST GUARD HOUSING - CORDOVA, AK \$5,500

Project Description, Justification and Scope

This program funds prioritized capital acquisition renovation, rehabilitation, modernization and/or replacement housing projects. Specifically, FY2007 funding will complete phase I of a two-phased housing recapitalization project in Cordova, AK. Phase I will allow for site preparation work; phase II will entail construction of 13-duplex housing units. These properties will provide modern, reliable accommodations for Coast Guard personnel and their families. In addition, this project will correct the resident privacy, housing separation, and environmental safety conditions associated with the existing Coast Guard housing in Cordova, AK.

Specifically, phase I entails clearing the existing site, leveling the land for construction and laying/preparing necessary utility lines. This is the full extent of work that can be accomplished during the short Alaska building season. Phase I will adequately prepare the site for phase II construction planned for the following Alaska construction season. The Coast Guard already owns the land for this project.

In June 2003, a Coast Guard housing needs assessment substantiated requirements to construct new housing units in Cordova, AK due to the extremely poor condition of existing Coast Guard housing and the lack of adequate local community housing for personnel to rent or buy. Specifically, a Cordova Housing Market Survey Analysis, by Runzheimer International, found that the Cordova, AK "rental market is incapable of providing sufficient adequate family housing for USCG personnel." Coast Guard housing adequacy criteria include cost, environmental safety, suitability elements (size, number of bedrooms, condition) and commuting factors (time, distance, and cost).

Former Coast Guard District 17 and Maintenance and Logistics Command Pacific Commanders have cited the Coast Guard owned housing in Cordova, AK as the worst Coast Guard housing they have ever seen. Specific problems with existing housing include:

- a. Lead based paint (primarily in door casings) and asbestos-containing construction materials have been found in the units. An Environmental Risk Assessment in 1998 deemed intact lead paint and asbestos not to be a hazard, but tenants are notified of its presence when they take occupancy. It is the Coast Guard's objective to provide new housing in Cordova before lead and asbestos contaminants become a hazard to tenants.
- b. Equal elevation: Existing housing units are directly parallel row house construction built on a very small parcel, resulting in extreme density of 18 units per acre and little/no privacy. Neighbors can see directly into and through one another's quarters, causing residents to close their shades, exacerbating the interior darkness and sense of being closed in. As stated above, these conditions will be eliminated with the construction of the new, planned Cordova housing units.
- c. Extreme density of current housing results in very difficult winter access due to snow buildup between units. As stated above, these conditions will be eliminated with the construction of the new, planned Cordova housing units.
- d. Existing housing units are constructed on fill within muskeg bog wetlands, creating additional personnel risks due to household mold, etc. The new construction is sited/designed to ensure that proper drainage occurs.

CHASE HALL BARRACKS PHASE I - (ANNEX E) COMPLETION \$2,000

Project Description, Justification and Scope

This request completes the Chase Hall Phase I (Annex E) portion of a multi-phase project to renovate Chase Hall barracks at the U. S. Coast Guard Academy. Phase I of this project funds construction of a four-story Annex E wing. Prior year funding allowed the build-out of 111 rooms in this 150 room wing. This FY2007 funding request will build-out the top floor of this new Annex E wing of Chase Hall, providing the final 39 berthing rooms under this project. Follow-on phases will renovate all existing wings (A-D) of Chase Hall.

The continued decline of Chase Hall barracks is well documented. Examples of recurring problems with physical plant include deteriorated/failing heating, plumbing and electrical subsystems. The facility's condition is adversely affecting the quality of life for Academy Cadets, Officer Candidates, and Leadership School attendees. Ultimately, these problems will negatively impact the Coast Guard's ability to recruit outstanding new leaders to Officer Candidate School and the Academy.

Significant Changes

Due to a lack of survey and design funding in FY2006, it was necessary for the Coast Guard to fund these requirements directly from appropriated project funds. As a result, Chase Hall (Annex E) Phase I was split into two segments to complete work deferred for survey and design purposes with funds requested in this budget submission.

WATERWAYS ATON INFRASTRUCTURE \$3,000

Project Description, Justification and Scope

This request establishes, maintains, repairs and improves transportation on U.S. waterways, through construction and improvements to buoys and structures which assist in navigation. Waterways infrastructure projects require funding on an annual basis to properly meet navigational safety requirements in conjunction with U. S. Army Corps of Engineers (ACOE) projects, and to address aging/failing/damaged aids to navigation (AtoN). For example, major ACOE projects in the Houston/Galveston area, which has a heavy volume of oil tanker traffic, cannot be made fully operational without the addition of navigational aids. In recent years, a number of critical AtoN structures in the Delaware River and Chesapeake Bay have been heavily damaged in recent years by ice and are on the verge of failure. These waterways projects promote safe, efficient marine transportation, which is an integral component of our nation's transportation system and essential to the health and well-being of our economy. Planned FY2007 projects are as follows:

Project	Location
05-00-035	Beverly Range, PA
05-95-008	Delaware Bay and River
05-97-016	Sharps Island LT, MD
08-01-057	Baytown- Houston Ship Canal, TX
07-99-042	Key West, FL
08-04-026	St Andrew Bay, FL
13-98-033	Grays harbor, WA
17-03-019	Portland Canal, AK

Significant Changes

The FY2007 requests represents a \$861K decrease from FY2006, as a result of a re-allocation of limited available shore funding to higher priority projects.

AC&I DIRECT PERSONNEL COSTS \$80,500

Project Description, Justification and Scope

This request funds the salaries, compensation and support costs (including annual pay raise and COLA) for personnel who manage, execute and administer multi-year funded projects within the Acquisition, Construction and Improvements (AC&I) Program. The requested funding level will support 652 FTE (344 military, 308 civilian). The personnel will support projects being requested in this budget submission, as well as prior year funded AC&I projects, by performing planning, design, engineering, contracting, project management, quality assurance and logistics support activities. This ensures the products and services acquired through the AC&I program are completed on time, on budget and in compliance with performance requirements.

\$1.730M of this request is for three-quarters of the FY07 pay raises at 2.2%. The remaining \$6.5M request over the enacted FY06 level of \$72.270M will be applied to new FTE. Specifically, \$3M for 22 FTE is needed for new positions conducting oversight and management of the Deepwater acquisition project. From FY1999 to FY06 the AC&I appropriation grew 221% (\$395M to \$1,269M) with only a 52% increase in AC&I personnel funding (\$48.5M to \$73.5M), which includes pay raises and COLA increases. The GAO, which has been reviewing the Deepwater program since 2001, has continually cited the lack of personnel management and oversight as an area of deep concern (GAO Reports: 01-564, 04-380, 04-636T, 04-695, 05-651T and 05-757). As outlined in GAO report 04-380, lack of staffing is threatening the Deepwater program, "...staffing shortfalls have contributed to the problems...such as the struggle to keep pace with workload..." The remaining \$3.5M will be used to fill existing positions, including closing the AC&I personnel vacancy rate from 12% to 7%.

Significant Changes

There is no significant change since the previous budget submission.

**U.S. COAST GUARD JUSTIFICATION
ACQUISITION, CONSTRUCTION & IMPROVEMENTS
FY 2007 C-Stage
(dollars in thousands)**

AC&I CORE**\$500****Project Description, Justification and Scope**

This funding is necessary to cover costs associated with project overhead activities for major acquisition projects. The primary initiatives include contract support for financial management services, contracting support services, training and workforce certification. The funding allows the Coast Guard to maintain an effective acquisition process by providing AC&I resources that are not project-specific. Resources are needed to maintain core competencies and capabilities necessary to execute assigned workload while meeting various requirements established in the Chief Financial Officer Act, Clinger-Cohen Act, DHS certification level requirements and OMB Circular A-76.

Significant Changes

There is no significant change from the previous budget submission.

FY07 represents the first year the Coast Guard has displayed numbers in this fashion. FY06 actuals will provide us accurate base data for projections in future budgets. In addition, these numbers do not reflect supplementals received.

CG-AC&I-146

Summary Justification and Explanation of Changes

Travel

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	204	\$	615	\$	286	\$	(330)

Travel includes all costs of transportation of persons, subsistence of travelers and incidental travel expenses in accordance with Federal travel regulations. Specifically, funds transport of personnel in support of training, project management and oversight of the Response Boat - Medium Project.

Transportation of things

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	19	\$	58	\$	27	\$	(31)

Transportation of things includes all costs of the care of such things while in process of being transported and other services incident to the transportation of things. Specifically, funding provides for shipment of goods, equipment, supplies and materials to support completion of AC&I projects.

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	41	\$	124	\$	58	\$	(67)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.).

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	36	\$	110	\$	51	\$	(59)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs.

CG-AC&I-147

Printing and reproduction

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 0	\$ 1	\$ 0	(\$ 1)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports and other Coast Guard directives.

Advisory and assistance services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 12,847	\$ 38,841	\$ 18,019	(\$ 20,822)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities.

Other services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 5,312	\$ 16,061	\$ 7,451	(\$ 8,610)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions.

Supplies and materials

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 616	\$ 1,862	\$ 864	(\$ 998)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies.

CG-AC&I-148

1834

Equipment

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 549	\$ 1,659	\$ 770	\$ (890)

This object class covers the purchase of capitalized and non-capitalized assets. For example, this object class enables the Coast Guard to purchase furniture for the cadets at the Coast Guard Academy and survival suits for the rescue swimmers deployed to the frigid waters of Alaska.

Land and structures

2005	2006	2007	2006 - 2007
Actual	Revised Enacted	Request	Change
\$ 1,015	\$ 3,068	\$ 1,423	\$ (1,644)

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

CG-AC&I-150

Summary Justification and Explanation of Changes

Travel

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	7,462	\$	12,133	\$	10,785	\$	(1,349)

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request includes increases in annualizations, terminations and other base adjustments.

Transportation of things

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	697	\$	1,134	\$	1,008	\$	(126)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves.

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	1,507	\$	2,451	\$	2,179	\$	(272)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.).

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	1,337	\$	2,175	\$	1,933	\$	(242)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs.

CG-AC&I-151

Printing and reproduction

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 11	\$ 18	\$ 16	(2)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports and other Coast Guard directives.

Advisory and assistance services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 471,551	\$ 764,902	\$ 680,634	(84,268)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities.

Other services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 194,725	\$ 316,633	\$ 281,438	(35,195)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions.

Supplies and materials

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 22,579	\$ 36,715	\$ 32,634	(4,081)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies.

CG-AC&I-152

CG-AC&I-154

Summary Justification and Explanation of Changes

Travel

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	376	\$	331	\$	-	\$	(331)

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request includes increases in annualizations, terminations and other base adjustments.

Transportation of things

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	35	\$	31	\$	-	\$	(31)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves.

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	76	\$	67	\$	-	\$	(67)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.).

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	67	\$	59	\$	-	\$	(59)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs.

CG-AC&I-155

Printing and reproduction

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 1	\$ 1	\$ -	(1)

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports and other Coast Guard directives.

Advisory and assistance services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 23,743	\$ 20,884	\$ -	(20,884)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities.

Other services

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 9,818	\$ 8,635	\$ -	(8,635)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions.

Supplies and materials

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 1,138	\$ 1,001	\$ -	(1,001)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies.

CG-AC&I-156

* These numbers are estimates only; the Coast Guard is currently working to improve its processes to effectively capture costs via object class, with an accurate correlation to PPA. FY07 represents the first year the Coast Guard has displayed numbers in this fashion. FY06 actuals will provide us accurate base data for projections in future budgets. In addition, these numbers do not reflect supplementals received.

CG-AC&I-158

Summary Justification and Explanation of Changes

Travel

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	1,629	\$	686	\$	1,194	\$	508

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request includes increases in annualizations, terminations and other base adjustments.

Transportation of things

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	152	\$	64	\$	112	\$	47

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves.

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	329	\$	139	\$	241	\$	103

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.).

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	292	\$	123	\$	214	\$	91

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs.

CG-AC&I-159

Printing and reproduction

2005		2006		2007		2006 - 2007	
Actual		Revised	Enacted	Request		Change	
\$	2	\$	1	\$	2	\$	1

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. Funding includes charges associated with publication of Coast Guard training manuals, operational instructions, reports and other Coast Guard directives.

Advisory and assistance services

2005		2006		2007		2006 - 2007	
Actual		Revised	Enacted	Request		Change	
\$	102,778	\$	43,324	\$	75,358	\$	32,034

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities.

Other services

2005		2006		2007		2006 - 2007	
Actual		Revised	Enacted	Request		Change	
\$	42,498	\$	17,914	\$	31,160	\$	13,246

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions.

Supplies and materials

2005		2006		2007		2006 - 2007	
Actual		Revised	Enacted	Request		Change	
\$	4,928	\$	2,077	\$	3,613	\$	1,536

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies.

CG-AC&I-160

1846

Equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	4,391	\$	1,851	\$	3,219	\$	1,369

This object class covers the purchase of capitalized and non-capitalized assets. For example, this object class enables the Coast Guard to purchase furniture for the cadets at the Coast Guard Academy and survival suits for the rescue swimmers deployed to the frigid waters of Alaska.

Land and structures

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	8,117	\$	3,422	\$	5,952	\$	2,530

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease.

CG-AC&I-162

Summary Justification and Explanation of Changes

Travel

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	52	\$	321	\$	298	\$	(23)

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request includes increases in annualizations, terminations and other base adjustments.

Transportation of things

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	5	\$	30	\$	28	\$	(2)

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves.

Other rent

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	10	\$	65	\$	60	\$	(5)

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.).

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	9	\$	58	\$	53	\$	(4)

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs.

CG-AC&I-163

Advisory and assistance services

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	3,252	\$	20,275	\$	18,820	\$	(1,455)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities.

Other services

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	1,345	\$	8,384	\$	7,782	\$	(602)

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions.

Supplies and materials

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	156	\$	972	\$	902	\$	(70)

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies.

Equipment

	2005		2006		2007		2006 - 2007

CG-AC&I-166

Summary Justification and Explanation of Changes

Salaries and Benefits

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	59,097	\$ 61,074	\$ 65,665	\$ 4,591

Salaries and benefits funds provide for compensation directly related to duties performed for the Coast Guard by active duty military personnel. This includes costs for 40,262 FTE. The FY 2007 request includes funding for the proposed pay raise, medical benefits, other mandatory personnel entitlements and program increases (371 FTE increase over FY06).

Travel

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	143	\$ 115	\$ 151	\$ 36

Travel funds cover the travel costs of Coast Guard employees, while in an authorized travel status, either directly or by reimbursing the traveler. The FY 2007 request includes increases in annualizations, terminations and other base adjustments.

Transportation of things

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	13	\$ 11	\$ 14	\$ 3

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. Specifically, funding supports the shipment of military member's household goods in conjunction with Permanent Change of Station (PCS) moves.

Other rent

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	29	\$ 23	\$ 31	\$ 7

Other rent includes all payments to a non-Federal source for rental space, land, and structures. Funding supports lease renewals for facilities (e.g. office space, waterfront/mooring facilities, equipment storage and maintenance facilities, etc.).

CG-AC&I-167

Communication, utilities, and misc charges

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	26	\$	21	\$	27	\$	6

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. Specifically, funding includes data connectivity costs for Coast Guard shore facilities, cutters, and aircraft, utility costs including shore facility utilities and cutter, boat and aircraft fuel requirements, and postal costs.

Advisory and assistance services

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	8,418	\$	7,277	\$	9,545	\$	2,268

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. Specifically, funding supports contracted training and services to repair/maintain Coast Guard operational assets and facilities.

Other services

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	3,740	\$	3,009	\$	3,947	\$	938

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. Specifically, funding supports contracted consultant services such as training manuals, architectural and engineering services, independent/third-party analysis of Coast Guard programs in support of the President's Management Agenda and Program Assessment Rating Tool and other initiatives focused on improving performance of Coast Guard missions.

Supplies and materials

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	434	\$	349	\$	458	\$	109

Supplies and materials are primarily defined as commodities that are ordinarily consumed or expended within one year after they are put into use. Specifically, funding supports procurement of consumable supplies aboard Coast Guard operational and shore support units including tools, spare part inventories for cutters, boats, aircraft, and supporting computer and communication systems, fuel required to conduct Coast Guard operations, janitorial materials, subsistence and administrative supplies. The FY 2007 request includes increases in annualizations and terminations and other base adjustments.

U. S. Coast Guard
Alteration of Bridges

I. Appropriation Overview

A. Mission Statement for Acquisition, Construction and Improvements:

The alteration of unreasonably obstructive bridges maintains navigational safety and freedom of mobility to facilitate commerce, emergency response vessels and government vessels of the United States by providing sufficient clearances for the type of vessels that transit through the bridge. Without this effort, there is greater risk of fatalities and collisions, longer transit times, negative impact on regional and national economies, negative impact on response times for emergency vessels and government vessels of the United States, increased waterway and highway/railway closures due to accidents.

B. Budget Activities:

Bridge projects supported with this funding will serve our Aids to Navigation mission.

C. Budget Request Summary:

The Coast Guard is not requesting funding for alteration of bridges in FY 2007.

CG-AB-2

III. Current Services Program Description by PPA

**Department of Homeland Security
U. S. Coast Guard
Alteration of Bridges
Program Performance Justification
(Dollars in Thousands)**

PPA I: ALTERATION OF BRIDGES

	Perm Pos	FTE	Amount
2005 Actual	\$16,601
2006 Revised Enacted	14,850
2007 Adjustments-to-Base			(14,850)
2007 Current Services	0
2007 Program Change
2007 Request	0
Total Change 2006-2007	(14,850)

The Coast Guard does not request any funding for this activity in FY 2007. This is a decrease of \$14.9 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Alteration of Bridges program provides the Federal government's share of the costs for altering or removing bridges determined to be obstructions to navigation. Alteration of obstructive highway bridges is eligible for funding from the Federal-Aid to Highways Program. Under the Truman-Hobbs Act of 1940, (33 U.S.C. 511et seq.), the Coast Guard shares, with the bridge owner, the cost of altering railroad and publicly-owned highway bridges which obstruct the free movement of vessel traffic. In addition, the U. S. Coast Guard exercises administrative control over the construction, maintenance and operation of bridges across navigable waters in the United States.

CG-AB-4

IV. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
U. S. Coast Guard
Justification of Proposed Changes in Environmental Compliance and Restoration
Appropriation Language**

[For necessary expenses for alteration or removal of obstructive bridges, \$14,850,000, to remain available until expended]. (*Department of Homeland Security Appropriations Act, 2006*).

Explanation of Changes:

No funding is requested.

PPA Mission Statement

The alteration of unreasonably obstructive bridges maintains navigational safety and freedom of mobility to facilitate commerce, emergency response vessels and government vessels of the United States by providing sufficient clearances for the type of vessels that transit through the bridge. Without this effort, there is greater risk of fatalities and allisions, longer transit times, negative impact on regional and national economies, negative impact on response times for emergency vessels and government vessels of the United States, increased waterway and highway/railway closures due to accidents.

U. S. Coast Guard
Research, Development, Testing and Evaluation

I. Appropriation Overview

A. Mission Statement for Research, Development, Testing and Evaluation:

Research, Development, Test and Evaluation (RDT&E) will allow the Coast Guard to maintain its non-homeland security research and development capability, while also partnering and leveraging initiatives identified by the Department of Homeland Security (DHS) and the Department of Defense (DOD) for efforts beneficial to the Coast Guard, DHS, and DOD for homeland security missions.

B. Budget Activities:

Research, Development, Testing and Evaluation projects provide a direct benefit for our traditional missions that include Search and Rescue (SAR), Marine Safety, Aids to Navigation (AtoN), Ice Operations, Marine Environmental Protection (MEP), Living Marine Resources (LMR), Drug Interdiction and Other Law Enforcement.

C. Budget Request Summary:

The Coast Guard requests \$13,860,000 in FY 2007 to develop technologies and systems to enhance Maritime Domain Awareness (MDA) and improve operational presence and response. Specific projects include the development of Sector Command Center (SCC) collaboration tools, the recovery of heavy oil, cold weather oil and hazardous material recovery technologies, and aquatic nuisance species remediation. Funding also supports program operations and maintenance costs (salaries, facility rent, utilities, etc.).

III. Current Services Program Description by PPA

Department of Homeland Security
U. S. Coast Guard
Research, Development, Testing and Evaluation
Program Performance Justification
(Dollars in Thousands)

PPA I: RESEARCH, DEVELOPMENT, TESTING AND EVALUATION

	Perm Pos	FTE	Amount
2005 Actual	107	97	\$26,566
2006 Revised Enacted	107	102	18,097
2007 Adjustments-to-Base	(4,237)
2007 Current Services	107	102	13,860
2007 Program Change	0
2007 Request	107	102	13,860
Total Change 2006-2007	(4,237)

The Coast Guard requests \$13.9 million for this activity. This is a decrease of \$4.2 million from FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Coast Guard Research and Development (R&D) Program supports Coast Guard missions through the development of technologies and systems to enhance Maritime Domain Awareness (MDA) and improve operational presence and response.

FY 2007 funding requirements for the R&D Program are grouped in two categories: Non-Homeland Security (legacy mission) R&D and operations & maintenance costs (salaries, facility rent, utilities, etc.).

With requested funding, the Coast Guard Research and Development (R&D) Program will conduct MDA research and development in the following areas: Situational awareness, short and long-range sensing, underwater technology, compel compliance and boarding team capability. In addition, the Coast Guard R&D Program will conduct legacy mission projects in the following areas: Search and Rescue (SAR), aquatic nuisance species and spill response.

CG-RDT&E-4

IV. Exhibits and Other Supporting Materials**A. Justification of Proposed Legislative Language**

**Department of Homeland Security
U. S. Coast Guard
Justification of Proposed Changes in Research, Development, Test and Evaluation
Appropriation Language**

For necessary expenses for applied scientific research, development, test, and evaluation, and for maintenance, rehabilitation, lease, and operation of facilities and equipment, as authorized by law, [\$18,097,000] \$13,860,000, to remain available until expended, of which [\$2,000,000] \$495,000 shall be derived from the Oil Spill Liability Trust Fund to carry out the purposes of section 1012(a)(5) of the Oil Spill Pollution Act of 1990; *Provided*, that there may be credited to and used for the purposes of this appropriation funds received from State and local governments, other public authorities, private sources, and foreign countries, for expenses incurred for research, development, testing, and evaluation. (*Department of Homeland Security Appropriations Act, 2006.*)

Explanation of Changes:

Requested funding for RDT&E has been reduced in recognition of critical operational needs of the Coast Guard, and the on-going reimbursable work performed by the Research and Development Center for the DHS Science and Technology (S&T) Directorate.

Salaries and Benefits include costs for 102 FTEs. The FY 2007 request includes an increase of \$319K to account for inflation and planned internal personnel reprogramming issues.

Travel

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	735	\$ 800	\$ 300	\$ (500)

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. Change results from a reduction in number and scope of R&D efforts. Work will focus on in house efforts in lieu of contracted efforts; therefore, less coordination with contractors and less test and evaluation of prototype equipment.

Transportation of things

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	38	\$ 41	\$ 25	\$ (16)

Change results from the reduction in number and scope of R&D efforts. There is a reduction in the amount of test equipment that needs to be shipped to test sites.

Other rent

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	343	\$ 355	\$ 650	\$ 295

Current 10 year lease expires at the end of FY 2006, estimate is at fair market value for the new lease.

Communication, utilities, and misc charges

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	80	\$ 87	\$ 50	\$ (37)

Change results from the reduction in number and scope of R&D efforts. There is a reduction in support services needed at test and evaluation sites.

CG-RDT&E-14

Other services

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	27	\$	29	\$	200	\$	171

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. With more of the R&D effort being done in-house there is an increase in ancillary services needed to support R&D efforts that previously would have been part of a R&D Contract.

Purchases of goods & svcs. from gov't accounts

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	150	\$	163	\$	100	\$	(63)

Change results from the reduction in number and scope of R&D efforts. There will be a reduction in work done at other government facilities.

Research and development

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	6,782	\$	7,380	\$	900	\$	(6,480)

Change results from the reduction in number and scope of R&D efforts. There will be a great reduction in contracted out efforts.

Operation and maintenance of equipment

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	37	\$	565	\$	215	\$	(350)

Change results from the reduction in number and scope of R&D efforts. There is a reduction in amount and frequency of test and evaluation equipment needed at test and evaluation sites.

Supplies and materials

	2005		2006		2007		2006 - 2007
	Actual		Revised Enacted		Request		Change
\$	771	\$	839	\$	424	\$	(415)

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are in use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. Change results from the reduction in number and scope of R&D efforts. There will be a corresponding reduction in supplies and material needed.

1889

Equipment

2005 Actual	2006 Revised Enacted	2007 Request	2006 - 2007 Change
\$ 63	\$ 69	\$ 30	(\$ 39)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Change results from the reduction in number and scope of R&D efforts. There will be a reduction in the amount of equipment that will be required.

CG-HFC-1

U. S. Coast Guard
Medicare-Eligible Retiree Healthcare Fund Contribution

I. Appropriation Overview

A. Mission Statement for the Healthcare Fund Contribution:

The Medicare-Eligible Retiree Healthcare Fund Contribution (HFC) will provide funding to maintain the cost of accruing the military Medicare-eligible health benefit contributions to the Department of Defense Medicare-Eligible Retiree Health Care Fund. Contributions are for future Medicare-eligible retirees currently serving active duty in the Coast Guard, retiree dependents, and their potential survivors.

The authority for the Coast Guard to make this payment on an annual basis was provided in P. L. 108-375, the 2005 Defense Appropriations Act. While this expenditure requires no annual action by Congress, it is counted as discretionary spending.

B. Budget Activities:

Although there are no budget activities directly related to providing this benefit to Active Duty personnel and their dependents, this ensures the personal well-being of every uniformed member of the Coast Guard.

C. Budget Request Summary:

The Coast Guard estimates it will pay \$278,704,000 to the DOD Medicare-Eligible Retiree Healthcare Fund in FY 2007 to support the benefits outlined above. The total adjustment to base is \$18,171,000 for non-pay inflation. No program increase is requested for FY 2007.

2007 Current Services	278,704
2007 Program Change
2007 Request	278,704
Total Change 2006-2007	18,171

The Coast Guard requests \$278.7 million for this activity. This is an increase of \$18.2 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

The Medicare-Eligible Retiree Healthcare Fund Contribution (HFC) will provide funding to maintain the cost of accruing the military Medicare-eligible health benefit contributions to the Department of Defense Medicare-Eligible Retiree Health Care Fund. Contributions are for future Medicare-eligible retirees, retiree dependents and survivors in the Coast Guard.

¹ In FY 2005, funding for this contribution was accounted for within the Operating Expenses appropriation, but it is displayed here for presentation purposes. Beginning in FY 2006, the contribution was officially re-allocated from the Operating Expenses appropriation to the Medicare-Eligible Retiree Healthcare Fund Contribution appropriation.

I. Appropriation Overview

A. Mission Statement for Retired Pay:

Retired Pay (RP) will provide payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans, payments for career status bonuses, concurrent receipts and combat related special compensation identified under the National Defense Authorization Act. It also provides payments for medical care of retired personnel and their dependents.

B. Budget Activities:

Although there are no budget activities directly related to providing this benefit to Active Duty personnel and their dependents, this ensures the personal well-being of every Coast Guard retiree and their dependents.

C. Budget Request Summary:

The Coast Guard requests \$1,063,323,000 in FY 2007 to support the benefits outlined above.

PPA Mission Statement

Retired Pay (RP) will provide payments as identified under the Retired Serviceman's Family Protection and Survivor Benefits Plans, payments for career status bonuses, concurrent receipts and combat related special compensation identified under the National Defense Authorization Act. It also provides payments for medical care of retired personnel and their dependents.

CG-RP-12

Summary Justification and Explanation of Changes

Salaries and Benefits

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	805,076	\$ 884,000	\$ 897,073	\$ 13,073

Requested increase accounts for cost-of-living adjustments for all retirement and most survivor annuities as well as entitlement benefits authorized in the National Defense Authorization Act.

Medical care

	2005	2006	2007	2006 - 2007
	Actual	Revised Enacted	Request	Change
\$	139,499	\$ 130,080	\$ 166,250	\$ 36,170

Requested increase accounts for medical inflation benefits for members before they become Medicare eligible. Once a member becomes eligible for Medicare, the Medicare-Eligible Retiree Health Care Fund (HFC) is responsible for these benefits.

U. S. Coast Guard**Boating Safety****I. Appropriation Overview.****A. Mission Statement for Boating Safety:**

The Boating Safety (BS) program is designed to minimize the loss of life, personal injury, property damage and environmental impact associated with the use of recreational boats, through preventive means, in order to maximize safe use and enjoyment of U.S. waterways by the public. In its role as the designated National Recreational Boating Safety (RBS) Program Coordinator, the Coast Guard is charged with managing dedicated user fee funding to support the National RBS Program provided from the Sport Fish Restoration and Boating Trust Fund (formerly Aquatic Resources Trust Fund). Under the provisions of the Sport fishing and Recreational Boating Safety Act of 2005 (Subtitle A, Title X, P.L. 109-59), the Coast Guard will receive a percentage distribution of total trust fund receipts from the preceding FY (e.g., FY07 funding will be a percentage of FY06 trust fund receipts), and a portion of the funds drawn out of the Boat Safety Account of the trust fund.

B. Budget Activities:

Boat Safety supports our Search and Rescue mission.

C. Budget Request Summary:

The FY 2007 budget provides the anticipated amount that will be available from the trust fund for boating safety based on current estimates of FY 2006 trust fund receipts from the Office of Tax Analysis of the Department of the Treasury, adjusted to reflect amendments of current law enacted in P.L. 109-59. The estimated total distribution from the trust fund for boating safety for FY 2007 is \$115 million. Of that amount, \$5.5 million is available for use by the Coast Guard to coordinate and carry out new and enhanced National RBS Program activities. The balance is authorized for the State RBS Grant Program established by 46 U.S.C. 13101, et seq., minus not more than five percent for national boating safety activities of national nonprofit public service organizations, and not more than two percent for Coast Guard costs to administer the State RBS programs.

U. S. Coast Guard
Oil Spill Recovery

I. Appropriation Overview

A. Mission Statement for Oil Spill Recovery:

The Oil Spill Recovery fund will provide a source of funds for removal costs and damages resulting from oil spills, or the substantial threat of a spill, into navigable waters of the U.S. In accordance with the provisions of the Oil Pollution Act of 1990, the President may make available up to \$50 million annually from the Fund for oil spill removal activities. The Fund also pays all valid claims for removal costs and damages resulting from oil spills. Claims can be presented by government entities, the private sector, and the general public for: uncompensated removal costs; damage to real or personal property; loss of profits and earning capacity; loss of subsistence use of natural resources; loss of government revenues; and, increased cost of public services. Federal, State, and Indian Tribe Trustees may also present claims for natural resource damages resulting from a spill. In addition, responsible parties (RP) may submit defense to liability claims alleging an "act of God," "act of war," or "sole fault of a third party," in which the RP is seeking reimbursement for all removal and damage costs it incurred as a result of a spill. RP's may also submit limit-of-liability claims, in which the RP demonstrates that the OPA liability limit applies and seeks reimbursement for costs incurred in excess of the applicable limit.

B. Budget Activities:

This fund directly supports our Marine Environmental Protection (MEP) mission.

C. Budget Request Summary:

The Coast Guard estimates that expenditures from the Oil Spill Recovery fund will total \$126,900,000 in FY 2007; the adjustment to the base from FY 2006 is (\$41,000,000). Since the balances of the Oil Spill Liability Trust Fund are held in a trust, an annual expenditure transfer is made to the Oil Spill Recovery account reflecting the anticipated activity for the fiscal year. In 2007, the Coast Guard estimates the following transfer will be made from the OSLTF to the Recovery account: \$50 million will be allocated for oil spill removal costs, \$1 million for the Oil Spill Recovery Institute (established by Congress in 1990 to support research, education and demonstration projects designed to address oil spills in the Arctic and sub-Arctic marine environments) and \$75.9 million will be required for payment of claims.

2007 Current Services	126,900
2007 Program Change
2007 Request	126,900
Total Change 2006-2007	(41,100)

The Coast Guard requests \$126.9 million for this activity. This is a decrease of \$41.1 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

Title I of the Oil Pollution Act of 1990 (OPA) provided for the use of a \$1 billion Oil Spill Liability Trust Fund (OSLTF) to pay for expeditious oil removal and uncompensated damages. In section seven of Executive Order 12777, the President delegated management responsibility for the OSLTF to the Secretary of the Department in which the Coast Guard is operating. Upon re-delegation by the Secretary, the Commandant of the Coast Guard delegated responsibility to the created National Pollution Funds Center (NPFC), which oversees the OSLTF. OSLTF uses under OPA include:

- Removal costs incurred by the Coast Guard and U. S. Environmental Protection Agency (EPA) Federal On-Scene Coordinators (FOSCs);
- Payments to Federal, state, and Indian tribe trustees to conduct Natural Resource Damage Assessments (NRDAs) and restorations;
- Payment of claims for uncompensated removal costs and damages; and
- Administrative, operational, and personnel costs and expenses incidental to implementation, administration, and enforcement of OPA and certain provisions of section 311 of 33 U.S.C. 1321.

PPA Mission Statement

The Oil Spill Recovery fund will provide a source of funds for removal costs and damages resulting from oil spills, or the substantial threat of a spill, into navigable waters of the U.S. In accordance with the provisions of the Oil Pollution Act of 1990, the President may make available up to \$50 million annually from the Fund for oil spill removal activities. The Fund also pays all valid claims for removal costs and damages resulting from oil spills.

Miscellaneous Funds

I. Gift Fund Overview

A. Mission Statement for Gift Fund

The Coast Guard General Gift Fund is authorized under Section 2601 of Title 10's provisions for such funds within the Department of Defense and the Coast Guard. The General Gift Fund is a vehicle that authorizes the Commandant of the Coast Guard to accept gifts and donations for the benefit of activities such as museums, chapels, and other organizations under the jurisdiction of the Coast Guard. A recent change also authorizes the Coast Guard to accept gifts to be used for the benefit of service members who are wounded, injured, or taken ill while in the line of duty, as well as for those members' dependents and survivors.

B. Budget Activities:

To accept and spend gifts, devises, and bequests to support the Coast Guard, its institutions, and its qualifying service members and dependents.

C. Budget Request Summary:

The Coast Guard requests \$80,000 in FY 2007 towards the Gift Fund.

II. Yard Fund Overview

A. Mission Statement for Yard Fund

The Yard Fund is a revolving account supported by the Coast Guard's Operation Expense (OE) and Acquisitions, Construction & Improvements (AC&I) appropriations to pay for FTE and materials required for Coast Guard projects and work orders completed by the Coast Guard Yard, located in Curtis Bay, Maryland.

B. Budget Activities:

Through their completion of mission-essential logistics and engineering support (e.g., cutter drydocking), Coast Guard Yard personnel contribute to all Coast Guard missions: Search and Rescue (SAR); Marine Safety; Aids to Navigation (AtoN); Ice Operations; Marine Environmental Protection (MEP); Living Marine Resources (LMR); Drug Interdiction; Migrant Interdiction; Other Law Enforcement; Ports, Waterways and Coastal Security (PWCS); and Defense Readiness.

Department of Homeland Security

United States Coast Guard

Strategic Context

Fiscal Year 2007

Congressional Justification

**U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT**

A. MISSION AND DESCRIPTION

The U. S. Coast Guard is the lead Federal agency for maritime homeland security and one of the five armed services of the United States of America. As such, it is an important element and enabler of U.S. national security strategies. The Coast Guard protects vital interests of the U. S. – the personal safety and security of our population, our natural and economic resources, and the territorial integrity of our maritime borders – from internal and external threats, natural and man made. The Coast Guard protects these interests in U.S. ports and inland waterways, along the coasts, on international waters or in any other maritime region where U. S. interests may be at risk. From 1915, when the U. S. Coast Guard was established by law as an armed service, it has been a **military, multi-mission, maritime service** possessing a unique blend of humanitarian, law enforcement, regulatory, diplomatic and military capabilities.

Each of the Coast Guard's strategic roles is composed of specific statutorily mandated mission-programs¹, totaling 11 in all. Each mission-program, in turn, is based on one or more mandated or authorized duties. Many Coast Guard mission-programs benefit more than one role. For example, while our aids to navigation mission-program primarily supports our maritime mobility role by facilitating the movement of people and goods, the system of aids we maintain also supports our maritime safety and protection of natural resources role by preventing accidents. Table 1 shows the primary alignment among Coast Guard roles and mission-programs.

Major Commands:

Table 1

¹ The term "mission-program" is used by the Coast Guard to identify one of its 11 statutorily mandated missions that guide Coast Guard budget presentations as well as strategic planning, programming and performance.

² Categorization of mission-programs and respective funding is done in compliance with Section 889 of the Homeland Security Act of 2002.

U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT

B. MAJOR ACTIVITIES AND KEY STRATEGIC ISSUES

Major Activities

Mitigating maritime risks requires a ready, capable Coast Guard force. The foundation of current and future enhancements remains Coast Guard readiness, a function of providing Coast Guard personnel with the tools and training necessary for the missions assigned and ensuring the fleets of Coast Guard cutters, aircraft and boats are able to maintain an effective and sustained presence in order to counter maritime threats. It is on that foundation that we will continue to enhance maritime capabilities. These enhancements will be based on priorities set by national strategies and the Secretary of Homeland Security; in particular, the Secretary's Six-Point Agenda outlined in July 2005.

No national strategy is more relevant to the historic roles and future needs of the Coast Guard than the *National Strategy for Maritime Security*. It set forth five Strategic Actions:

- **Enhance International Cooperation;**
- **Maximize Domain Awareness;**
- **Embed Security into Commercial Practices;**
- **Deploy Layered Security;**
- **Assure Continuity of the Marine Transportation System.**

The Coast Guard will execute these strategic actions through the lens of the homeland security agenda as summarized in Table 2 on the following page.

Key Strategic Issues

The United States remains engaged in a global struggle against extremism, with elements intent on harming the United States and its citizens. For the foreseeable future, terrorists and violent extremists will have the means and opportunity to target U.S. interests on a global scale using the oceans and maritime transportation system as a means for, as well as target of, attacks. These threats recognize no border and originate from organized groups and individuals operating within or outside the United States.

Protecting the homeland of a free society is a daunting task and one that is particularly difficult in the maritime domain. The oceans provide almost unrestricted access to the shores and the waterways that connect many American cities and the Nation's heartland. Distinct from other domains (e.g., air, cyber), the maritime domain has relatively few access barriers and provides an expansive pathway for a wide spectrum of threats.

STRATEGIC RISKS

Near-term threats are not likely to come from peer adversaries or massing opposition armies and navies, but rather highly mobile individuals and groups that are difficult to detect, track and interdict. Detecting such threats is an extreme challenge even within areas of undisputed U. S. jurisdiction. The United States is bounded but not protected by its ocean borders. Our maritime domain - the oceans, and thus the coastal approaches to the United States, must be viewed as they are: critical national borders that are expansive pathways for potential threats, ripe for exploitation and disruption.

The vastness of the maritime domain and the variety of risks it presents require a continual effort to better understand the nature and severity of risks so that we may apply resources, which are always finite, in the most efficient manner possible. Toward this end, the Coast Guard has deployed a number of tools at the port and national levels to assess and monitor risk in order to prioritize resource allocation. At the national level, this has included a National Maritime Strategic Risk Assessment (NMSRA) that serves to identify risk by Coast Guard strategic role. In assessing a variety of incidents affecting

**U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT**

DHS Six-Point Agenda	National Strategy for Maritime Security				
	Enhance International Cooperation	Maximize Domain Awareness	Embed Security into Commercial Practices	Deploy Layered Security	Assure Continuity of Marine Transportation System
Increase overall preparedness, particularly for catastrophic events	International Maritime Law Enforcement Training	CG partnerships with TRANSPORT Canada and allied exercises	Automatic Identification System (AIS) carriage requirements	National Capital Region Air Defense (\$4M in FY06, \$62.4M in FY07) Marine Security Response Team (\$4.8M in FY07) SCBA Implementation (\$7.2M in FY07)	National Response Options Matrix
Create better transportation security systems to move people and cargo more securely and efficiently	Foreign Port Security Assessment	Nationwide AIS infrastructure (\$24M in FY06, \$11.2M in FY07) Maritime Domain Awareness (\$6.4M in FY07)	MTSA/ISPS enforcement Mariner Licensing Documentation Centralization	Deepwater (\$724M in FY05, \$924M in FY06, \$934M in FY07)	National Response Options Matrix
Strengthen border security and interior enforcement and reform immigration processes	ISPS compliance lessons learned and best practices sharing	Deepwater (\$724M in FY05, \$924M in FY06, \$934M in FY07)	Port State Control vessel targeting matrices	Deepwater (\$724M in FY05, \$924M in FY06, \$934M in FY07) Response Boat-Medium (\$12M in FY05, \$18M in FY06, \$25M in FY07)	Rescue 21 (\$94M in FY05, \$41M in FY06, \$40M in FY07)
Enhance information sharing with our partners	Coast Guard leadership within Int'l Maritime Organization	Maritime Domain Awareness (\$22M in FY06, \$6.4M in FY07)	National Maritime Security Advisory Committee	Partnerships and agreements with DOD and NORTHCOM	Area Maritime Security Committees
Realign the DHS organization to maximize mission performance	The Coast Guard has re-aligned its field infrastructure to Sector Commands in order to unify Coast Guard authorities and capabilities within U.S. ports. The Coast Guard plans to relocate Coast Guard Headquarters in order to enhance capability and efficiency. (\$50.2M in FY07)				
Improve DHS financial management, HR development, procurement and IT	CFO Act Remediation (\$2M in FY07)				

the accomplishment of Coast Guard strategic goals, maritime security risk (especially that related to terrorism) represents the largest portion of risk in the maritime domain as shown in Figure 1. Accordingly, enhancing maritime homeland security will necessarily remain the near-term focus of Coast Guard resource and policy enhancements.

As important as understanding the type of maritime risks is understanding where and how that risk can be mitigated. Nowhere is the need for an active, layered defense more important than the maritime domain. The flow of people, vessels and cargo through U.S. maritime borders is part of a complex and interdependent global system. It is a system wherein exclusive U.S. jurisdiction is limited but U.S.

**U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT**

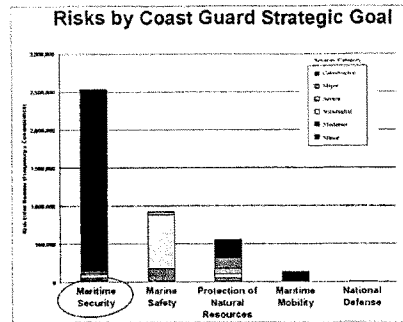

Figure 1 - Maritime Risks by Strategic Goal

interests are far-reaching. As a result, effective maritime homeland security must begin outside the homeland. International cooperation and engagement will continue to be critical pillars as we seek to enhance the security of the maritime domain. Identifying threats as far from U.S. shores as possible depends on our ability to improve awareness of the people, vessels and cargo approaching and moving throughout U.S. ports, coasts and inland waterways. Awareness is fundamental to enabling effective resource and operational decisions at every level of command - strategic, operational and tactical. However, awareness alone is not enough. Just as important will be equipping maritime first responders with the capabilities and competencies needed to accomplish the mission. For example, the advance information required of vessels arriving to the U.S is critical to understanding who and what is arriving in order to identify potential threats. However, if Coast Guard cutters and aircraft do not have the capabilities necessary to deal with identified threats early and effectively, an opportunity to mitigate risk is lost. Specific enhancements will continue to be needed not only to deal with potential threats within U.S. ports but also to ensure that when required, threats can be stopped before they ever reach U.S. ports. A guiding principle to each security enhancement will continue to be the facilitation of safe and secure maritime commerce. For example, funding appropriated in FY 2006 to restructure the Merchant Mariner Licensing and Documentation program (\$12M) by centralizing critical security vetting and mariner credentialing processes in a new, enhanced National Maritime Center will dramatically improve security on our nation's waterways, while facilitating efficient service to mariners.

C. RESOURCES REQUESTED AND PERFORMANCE IMPACT

The 2007 Budget proposes a discretionary budget authority of over \$7.1 billion for the Coast Guard, including \$934 million for *Deepwater* modernization initiatives. *Deepwater* will transform the Coast Guard and enhance capabilities to meet current and future mandates through system-wide recapitalization and modernization of Coast Guard cutters, aircraft and associated subsystems. More capable and reliable cutters, boats, aircraft and associated systems will enhance safety and security in U.S. ports by improving the Coast Guard's ability to perform all its missions. *Deepwater* will improve the Department's ability to respond to security threats and reduce maritime security risk.

As a result of resources received, several Coast Guard programs have been able to set targets describing increased performance in the five-year outlook. For example, the planned FY 2007 Drug Interdiction performance increase of 4% in the cocaine removal rate is possible, in part, due to continued funding for Airborne Use of Force initiatives (\$46M requested in FY 2007) and recent increases in Maritime Patrol Aircraft (MPA) hours (\$6.1M requested in FY 2007). This performance increase is likely *despite* the temporary reduction in major cutter hours expected to occur in FY 2007 as a result of the medium endurance cutters undergoing Mission Effectiveness Projects (\$37.8M), made necessary by the degradation of our legacy assets. The funds requested for the National Capitol Region Air Defense

CG-SC-4

U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT

(\$62.4M) initiative, and Maritime Security Response Teams (\$4.8M) are critical to reducing the risk of attacks against high value assets and key infrastructure, a goal most closely aligned with the Ports, Waterways and Coastal Security (PWCS) mission-program, which encompasses the Coast Guard's efforts to prevent and protect against terrorist attacks. In addition, the funds requested ensure no degradation to other mission-programs by providing funds for additional airframes to sustain the increased mission demand.

Other increases in Coast Guard performance are better explained through the *holding steady* of performance levels against a more challenging future environment. An example is the Living Marine Resources (Domestic Fisheries Enforcement) mission-program which has forecasted its FY 2007 performance (97% compliance) at FY 2006 levels. Recent trends favor the growth of more-difficult-to-enforce regulations, such as individual fishing quotas and larger closed areas. Challenges like these compel the Coast Guard to seek internal efficiencies and improvements. The planned relocation to Alaska of a more capable high endurance cutter and the associated early decommissioning of the cutters STORIS and GENTIAN (reflecting a cost savings of \$3.6M) are examples of positive steps the Coast Guard is taking to increase efficiencies within its budget while maintaining high mission performance. Other efficiencies include personnel reductions (\$5M) and management efficiencies (\$9.3M) that contribute to streamlining overhead costs – these efforts will allow us to re-direct funding towards sustaining our current operational tempo.

To date, eight mission programs – Search and Rescue, Aids to Navigation, Living Marine Resources, Marine Environmental Protection, Drug Interdiction, Other Law Enforcement (i.e. Foreign Fisheries/EEZ Enforcement), Migrant Interdiction and Ice Operations have been reviewed by OMB's Program Assessment Rating Tool (PART) in the course of the FY 2004, 2005 and 2006 budget cycles. A ninth mission-program – Marine Safety – is presently being reviewed by OMB for the 2007 budget cycle. The PART has fostered the identification of both specific mission-program performance and enterprise wide improvement opportunities upon which the Coast Guard continues to act. In addition, the Coast Guard has acted upon PART recommendations regarding the use of independent program evaluations for improving performance and efficiency, and teamed with the Center for Naval Analyses (CNA) to conduct an evaluation of the Migrant Interdiction mission program. The results of CNA's evaluation were overwhelmingly positive, and the Coast Guard has since commissioned similarly designed studies of its Search and Rescue, Living Marine Resources and Other Law Enforcement mission-programs.

With respect to specific mission-program improvement recommendations, the PART has proven quite valuable to the Coast Guard. The Coast Guard continues to strive toward improving its drug interdiction performance via capability initiatives, such as the *Deepwater* and the expanded use of armed helicopters, and partnership initiatives such as bilateral counter-drug agreements with countries bordering the Caribbean and Eastern Pacific. In the Search and Rescue arena, the ongoing development and fielding of Rescue 21 (\$40M requested in FY 2007), combined with the introduction of follow-on 87-foot coastal patrol boats, the addition of over 500 personnel to our multi-mission stations and command centers (\$6.6M in follow-on requested in FY 2007), as well as enhancements to the Motor Lifeboat School and Boatswain's Mate "A" School all serve as key capability and competency improvements focused on addressing gaps identified in the SAR mission-program's FY 2004 PART review. In response to OMB's recommendations following the FY 2006 PART review of the Ice Operations mission-program, the Coast Guard worked with the National Science Foundation, DHS and OMB to re-structure the budget framework that supports the Polar Icebreaking program component. Within the Domestic Icebreaking component, the PART spurred efforts within the Coast Guard to pursue performance measurement improvements. Finally, the FY 2006 review of the Migrant Interdiction mission-program – combined with the PART-aligned and inspired CNA evaluation that was conducted – resulted in a host of improvements to program planning, measurement and management.

U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT

D. PROGRAM AND PERFORMANCE GOAL ALIGNMENT TO DHS STRATEGIC PLAN OBJECTIVES

The 11 Coast Guard mission-programs and their long-term performance goals are listed below, followed by the DHS strategic objective(s) they support.

Search and Rescue – The Coast Guard’s long-term goal is to save mariners in imminent danger on our Nation’s oceans and waterways.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- RESPONSE Objective 4.3: Provide search and rescue services to people and property in distress.

Marine Safety – The Coast Guard’s long-term goal is to eliminate maritime fatalities and injuries on our Nation’s oceans and waterways.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PREVENTION Objective 2.5: Strengthen the security of the Nation’s transportation systems.

Aids to Navigation – The Coast Guard’s long-term goal is to eliminate collisions, allisions and groundings by vessels on our Nation’s oceans and waterways.

- AWARENESS Objective 1.1: Gather and fuse all terrorism related intelligence; analyze and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- SERVICE Objective 6.4: Facilitate the efficient movement of legitimate cargo and people

Ice Operations – The Coast Guard’s long-term goal is to maintain operational channels for navigation, limiting channel closures to two days (during average winters) and eight days (during severe winters).

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- SERVICE Objective 6.4: Facilitate the efficient movement of legitimate cargo and people.

CG-SC-6

U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT

Marine Environmental Protection (MEP) – The Coast Guard’s long-term goal is to eliminate oil spills and chemical discharge incidents.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PROTECTION Objective 3.6: Protect the marine environment and living marine resources.
- RESPONSE Objective 4.1: Reduce the loss of life and property by strengthening nationwide response readiness.
- RESPONSE Objectives 4.2: Provide scalable and robust all-hazard response capability.
- RECOVERY Objective 5.2: Provide scalable and robust all-hazard recovery assistance.

Living Marine Resources (LMR) – The Coast Guard’s long-term goal is to achieve sustained fisheries regulation compliance on our Nation’s Oceans.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PROTECTION Objective 3.6: Protect the marine environment and living marine resources.

Illegal Drug Interdiction – The Coast Guard’s long-term goal is to reduce the flow of illegal drugs entering the U.S. via non-commercial maritime shipping sources.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PREVENTION Objective 2.1: Secure our borders against terrorists, means of terrorism, illegal drugs, and other illegal activity.

Undocumented Migrant Interdiction – The Coast Guard’s long-term goal is to eliminate the flow of undocumented migrants via maritime routes to the U.S.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PREVENTION Objective 2.1: Secure our borders against terrorists, means of terrorism, illegal drugs and other illegal activity.

CG-SC-7

U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT

- SERVICE Objective 6.3: Support the United States humanitarian commitment with flexible and sound immigration and refugee programs.

Other Law Enforcement – The Coast Guard’s long-term goal is to reduce the numbers of vessel incursions into the United States Exclusive Economic Zone (EEZ).

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PREVENTION Objective 2.1: Secure our borders against terrorists, means of terrorism, illegal drugs and other illegal activity.

Ports, Waterways, and Coastal Security (PWCS) – The Coast Guard’s long-term goal is to reduce homeland security risk in the maritime domain.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.
- PREVENTION Objective 2.1: Secure our borders against terrorists, means of terrorism, illegal drugs, and other illegal activity.
- PREVENTION Objective 2.5: Strengthen the security of the Nation’s transportation systems.
- PROTECTION Objective 3.1: Protect the public from acts of terrorism and other illegal activity.
- RESPONSE Objective 4.1: Reduce the loss of life and property by strengthening nationwide response readiness.
- RESPONSE Objective 4.2: Provide scalable and robust all-hazard response capability.

Defense Readiness – The Coast Guard’s long-term goal is to support our national security and military strategies by ensuring assets are at the level of readiness required by the combatant commander.

- AWARENESS Objective 1.1: Gather and fuse all terrorism-related intelligence; analyze, and coordinate access to information related to potential terrorist or other threats.
- AWARENESS Objective 1.4: Develop a common operating picture for domestic situational awareness, including land, sea, and air.

PREVENTION Objective 2.4: Ensure national and international policy, law enforcement, and other actions to prepare for and prevent terrorism are coordinated.

**U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT**

E. PERFORMANCE BASED BUDGET HIGHLIGHTS BY PROGRAM

The Coast Guard's Mission Cost Model (MCM) is a modern, flexible and agile tool that enables the Coast Guard to use activity-based costing techniques to allocate direct, indirect and support costs to mission-programs and the strategic goals and objectives that they support. As a result, greater transparency is realized with respect to the relationship between resources consumed and the results achieved by Coast Guard programs. The performance based budget projection that the MCM provides is key not only to the Coast Guard's budget processes, but to other related macro-level policies and initiatives, such as the President's Management Agenda initiative of Budget and Performance Integration, OMB Program Assessment Rating Tool (PART) reviews, and the Government Performance and Results Act. The following tables provide program-specific information that shows the relationship between budgetary funding and personnel resources, and the lead outcome performance goals that have been established for each of the Coast Guard's 11 mission programs.

Performance Goal: Eliminate collisions, allisions and groundings by vessels on our Nation's oceans and waterways.						
Measure: Five-Year Average of Number of Collisions, Allisions, and Groundings (CAG)	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	2,010 or fewer	1,923 or fewer	1,831 or fewer	1,748 or fewer	1,664 or fewer
	Actual	1,523	1,876	1825		
Program: Aids to Navigation (AtoN)	\$ Thousands	\$928,429	\$945,827	\$1,152,794	\$1,086,817	\$1,060,816
	FTE	7,804	6,749	6,985	7,521	7,512

Performance Goal: Support our national security and military strategies by ensuring assets are at the level of readiness required by the combatant commander.						
Measure: Percent of time that Coast Guard assets included in the Combatant Commander Operational Plans are ready at a Status of Resources and Training System (SORTS) rating of 2 or better.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	100	100%	100%	100%	100%
	Actual	78	76%	69		
Program: Defense Readiness	\$ Thousands	\$586,733	\$229,068	\$612,554	\$615,814	\$602,632
	FTE	461	996	2,942	2,079	2,109

Performance Goal: Reduce the flow of illegal drugs entering the U.S. via non-commercial maritime shipping sources.						
Measure: Removal rate for cocaine that is shipped via non-commercial maritime means.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target		15%	19%	22%	26%
	Actual		30.7%	Estimate (as of 9/30/05) 137.5 Metric Tons Seized. Final percent removal pending release of the Defense Intelligence Agency's annual Inter-agency Assessment of Cocaine Movement report expected to be released by May 2006.		
Program: Drug Interdiction	\$ Thousands	\$747,820	\$907,232	\$1,017,478	\$1,211,218	\$1,239,474

**U. S. COAST GUARD
CONGRESSIONAL-STAGE REQUEST – Fiscal Year 2007
STRATEGIC CONTEXT**

Performance Goal: Reduce the numbers of vessel incursions into the United States Exclusive Economic Zone (EEZ).						
Measure: Number of incursions into the U.S. Exclusive Economic Zone.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	202	202	200	199	199
	Actual	153	247	171		
Program: Other LE (law enforcement)	\$ Thousands	\$274,300	\$102,958	\$94,642	\$143,924	\$152,569
	FTE	2,008	657	445	710	723

Performance Goal: Reduce homeland security risk in the maritime domain.						
Measure: Ports, Waterways, and Coastal Security Risk Index *	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target			Full implementation of planned activities geared towards lowering the risk due to terrorism in the maritime domain.	Full implementation of planned activities geared toward lowering the risk due to terrorism in the maritime domain.	A reduction of 15% to that quantifiable Maritime Risk that the Coast Guard is able to impact.
	Actual		Not Reported	Activities implemented as planned. Risk index (for that quantifiable risk that the Coast Guard is able to impact) was estimated to have been reduced by approximately 14%. (Or, approximately 4% of all of the estimated maritime risk was reduced.)		
Program: Ports Waterways and Coastal Security (PWCS)	\$ Thousands	\$1,736,024	\$1,833,794	\$1,625,391	\$1,734,717	\$2,034,848
	FTE	11,613	14,670	12,268	12,916	13,206

* Beginning in FY 2005, the Coast Guard is using a new risk index to demonstrate its PWCS performance. This first time effort is a baseline that will be refined and improved upon in the next several years as the modeling, simulation, and analysis of terror-attack scenarios improves. These risk reduction estimates represent the Coast Guard's initial estimate of its outcome performance, expressed as a percent reduction of that portion of the risk the Coast Guard can mitigate. The assessment is based on national threat assessment data and standardized actuarial methodologies. This risk measurement method builds upon industry assessment models, and provides for a balanced management approach to dealing with an unknown adversary: one that requires careful focus on prevention (threat), protection (vulnerability), and response - in the event an attack occurs (consequence). This scenario-based approach is accepted as a best practice and way ahead among GAO, academia, and the private sector (insurance and other industries).

This first risk-reduction analysis was largely an internal, self assessment. Improved, future iterations will seek to validate the process and improve the accuracy of the conclusions by including external stakeholders from among the maritime community. Specifically, external validation will be sought to refine the estimate of how much (and of which type) of maritime security risk the Coast Guard itself is most responsible for mitigating.

S&T - ii

iii. Status of Congressional Requested Studies and Reports**Department of Homeland Security, Science and Technology Directorate**

1. The Intelligence Reform and Terrorism Prevention Act of 2005 (PL 108-458) directs the Under Secretary to submit a report describing DHS' plans to secure airports and the aircraft arriving and departing from airports against Man-Portable Air Defense Systems (MANPADS) attacks. This is a joint S&T/TSA report. We anticipate delivery to Congress by February 28, 2006.
2. The Intelligence Reform and Terrorism Prevention Act of 2005 (PL 108-458) directs the Under Secretary to submit a report the pilot program to test various advanced technologies that will improve border security between ports of entry along the northern border of the U.S., which shall include: (1) a discussion of the implementation of the pilot program, including the experience under the pilot program; and (2) a recommendation regarding whether to expand the pilot program along the entire northern border of the U.S. and a timeline for the implementation of the expansion. We anticipate delivery to Congress by January 31, 2006.
3. House Appropriations Report HR109-79 recognizes that the Committee is aware that Science and Technology, in cooperation with Transportation Security Administration and U.S. Customs and Border Protection, has a number of initiatives underway concerning the security of containers, including the detection of materials within the container and the security of the container itself. S&T is looking to assure the integrity of conveyance loading and documentation; significantly reduce the risk of undetected tampering in transit; and provide accurate, complete, timely and protected shipment information while enhancing supply chain efficiency. These initiatives are underway through the solicitation of technologies through a small business innovative research effort and a broad agency announcement. The Committee continues to support this important effort and urges S&T to accelerate its efforts where possible and to report to the Committee by February 10, 2006 on its progress to date. We anticipate delivery to Congress by February 10, 2006.
4. House Appropriations Report HR109-79 directs Science and Technology to develop standards and testing protocols for measuring performance of blast-resistant products, and initiate testing of both installed and new products. The Committee further directs Science and Technology to report back on the status of this effort no later than January 16, 2006. We anticipate delivery to Congress by February 10, 2006.
5. House Appropriations Report HR109-79 directs the SAFETY Act Office to report to the Committee on the status of applications, certification decisions, its actions to speed up this process, and efforts to streamline the application process by January 16, 2006. We anticipate delivery to Congress by February 10, 2006.
6. House Appropriations Report HR109-79 states that merging multiple agencies in the formation of the Department created overlapping activities, such as addressing interoperability and assessment of technology and equipment. The Committee strongly supports Office of Interoperability and Compatibility (OIC) efforts to align these programs to ensure conformance, compatibility and interoperability as well as steps to enhance training and communications. The Committee specifically notes the critical work done by the Risk Assessment Policy working group to align risk assessment policies and methodologies and directs OIC to report to the Committee on the status of its efforts. We anticipate delivery to Congress by February 10, 2006.

7. The Intelligence Reform and Terrorism Prevention Act of 2005 (PL 108-458) directs the Secretary to submit a final report regarding the interagency communications pilot projects required by Section 7304 paragraph (a) not later than 18 months after the date of enactment of this Act. We anticipate delivery to Congress by June 17, 2006.

8. House Appropriations Report HR109-79 funded three cargo screening pilot programs -- one at an air cargo airport and two at top ten passenger cargo airports. The Committee expects each of these pilots to be no shorter than nine months in duration and all pilots to be completed by January 31, 2007. A comprehensive report on each pilot program two months after each is completed and interim reports of progress and results no later than August 31, 2006. We anticipate delivery of all reports in sequence to Congress as required, with the final report delivered by August 31, 2006.

9. The Real ID Act (PL 109-13, Division B, Section 302) directs the DHS Under Secretary for S&T, in consultation with the Under Secretaries for BTS and IAIP and the Secretary of Defense to develop and implement a pilot program to utilize, or increase the utilization of, ground surveillance technologies to enhance U.S. border security (see section for additional requirements of pilot program). BTS is responsible for implementation. The Under Secretary for S&T shall submit a report to Congress on the pilot program no later than one year after implementation. We anticipate delivery to Congress by May 11, 2006.

10. Senate Appropriations Report SR 109-83 directs the Under Secretary for S&T, in coordination with the Administrator of the TSA, to provide a report on progress made in the development or acquisition of technologies that will enable TSA to increase the amount of air cargo that is screened no later than February 18, 2006. We anticipate delivery to Congress by February 10, 2006.

11. In Public Law 108-334, Congress provided additional resources for development of an air-to-ground communications capability for the Federal Air Marshals. In SR 109-83 the Senate Appropriations Committee directs S&T to submit a status report on efforts achieved to date no later than February 18, 2006. We anticipate delivery to Congress by February 10, 2006.

12. House Appropriations Report HR109-79 directs the Department to develop and report to the Committee 180 days after enactment of this Act on its business model to address: (1) the process that determines goods and services needed; (2) how information about needs will be spread to the marketplace; (3) where individuals with ideas and products can be heard; (4) the development of needed technology transfer programs; (5) the certification process for appropriate products; (6) how the Department can build future funding into its budgetary process so that the Department can begin procurement immediately upon certification; (7) how the rate of deployment can be enhanced; and (8) how to integrate an ombudsman function to direct inquiries and correct problems. The report should outline how S&T is addressing the above and any other issues the Department believes are relevant, how far along the Department is in implementing the business plan, and indicate what challenges it faces toward full implementation. The report shall also include recommendations to help the process of assessment, certification, transparency of review and deployment of goods and services. We anticipate delivery to Congress by April 15, 2006.

13. House Appropriations Report 109-241 directs the Secretary to advise the Committees on Appropriations on the distribution of the recession prior to its implementation. Of the unobligated balances from prior year appropriations made available for Science and Technology 'Research, Development, Acquisition, and Operations', \$20,000,000 are rescinded. We anticipate delivery to Congress by February 28, 2006.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

**Science and Technology Directorate
Management and Administration**

I. Appropriation Overview**A. Mission Statement for Management and Administration:**

The Management and Administration appropriation provides for execution of salaries and expense related to 383 Full Time Equivalent (FTE) for Headquarters and field operations. Field operations include the National Biodefense Analysis and Countermeasures Center (NBACC), Plum Island, Environmental Measurements Laboratories (EML) and the Transportation Security Laboratory (TSL).

B. Budget Activities:

Office of the Under Secretary for Science and Technology – The Management and Administration appropriation provides for salaries and expenses related to 40 FTE personnel in the Office of the Under Secretary for Science and Technology. These personnel perform functions including executive directions of S&T policy analysis, planning, and guidance formulation

Other Salaries and Expenses – The Management and Administration appropriation provides for salaries and expense related to 343 FTEs personnel at the Science and Technology Directorate Headquarters and field operations. These personnel perform such functions as execution oversight, operations and maintenance support, program analysis and execution, etc. Field operations include the NBACC, Plum Island, EML, and the TSL.

In FY 2007, additional resources are required to fully fund 383 FTE, as well as all operations and maintenance costs for Plum Island, EML, and NBACC previously funded through Research and Development (R&D) program resources.

C. Budget Request Summary

The Management and Administration requests 383 positions, 383 FTE, and \$195,901,000 for FY 2007 Request. The total adjustment-to-base is (4) FTE and \$114,613,000. A program increase of \$1,000,000 is requested for:

- Compliance with Public Law 108-330, *The Department of Homeland Security Financial Accountability Act*. The Act requires that the annual Performance and Accountability Report (PAR) include an assertion by the Secretary on the adequacy of internal controls that apply to financial reporting.

II. Summary of FY 2007 Budget Estimates by Program/Project Activity (PPA)

Department of Homeland Security
 Science and Technology Directorate
 Management and Administration
 Summary of FY 2007 Budget Estimates by Program/Project Activity

III. Current Services Program Description by PPA

**Department of Homeland Security
Science and Technology Directorate
Management and Administration
Program Performance Justification**
(Dollars in thousands)

OFFICE OF THE UNDER SECRETARY

	Perm Pos.	FTE	Amount
2005 Actual	40	40	\$6,172
2006 Revised Enacted	40	40	6,414
2007 Adjustments to Base	-	-	1,180
2007 Current Services	40	40	7,594
2007 Program Change	-	-	-
2007 Request	40	40	7,594
Total Change 2006-2007	-	-	1,180

Science and Technology Directorate requests \$7.6 million for this activity. This is an increase of \$1.2 million over FY 2006 for pay and non-pay inflation and fully funds 40 FTE.

CURRENT SERVICES PROGRAM DESCRIPTION: The Management and Administration appropriation provides for execution of salaries and expenses related to 40 FTEs within the Office of the Under Secretary for Science and Technology.

OTHER SALARIES AND EXPENSES

	Perm Pos.	FTE	Amount
2005 Actual	280	280	\$62,371
2006 Revised Enacted	347	347	73,874
2007 Adjustments to Base	(4)	(4)	113,433
2007 Current Services	343	343	187,307
2007 Program Change	-	-	1,000
2007 Request	343	343	188,307
Total Change 2006-2007	-	-	114,433

Science and Technology Directorate requests \$188.3 million for this activity. This is an increase of \$114,433 million over FY 2006 which includes increases for pay and non-pay inflation. Additionally, S&T is realigning resources from Research and Development appropriation to Management and Administration appropriations (\$112,013). An increase of \$1 million is requested for Internal Control Audit costs.

CURRENT SERVICES PROGRAM DESCRIPTION: The Management and Administration appropriation provides for execution of salaries and expense related to 343 FTEs at the Science and Technology Directorate Headquarters and field operations. Field operations include the National Biodefense Analysis and Countermeasures Center (NBACC), Plum Island, Environmental Measurements Laboratories (EML), and the Transportation Security Laboratory (TSL).

DHS Infrastructure Transformation Program

The Department's Infrastructure Transformation Program (ITP), led by the Office of the Chief Information Officer (OCIO), will integrate the IT infrastructures of the 22 legacy components into "One Infrastructure". Currently, most of the Department's components fund and are supported by separate and largely stove-piped IT infrastructures. This environment makes it difficult to share information across components and has resulted in redundant investments and wasted resources. The ITP will eliminate the duplicative infrastructures and provide common capabilities and services for all components to leverage.

The ITP consists of five domains with a Department component assigned as a steward responsible and accountable for the performance of each domain. The domains and their stewards are listed below:

- Network Services led by Customs and Border Protection (CBP);
- Data Center Services led by CBP;
- Email Services led by U.S. Coast Guard (USCG);
- Help Desk Services led by USCG; and
- Video Operations Services led by Federal Emergency Management Agency (FEMA).

The OCIO oversees the work of the stewards and the other components to ensure operational requirements are met and investments and resource allocations are balanced across the components.

Implementation of the ITP will eliminate the need for components to spend resources on improving their own infrastructures. Instead, some of the investment funding previously used for stovepiped infrastructures will be used to support the department-wide ITP effort. For example, CBP's IT initiatives such as the Automated Commercial Environment will benefit from the capabilities and services the ITP will provide such as network access, data center hosting, email/collaboration services, wireless access, integrated help desk, voice access, video services, and on-site support. Rather than independently developing new capabilities or augmenting legacy capabilities within CBP, the ITP will provide enterprise-level services that will benefit all components.

By investing in the ITP, DHS components will benefit from economies of scale while promoting Department integration, and improving information sharing and interoperability. The amount of IT investment funding from components to support the ITP is still under deliberation and any such proposal will be fully vetted with the Congress prior to any actions being taken.

IV. Program Justification of Changes

**Department of Homeland Security
Science and Technology Directorate
Management and Administration
Justification of Program Changes**

Program Increase 1: Internal Controls/Audit \$1,000,000

Strategic Goal(s) & Objective(s):
7.3 Continually improve our way of doing business.

PPA: Management and Administration, Salaries and Expenses

Program Increase: Positions 0 FTE 0 Dollars \$1,000

Funding Profile

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									0
Program Increase									1,000
Total Request	0	0	0	0	0	0	0	0	\$1,000

Description of Item

One million dollar increase is to provide support for a Department-wide internal controls audit.

Justification

An increase of \$1,000,000 is requested for compliance with Public Law 108-330, *The Department of Homeland Security Financial Accountability Act*. The Act requires that the annual Performance and Accountability Report (PAR) include an assertion by the Secretary on the adequacy of internal controls that apply to financial reporting. In addition, the Act requires the Secretary to include an audit opinion over the Department's internal controls over financial reporting.

These requirements for internal control reporting and audit impose significant management challenges and resource demands on the Department and its components. To comply with the Act the Department's components must obtain contractor support to:

- provide training,
- develop internal control process analysis documentation,
- perform internal control test of design and test of operating effectiveness,
- develop significant remediation strategies for material weaknesses in internal control, and
- provide project management support for the Department's Internal Control Committee.

The Department's Independent Government Cost Estimate is based on audit hour estimates from the Department's Financial Statement audit.

1998

Impact on Performance (Relationship of Increase to Strategic Goals)

A sound and reliable internal controls audit will enable the Department to focus on its goal of building, sustaining, and improving the Nation's capability to prevent terrorist attacks in the United States. A clean audit will ensure the public that funds are being used properly and effectively, so that the true mission of the organization is the focus of the Department's efforts.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

Science and Technology Directorate
Research, Development, Acquisitions, and Operations

I. Appropriation Overview**A. Mission Statement for Research, Development, Acquisitions, and Operations:**

The S&T Directorate will conduct, stimulate, and enable homeland security research, development, testing and evaluation and the timely transition of capabilities to Federal, State, local, and tribal end-users.

The S&T Directorate's major role is as a developer and a translator of science and technology to promote homeland security. This role can be broken down into three main functions. The Directorate serves to:

- Discover, filter, and translate scientific information to prioritize and inform operations that secure the homeland;
- Develop new technologies and help ensure that those technologies are used by appropriate homeland security personnel at all levels of government and in the private sector;
- Create a scientific community that uses common technological standards to effectively work across levels of government and the private sector in protecting the homeland.

The S&T Directorate provides leadership for directing, funding and conducting research, development, test and evaluation (RDT&E) and procurement of technology and systems to prevent the importation of chemical, biological, radiological, nuclear and related weapons and material and to protect against and respond to terrorist threats. The S&T Directorate partners and coordinates with Federal, State and local government and private sector entities in conducting its activities and establishes an efficient system to transfer homeland security developments and technologies to the operational elements of the Department to enhance their ability to execute all missions, now and in the future, and to meet the high priority homeland security RDT&E needs of the nation.

B. Budget Activities:

Biological Countermeasures – The biological countermeasures portfolio places its greatest emphasis on those biological attacks that have the potential for widespread catastrophic damage, which in general provides some measure of protection against most attack scenarios. Such high consequence threats include, but are not limited to: aerosolized anthrax, smallpox, and genetically engineered airborne pathogens; highly virulent agricultural diseases such as foot and mouth disease; and high volume contamination of selected food supplies. Work is pursued in partnership with the Department of Health and Human Services (HHS), the Department of Defense (DoD), the Environmental

Protection Agency (EPA), the Department of Agriculture (USDA) and others. Key elements of an early biological warning system have been demonstrated and piloted at the research level and a subset are operational (e.g. the BioWatch program). The program performs additional research on non-traditional forms of biological surveillance, advanced detection technologies to include biological signatures and assays, bioforensics, and restoration to deal with existing and next-generation threats.

Key elements of the Biological Countermeasures Portfolio are: (1) Surveillance and Detection R&D, which provides research, development, and piloting of technologies and systems to support the spiral development of the operational capabilities, such as the BioWatch Program; the Biological Warning and Incident Characterization System (BWIC) to be used in BioWatch cities to aid in interpreting the public health significance of BioWatch signals and to inform and guide the initial responses and event reconstruction; (2) Plum Island Animal Disease Center, which is a facility used to research the most sensitive rapid identification techniques, the most effective and reliable vaccination approaches, and develop genetic databases of foreign disease pathogens in order to detect and stem the effects of an intentional attack with agricultural bioagents; and (3) the National Biodefense Analysis and Countermeasures Center, to include the Biothreat Characterization Center and National Bioforensics Analysis Center, which provides: a) scientific support to biological threat net assessments, b) bioforensic analysis for attribution, c) validated countermeasures, and d) in conjunction with the Biodefense Knowledge Center, an information clearing-house which supports interagency efforts in countering biological terrorism focused on law enforcement, national security, and public health.

Chemical Countermeasures – The mission of the Chemical Countermeasures portfolio is to enhance the nation’s capability to anticipate, prevent, protect from, respond to and recover from chemical threat attacks through interagency leadership and conduct of innovative research, development, and technology transition. Research and Development (R&D) activities reflect prioritization of the many possible chemical threats and targets, development of new detection and forensic technologies, and integrated protective systems for high-value facilities such as airports and subways. These activities are informed by end-user input and systems studies that identify gaps in current capability and guide technology investment. The portfolio has been organized to reflect needs in preparedness against current and future chemical threats requiring capabilities in four key areas: Chemical Analysis and Coordination, Architecture, Detection, and Response and Recovery. The portfolio’s scope includes classical chemical warfare (CW) agents, toxic industrial chemicals (TICs), and non-traditional agents (NTAs).

Explosives Countermeasures – This portfolio conducts research to: improve explosives detection equipment and procedures for aviation security, to allow the reliable detection of explosives carried by persons boarding aircraft and of explosives in air cargo; improve efficiency and reduce false alarm rates of explosives detectors currently used for screening checked baggage; adapt explosives detection technologies for use in other modes of transportation, such as trains and cruise ships; and develop stand-off detection technologies that can detect large quantities of explosives in cars and trucks at a distance and, if possible, leave-behind bombs and suicide bombers, attempting to detonate explosives carried on their persons in crowded areas. Work in the first three areas are being coordinated and conducted in partnership with the DHS Transportation Security Administration.

Threat Awareness Portfolio – The RDT&E activities funded through the Threat Awareness Portfolio (TAP) primarily support two DHS strategic goals, namely, awareness and prevention. The portfolio’s mission is to develop, test, and deliver – in collaboration with intelligence, law enforcement, and homeland security community agencies – computationally based tools and methodologies for assessing

terrorist threats and understanding terrorism. Such tools and methods are intended to enable and enhance Federal, State, and local awareness of a broad range of threats through intelligence fusion and information sharing. TAP currently prosecutes its mission through eight interrelated programs in three critical areas: Capability Assessment and Attribution, Social-Behavioral Analyses of Terrorist Threat, and Knowledge Management Tools for Fusing and Sharing Intelligence. To achieve its objectives, TAP's science and technology efforts focus on developing a Federal-level enterprise for threat assessment. Activities in this portfolio are designed to help evaluate extensive amounts of diverse threat information; detect and document terrorist intent; couple threat information with detailed knowledge of terrorists' capabilities for developing and sources for obtaining weapons of mass effect and with accurate forensic analyses; and enable analysts to draw timely insights and distribute assessments from the information. The technologies include knowledge discovery and dissemination, information analysis, visual analytics for synthesis of dynamic, disparate, distributed information sets containing multiple data types; information extraction and pattern discovery from massive data sets; semantic networks and high-performance processing techniques for multi-modal data correlation; integrated simulation and modeling techniques for threat assessment, scenario planning, and incident response; security and privacy; CBRNE capability assessments; field and laboratory forensic analyses of radiological and nuclear materials; and continuous assessment of individual- or group-related motives, behaviors, and intentions signifying terrorist actions. Capabilities appropriate to federally managed information sources as well as security and privacy tools required to share information and collaborate among various Federal, State, and local government organizations, as well as foreign governments and international organizations, involved in homeland security are also being developed and implemented. Such activities directly support the Office of Information Analysis, the Directorate for Preparedness, the Transportation Security Administration, Customs and Border Protection, and Immigration and Customs Enforcement, as well as other operational entities within DHS.

Standards – The Standards portfolio develops, in collaboration with operational end-users, performance measures, testing protocols, certification methods, and a reassessment process appropriate to each threat countermeasure and for the integrated system.

Support to DHS Components –

Border and Transportation: The Border and Transportation Portfolio's mission is to develop and transition capabilities that improve the security of our nation's borders and transportation systems without impeding the flow of commerce and traveler. One of the Department of Homeland Security's first priorities is to prevent the entry of terrorists and the instruments of terrorism into the United States while simultaneously ensuring the efficient flow of lawful traffic and commerce. In the Department, the Border and Transportation Security (BTS) Directorate has this responsibility.

Emergency Preparedness and Response: The S&T Directorate's Emergency Preparedness and Response (EP&R) portfolio supports the Department's Preparedness Directorate and FEMA with a mission to improve the ability of the Nation to prepare for, respond to, and recover from all-hazards emergencies through development and deployment of enabling capabilities. Particular emphasis is placed on technology integration and interoperability at all levels of government; personal protection and equipment for emergency responders; technologies to enhance training and exercise capability; emergency medical response operations, and long-term sustained performance of emergency response systems.

United States Secret Service: The mission of the United States Secret Service (USSS) portfolio of the S&T Directorate is intended to support the unique USSS mission by development and deployment of advanced technologies to enhance protective and investigative capabilities. This portfolio is coordinated with the United States Secret Service and has established its first direct-funded R&D program. The USSS portfolio effort focuses upon input from the intelligence community (threat based model) and direct operational experience obtained over the last century. As a result, this funded technology program is subject to reevaluation and change based upon the perceived threats to the safety of those protected by the USSS.

United States Coast Guard: The United States Coast Guard's mission is to protect the public, the environment, and U.S. economic interests in the Nation's ports and waterways, along the coast, on international waters, or in any maritime region as required to support national security. The Coast Guard Research Program supports this mission through the development of technologies and systems to enhance Maritime Domain Awareness, and to improve Operational Presence and Response. Maritime Domain Awareness includes all systems, sensors, and command and control systems necessary to detect, identify, and determine the threat potential of all vessel traffic. It also includes Port Security research to protect selected harbors. Operational Presence and Response is the development of the safest and most effective means of stopping a vessel, boarding it, and finding/eliminating the specific threat. The objectives of this R&D work areas to neutralize the threat as far away from potential targets as possible and to respond to emergencies as quickly and effectively as possible. The Coast Guard Research and Development program is characterized by its many partnerships with other Federal agencies and international R&D groups. Working together on mutual problems has shared costs and expedited delivery of important R&D products.

This program also supports Coast Guard unique traditional missions such as Search and Rescue and, Maritime Regulations in support of its Marine Safety mission. It researches oil spill prevention and response, and Aquatic Nuisance Species prevention in support of its Marine Environmental Protection Program. Further it works on the development of advanced navigation systems to improve the flow of goods and services via our nation's waterways.

University and Fellowship Programs – This program funds strategic partnerships with the academic community to further the homeland security mission through research and education. It provides support for qualified students and faculty in areas relevant to the Nation's security and establishes University Centers of Excellence that focus on long term and large-scale homeland security issues.

Emergent and Prototypical Technology – The mission of the Emergent and Prototypical Technology Portfolio is to, through six major thrust areas; address the dynamic nature of terrorist threats, as science and technology advancements enable new agents of harm and new ways to employ them, and; to accelerate, through rapid prototyping, the deployment of advanced technologies to address urgent user requirements.

Counter MANPADS – Beginning in May 2003, the Department of Homeland Security (DHS), in partnership with other Federal agencies, initiated a Congressionally-directed aggressive System Development and Demonstration (SD&D) program to counter the threat of shoulder-fired missiles, known as MAN-Portable Air Defense Systems (MANPADS), to civilian commercial aviation. The DHS Science and Technology Directorate (S&T) is leading the technology aspects of the effort

through its Counter-MANPADS Program. The Program demonstrates and evaluates the possible migration of existing military Counter-MANPADS technologies to the commercial airline industry. The re-engineering of countermeasure technologies and components is necessary to meet commercial air carrier operation requirements, including protection of critical military technology in a civilian aviation environment.

SAFETY Act – This office reviews, processes, and certifies promising homeland security technologies that receive limited liability protections if designated as a SAFETY Act certified technology.

Offices for Interoperability and Compatibility – Non-interoperable and incompatible equipment and a lack of standardized procedures for their operation have plagued the public safety community for decades. In many cases, public safety agencies in times of multi-jurisdictional emergency responses, such as terrorist attacks, cannot perform their mission-critical duties because of these challenges. To address these issues, the Secretary of the Department of Homeland Security directed the Science and Technology Directorate to create the Office for Interoperability and Compatibility (OIC). This Office coordinates the Federal response to the challenges of interoperability and compatibility, and was implemented in coordination with other DHS programs. By coordinating and leveraging the vast range of interoperability programs and related efforts spread across the Federal government, the OIC will reduce unnecessary duplication in programs and spending, identify and promote best practices, and coordinate Federal activities related to research and development, testing and evaluation, standards, technical assistance, training, and grant funding guidance related to interoperability.

Critical Infrastructure Protection – This portfolio, conducted in support of the DHS Preparedness Directorate and other CIP activities: 1) develops, implements, and evolves a rational approach for prioritizing CIP strategies and resource allocations using modeling, simulation, and analyses to assess vulnerabilities, consequences, and risks; 2) proposes and evaluates protection, mitigation, response, and recovery strategies and options; and 3) provides real-time support to decision makers during crises and emergencies.

Cyber Security – This portfolio conducts research and development on technologies to secure and protect the Nation's cyber infrastructure from cyber threats.

C. Budget Request Summary:

The Research, Development, Acquisitions, and Operations request of \$806,370,000 for FY 2007 Request. The total Adjustment-to-base is - \$609,517,000. The program increase includes \$9,100,000 for:

- The additional funds (\$2,000,000) are to instantiate and staff a Joint Agro-terror Defense Office (JADO), which will enhance inter-agency coordination of advanced development of countermeasures for agro-defense.
- The additional funds (\$7,100,000) are to enhance domain name infrastructure security research and development (\$1,250,000); to support research and development to secure Border Gateway Protocols under the Secure Protocols for Routing Infrastructure program (\$1,250,000); to support cyber security test beds (\$1,000,000); to support large-scale cyber security data sets (\$1,000,000); to support research and development for highly scalable identity management with an emphasis on the ability to deploy this technology to wide-area network (\$2,000,000); and to support Cyber Security project administration (\$600,000).

Science and Technology Directorate requests \$337.2 million for this activity. This is a decrease of \$39.0 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The mission of the Biological Countermeasures portfolio is to provide the understanding, technologies, and systems needed to anticipate, deter, protect against, detect, mitigate, and recover from possible biological attacks on this Nation's population, agriculture or infrastructure. The Biological Countermeasures portfolio uses the Nation's science base to prevent, protect, respond to and recover from bioterrorism events. Biological threats can take many forms and be distributed in many ways. Aerosolized anthrax, smallpox, foot-and-mouth disease, and bulk food contamination are among the threats that can have high consequences for humans and agriculture. The portfolio managers work in partnership with the Department of Health and Human Services (HHS), the Centers for Disease Control and Prevention (CDC), the Department of Defense (DOD), the Department of Agriculture (USDA), the Environmental

Protection Agency (EPA), the Department of Justice (DOJ), the Department of State (DOS), the United States Postal Service (USPS), and State and local operational end users.

The Biological Countermeasures portfolio provides the science and technology needed to reduce the probability and potential consequences of a biological attack on this Nation's civilian population, its infrastructure, and its agricultural system. The portfolio is developing and implementing an integrated systems approach with a wide range of activities, including vulnerability and risk analyses to identify the need for vaccines, therapeutics, and diagnostics; development and implementation of early detection and warning systems to characterize an attack and permit early prophylaxis and decontamination activities; and development of a national bioforensic analysis capability to support attribution of biological agent use.

This portfolio provides scientific activities in program areas such the National Biodefense Analysis and Countermeasures Center (NBACC), the BioWarning and Incident Characterization System (BWIC), BioWatch and related environmental monitoring activities being conducted at sites throughout the country. NBACC provides scientific support for intelligence activities, prioritizes biothreats, and conducts bioforensic analyses contributing to attribution and hence to deterrence. BWIC integrates environmental monitoring data (e.g., BioWatch) with biosurveillance and other data to provide early attack warning and assessment. The environmental monitoring activities include not only BioWatch, which provides 24/7/365 monitoring for many of our urban areas, but also targeted monitoring that is temporarily deployed for National Special Security Events (NSSEs) and other special national needs (e.g., when the threat level is raised). While serving a primary function in minimizing damage, both BWIC and environmental systems may also play a significant deterrent role since terrorists may be less likely to attack when defensive systems may prevent them from attaining their goals.

This portfolio's activities also include simulation, modeling, and gaming to guide and prioritize technical developments and to train decision makers prior to and during an event, and identify needs for BioWatch consequence management tools, and a systems approach and protocols for decontamination.

FY 2005 Accomplishments:

Systems Studies and Decision Support Tools - FY 2005 system studies efforts have paid dividends in providing a more comprehensive picture of the biological threat landscape. Studies were completed on five representative threat scenarios (outdoor release of a non-contagious agent, indoor release of a contagious agent, contamination of a major food commodity, a highly virulent livestock disease and a virulent crop disease) and studies were initiated on several other representative families of threats (multiple small attacks, attack with an antibiotic resistant agent, and a zoonotic disease). These studies have highlighted critical gaps in capabilities and capacity needed to support more robust Biodefense architectures. The results are being used to develop/refine requirements for S&T Surveillance/Detection programs, event characterization, and response and recovery architectures within the S&T Directorate, as well as serving as benchmarks for systems developed outside of DHS. In addition, data from the Joint Urban 2003 tracer release studies were used to validate atmospheric transport and diffusion models. Joint Urban 2003 was the largest study of its kind to date, generating over a terabyte of data and forming the informatics baseline for validation of these models.

Threat Awareness and Characterization - Significant progress was achieved in FY 2005 in understanding the full nature of the biological threat at a strategic planning level. Specifically, six in-

depth threat assessments for BioShield (anthrax, plague, tularemia, chemical nerve agents, radiological devices, nuclear devices) were completed. A broader set of risk assessments required by Homeland Security Presidential Directive (HSPD)-10 covering 29 biological agents is well underway and will be completed in January 2006. This information will be used to prioritize a wide range of national biodefense activities, including subsequent rounds of BioShield acquisitions. A strategy for addressing engineered threats has been developed in partnership with HHS and other agencies and is being used to guide activities and investments in this area. Laboratory studies have been initiated to better characterize the virulence of some of the top threat agents (e.g. anthrax, plague, botulinum toxin) as a function of route of entry into the body (inhalational vs. oral), in different food matrices, and under different food processing and environmental conditions. A new, certified, state-of-the art, aerobiology laboratory has been developed at the Lovelace Respiratory Research Institute to support these studies. The Biodefense Knowledge Center (BKC) continues to expand its capabilities, providing information to support high level decision making, including 24/7/365 support to the Homeland Security Operations Center (HSOC) as well as special topical assessments on issues ranging from the accidental release of the H2N2 virus to the potential role of zoonotic diseases (e.g., Rift Valley Fever, Nipah virus) as terrorist weapons.

Surveillance and Detection Operations - The BioWatch Program Office has focused on daily operations throughout FY 2005. Significant programs implemented this year included – establishment of the BioWatch Special Program Office, development of a comprehensive program management plan, publication of the BioWatch Logistics Support Plan, publication of Quality Assurance/Quality Control plans and fielding Standard Operating Procedures. An Information Technology (IT) system, which allows for local and Federal data analysis and review, was developed, validated, and deployed. The BioWatch Enhancement (Generation 2) has been initiated in collaboration with the local stakeholders. The enhancement places significantly more air collectors in the top threat cities to include transit and special event coverage and is expected to be completed in FY 2006 on schedule. This will allow cities to further increase their broad population protection while also providing targeted coverage of their most vulnerable venues. In addition, the public health epidemiology stakeholder community has been engaged to provide input for BioWatch improvement and incorporation into their day-to-day operations. In August 2005 BioWatch Stakeholders attended the second Annual Workshop where they engaged in a dialog with DHS, DOJ, CDC, and EPA to share lessons learned and enable further system improvements.

As part of a White House initiative for an improved and integrated biosurveillance strategy the S&T Directorate has drafted and coordinated a comprehensive Memorandum of Understanding (MOU) among the major biosurveillance stakeholders that include DHS, HHS, DoD, FBI, and the USPS. The MOU sets a framework for development of integrated national biomonitoring architecture, to include DHS BioWatch, US Postal Service's Biohazard Detection System (BDS), and DOD Installation Protection Program (IPP). The interagency collaboration will leverage and optimize existing agency efforts and provide improved coordination between civilian biothreat detection programs and the corresponding programs for protecting domestic military installations. As a first step in this direction, the joint DHS/DoD BioNet Program piloted improved civilian-military coordination in San Diego, CA.

In addition biological monitoring and surveillance support was provided to two National Special Security Events (NSSE). The events included the Presidential Inauguration in Washington, DC and the National Governor's Association meeting in Des Moines, IA.

Surveillance and Detection R&D - Provides for the research, development and piloting of advanced detection systems for air, surface, agricultural, and food monitoring; and the development of the supporting biological assays (genetic, protein and other) for affordable, highly sensitive, highly specific detection of both classical and emerging/engineered biological agents. A critical objective of the program is the advancement to autonomous detection systems. This technology will provide agent identification without manual intervention. Significant accomplishments were achieved in FY 2005 in three major monitoring and surveillance initiatives: 1) next generation detection platforms 2) biological threat agent assays for precise biological threat agent identification, and 3) BioWatch signal interpretation capability to support incident management at the State and local level.

1) Next Generation Detection Platforms - The Biological Autonomous Networked Detection (BAND) program is developing the next generation, fully autonomous, bio-detection technologies which will allow for collection and analysis the biological agents in place, eliminating the high-cost, labor-intensive manual processes that are currently in place. BAND technology will form the basis of the third generation BioWatch system (Gen 3 BioWatch) with greatly expanded coverage and capability. To date, seven systems have demonstrated feasibility in meeting the BAND requirements (broad spectrum, low-reagent consumption, short sampling/analysis time, high sensitivity, extremely low false positive rate, low operational costs, and a small footprint). Down selection of the most promising candidates is in progress and independent testing capabilities have been established at the DoD's Edgewood Chemical and Biological Center (ECBC) to test the resulting subsystems.

Work is also in progress to develop detect-to-warn systems that can detect biological agents in minutes so as to protect high value facilities or special venues. The Rapid Automated Biological Identification System (RABIS) program, which is seeking to do agent detection and identification in two minutes or less is completing its feasibility phase and undergoing down selection for advancing to the laboratory prototype phase. A second program, the Instantaneous Bio-Aerosol Detector Systems (IBADS), was initiated in FY 2005 to explore a broader set of tradeoffs in detection times and levels. The IBADS program leverages efforts supported by the Defense Advanced Research Projects Agency (DARPA) Joint Program Executive Office-Chemical-Biological (JPEO-CB), and the Defense Threat Reduction Agency (DTRA) in the development of a low cost detection platform. In fact DTRA is co-funding this effort.

2) Assay development for Biological Threat Agents - Assay development continued throughout FY 2005 with an emphasis on developing validated assays for the top 20 priority agents and for developing methods to allow for high throughput analysis at significantly less cost. The multiplexing methods will play a critical role in managing and responding to a large-scale attack. FY05 accomplishments include the development of assays for most of the viral hemorrhagic fevers (e.g., Ebola, Marburg), on-going development of assays for all seven serotypes of Foot and Mouth Disease, and the successful demonstration of multiplexed assays (27-plex) that screen a single sample simultaneously for six agents (multiple signatures for each agent).

3) BioWatch Signal Interpretation – Understanding the significance of a BioWatch positive test result is critical in assisting the public health community with incident characterization and management. To support the task, the Biological Warning and Incident Characterization System (BWIC) is designed to provide the framework and tools for more effectively integrating information from BioWatch detectors (both positive and negative detections), with environmental sampling data, plume modeling and medical surveillance data to better characterize the public health and national security significance

of a BioWatch positive. This year the BWIC design was completed based on an open architecture, utilizing standards adopted by public health agencies, emergency management communities and endorsed by the DHS Office for Interoperability and Compatibility. The use of interface standards from both the emergency management and public health communities will serve to facilitate information exchange and communication across two communities that historically have not been integrated. To enhance requirements definition from operational users the BWIC program conducted several workshops in FY 2005 with stakeholder/partners from various BioWatch cities to solicit operational needs for the system. These requirements have been incorporated into the systems design specification. A pilot demonstration of initial capability is being deployed in Chicago and Miami. These pilots will serve as the template for a phased system deployment to all BioWatch sites.

Bioforensics – The President's *Biodefense for the 21st Century* designated the national Bioforensics Analysis Center (NBFAC) as the Nation's lead facility for technical analysis of samples to support attribution activities by the Federal Bureau of Investigation and other appropriate agencies. Interim capabilities were established at Ft. Detrick in FY04 and the NBFAC is now conducting extensive casework to support on-going FBI investigations of biocrimes or acts of bioterrorism. All evidence receipt, cataloging and processing are being conducted in secure, bio-threat agent contamination free, biocontainment space within the NBFAC interim hub laboratory. This capability was non-existent at the time of the anthrax attacks in the fall 2001.

To maximize the admissibility and validity of biological evidence analytical results used in court proceedings, NBFAC is seeking to obtain the International Standardization Organization (ISO) 17025 certification as a reference analytical laboratory in 2006. To meet stringent ISO certification requirements, NBFAC has established a stand-alone Safety and Biosurety Program, Quality/Accreditation Program, and received select agent handling certification from Centers for Disease Control and Prevention (CDC) for all laboratory staff and facilities. Standard operating procedures and protocols are in place for evidence handling and analytical flow processes.

Significant progress has also been made on the needed forensic analysis tools. Highly specific forensic assays have been developed for anthrax and corresponding work has been initiated on ricin. A library of reference strains (National Bioforensic Repository Collection) has been established to support NBFAC casework. Interagency agreements have been implemented with other Federal laboratories to provide capability for specialized analysis and surge requirements. R&D efforts are improving protocols for sample management including collection, preparation, and extraction and novel methods for analysis of the physical and chemical signatures of biothreat agents and their associated matrices resulting from differences in methods used to grow, harvest, process and deliver agents.

Response and Restoration - The overall goal for the Response and Restoration Thrust Area is focused on providing a coordinated systems approach to the recovery of wide urban areas and high traffic area (transit/transportation facilities) following an aerosol release of a Biothreat agent. The major accomplishment in FY05 was the completion of the multi-year Airport Restoration Demonstration done in partnership with the San Francisco International Airport, the EPA and National Institute of Occupational Safety and Health. Key outputs include the development of EPA pre-reviewed restoration protocols that can serve as templates/guidelines for other airports throughout the nation; new tools for conducting the pre- and post-clean-up sampling, including tools for determining the viability of agents within hours instead of days; and the completion of a National Academies of Science Study entitled "Reopening Public Facilities After a Biological Attack: A Decision-Making Framework" that was released in June 2005. The study concluded that the information needed to set

specific clean-up levels for biological threat agents is lacking at this time. The study outlines the information needed to set these levels along with a risk-assessment framework. This long awaited study will be utilized to help guide future research investments.

Other restoration accomplishments included a joint DHS-DoD-EPA National Sampling Workshop involving some 400 participants to share recent advances and outline next steps forward; improved characterization of selected vapor-phase decontamination technologies; and modification and preparation for testing of a mobile chlorine dioxide system for decontaminating small to medium size facilities such as office buildings. This latter technology was initially developed by DARPA and upon successful validation in a joint DHS-EPA-JPEO-CB test in FY06, will be transferred to EPA for use in the rapid decontamination following a bio-contamination event.

Agriculture – Significant progress has been made in expanding and accelerating the development of improved veterinary vaccines and anti-virals. A Targeted Advanced Development research unit and pilot scale production facilities have been established at Plum Island Animal Disease Center (PIADC). Current and next-generation vaccine candidates and immuno-modulators against FMD have been evaluated and promising candidates targeted for further advanced development, in collaboration with USDA and industry partners. High priority concerns for the facilities, operations, and security of the Plum Island Animal Disease Center (PIADC) continue to be addressed.

Good progress has also been made in developing supporting decisions tools. The reference case studies have been completed on model systems of virulent livestock Foot-and-Mouth disease (FMD) and crop (soybean) rust outbreaks and provide critical insights into the requirements for prevention – detection –response. An initial national scale FMD model that incorporates both disease spread and economic impact information has been developed to study various intervention strategies ranging from national or regional stop movement orders to vaccination and culling strategies. Significant improvements were made to enhance diagnostics capabilities, including the development of rapid, multiplexed DNA- and protein-based assays capable of high throughput for early detection of high-consequence animal diseases. A major FY05 deliverable was to conduct an inter-laboratory comparison study in the National Animal Health Laboratory Network (NAHLN) to test the robustness of the multiplexed assays and diagnostic platform in the hands of the user community; these assays and instrumentation will be transitioned to the NAHLN labs. A high-throughput diagnostics platform for FMD and look-alike diseases has been developed, and after piloting within the NAHLN, is expected to enhance daily lab processing from tens to thousands of samples per day. And, in cooperation with the Food and Drug Administration, a solicitation was issued for the design of a ‘food sensor’ to detect priority pathogens at critical production nodes of the appropriate food industry sector.

FY 2006 Plan:

Systems Studies and Decision Support Tools - will complete the three high level architectures initiated in FY 2005 for multiple small attacks, an engineered organism, and a zoonotic disease, identifying key requirements for each major element. “Report cards” will be developed on the current and projected status of each element including detailed design tradeoffs for those areas in which DHS has execution responsibility. Efforts will begin to shift from high-level architecture studies to detailed simulations of the systems in or nearing deployment, enabling better assessment and “stimulated” testing of such systems. Special emphasis will be given to simulating the characterization and response phases of the current BioWatch system and to conducting cost-benefit and architecture tradeoffs on the extent and coverage of the next generation BioWatch system. Also, as called for in the President’s *Biodefense for*

the 21st Century, a biodefense net assessment (BNA) will be initiated to provide a periodic assessment of some of the more fundamental issues and assumptions underlying the Nation's biodefense strategy.

Threat Awareness and Characterization - will complete the first formal risk assessment required under HSPD-10 and will be in the process of closing many of the key remaining experimental gaps in our knowledge of the classical bioagents. Near-, mid-, and long-term plans for dealing with engineered agents will be developed, and R&D on addressing the gaps in responding to modified organisms (e.g., antibiotic resistant) initiated. The Biodefense Knowledge Center (BKC) will continue to expand both its curated library of unclassified and classified materials on all aspects of the biothreat, and improve and expand semantic network tools for rapidly searching and discovering relationships in extensive databases. Subject matter expertise on the biothreat and advanced information integration and analysis tools will continue to play a significant role in the evolving capabilities of the National Biosurveillance Integration System.

Surveillance and Detection Operations - will complete the deployment of Gen 2 BioWatch systems to the top threat cities while continuing to operate and optimize already extant BioWatch systems. Deployment of the BWIC, first piloted in FY 2005, will begin to further aid in interpreting the public health significance of a BioWatch signal and in guiding the initial response. The operational deployment, beyond the pilot sites, will commence with three BioWatch sites in fourth quarter FY 2006 followed by the next seven sites in FY 2007. BWIC efforts will be closely coordinated with CDC's BioSense program, which will provide some of the public health monitoring information used by BWIC.

Surveillance and Detection R&D - will have completed test and evaluation of laboratory prototypes of the Gen 3 BioWatch detection systems and will be ready to down-select those which will go on to develop fieldable prototypes in FY 2007. A fieldable prototype of the food node sensor, whose development was initiated in FY 2005, should also be available, and R&D will continue on the rapid identifier. Work will continue to close the remaining gaps that exist between validated assays and the various lists of biological threat agents. Multi-loci genetic and molecular recognition bioassays will be developed for about ten of the remaining select agents and novel assay development will continue for detecting modified or novel pathogens.

Bioforensics - will continue to operate the interim NBFAC. ISO certification fully completed - giving the analytical results additional credibility in both the national and international community and courts of law. The National Reference Repository will continue to expand, both in the number of strains of a particular agent and in the number of agents covered. Genotyping assays will be developed for two to three high priority agents as determined by NBFAC and the law enforcement community. R&D will continue on the physical and chemical signatures of the "matrix" materials associated with bioagents to develop methods for understanding tell-tale remnants of enrichment media, culture conditions, metabolites, and dispersion technology.

Response and Restoration - Several regional Airport Restoration Workshops will be conducted to share the results and templates from the Airport Restoration Demonstration completed in FY05 with airports throughout the Nation. Planning will begin for a new system level "demonstration" of an approach to wide area clean-up following the potential contamination of tens of blocks of a major U.S. city. Work will continue on a second generation of enhanced operational indoor modeling tools with emphasis on critical transportation hubs.

Agriculture - will continue operation of the PIADC and essential upgrades to the facility and will initiate conceptual design and siting study for the National Bio and Agro-defense Facility (NBAF) – the next generation agro-defense facility that will replace the 50 year old PIADC facility. R&D will continue on next generation vaccines and antiviral therapeutics for FMD and will be expanded to include other high priority foreign animal diseases such as Rift Valley Fever. Development will continue for bioassays targeted for recognition of high priority foreign animal diseases. Assays developed and validated in FY 2005 will be deployed to the National Animal Health Laboratory Network. The multiplexed protein-based test that can be used to differentiate naturally-infected animals from those vaccinated against FMDV (DIVA) will be made available to the international community and an effort made to validate it through the Office International des Epizooties (OIE). The High throughput diagnostics capability developed in FY05 will be tested and evaluated in FY06 in preparation for deployment to a regional or State laboratory. A national scale model for modeling the disease spread of FMD and the efficacy and economic impacts of various intervention strategies will be ready for deployment.

FY 2007 Plan:

Systems Studies and Decision Support Tools - Simulation and trade-off studies conducted in FY 2006 will be expanded in FY 2007, with special emphasis on Gen 3 BioWatch, its coverage, deployment strategies, associated technologies, concept of operations and role in an integrated national biomonitoring system. Performance tradeoff studies and cost-benefit analyses will be performed on various technologies being developed within DHS R&D programs to assist in the down-selection and optimization of technologies as they move from laboratory to prototypes to full scale deployment in next generation architectures. Independent analyses, to identify any weaknesses or vulnerabilities in current or proposed architectures, so called red-teaming, will be initiated.

Systems studies to address any new or under-characterized risks, identified in the HSPD-10 Risk Assessments will be initiated and work will continue on the Biodefense Net Assessments (BNA), called for by the President's *Biodefense for the 21st Century*. The completed BNA is due in FY08.

Threat Awareness and Characterization - will be in the midst of conducting the second formal risk assessment required by the President's *Biodefense for the 21st Century*, this time including agricultural and not just human threats. A major thrust of this round of assessments will be greater emphasis on unconventional and engineered threats. Many of the laboratory studies on closing the key gaps in our knowledge of the classical bioagents will be completed. A "technology watch" for those scientific advances that can significantly impact our assessment of, and strategy for, engineered threats will be underway and there will be increased emphasis on R&D to address the gaps in responding to modified organisms, such as antibiotic resistant. Advances in automated information analysis tools will enable the Biodefense Knowledge Center (BKC) to move from its initial operational capability of research and reach back to an interim capability that also supports "watch and warning". This latter capability will tie in strongly with the National Biosurveillance Integration System to improve biological situational awareness for the nation as a whole.

Surveillance and Detection Operations - will continue to operate and optimize the BioWatch system that includes the fully deployed Gen 2 enhancement to the top threat cities. Special event coverage, to include NSSEs, will continue. Deployment of BWIC, first piloted in FY 2005, will continue to the next seven sites. This will further support BioWatch signal interpretation/event characterization and

assist the public health community with event appropriate intervention strategies. BWIC deployment to the full set of BioWatch sites will be completed by FY 2011.

Surveillance and Detection R&D – development will continue on autonomous detection systems. Specifically, BAND prototypes will be field tested under representative operating conditions and five fieldable prototypes of the most promising system(s) will be developed to be deployed alongside operational BioWatch collectors in FY 2008 as part of the pilot test for Generation 3 BioWatch.

In FY 2007 bioassays for detection and identification of threat agents will complete the development of very low false alarm rate assays for the top 20 agents as identified in our FY 2006 HSPD-10 Risk Assessment. These assays will be available to support the Gen 3 BioWatch pilot in FY 2008. In a related initiative, the S&T Directorate will launch a collaborative program with DOD, HHS/CDC, USPS, and DOJ with the private sector to develop a set of validated assays called Public Health Actionable Assays (PHAA). These assays will be available to the private sector for use in commercial off-the-shelf biodetection following appropriate testing and validation by an independent third party. Providing the commercial sector with a path toward validated assays of known and sufficient quality to initiate a public health response will further enhance the Nation's ability for screening of suspect materials and for early detection and initiation of countermeasures.

Additionally, we will demonstrate laboratory prototypes of several different types of detect-to-warn sensors that can provide rapid enough detection of a biological attack to enable protective actions to minimize an individual's exposure, much as a fire alarm does today. These detectors will differ in the speed with which they can detect an attack and with the specificity with which they can tell what the agent is – and hence will lead to different protective measures. By the end of FY 2007 we will have tested them in a laboratory setting and be ready to down select those which we will develop to field test in FY 2008 followed by pilot deployment in real world situations in FY 2009. Also, we will complete the development of our critical food node sensor begun in FY 2005 and transition this to the FDA and the appropriate food industry sector for deployment.

Bioforensics - NBFAC will continue operations of the dedicated containment laboratories using interim space at the US Army Medical Research Institute for Infectious Diseases (USAMRIID), while beginning transition planning for operations into the new NBACC facility scheduled to be completed in FY 2008 at the National Interagency Biodefense Campus (NIBC) at Ft. Detrick. The NBFAC will continue to provide bioforensic analysis support for Federal customers including the Federal Bureau of Investigation (FBI), law enforcement, Department of Defense (DOD), the intelligence community, State Department and others for ongoing biothreat agent casework. Automation, high-throughput and surge capacity capabilities for the management of evidentiary samples will be further optimized to allow NBFAC to operate seamlessly regardless of conditions. Genotyping assays will be developed for the next set of high priority agents as determined by NBFAC and the law enforcement community. This will ultimately result in a validated set of bioforensic genotyping assays for the top 20 high-consequence biothreat agents and three Foreign Animal Disease (FAD) agents. Genetically engineered or modified agent molecular assays will be developed. Cell-free assays, mouse lethality assays and others will be developed, evaluated, and validated for the high-consequence toxin biothreat agents.

The National Bioforensic Repository Collection (NBRC) will be operational. This collection will then be transitioned to the new NBACC facility. Repository collections at spoke laboratories will be expanded with plans for complete consolidation of all reference collections of the top 30 high-consequence biothreat agents, enteric agents, and related and non-related organisms in the NBRC.

The current NBFAC Spoke operations will undergo an intensive review to ensure that resources are being utilized appropriately. After achieving ISO 17025 certification for the NBFAC interim hub laboratory in FY 2006, NBFAC will concentrate on assisting accreditation of spoke operations with ISO 17025 certifications starting with the Plum Island Animal Disease Center (PIADC) Foreign Animal Disease Bioforensic Spoke Laboratory.

The NBFAC National Laboratory R&D Program will continue focusing on the characterization of biothreat agents and their associated evidentiary sample matrices in three R&D focus areas: physical and chemical analysis of biothreat agents, development of molecular signatures and sample management.

Response and Restoration – Begin development of concept of operations for wide area restoration.

Agriculture – Operation of the Plum Island Animal Disease Center (PIADC) and necessary safety, security and operational upgrades continues. The conceptual design and engineering study for the National Bio- and Agro-defense Facility is completed. Partnering with industry, commercial scale-up, production, and testing is conducted on the improved FMD vaccine which had undergone preliminary testing in FY06. This should result in a product ready for acquisition into the National Veterinary Stockpile by FY08. Advanced development continues on vaccines for other FMD serotypes and other foreign animal diseases (e.g. Rift Valley Fever) and on anti-virals. Remaining diagnostic gaps will be closed.

Decision support tools including systems studies, FMD model, and crisis action planning exercises developed for the top priority foreign animal disease (i.e., FMD) are deployed, and regularly exercised by DHS and sector-specific agency partners. The ‘food sensor’ designed during FY 2005 and FY 2006 to detect priority pathogens at critical production nodes of the appropriate food industry sector will be commercially available. The high-throughput diagnostics platform developed for FMD and look-alike disease during FY 2004 through FY 2006 is deployed in partner laboratories in the USDA National Animal Health Laboratory Network, thereby providing a significant enhancement of national response and surge capacity.

DHS responsibilities for agro-defense are defined in several public laws and Homeland Security Presidential Directives (HSPD), including the Homeland Security Act of 2002; Congressional appropriations for FY 2004-2006; “Critical Infrastructure Identification, Prioritization, and Protection” (HSPD-7); “Defense of United States Agriculture and Food” (HSPD-9); and “Bio-defense of the 21st Century” (HSPD-10). Collectively, these directives emphasize the need for a coordinated agro-defense program amongst the various sector specific agencies (SSAs). To insure more effective coordination DHS will establish the Joint Agro-terror Defense Office (JADO) in FY 2007. The JADO will be established in the Office of the Under Secretary of DHS S&T, and will provide continuity and functional linkages for these inter-agency interactions, including issues concerning policy (guidance and coordination, development of requirements), research coordination (leadership and coordination of domestic and international programs for requirements-driven advanced development of countermeasures), and strategic planning. To provide overall coordination and guidance, JADO will establish a Senior Advisory Group, to be chaired by the Under Secretary of DHS S&T and vice chaired by USDA, and include representatives from the research and regulatory agencies and homeland security office of USDA. A dedicated staff for JADO will include an executive officer and staff of 4-5 FTEs (e.g., 2-3 DHS and 2-3 inter-agency), whose activities will include active participation in the

inter-agency process, and the preparation of necessary reports, meetings and workshops, and associated travel in support of priority issues in the context of the strategic planning process.

Engineered Threats – Traditional threat agents – those that have their origins in nature – pose the greatest immediate terrorist threat and hence have been the primary focus of the Biological Countermeasures Portfolio to date. However, the explosive pace of discoveries and advances in biotechnology and molecular biology has increased the potential for a future generation of engineered biological threats. The interagency “Strategy for Defending Against Engineered Threats” provides a systematic framework for addressing such threats and calls on DHS to implement a “technology watch” to look for those scientific indicators that would change our understanding of the feasibility of terrorist groups engineering such organisms and to develop detection systems that are specially designed to rapidly detect and characterize unknown and novel threats. Both these activities will be initiated in FY 2007.

PPA: CHEMICAL COUNTERMEASURES

	Perm Pos.	Work Years	Amount
2005 Actual	-	-	\$61,393
2006 Revised Enacted	-	-	94,050
2007 Adjustments to Base	-	-	(10,958)
2007 Current Services	-	-	83,092
2007 Program Change	-	-	-
2007 Request	-	-	83,092
Total Change 2006-2007	-	-	(10,958)

Science and Technology Directorate requests \$83.09 million for this activity. This is a decrease of \$11 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The Chemical Countermeasures portfolio enhances the nation’s capability to anticipate, prevent, protect from, respond to and recover from chemical threat attacks through interagency leadership and conduct of innovative research, development, and technology transition. To fulfill this mission, the following strategic objectives have been established:

- enable comprehensive understanding and analyses of chemical threats in the domestic domain;
- develop pre-event assessment, discovery, and interdiction capabilities for chemical threats;
- develop capability for warning, notification, and timely analysis of chemical attack;
- optimize technology and process for recovery from chemical attacks; and
- enhance the capability to identify chemical attack sources.

Research and Development (R&D) activities reflect prioritization of the many possible chemical threats and vulnerabilities, as well as the possible systems, methods, and technologies that might address these. End-user input and systems studies that identify gaps in current capabilities guide technology investment. In FY07, the portfolio organization is being adjusted to distribute programs associated with the current Architectures program area where they more appropriately belong. Thus the Architectures program area will be eliminated and the total number of program areas reduced to three: Analysis, Detection, and Response and Recovery. The Laboratory Response Network program in

Analysis will also move to Response and Recovery for improved association to function. The portfolio organization reflects our recognition of the needs to prepare against a range of threats that includes classical chemical warfare (CW) agents, toxic industrial chemicals (TICs), and non-traditional agents (NTAs).

The Analysis Program Area (referred to in the FY06 budget as Chemical Analysis and Coordination) supports development of the required fundamental understanding of toxic chemical threat properties and conducts risk and vulnerability assessments based on these properties. The program also develops and sustains expert reach-back capabilities to provide rapid support in domestic emergencies. The Analysis program area provides support to develop and validate forensic analytical tools and methodologies for attribution. To ensure a cohesive effort to describe threats and countermeasures, key analytical assessments in support of Chemical Countermeasures, including Material Threat Assessments and systems studies formerly supported under the Architectures program area, will be conducted under the auspices of a single entity, the Chemical Security Analysis Center sustained by funding from the Analysis program area.

The Detection Program Area supports technology development for warning and notification of a chemical threat release. It includes technologies responders need to survey potentially contaminated scenes. Target performance characteristics for detectors will be established for different detector applications, and a process to certify that candidate technologies perform as specified will be used. The program works toward the development of technologies that can, in a single package, sense chemical hazards of possible terrorist use as well as more commonly monitored chemicals at costs that will support true dual-use application. Developing such a capability requires a leap forward in technology; research toward that end is embedded across detection technical milestones. In FY07, the Rapidly Deployable Chemical Detection System moves from the former Architectures program area to this program area.

The Response And Recovery Program Area provides technologies used in returning a chemically contaminated area to a normal condition. This area primarily supports development of technologies and guidelines in decontamination, and the analysis of contaminated areas for contamination both before and after restoration processes. In the FY07 budget, the Laboratory Response Network moves from the Analysis program area to the Response and Recovery program area. Additionally, the Facility Restoration Demonstration moves to this area from the Architectures program area.

Coordination with other agencies like the Environmental Protection Agency (EPA), Centers for Disease Control and Prevention (CDC), the Federal Bureau of Investigation (FBI), the Department of Defense (DoD), the interagency Technical Support Working Group (TSWG), and the Intelligence Community (IC) remains critical to support our national chemical preparedness goals. The DoD has developed a particularly strong chemical defense program over a number of decades, and is a key partner for moving new capabilities into the domain of homeland security.

FY 2005 Accomplishments:

Chemical Analysis and Coordination:

- We developed and executed a Memorandum of Agreement (MOA) with DoD on building and use of space to locate Chemical Security Analysis Center at Edgewood campus of Aberdeen Proving Ground (APG), MD. We developed design of CSAC SCIF space, which will be collocated with All-Hazards Sample Receipt Facility at APG. Construction of final CSAC will

be complete in March FY 2007 using DHS Chemical Countermeasures funds executed in FY 2005. We agreed to space for interim operations at APG and identified interim Director for CSAC.

- Through agreement with interagency, we initiated development of a “source book” for non-traditional chemical agents (NTAs), under auspices of CSAC. Source book will collect currently available information on NTAs from multiple agencies into a single searchable document to enable effective threat assessments and advance RDTE related to NTAs.
- We drafted Security Classification Guidance for NTAs in collaboration with IC and DoD to improve information control and enable better communication among agencies working in NTA matters.
- We developed model for chemical reach-back managed through CSAC and interfaced with DHS all-hazards reach-back concept.
- We committed to providing support for an integrated forensic laboratory network that can provide timely, effective, and forensically defensible response to suspect or real incidents of chemical terrorism.
- We initiated design and development of chemically contaminated evidence receipt facilities at Lawrence Livermore National Laboratory Forensic Science Center and Edgewood Chemical and Biological Forensic Analytical Center. Initiated development of mobile forensic and evidentiary van.
- We initiated analysis of gaps in chemical forensic analytical methodologies and development of plan to address the gaps. We accumulated current forensic methods for sharing between the forensic centers.
- We began design and construction of two all-hazards sample “triage” laboratories in collaboration with EPA and Association of Public Health Laboratories. These laboratories are designed to exclude chemical and radiological hazards and enable safe handling and dispensation of unknown samples presented to public health laboratories. The effort addresses a major safety concern of the National public health laboratory system. Agreements are under development to place the prototypes at an EPA laboratory and a State public health laboratory for testing and evaluation in FY 2006.
- We established an *ad hoc* interagency technical working group (DHS Chair, EPA, CDC, FBI, DoD) to address issues related to establishment of an environmental chemical analysis capability to support restoration. We established policy issues regarding chemical surety analysis and worked with DoD to examine policy issues toward addressing homeland security goals.
- We conducted an interagency tabletop exercise (“Amber Mist”) with Federal, State, and local participation to identify and document issues bearing on environmental, clinical, and forensic laboratory capabilities to address an incident involving persistent highly toxic chemical agent release.

Architecture:

- We approved the New York City Metro Transit Authority’s request to keep as a locally-owned asset the expeditionary PROTECT networked chemical detection system deployed, maintained, and monitored on a continuous basis by DHS through the fall of 2004.
- We worked with Office of Domestic Preparedness to have the PROTECT system identified as an allowable expenditure under the FY 2005 Transit Security Grant Program, thereby successfully transitioning the PROTECT system to a capability available to major urban area transit systems.

- We provided final assessment and documentation of three representative scenarios (indoor attack with a chemical warfare agent, outdoor attack with a toxic industrial chemical (TIC), and water supply contamination with a toxin). These studies indicate potential attack consequences, examine possible approaches to mitigate these consequences, and guide the development of technical and operational defensive countermeasures.
- We developed a framework for prioritizing threats and vulnerabilities more generally, based on such features as toxicity, exposure pathway, non-lethal sensory properties, dissemination method and venue attacked.
- We analyzed the value of early detection that could be provided by chemical sensors and video surveillance in facilities to support emergency response measures (e.g. controlled evacuation) aimed at minimizing casualties. This analysis informs requirements developed for detection technology development efforts.
- We examined operational concepts for use with re-locatable detection systems, such as the prototype Rapidly Deployable Chemical Defense System (RDCDS), in selected deployment configurations.
- We assessed the impact and potential countermeasures for excursions on the outdoor reference scenario, including attacks on special events and chemical sources moving through populated areas.
- We completed an assessment of the impacts of a large-scale TIC release and assessed the cost-effectiveness of potential technological solutions and mitigation strategies. We investigated issues associated with transport of chlorine (and similar chemicals) through populated areas. A major city has been involved in identification of potential countermeasures.
- We identified key issues pertaining to contamination of water distribution systems. We analyzed key factors pertaining to the required detection limit, extent of health and economic impacts, and uncertainties surrounding restoration that are directly relevant to establishing technology requirements for water systems. Selected technology alternatives will also be assessed for cost versus effectiveness. We assessed impact and potential countermeasures for excursions from baseline scenario, involving contamination of bottled water.
- We developed an architecture for a Rapidly Deployable Chemical Defense System (RDCDS) to provide chemical detection capability for protection at special events, such as National Security Special Events. The architecture comprises a networked system of ground-based detectors (commercially available) and an aerial surveillance platform, configurable as appropriate to the need of the event.
- The airborne component of RDCDS was certified by USSS for support of NSSEs and supported the 2005 Inauguration and State of the Union events. Airborne system can detect or identify 17 Toxic Industrial Chemicals (TIC) and six Chemical Warfare Agents (CWA).
- We successfully deployed and demonstrated a ground-based sensor network with robust/secure communication system at the San Francisco Airport in January 2005. The current ground based system can detect or identify four classes of TICs and two classes of CWAs.
- The S&T Directorate is funding a Facility Restoration Operational Technology Demonstration (OTD). The goal of this project is to develop procedures, plans, and tools to restore rapidly critical transportation facilities following a release of a chemical warfare agent. Critical transportation facilities to be considered are those that, if shut down, could cause great damage to the US either from an economic standpoint or from a national security perspective. As such, the primary focus of the OTD is on major airports. Accomplishments this FY include:

- Establishing a partnership with Los Angeles International Airport (LAX) and conducted initial meetings with airport emergency management personnel as well as regulatory agencies that have responsibility for the airport;
- Establishing a list of threat agents and a threat scenario (at LAX) based on input from other DHS-funded projects and other Federal agencies.
- Developing an outline for the LAX Restoration Plan. Established preliminary clean-up guidelines for airborne exposure to the threat list agents and initiated development of similar guidelines for contact hazard. Neared completion of survey of sampling and decontamination technologies to serve as basis for recommendations on specific technologies that should be used during restoration operations at partner airport.
- Initiating modification of a decision support tool that was developed for a previous DHS project (the Biological Restoration DDAP) to handle chemical data. Initiated an advisory board for this project made up of members from other Federal agencies such as the EPA, DOT, and the FBI.
- Water Security Operational Technology Demonstration:
 - We produced a template for choosing, acquiring, and evaluating in-line water sensors for use in homeland security applications.
 - We evaluated sensor performance of three sensor technologies against selected waterborne chemicals, in both laboratory testing and operational testing on an actual local water distribution system. Overall project was guided by an advisory board, comprising representatives from major water utilities, Federal agencies with an interest in water security, and other important stakeholders.
 - We initiated transition discussions with EPA to move effort to EPA in 2006.

Detection:

- Lightweight Autonomous Chemical Identification System (LACIS) Program (Responder Hand-Held Chem Detection Tool): Twelve performers initiated Phase I work. Breadboard systems were tested against high priority TICs under a variety of relative humidity levels and at different temperatures, in the presence of interferents. Preliminary Design Reviews (PDRs) were conducted and performers provided Receiver Operating Characteristic (ROC) curves to characterize their systems' Probability of False Alarms, Probability of Detection, and Limits of Detection. Overall system performance compared to requirements was predicted. Based upon Phase I performance, six of these twelve performers will be down-selected to continue further development in Phase II efforts, being initiated in FY 2005. Phase II efforts focus on combining effectively orthogonal sensing modalities including Ion mobility spectroscopy, differential mobility spectroscopy, chemical resistors, and optical methods.
- Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) Program: Eight teams actively pursued Phase I projects aimed at developing technologies for low cost, continuous, indoor detection of CWAs and TICs. During Preliminary Design Reviews, each provided, through a combination of analysis and laboratory validation, evidence for the Limit of Detection, Probability of Detection, and Probability of False Alarm for their system, as well as an analysis of the total cost of ownership. Five teams were down-selected and Phase II efforts were initiated.
- Low Vapor Pressure Chemical Detection Systems – Short-Range On-Demand Low Volatility Detector (SOLVD) and Low Volatility Autonomous Chemical Monitor (LoVAC) Programs: Based in part upon gaps in current technologies to detect low vapor pressure chemicals identified in a 2004 workshop of Subject Matter Experts, a Broad Agency Announcement

entitled "Low Vapor Pressure Chemical Detection Systems" was released in the second quarter of FY 2005. Submitters proposed R&D projects to develop two distinct systems. A LoVAC will provide technology to monitor for the presence of chemicals that are either aerosolized or supported on airborne particulates, and the SOLVD will provide responders with a tool to determine whether a hazardous low vapor pressure chemical contaminant is present. From 25 proposals received, 4 SOLVD teams and 3 LoVAC teams were selected for negotiations for awards that began in fall 2005.

Response and Recovery:

- Portable High-throughput Integrated Laboratory Identification System (PHILIS) Program: Of four Phase I teams, three were selected to enter the final combined Phase II-III portion of this project, based upon Critical Design Reviews in which each team provided final designs and defended their estimates of environmental sample throughput and limit of detection of target analytes in the presence of matrix interferences. A production version of each team's mobile integrated laboratory system was provided for independent testing and evaluation at Field Trials conducted at the CUBRC Facility in Springville, New York, July 19-23, 2005. Each team demonstrated an ability to be fully operational within two hours of starting the test, and initially to analyze six independent samples for the presence of target analytes. Following this demonstration, each team was supplied samples representative of 1000 samples per 24-hour period. Analytes included CWAs and TICs from a pre-approved list, and were present at various concentrations in various physical phases and in the presence of a variety of sample matrices, including soil, water, soil with diesel fuel, and water with diesel fuel. Final reports were provided describing the capabilities and limitations of each system undergoing Field Trials. This Program is complete in FY 2005.
- An MOA is in development with EPA for joint DHS-EPA evaluation of two selected prototype PHILIS systems at user sites during FY 2006, with transition of ownership responsibilities to EPA in FY 2007.
- Developed technical performance data on several non-traditional agent decontamination chemistries in laboratory reactor studies.

FY 2006 Planned Accomplishments

Chemical Analysis and Coordination:

- We will complete outfitting of temporary Chemical Security Analysis Center space and initiate staffing of CSAC. Initiate construction of permanent CSAC space. We intend to accumulate data on chemical hazards and identify data gaps.
- We plan to complete the first edition source book on non-traditional chemical agent data.
- We plan to complete nerve agent material threat assessment and initiate material threat assessments of additional chemical threats, with prioritization determined in collaboration with HHS.
- We will establish a chemical expert reach-back program and integrate with DHS all-hazards reach-back concept.
- We will complete construction of chemically contaminated evidence receiving facilities.
- We intend to complete analysis of gaps in forensic analytical methodologies. Initiate validation of existing candidate methods and initiate development of new methodologies against prioritized needs.
- We will complete construction of two prototype unknown sample "triage" laboratories, place in public health lab and EPA regional lab, and initiate assessment in concert with EPA.

- Based on the outcome of policy considerations with regard to chemical surety agent controls and assessment of capacity required, we will develop a prototype fixed laboratory capability to analyze large numbers of samples from chemical contamination event. This effort will target selection of two well-equipped laboratories in mid-Atlantic and Northeast regions for modification to address requirement to support high-volume sample analysis.
- We will design a proficiency testing and performance maintenance program to support fixed and mobile chemical analysis laboratories.
- We will conduct critical enabling studies toward the construction of a chamber for developmental testing of countermeasures to non-traditional agents, in collaboration with DoD.
- We will design a program to develop environmental fate and toxicology data on non-traditional agents, coordinated with DoD programs.

Architecture:

- We intend to complete reports on system studies of three initial representative scenarios (indoor attack, outdoor attack, and attack on water system).
- We will initiate system study on low-volatility agent attacks, identifying potential attack scenarios, assessing consequences, and identifying target countermeasure performance parameters (under auspices of CSAC).
- We will transition the Water Security Demonstration program to EPA.
- Under the Facility Restoration Demonstration Program, we will complete a restoration plan for Los Angeles International Airport which will include scenario planning, roles and responsibilities of stakeholders, recommended clean-up guidelines for three chemical agents and three toxic industrial chemicals, sampling plans for facility characterization and clearance, recommended decontamination strategies, and a waste management plan. The restoration plan will serve as a template for other airports and transportation facilities. A final version of a decision support tool for chemical restoration will be completed.
- The Rapidly Deployable Chemical Defense System Program will complete its market survey of technologies toward definition of best-available technologies for networked ground sensor and aerial chemical surveillance platform. It will expand the number of TICs and CWAs detectable, and obtain certification of ground-based sensor system for use in NSSE support.

Detection:

- Lightweight Autonomous Chemical Identification System (LACIS) Program (Responder Hand-Held Chem Detection Tool): Six Phase II performers will continue laboratory testing against TICs of most immediate concern, and system integration of prototype systems will be completed. Three prototype models of the hand-held sensor from each performer will be delivered by May 2006 for independent testing. Independent Testing Performers will be selected and awarded, and testing of systems against sixteen TICs and four CWAs, in the presence of interferences, will be completed by July 2006. Test results will form partial basis for down-select decisions for Phase III awards.
- Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) Program: In the second quarter of FY 2006, a laboratory prototype from each of the five Phase II performers will be delivered for extensive testing and evaluation at an Independent Test Facility. The test matrix will consist of sixteen TICs and four CWAs. Based upon Independent Testing of prototypes and result of a Critical Design Review, less than three performers will be selected to begin Phase III R&D efforts. Up to three early pre-production prototypes will be made

available for preliminary field-testing in operational test-beds such as WMATA and Pentagon Shield.

- Low Vapor Pressure Chemical Detection Systems – SOLVD and LoVAC Programs: Each Phase I team will conduct in-house laboratory testing of three Low Volatility Analytes to demonstrate a proof of concept for their technical approach. Each team will provide a Preliminary Design Review for Program Managers. Phase I will finish in FY 2006 and down-selection of performers for beginning Phase II projects will be based on technical evaluation (test protocol, performance targets and system characteristics), funds available, and system total cost of ownership.

Response and Recovery:

- In collaboration with EPA, we will assess prototype Portable High-Throughput Integrated Laboratory Systems (PHILIS) for acceptability to place in user hands for evaluation and modification deemed necessary through user evaluation.
- We will identify needed modifications to one PHILIS system to address non-traditional agent (NTA) field analysis requirement. Identify environmental controls and analytical technologies for analysis of NTA in mobile lab environment.
- Based on a market survey of decontamination technologies and identified shortfalls in performance against CWAs and TICs, we will initiate program to fill performance gaps with new decontamination approaches.
- We intend to identify the most promising current approaches for NTA decontamination and conduct laboratory reactor tests and efficacy studies using coupon tests

FY 2007 Plan

Analysis (formerly Chemical Analysis and Coordination):

- The Chemical Security Analysis Center will be fully operational; construction completes Mar 2007. CSAC will be fully integrated with DHS S&T all-hazards knowledge management construct.
- Compilation, acquisition and curation of chemical databases and NTA reports will be complete.
- We will complete material threat assessments for high-priority chemical threats.
- We will complete a system study on low-volatility agent attacks, identifying potential attack scenarios, assessing consequences, and identifying target countermeasure performance parameters.
- We will complete critical enabling studies toward the construction of a chamber for developmental testing of countermeasures to non-traditional agents, in collaboration with DoD.
- We will initiate data acquisition on environmental fate and toxicology of NTAs.
- We will validate new forensic analytical methodologies developed in FY 2006.

Detection:

- Lightweight Autonomous Chemical Identification System (LACIS) Program (Responder Hand-Held Chem Detection Tool): Phase III awards will begin in early FY 2007, following a successful Phase II Critical Design Review and consideration of results from testing of prototype systems. Systems delivered at end of Phase III will be field tested.
- Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) Program: Two or three of the most effective systems developed by the original eight Phase-I performers will finish development in Phase III R&D programs. Each team will deliver field prototypes in FY 2007 for testing and evaluation at an independent test facility.

- Low Vapor Pressure Chemical Detection Systems – SOLVD and LoVAC Programs: Phase II efforts will commence in FY 2007. Each team will deliver a laboratory prototype to HSARPA for testing and evaluation at an Independent Test Facility near the end of Phase II. In an effort to produce an early version of a working prototype, at least two teams will deliver fieldable prototypes in FY 2007. Next generation systems will initiate their Phase III efforts after the successful completion of a Critical Design Review.
- The Rapidly Deployable Chemical Defense System will continue to support NSSE. Continue spiral development of the RDCDS system to incorporate new technologies.

Response and Recovery:

- We will modify prototype Portable High-throughput Integrated Laboratory Identification Systems (PHILIS) based on user input and recommendations after FY 2006 evaluation period and leave behind as deemed appropriate, and we will transition the program to EPA.
- We will initiate modifications of mobile laboratory to enable field analysis of NTAs.
- We will complete assessment of triage labs and prototype fixed labs; leave in place if assessment favorable.
- We will complete definition of accreditation process for chemical laboratory performance.
- The Facility Restoration Technology Demonstration will focus on the transfer and application of the concepts developed in FY 2005 and FY 2006 for airports to other types of critical facilities such as subway systems and other transportation nodes. In addition, FY 2007 accomplishments will focus on filling data and technology gaps critical to the restoration of facilities such as the decontamination of sensitive equipment and the interactions of chemical agents on surfaces.
- We plan to assess progress toward identification of next-generation decontamination technologies for persistent agent decontamination.

PPA: EXPLOSIVES COUNTERMEASURES

	Perm Pos.	Work Years	Amount
2005 Actual	-	-	\$18,826
2006 Revised Enacted	-	-	43,560
2007 Adjustments to Base	-	-	43,022
2007 Current Services	-	-	86,582
2007 Program Change	-	-	-
2007 Request	-	-	86,582
Total Change 2006-2007	-	-	43,022

Science and Technology Directorate requests \$86.6 million for this activity. This is an increase of \$43 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The Explosives Countermeasures portfolio develops and coordinates technical capabilities to detect, interdict, and mitigate the consequences of the use of improvised explosives devices (IEDs) in terrorist attacks against the population, mass transit, civil aviation and critical infrastructure. Its research, development, test and evaluation (RDT&E) activities include prioritization of efforts among the many possible terrorist threats and targets, development of new detection technologies, and evaluation of integrated protective systems for high-value facilities. RDT&E priorities focus on the detection of vehicle bombs, suicide bombers, and leave

behind bombs. As a result of the R&D Consolidation in FY 2006, the Explosives Countermeasures portfolio will also dedicate significant resources to continue the development of explosives detection and blast mitigation systems for civil aviation security. Consistent with this RDT&E leadership role, the Explosives Knowledge Center initiated in FY 2005 will provide guidance and information to ensure that preparedness capabilities at the Federal, State, local, and tribal levels are updated over time to be consistent with new and emerging technologies and capabilities as well as with the changing threat.

FY 2005 Accomplishments:

The following activities describe key accomplishments for the explosives portfolio in FY 2005:

- initiated pilot of commercially-available technologies to screen for suicide bombers in a mass transit rail environment;
- initiated development of stand-off explosives detection technologies for suicide bombers;
- initiated development of explosives detection technologies, stand-off and checkpoint for vehicle bombs;
- drafted a blast mitigation RDT&E strategy for infrastructure protection; and
- initiated the creation of the Explosives Knowledge Center. This knowledge center will support preparedness for State, local, and tribal communities by developing system architectures, based on technology information and assessment tailored to the local community. The end result will be to give State, local and tribal communities the capability to make optimal risk versus cost choices for explosive countermeasures.

FY 2006 Plan:

Efforts will focus on developing the ability to detect, interdict and mitigate the consequences of suicide bombs, leave behind bombs, and vehicle bombs. The Explosives Portfolio will also provide the ability to detect, interdict and mitigate the consequences of explosives and weapons attacks on air transportation (both domestic and foreign inbound). Such protection will extend to passengers and their baggage, as well as to cargo containers and bays. The Explosives Portfolio will lead an interdepartmental effort to develop a national strategy for explosives countermeasures technology RDT&E to address the prevention, protection, response and recovery for our domestic critical infrastructure and key assets.

Aside from cross-cutting research initiatives applicable to all programs, specific RDT&E areas to be pursued are:

Aviation Security: An air cargo pilot program will evaluate the operational feasibility of screening break-bulk air cargo using available technologies. We will complete development of a prototype automated carry-on baggage explosives detection system, and will evaluate and improve. The next-generation checked baggage Phoenix program will be completed. The development of advanced systems to screen people for both explosives and weapons will be initiated. Certified checked baggage Explosives Detection System (EDS), checkpoint screening, and cargo screening systems will be evaluated for certification or qualification.

Suicide Bombers/Leave-Behind IEDs: The portfolio will pilot available and prototype explosives detection and mitigation countermeasures in a rail environment. In parallel, the RDT&E program will develop new capabilities--for example, advanced systems to screen people at stand-off distances for explosives--that will significantly enhance existing capabilities against suicide bombers. The portfolio

will work in conjunction with the Domestic Nuclear Detection Office (DNDO) to address the detection of smuggled explosives in inbound cargo.

Vehicle Bombs: The portfolio will complete the development of a prototype checkpoint vehicle bomb detection system. A pilot to test available systems suited for outdoor screening at checkpoints will be conducted. The portfolio will continue development of stand-off vehicle bomb detection systems. To fill the technology gaps identified in the infrastructure protection strategy developed in FY 2005, the portfolio will develop methods to mitigate blast effects on critical infrastructure, and provide guidance on the implementation of available blast mitigation technology. The portfolio will also pursue the ability to detect marked commercial explosives at locations upstream from the target.

Explosives Knowledge Center: The requirements for the explosives knowledge center will be determined and the center will be established.

FY 2007 Plan

Efforts will continue to focus on developing the ability to detect, interdict and mitigate the consequences from aviation threats, suicide bombs and vehicle bombs approaching high profile targets and densely populated areas. Aside from the cross-cutting research programs, specific areas to be pursued are:

Aviation Security: The portfolio will complete the air cargo pilot to evaluate available technologies to screen break-bulk air cargo. The prototype automated carry-on baggage explosives detection system will be evaluated and readied for qualification. Current passenger explosives detection systems will be improved and evaluated. The development of advanced systems to screen people for both explosives and weapons will continue to be pursued. And as improved systems become available, checked baggage EDS, checkpoint screening, and cargo screening systems will be evaluated for certification or qualification.

Suicide Bombers/Leave-Behind IEDs: The portfolio will pilot available and prototype explosives detection and mitigation countermeasures in operational environments to protect critical infrastructure. Prototypes of advanced systems to screen people for suicide bombs will be developed. The portfolio will continue to work in conjunction with DNDO to address the detection of smuggled explosives in inbound cargo.

Vehicle Bombs: A pilot to test available and prototype systems suited for outdoor screening will be conducted. The portfolio will continue the development of stand-off vehicle bomb detection systems. Blast mitigation methods to protect critical infrastructure will continue to be developed, as well as guidance on the implementation of available blast mitigation technology will be provided. The portfolio will continue to pursue the ability to detect marked commercial explosives at locations upstream from the target.

Explosives Knowledge Center: An explosives knowledge center will be fully operational and conduct activities prescribed by the plans and implementation practices developed in FY 2005 and FY 2006. Specifically, the explosives knowledge center will:

- develop techniques to determine State, local, and tribal explosives countermeasures technology needs and produce optimum explosives response architecture;

- provide technical outreach to State, local, and tribal communities regarding explosives threats and explosives countermeasures technology, training and procedures; and
- deliver and test that capability in one Regional Technology Integration initiative city.

PPA: THREAT AWARENESS PORTFOLIO (FORMERLY THREAT AND VULNERABILITY, TESTING AND ASSESSMENT)

	Perm Pos.	Work Years	Amount
2005 Actual	-	-	\$84,315
2006 Revised Enacted	-	-	42,570
2007 Adjustments to Base	-	-	(2,719)
2007 Current Services	-	-	39,851
2007 Program Change	-	-	-
2007 Request	-	-	39,851
Total Change 2006-2007	-	-	(2,719)

Science and Technology Directorate requests \$39.9 million for this activity. This is a decrease of \$2.7 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The RDT&E activities funded through the Threat Awareness Portfolio (TAP) primarily support two DHS strategic goals: awareness and prevention. Furthermore, they provide the tools and knowledge necessary to meet one of the Secretary's recently announced imperatives to increase preparedness, with particular emphasis on catastrophic events caused by weapons of mass effect (WME), and the requirements delineated in the Department's National Preparedness Goal. TAP's efforts focus on developing information about the two basic elements of terrorist threat, namely, terrorist capabilities and terrorist motivations and intents, and providing the advanced information processing tools necessary to rapidly and accurately discover, use, and share such information. Such tools and methods are intended to enable and enhance Federal, State, and local awareness of a broad range of threats through information fusion and information sharing. TAP carries out its mission through seven interrelated programs in three critical areas:

WME Capability Assessment and Attribution

- All-WME Capability Assessment - Assessing the scientific and technical capabilities of foreign and domestic terrorist groups to develop and deploy weapons of mass effect and other threat agents

Social-Behavioral Analyses of Terrorist Threat

- Motivation and Intent – Develop the ability for the U.S. to predict the incidence and timing of terrorist actions. Understand how socio-political, cultural, and behavioral factors relate to the motivations and intents of terrorists. Develop predictive and prescriptive analytical models that enable continuous assessment of individual- or group-related motives, behaviors, and intentions signifying terrorist actions
- Terrorist Detection – Developing and applying multiple physical and behavioral indicators of terrorist threat, including multimodal biometrics to identify terrorists as well as remote, non-invasive psychological and physiological measures and techniques to determine deception or detect hostile intent

Knowledge Management Tools for Fusing and Sharing Information

- Data Science and Data Representation – Develop the ability to ingest process and fuse vast quantities of information to find hidden relationships and links, enabling the U.S. to “connect the dots” ahead of time. A common, multi-use computing architecture for collecting, analyzing, synthesizing, and disseminating massive amounts of threat information from multiple, distributed, and disparate data sources
- Visualization and Analytics – Today intelligence and law enforcement have very large dynamic data sets, but their usefulness is limited by the analyst’s ability to understand or comprehend the data. Visualization and analytics seeks to display relationships and dynamics of vast amounts of intelligence in an intuitive visual way. Techniques for rapidly and easily discovering, relating, and synthesizing diverse information of multiple data types and from multiple sources, including information extraction and pattern discovery from massive, diverse data sets
- Discrete Sciences and Modeling and Simulation – Our ability to understand and simulate the dynamics of a major event, like Hurricane Katrina, is limited by our modeling and simulation technologies. In-depth simulation will enable us to predict in real-time major event consequences and courses of action. Advanced computing algorithms and hardware architectures for modeling, simulating, and managing threat data in real time and with high resolution; integrated simulation and modeling techniques for threat assessment, scenario planning, and incident response
- Interagency Testing and Evaluation – An interagency collaborative facility for testing, evaluating, prototyping, and piloting knowledge management technologies for national-level threat assessment capabilities; extending to operational deployments at Federal, State, and local venues

Activities in this portfolio are designed to provide computer-based tools that enable DHS analysts to evaluate extensive amounts of diverse threat information; detect and document terrorist intent; couple threat information with detailed knowledge of terrorists’ capabilities for developing and sources for obtaining weapons of mass effect; and to draw timely insights and distribute assessments from the information. Capabilities appropriate to federally managed information sources, including security and privacy tools required to share information and collaborate among various Federal, State, and local government organizations as well as foreign governments and international organizations involved in homeland security are also being developed and implemented. Such activities directly support the Office of Intelligence and Analysis (OIA), the Directorate for Preparedness, the Transportation Security Administration, Customs and Border Protection, and Immigration and Customs Enforcement, as well as other operational entities within DHS. In addition, the portfolio’s efforts have been designed to enable collaboration with intelligence, law enforcement, and other homeland security community agencies.

FY 2005 Accomplishments

In FY 2005, several comprehensive research and development programs – on the social and behavioral aspects of terrorism and responses to terrorism, on visual analytics techniques for discovering and accessing information, and on discrete mathematics for managing and processing data in massive, disparate data sets – were established. In addition, implementations of TAP technologies were initiated throughout DHS.

- We hosted a comprehensive, 3-day Portfolio Review at the Nevada Nuclear Test Site for all nine TAP programs and their 60 individual projects being executed through ORD, HSARPA, and SED. Participants included 125 project, program, and portfolio staff as well as S&T management and the former Information Analysis and Infrastructure Protection (IAIP) and Custom and Border Protection (CBP) customer representatives.
- TAP initiated a multi-faceted research and development program in terrorist motivation and intent. This program addresses projects ranging from modeling the socio-political, behavioral, and cultural bases for terrorism on a group, organizational, or cultural basis to detection of deception and determination of intent on an individual level using social-behavioral or advanced, multiple biometrics measures. As with all sponsored work, the research encompasses broadly based efforts at national laboratories, universities, and commercial organizations.
- With the White House Office of Science and Technology Policy (OSTP), TAP established a Social, Behavioral, Economic Partnership that includes 21 experts in the socio-political, behavioral, cultural, and psychological aspects of terrorism and responses terrorism. This group provides expert advice on and help set a research and operational agenda for programs in this area. We hosted the Partnership's initial 2-day meeting in March 2005.
- TAP created a knowledge management architecture, known as ADVISE (Analysis, Dissemination, Visualization, Insight, Synthesis, and Enhancement) to integrate the various information analysis and synthesis, visualization, and knowledge discovery component capabilities. ADVISE also created and incorporated a comprehensive encyclopedia of CBRNE threat and consequence and effects data.
- TAP established an Institute for Discrete Sciences (IDS) to investigate and develop the specialized computing algorithms and hardware architectures necessary to analyze massive amounts of diverse data from multiple, disparate, distributed data sources and to model terrorist attacks and simulate consequences on a real-time, high-resolution basis.
- We completed the national-level research agenda for the National Visualization and Analytics Center (NVAC), *Illuminating the Path* published by IEEE in July 2005. We formally established the first Regional Visualization and Analytics Center (RVAC) at Stanford University, and initiated formal steps to create two Government VACs to support the NVAC. The RVACs and GVACs will incorporate university research activities as well as commercial and other government visual analytics research into the national lab-oriented work of the NVAC.
- We expanded the pilot Threat Vulnerability Integration System (TVIS) at OIA to include the enhanced computer hardware, networking hardware, and a suite of analytical and visualization tools available with ADVISE. TVIS has been connected to OIA's internal networks and made available for use by all analysts. Replaced the initial TVIS system at the Biodefense Knowledge Center with the enhanced ADVISE capability.
- TAP completed an engineering design for the Enhanced International Travel Security (EITS) system, which allows the validity of travel documents and the identity of travelers to be determined in real-time at U.S. borders and other points of entry. We initiated planning for a pilot system to be implemented with the United Kingdom and Australia. We established formal working groups with representatives from S&T, Customs and Border Protection, US-Visit, as well as the US Department of State, the UK Passport Services Office, and the Australian Department of Immigration Affairs, to oversee the pilots and lead development and implementation of EITS
- We completed science-based assessments of the chemical, biological, radiological, nuclear, and advanced explosives (CBRNE) capabilities and efforts for the 42 terrorist groups considered by

the intelligence community to pose the highest threat to the US. We also completed assessments of 21 infrastructure sectors from a terrorist target perspective. These assessments were provided directly to IAIP in support of their mission.

- TAP developed advanced computing algorithms in support of improved aerosol dispersion models, bioinformatics, and scalable information extraction; such high-resolution, real time algorithms will make more accurate information available for indoor and complex cityscape environments, for partial nucleic acid determinations of biothreat agents, and for distributed, disparate information sets. This work has already led to such enhancements as a thousand fold decrease in the time required to simulate the dispersion of a toxic aerosol in complex indoor environments and a tenfold decrease in the time necessary to identify a biological threat organism.
- We created the Inter-agency Center for Applied Homeland Security Technology (ICAHST) to enable collaboration among intelligence and law enforcement community agencies on the testing, evaluation, and prototyping of information analysis and sharing technologies. In FY 2005 some 23 Federal agencies are represented on the Steering Group and the several working groups. We began the build-out of the facility, which is located in secure space at the Johns Hopkins University Applied Physics Laboratory, and we initiated the first three inter-agency testing projects for DHS, the National Counter-Terrorism Center, Central Intelligence Agency, National Security Agency, and the National Reconnaissance Office.
- We expanded programs on the science and technology needed for the development of multiple biometrics (such as fingerprints, facial, and iris scanning) for more precise, more rapid identification of individuals and for the transition of US-VISIT from 2-print to 10-print fingerprint enrollment; TAP also developed prototype instrumentation to aid authorized officials in detecting individuals with potentially hostile intent.

FY 2006 Plan

For FY 2006 the following activities, which include consolidation of the various research efforts into operational prototype and pilot systems as well as definitive advancements in knowledge management technologies and techniques, are planned.

- We intend to establish four regional components supporting the Institute for Discrete Sciences, including university and other government laboratory facilities. In addition, two government-hosted visualization and analytics centers (GVACs) supporting NVAC activities will be established
- We will complete pilot EITS activities with the UK and Australia under the sponsorship of the US-VISIT program. Efforts to pilot EITS with an additional six to eight G8, European Union, or Organization for Economic Cooperation and Development (OECD) countries will be initiated. The design, policy, security and privacy technologies and procedures, as well as a governance model for worldwide travel security will be established. The latter effort will build on the support and guidance provided to the DHS/State/OSTP team by the OECD in FY 2005.
- We will complete science-based WME assessments for an additional 20 groups or organizations, including domestic groups, and provide an integrated informational capability to support indications, warning, and response activities for CBRNE threats.
- We intend to create a comprehensive, real-time dataset of worldwide terrorism incidents since 1945 to form the basis for both motivation and intent threat awareness modeling and the development of visualization, analytical, and discrete simulation tools. Such data will enable the models to be validated and the tools to be tested for accuracy.

- We will develop and, more importantly, validate, models for terrorist group-level motivation and intent to enhance analytical threat assessment capabilities
- We will complete prototype of deception detection and intent determination technologies and initiate effort to pilot system at one border location.
- We will initiate a BorderSafe pilot including the Tucson Police Department and the San Diego-based Automated Regional Justice Information System (ARJIS) as well as CBP and Immigration and Custom Enforcement (ICE) to demonstrate Federal, State, and local information sharing.
- We will create a CBRNE threat encyclopedia and integrate it with the ADVISE system to provide immediate, complete data for the Biodefense Knowledge Center as well as other threat knowledge centers being established by DHS.
- We will build out the initial ICAHST facility, and complete the initial set of evaluations of knowledge discovery technologies, including ADVISE with the NCTC.
- We will integrate the second-generation INSPIRE and STARLIGHT visualization tools developed in FY 2005, the first generation of which have proven to be successful at IAIP as well as CIA and NSA, into TVIS and the BKC.
- We will build a discrete mathematical basis for large-scale information management, that is, dealing with up to 10^{10} facts or entities, for ADVISE. Provide an additional tenfold speedup for indoor simulations and expand rapid identification of bioagents to six more organisms. Integrated simulation capabilities will be made available to multiple DHS components.
- Finally, we will develop a capability for information extraction, pattern discovery, group detection, and visualization for unstructured text to complement the capability for structured data developed in FY 2004 and implemented for large data sets in FY 2005.

FY 2007 Plan

In FY 2007, the scope of the research programs and selected development and piloting efforts will focus on technology application and implementation through integration of the knowledge management, social-behavioral models, and all-WME technical capabilities and attribution activities rather than on research.

- We intend to complete implementation of the upgraded ADVISE system, which includes new visualization and discrete modeling tools, at four sites – OIA, Customs and Border Protection, Immigration and Customs Enforcement, and the Biodefense Knowledge Center.
- We plan to implement initial ADVISE capability for maritime domain awareness with US Coast Guard and Customs and Border protection; focus on real-time, continuous monitoring of ship movements.
- We will evaluate initial ADVISE capability for use by BorderSafe's State and local information sharing system pilot and if successful incorporate the comprehensive information analysis and visualization capabilities of ADVISE within the multi-agency information sharing activities of BorderSafe to enable Federal, State, and local intelligence fusion for the southwest border.
- We will expand BorderSafe pilot to include additional State and local jurisdictions, and connect with two other sites along the southwest border, and expand the scope and variety of wireless devices to include new functionality such as GPS assisted officer alerts and notifications, GPS based reporting, biometrics, and real time computer aided dispatch.
- We will develop a capability for information extraction, pattern discovery, group detection, and visualization for audio and video information to complement the capability for structured data and unstructured text developed in FY 2005 and implemented for large data sets in FY 2006.

- We plan to enhance the discrete mathematical basis being developed for large-scale, multi-modal information management to handle another tenfold increase in facts or entities. Develop a common data representation scheme for text and textual data, images, audio, and video to enable future multi-modal intelligence analysis, visualization, and fusion.
- We intend to provide a tenfold increase in the number of or speed at which documents are processed and analyzed through visualization tools.
- We will develop advanced scientific computing, discrete mathematics-based software algorithms for use in remote analysis and detection of WME threat agents secreted in cargo containers.
- We plan to add two State and local organizations to the ICAHST consortium and initiate joint evaluations among Federal, State, and local partners for national-level information sharing tools.
- We will complete development and validation of group-based motivation and intent model and incorporate within ADVISE framework; initiate development efforts to extrapolate models to individual and sub-cultural levels.
- We will combine information on the CBRNE threat capabilities of foreign and domestic terrorist groups with specific knowledge of their motivations and intents as well as behavioral models to fully describe the potential spectrum of terrorist threat to the US.
- We will develop and lead series of interagency studies on radicalization and the formation of domestic and international radical groups.

PPA: STANDARDS

	Perm Pos.	Work Years	Amount
2005 Actual	-	-	\$39,903
2006 Revised Enacted	-	-	34,650
2007 Adjustments to Base	-	-	(12,519)
2007 Current Services	-	-	22,131
2007 Program Change	-	-	-
2007 Request	-	-	22,131
Total Change 2006-2007	-	-	(12,519)

Science and Technology Directorate requests \$22.1 million for this activity. This is a decrease of \$12.5 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The development, adoption and implementation of standards are critically important for homeland security. Standards provide the basis for ensuring the effectiveness of scientific and technological tools critical for homeland security. Measures of effectiveness include basic functionality, appropriateness and adequacy for the task, interoperability, efficiency, and sustainability. With the mission to develop and coordinate the adoption of national standards and appropriate evaluation methods to meet homeland security needs, the Standards Portfolio cuts across all aspects of the Science and Technology (S&T) Directorate's mission. Homeland security standards address metrics for products, services, and guidelines, performance specifications, testing and evaluation protocols, training, certification of equipment and personnel, as well as metrics and quality assurance for deployment of systems. Standards are also an essential component of codes of practice and standard operating procedures. These standards will

provide the Department of Homeland Security (DHS) the ability to provide guidance to Federal, State, tribal and local homeland security entities regarding purchase, deployment, and use of these tools.

Without standards, State, local governments, and other first responder communities would be forced to purchase equipment without any knowledge of equipment functionality, adequacy for task, reliability, and interoperability. In many cases, the homeland security community would be forced to rely on private industry claims of performance or anecdotal information. Billions of dollars could be spent on ineffective equipment. In addition, standards lower the risk of introducing new or improved technologies into the field by defining requirements, standard operating procedures, and requirements for training so that the equipment is used correctly and in the correct scenario. The development of standards enables the successful technology transition into the field of the technologies that the S&T Directorate develops.

In addition to the development and adoption of standards, the Portfolio is concerned with determining and ensuring compliance with the requirements outlined in the standards. The Standards Portfolio develops the appropriate conformity assessment programs, such as certification and accreditation programs, to make sure that the appropriate standards are followed. Effective conformity assessment programs based on standards will fulfill the needs of DHS, other Federal agencies, State, tribal and local governments, first responders and the private sector for confidence in the performance of procured and deployed critical security products, systems and personnel.

The Standards Portfolio is organized to align with and address the needs of a wide variety of homeland security customers including those internal to S&T, those internal to DHS, and those external to DHS (i.e., the emergency response community – fire, police, emergency medical, HAZMAT personnel and infrastructure operators). The portfolio currently consists of four major thrust areas: Standards for Chemical, Biological, Radiological, Nuclear, and Explosive Countermeasures (CBRNE), Standards for Emergency Preparedness and Response (EPR), Standards for Border and Transportation Security (BTS), Standards for Information Analysis and Infrastructure Protection (IAIP). These thrust areas were organized to align with the major DHS Directorates and the Science and Technology Portfolio Managers. They are flexible in nature and may be changed to account for changes in DHS organizational structure, DHS customer priorities as well as DHS strategic goals. In addition, the portfolio supports some efforts that cut across all the thrust areas and establish an integrated standards process and infrastructure within DHS.

The Standards Portfolio Thrust Areas are further delineated into nineteen major standards working groups. The **CBRNE Thrust Area** working groups currently include: Biological Countermeasures, Chemical Countermeasures and Explosive Countermeasures. Funding for the Radiological/Nuclear Countermeasures working group is within the Domestic Nuclear Detection Office (DNDO). However, S&T will service DNDO in performing this function. The **Emergency Preparedness and Response Thrust Area** working groups include: Incident Management Standards, Communications Standards, Training Standards, Personal Protective and Operational Equipment Standards, Urban Search and Rescue Robot Standards, and Geographical Information Systems Standards. The **Border and Transportation Security Thrust Area** Standards Working Groups include: Biometrics standards, Radio Frequency Identification Standards, X-Ray Standards, and Customs Standards. The **Information Analysis and Infrastructure Protection Standards** Thrust area working groups include: Modeling, Simulation and Analysis Standards, Building Automation Systems, Integrated Sensors Standards, and Structure Standards.

Standards development in some of these areas is more mature than others. Initially, the Standards Portfolio focused on high priority, urgent standards issues with short-term deliverables, i.e. As the program matures other existing standards development programs are being incorporated into the Standards Portfolio.

FY 2005 Accomplishments:

The following are highlights of FY 2005 accomplishments in the Standards Portfolio.

Integrated Standards Process and Infrastructure: In FY 2005, the majority of Standards Subject Area working groups have been initialized. Most groups have met to begin the process for determining gaps and priorities for the development of new standards. The homeland security standards database has been released and is available at www.hssd.us. In addition, the Standards Portfolio supported the American National Standards Institute Homeland Security Standards Panel (ANSI-HSSP), which serves as an effective government and private partnership, providing a forum for discussion of high-priority homeland security standards areas. ANSI-HSSP held several forums in FY 2005 addressing chemical and biological countermeasures standards, first responder training standards, emergency communications standards, enterprise power security standards, and perimeter security standards.

Conformity Assessment: Model conformity assessment systems have been developed for interoperability of public safety radio equipment, biometric access control equipment and radiation detectors. The development of technical and program operation documents is underway in these areas. Additionally, standards and conformity assessment expertise has been added to standards development in the areas of radiation detectors and non-intrusive inspection equipment (X-ray scanners) to ensure the objectivity of performance and test requirements, suitability for conditions of use and reference to accepted requirements where practical.

Standards for CBRNE & Cyber Countermeasures

Biological Countermeasures: In FY 2005, the Biological Countermeasures Working Group re-focused priorities on developing standards to support and build confidence in the nation's response to a suspicious powder event. Several interagency working groups were established to standardize and ensure the effectiveness of sampling and field screening processes related to response to a visible suspicious powder. Specific accomplishments include developing a draft standard for field performance of hand held immunoassays, developing standardized training specific to validated hand held immunoassays, drafting a national sampling standard for visible suspicious powders, and initiating the development of guidelines for how and when to use hand held immunoassays in the field. Other accomplishments include the evaluation and characterization of candidate reference materials for *Bacillus anthracis* and ricin. In addition, the Standards Portfolio has participated and supported an interagency effort to develop standards for chemical and biological decontamination.

Chemical Countermeasures: In FY 2005, the first-ever performance standard for a point chemical agent vapor detector for use by civilian responders was drafted and is being balloted through ASTM. Coordination to establish a conformity assessment program for the detectors was conducted in FY 2005, with the intent to have the program in place in FY 2006. In addition, a standard protocol was developed to generate instrument independent libraries for field portable Raman Spectrometers. A report was issued on Photoionization Detectors (PIDs) in use by emergency responders.

Radiological / Nuclear Countermeasures: In FY 2005, the standards portfolio published the results of the testing of four classes of radiation detectors to the ANSI N42 standards adopted by DHS in FY

2004. The results were posted to the Responder Knowledge Base and considered in the 2005 Selected Equipment List (SEL) available from the Interagency Board on Equipment Standardization and Interoperability (IAB). Lessons learned from the first round of testing led to the development of draft revisions to the four ANSI standards and a second round of testing was initiated. New standards development efforts include a performance standard for spectroscopic portal monitors currently under ballot. This standard is already being used for testing equipment at the Nevada Test Site. Other accomplishments include the preparation of a draft standard on performance specifications for active interrogation systems used in detection of special nuclear materials, calibration of neutron sources of low fluence levels, the development of a draft standard for portable neutron detectors, and a draft standard for active interrogation systems.

Explosive Countermeasures: Standards were developed for calibration and optimization of performance for hand-held trace-explosive detectors. The resulting draft standard is entitled "Standard Practice for Verification of Ion Mobility Spectrometry-based Trace Explosives Detectors". This standard is currently under ASTM formal review. Field evaluations are being conducted using these procedures with the NIST security personnel. Efforts to develop reference materials to be used in the calibration of explosive detectors continued in FY 2005. In addition, the documents entitled, "IMS-based Trace Explosives Detectors for First Responders" and "Characterization of Trace Explosive Detector Performance by Ion Mobility Spectrometry", have been delivered to the Transportation Security Administration.

Cyber: The programs for E-Authentication, Forensics for Personal Digital Assistant (PDA) Handheld Devices, and Checklists for Securing Operating Systems and Application Configurations have continued, along with a new start to develop a Standardized Mechanism for Universal Access Control to enable and promote sharing of information across organizational boundaries each with potentially different access control policies. The e-Authentication program is in the process of extending Electronic Authentication guidance to encompass knowledge based authentication and has a technical white paper on knowledge based authentication for e-Authentication. In addition, a workshop was held on the use of biometrics for remote authentication from uncontrolled workstations. The forensics program analyzed commercially-available forensic tools for examining cell phones and hybrid PDA/phones, and developed a guide summarizing the capabilities and limitations of these tools for handling and examining such handheld devices. The checklist program continued the development of special publications and accompanying checklists that cover a variety of technology areas, introduced the Checklist web repository, began to process and review externally submitted checklists, and conducted a second workshop that involved information technology product vendors and software configuration and management tool vendors. The standard access control mechanism program surveyed existing access control policies and models, identified access controls most primitive and atomic principles and functions and design a universal access control mechanism capable of abstracting, combining and enforcing all existing attribute based access control policies and models.

Standards for Incident Management (formerly wrapped into EPR area): In FY 2005, the Standards Portfolio focused on establishing communication and coordination with the National Incident Management System (NIMS) Integration Center (NIC). An S&T Standards Portfolio staff member was detailed full time to the NIC to ensure proper coordination in the area of incident management standards. New standards priorities in this area were established for FY 2006 based on NIC input on their requirements. Other accomplishments include obtaining the final approval for the ASTM Hospital Preparedness Standards in FY 2005. The ASTM Mission Essential Task List (METL) standard for first responders was drafted but is currently under revision to coordinate with similar initiatives owned

by the National Fire Protection Agency (NFPA). The development of several draft ASTM standards were also supported in FY 2005 including a standard guide for building event dispersion and health assessment preparedness and response planning, a standard guide for conducting emergency preparedness drills and exercises, and a standard guide for developing model emergency operations plans in response to all-hazard events including CBRNE. Due to shifting priorities, the effort that supported Environmental Measurements Laboratory to initiate a cooperative interagency effort to address laboratory emergency response measurement protocol development and laboratory capability and capacity assessment was halted.

Standards for Personal Protective and Operational Equipment: Work continued with the National Institute for Occupational Safety and Health (NIOSH) on the suite of CBRN respiratory protection equipment standards. Testing continued on Self-Contained Breathing Apparatus (SCBA), Air Purifying Respirators (APR – gas masks) and Escape Masks. Work continued on the development of standards for Powered Air Purifying Respirators (PAPR) and Closed-Circuit Self Contained Breathing Apparatus (CC_SCBA) and on the development of simulants for chemical warfare agents for use in the development of respirators. The National Fire Protection Association (NFPA) 1991 standard was revised to include CBRN protection requirements and to incorporate the NIOSH CBRN respiratory standards. The NFPA 1994 standard is undergoing final revisions to incorporate new test methods and classes of ensembles to include a standard for a “particulate protective” ensemble for use when dealing with suspicious powders. Investigation in the toxicological properties of toxic industrial chemicals continued, which will help determine appropriate challenge agents and breakthrough concentrations for skin hazards to support future chemical protective ensemble standard development. Research was conducted on system integration of equipment and communications devices for emergency responders. Test methods for the assessment of thermal stress on electronic devices used by emergency responders, such as Personal Alarm Safety Systems (PASS) devices was conducted, results of this effort will be included in future NFPA standards. The NIOSH CBRN respiratory protection standards were incorporated into the NFPA 1991, 1994 (draft) and 1971 (draft) standards. Work is continuing on advanced protective equipment for law enforcement, bomb suit standard. Equipment for chemical and biological agent detection equipment were revised and posted on the Responder Knowledge Base.

Standards for Interoperable Communications: Studies in the dielectric properties of building materials and signal propagation through collapsed structures were conducted. Tests were conducted in buildings scheduled for implosion; initial results measured before and after the collapse of a 13-story high rise apartment building that transmitters would have to overcome a minimum of 60 to 80 dB decrease of signal strength in order to communicate successfully using a two-way radio or cell phone. Results of these programs are critical to understanding signal propagation through structures during emergency conditions.

Standards for Training: In FY 2005, the Standards Portfolio supported development of training curricula for emergency responders for specific technologies associated with detectors for weapons of mass destruction. This included coordination of a writing group for ANSI N42 to develop a training standard for radiation detectors used for homeland security applications and a training protocol for use at the DHS Center for Domestic Preparedness (CDP) for prescreening tools for biological agents for suspicious materials. The Standards Portfolio also worked with the ANSI Homeland security Standards panel on a series of workshops to identify homeland security related training standards.

Standards for Urban Search and Rescue Robots: In FY 2005, the Standards portfolio supported NIST to work with the subject-matter expert advisory committee comprised primarily of Federal Emergency

Management Agency (FEMA) Task Force members to define the performance requirements for urban search and rescue robots. A total of three workshops were held at NIST to develop more than 100 requirements categories plus 13 initial robot/deployment classifications. A preliminary statement of requirements document, including draft set of performance tests to introduce into standards process has been distributed to vendors, researchers, and responders. A public forum announcing the program was held at NIST in May. A workshop exposing responders to various candidate robot technologies and allowing them to critique the draft standard tests will be held in August at a rescue training facility. DHS will select the Standards Development Organization (SDO) to host the standards process.

Standards for Geospatial Information Standards (GIS): The GIS Standards Working Group has approved a standard based on FEMA based emergency management symbols – this effort, vetted from the State and local level, will smooth the production and distribution of maps during emergencies.

Standards for Border & Transportation Security: Major accomplishments in FY 2005 include significant progress in standards for multimodal biometrics. Specific deliverables include a standard configuration (i.e., camera rig) for multiple-image face recognition capture, a flexible logical data model (i.e., database schema) for multimodal data collection, a modernized uniform sensor capture application program interface, API, and recommendations for data capture and candidate review user interfaces based on pilot usability studies.

Standards for X-Ray Screening Equipment: In FY 2005, the Standards portfolio initiated the effort to develop technical performance standards for x-ray and gamma-ray inspection devices. The following standards-writing working groups were constituted: (1) checkpoint x-ray screening systems (energies up to 200 keV), (2) Computed Tomography (CT)-based systems (all energies), and (3) cargo/vehicle x- and gamma-ray inspection systems (energies greater than 200 keV). The standard is expected to be designated ANSI N42.40: Standard for Evaluation and Performance of x-ray and gamma-ray Inspection Systems for Detection of Contraband of Concern in Homeland Security.

Standards for Radio Frequency Identification (RFID): Efforts investigating the requirements for RFID standards began in FY 2005, through participation in workshops and seminars, and establishment of the working group.

Standards for Information Analysis and Infrastructure Protection: Two ASTM standards on the life-cycle cost standard practice (ASTM E 917) and the impact summary standard guide (ASTM E 2204) were developed. ASTM E2204 was completed and approved by ASTM and the Building Economics Subcommittee (E06.81). ASTM E 917 will be balloted in August 2005 and is expected to be approved. The Guide for Developing a Cost-Effective Risk Mitigation Plan is currently under preliminary development following conceptual approval by the Building Economics Subcommittee (E06.81).

FY 2006 Plan:

In an effort to keep the Standards Portfolio aligned with its customers and stakeholders, the FY 2006 plans are organized by the four major thrust areas and nineteen corresponding working groups. In addition, plans are reported for the Standards Portfolio's efforts to develop an integrated standards process and infrastructure at the Federal level.

Integrated Standards Process and Infrastructure: FY 2006 plans focus on continuing to maintain and improve the process by which homeland security standards are developed and promulgated at the

Federal level. The Standards Portfolio will support the maintenance and update of the homeland security standards database available to the homeland security community. Support will also be extended to the ANSI Homeland Security Standards Panel (HSSP) effort initiated in FY 2004.

Conformity Assessment: FY 2006 plans emphasize the development of a systematic approach for adding new conformity assessment programs based on homeland security priorities. By FY 2006, Federal, State and local government should be able to rely on DHS conformity assessment for confidence in selected critical equipment, systems and/or personnel credentialing. Additionally, assistance in the development of technical requirements that are suitable for objective conformity assessment and rely on accepted requirements will be stressed.

Standards for CBRNE: In FY 2006, the Standards Portfolio will continue to utilize interagency working groups to reevaluate requirements and prioritize needs for CBRNE countermeasures standards. Work will focus on developing sampling protocols and guidelines and standardized sample triage methods for CBRNE countermeasures. In addition, efforts will be initiated that focus on standards for emerging CBRNE countermeasures technologies including CBRNE point detectors; CBRNE stand off detectors and urban surveillance technologies such as BioWatch, CBRNE facility monitors, bomb disposal robot standards and water distribution monitors. Plans also include the development of standards for radiation dosimetry for emergency preparedness and response. Develop standards and refine testing and evaluation protocols for emerging technologies. Review laboratory and field-testing results for various chemical and biological contaminants on different surfaces and issue a CB agent decontamination consumer guide. Integrated, long range, requirements based plans for the development of standards, test methods and reference materials for chemical, biological and explosive threats will be developed which will in turn be used to focus future standards development efforts. Continue to address emerging technologies in areas such as CBRNE reference materials and simulants, decontamination, forensics, and laboratory response networks

Standards for Emergency Preparedness and Response:

Incident Management Standards: Based on NIC input, the Standards Portfolio has re-prioritized efforts to be supported in FY 2006 for incident management standards. Work will be supported to develop a "clearinghouse" of existing incident management standards that will be used by first responders to demonstrate NIMS compliance. All existing standards applicable to NIMS will be identified, reviewed and classified appropriately. The effort to build this clearinghouse of NIMS standards will be coordinated with efforts underway at ANSI and the Homeland Security Institute to develop a database of existing homeland security standards. Also, working with the NIMS Integration Center, the process of identifying gaps in existing incident management standards and developing a project plan to address those gaps will continue. Work will also continue with ASTM International to finalize the draft standards supported in FY 2005 but the primary focus will be on completing the ASTM standard addressing requirements for State and local emergency operation plans.

Standards for Interoperable Communications: Efforts to develop standards for Interoperable Communications will continue in cooperation with the Office of Interoperability and Compatibility (OIC) and its SAFECOM Program.

Standards for Training: FY 2006 plans include the development of a standard for curricula development for introducing CBRN topics into existing curricula by identifying best practices, bring together a group of educators and trainers currently using the best practices, develop the standard for curricula and course development and begin the process of gaining national acceptance.

Standards for Personal Protective and Operational Equipment: The current plan for the development of CBRNE protective and operational equipment will continue in FY 2006, specifically focusing on completing the suite of respiratory protection equipment standards to include powered air purifying respirators, closed-circuit self contained breathing apparatus, and combination respirators. Specific goals for FY 2006 include completion of the initial suite of CBRN respirator standards, to include closed-circuit SCBA, and combination SCBA/APR standards and completion of CW agent simulant study systems. Equipment guides will be updated and continue to be accessible through the Responder Knowledge Base. Standards and test methods for emerging equipment will be developed and in place to support the commercialization and fielding of new integrated protective equipment ensembles. Standards for thermal imaging devices will continue to be developed. The existing long range plan for the development of personal protective equipment standards will be reviewed, revised and updated, and will leverage against ongoing efforts in other organizations.

Standards for Geospatial Information: Efforts will continue in geospatial standards development as the Geospatial working group focuses on critical gap areas identified in FY 2005. The S&T Directorate will support development of high priority, urgently needed geospatial standards identified by the working group. The GIS WG will work to align its work with the Metadata Center of Excellence, which seeks to implement critical Federal and DHS IT Enterprise Architectures. The group's tasks will include a variety of Data and Metadata standards. This will begin with a phased evaluation of Federal Geographic Data Committee standards for DHS endorsement. The WG will also begin gathering requirements for a DHS Time Standard.

Standards for US&R Robots: In FY 2006 plans include working with the selected standards development organization to produce the first wave of performance tests through a fast track process. Additional workshops will be held in which responders are able to evaluate a variety of robot technologies and comment on them. An initial instrumented test facility will be built to conduct and refine the standard tests.

Standards for Border & Transportation Security:

Standards for Biometrics: FY 2006 plans include the continuation of the programs to address multimodal biometrics, latent fingerprints, rapid biometric evaluations, and biometric image and feature quality. FY 2006 plans also include the exploration and evaluation of ergonomics, human factors, and usability issues of biometric sensors, software, and systems. Focus will also be on recommendations to biometric sensor and software vendors that would allow their hardware or software to be easily integrated and evaluated by the Federal government. Potential areas with a need for standards include: real-time (< five minutes) DNA, non-intrusive DNA, 3D imaging, and personal gait.

Standards for X-ray Screening Equipment: In FY 2006, the Standards Portfolio will continue to support the effort to draft x-ray and gamma-ray security screening standards and to send the draft standards up to the ANSI balloting process and address comments. In addition, the development of testing and evaluation protocols, operator training and long-term quality assurance testing requirements appropriate for x-ray and gamma-ray security screening equipment will begin.

Standards for Radio Frequency Identification (RFID):

Studies into the requirements for the development of standards for RFID devices will be conducted and will help structure future standards development in this area.

Standards for Information Analysis and Infrastructure Protection: The FY 2006 focus is to expand the standards and technical specifications developed in the FY 2005 program to include standards-based reference implementations and, standardized test and evaluation procedures. Partnering with standards organizations, develop economic standards used in decision support methods to protect buildings from blast, fire, progressive collapse and other threats. Develop standardized system test and evaluation procedures for gaseous air cleaning rating methods and in-situ HVAC performance testing for CBR releases in buildings, tunnels, and subways. Identify and develop standardized protocols and architectures for large integrated sensor systems and infrastructure. Develop standardized protocols and architectures for integrating multiple hierarchical dynamic event-driven supervisory control and data acquisition SCADA industrial systems; and expand existing control systems standards and protocols reference implementations. FY 2006 plans for standards for cyber security include continuing the Checklists for Securing Operating Systems and Applications through Standardized Configurations, completing the Forensics for PDA/Handheld Devices program, and continuing the E-Authentication and the Standardized Mechanism for Universal Access Control programs. Under the Checklists effort, continue the development of additional security configurations checklists to secure and harden heavily utilized products and applications, maintain and improve the checklist web repository; solicit participation from additional IT vendors and organizations. Under the Handheld Forensic effort, develop guidelines for the preservation, acquisition, examination, analysis, and reporting of digital evidence contained on cell phones and hybrid PDA/phones. Under the access control program: develop a reference implementation and demonstration of the universal access control mechanism. E-authentication will update NIST Special Publication # 800-63 to initially address several new or refined commercially available e-authentication methods developed in response to Special Publication 800-63 and intended to provide more economical high assurance authentication. Continue to support biometrics standards efforts to introduce biometrics into remote authentication. This will include the demonstrated ability to enforce and combine some of the most prevalent and challenging access control policies of the day.

FY 2007 Plan:

In FY2007, due to higher priorities in other programs and the Management and Administration account, the lower priority programs of this portfolio were reduced. Customer needs and priorities will be balanced against funding levels.

Integrated Standards Process and Infrastructure: The database of available homeland security will be maintained. The process for developing and adopting new standards will be maintained.

Conformity Assessment: FY 2007 plans focus on an improved integration of the processes for technology development, requirements development and conformity assessment, standing up conformity assessment programs in a small but critical group of DHS priority areas and increasing the efficiency and effectiveness of operational programs. User and stakeholder feedback on programs will be collected and analyzed to determine opportunities for continuous improvement.

Standards for CBRNE Countermeasures:

The focus of efforts will continue to be commercially available CBRNE field detection technologies as funding levels will not be available to begin to transition from stand alone field point detectors to

standoff detectors and integrated sensor networks for CBRNE. The program will continue to address the need for standards for CBRNE reference materials and simulants. The portfolio will continue to support the development of interagency guidelines related to long term decontamination after a CBRN event. Overall, the integrated long range program developed in FY 2006 will guide the CBRNE countermeasure standards development efforts in FY 2007. Maximum effort will be made to coordinate and build upon initiatives in other organizations in order to maintain output in the face of diminishing funds. The standards, testing and conformity assessment programs need to be in place to support new technologies that had been developed through S&T Directorate and other Federal programs, yet this may not be possible with funding levels.

Biological Countermeasures: In FY 2007, efforts will continue to develop and refine performance standards and testing and evaluation protocols for commercially available biological detection equipment used in the field by first responders. Testing will include evaluation of detector performance against a small number of high priority biological threats other than *Bacillus anthracis*. Characterization and evaluation of biological simulants and reference materials will continue. The expansion of the effort to standardize sampling methods for biological agents to include scenarios other than visible suspicious powders will be considered.

Chemical Countermeasures: In FY 2007, efforts will continue to develop performance standards and testing and evaluation protocols for commercially available chemical detectors used by first responder such as the Photo Ionization Detector and Raman spectrophotometer. In addition, the program will possibly seek to develop performance standards and test and evaluation protocols for an additional type of chemical detector entering the market place.

Radiological / Nuclear Countermeasures: Interagency working groups will continue to be utilized to re-evaluate requirements and needs for radiological countermeasures standards. Emphasis will be placed on coordination of all standards efforts with the Domestic Nuclear Detection Office (DNDO). Focus will be on developing standards for radiological countermeasures technologies in areas such as reference materials, quality control of production of reference materials, and simulants.

High Explosive Countermeasures: Efforts will continue to develop and refine accurate testing protocols and appropriate reference materials that are applicable for security personnel to detect trace explosives for scenarios at airports, train stations, subways and other mass transit locations. In addition, this effort may consider developing standards for bomb mitigating equipment and device that could detect and defuse explosives remotely and more effectively whilst decreasing potential harm to first responders.

Standards for Emergency Preparedness and Response:

Incident Management Standards: The Standards Portfolio will continue to work with NIC to define standards priorities and to develop a long term plan to address gaps in incident management standards. The effort to develop a "clearinghouse" of existing incident management standards that will be used by first responders to demonstrate NIMS compliance will be completed. A small number of new standards development efforts identified as priorities in FY 2006 will be considered..

Standards for Interoperable Communications: As mentioned in FY2006 plans, efforts in this area will continue in cooperation with the Office of Interoperability and Compatibility and its SAFECOM Program.

FY 2007 Training Standards: In FY 2007 the Standards Portfolio will continue development of training curricula to support technologies for WMD countermeasures. These training standards will map onto performance specification standards developed by ASTM, Institute of Electronic and Electrical Engineers (IEEE), and the Association of Analytical Chemists (AOAC). Standards Portfolio will partner with training centers within DHS to include Center for Domestic Preparedness (CDP), the Fire Administration and the Federal Law Enforcement Training Center (FLETC).

Standards for Personal Protective and Operational Equipment: In FY 2007 CBRN respiratory protection equipment standards development and the certification of CBRN respirators will continue. The primary focus will be on the development of combination supplied air/purified air respirator standards. It is anticipated that by this time additional modifications to the existing standards will be required to more fully address new and emerging requirements, and technological developments in respirators and threats. Certification testing for open and closed circuit self contained breathing apparatus, air purifying and powered air purifying respirators and escape masks will continue. Efforts to develop integrated protection into duty uniforms for emergency responders will continue, recognizing the fact that the responders may not have the time to do more specialized protective clothing, especially during the initial few minutes of an incident. The major challenge faced by the PPOE standards development efforts will be to identify the gaps in standards, and to coordinate and leverage new standards efforts with the concurrent standards initiatives being executed throughout the community.

Standards for Urban Search and Rescue Robots: Robot trials in realistic environments exercising the first set of performance standards will be conducted. The initial draft of the next set (wave) of performance tests to be introduced into the standards process will be developed. Taxonomies for mobile robots and for building collapses will be published.

Standards for Geospatial Information Standards: The WG will continue its evaluation and approval process for GIS, data and metadata standards. Given the highly dynamic nature of data standards, the WG will seek a streamlined balloting process to ensure speedy evaluation and proper scrutiny. A time standard adoption process should be underway.

Standards for Border & Transportation Security:

Standards for Biometrics: Due to changes in funding delivery, the new biometric standards activities (Standards for Latent Fingerprints, Standards for Rapid Evaluation, and Standards for Image and Feature Quality) will be initiated in FY 2006. Therefore, the FY 2007 plan would be the continuation of the programs to address multimodal biometrics, latent fingerprints, rapid biometric evaluations, and biometric image and feature quality.

Standards for X-ray Screening Equipment: By early FY 2007, X-ray standards program will strive to achieve the full adoption of the ANSI x- and gamma-ray technical performance standards for security screening equipment. In addition, emphasis will be placed on completion of follow-on T&E protocols, long-term quality control testing, and operator training requirements to assure technical performance of x-ray security screening equipment.

Standards for Radio Frequency Identification (RFID): Requirements and the program developed in FY 2006 will guide the development of RFID standards if funding is available. The major challenge will be to integrate activities with the numerous competing requirements and established programs

Standards for Information Analysis and Infrastructure Protection: The FY 2007 focus is to continue the standards and technical specifications developed in the FY 2006 program to include standards-based reference implementations and, standardized test and evaluation procedures. Partnering with standards organizations, develop economic standards, focused reference implementations, and training modules for selected application areas related to performance-based building codes and standards for buildings from blast, fire, progressive collapse and other threats. Develop standardized system test and evaluation standard and procedures for gaseous air cleaning rating methods and in-situ HVAC performance testing for CBR releases in buildings, tunnels, and subways. Identify and develop standardized protocols and architectures for large integrated sensor systems and infrastructure. Develop standardized protocols and architectures for integrating multiple hierarchical dynamic event-driven SCADA and industrial control systems; and expand existing control systems standards and protocols reference implementations. FY 2007 plans for standards for cyber security will be evaluated and may include continuing the Checklists for Securing Operating Systems and Applications through Standardized Configurations, merging the E-Authentication program with another authentication program (PDA authentication) to develop guidance on the strength and effectiveness of authentication methods in general. In addition efforts will be under taken to transfer and publicize the Standard Access Control Mechanism to include performing public and commercial demonstration of this new technology, and working with standards organization in the adoption of this security mechanism.

PPA: SUPPORT TO DHS COMPONENTS

	Perm Pos.	Work Years	Amount
2005 Actual	-	-	\$52,141
2006 Revised Enacted	-	-	79,200
2007 Adjustments to Base	-	-	9,422

Total Change 2006-2007	-	-	9,422

Science and Technology Directorate requests \$88.6 million for this activity. This is an increase of \$9.4 million over FY 2006.

Border and Transportation

CURRENT SERVICES PROGRAM DESCRIPTION: The Border and Transportation (B&T) Portfolio develops and transitions capabilities that improve the security of our nation's borders and transportation systems without impeding the flow of commerce and travel. The Portfolio's Border and Transportation Science and Technology Plan and Roadmap represents the combined work of the S&T Directorate and Border and Transportation agencies to identify new capabilities needed and to plan how the Department will make technology investments in support of B&T mission objectives. The B&T portfolio focuses on these major programs:

Border Watch: Border Watch combines sensors, processes and people to provide real-time situational awareness of our borders. This system-of-systems will give us the ability to monitor the status of every mile of our national borders and enable detection of an approaching threat. Border Watch will monitor three specific physical domains – land, maritime and air. Its concept involves developing an advanced suite of sensors and sensor platforms, integrating the data from those sensors, and adding intelligence and other pertinent information from outside sources. This integrated system will provide local commanders with shared situational awareness, common alerts and warnings, and robust tools to help them develop a course of action to meet a threat.

Transportation Watch: Securing the domestic transportation system will significantly decrease our nation's vulnerability to terrorist attack. Transportation Watch is similar to Border Watch, but focuses specifically on five transportation domains – aviation, rail, ship, highways and pipelines. Transportation Watch will provide a similar situational awareness as that of Border Watch but for a much more diverse set of potential targets. In the aviation domain, Transportation Watch will leverage technology developed under Border Watch to improve capabilities to identify potential items or parties of interest and enhance our ability to screen passengers, luggage and cargo. As this capability matures it will be transferred to the rail and ship domains. As in Border Watch, establishing a network of sensor and surveillance capabilities will be a large component of Transportation Watch. This surveillance capability will integrate the significant existing capability within the transportation infrastructure and develop new capabilities to fill gaps. Transportation Watch will provide the ability to fuse information available from current and new systems to provide a National Transportation Intelligence and Scene Awareness System that can be used by security officials to monitor the safety and security of the entire transportation system.

Cargo Security: DHS is developing a clearly defined Cargo Security Strategy, architecture and policy framework. Our overarching goal is to balance regulations and incentive-based programs to raise the overall security of containers in a way that not only avoids impeding but actually facilitates the flow of commerce. Our approach leverages existing efforts while defining a strategic prioritization of resources and R&D efforts. The S&T Directorate has taken the lead in developing technology solutions with clear requirements, performance criteria, test and evaluation, and transition paths that will support the Department's proposed Cargo Security Strategy. We are developing the next generation of containers—these insure their own integrity, enable communications with shippers and authorities, can record data and their history, and even sense their environment and status. We are providing advanced technology tools for data mining, knowledge discovery, analysis and anomaly detection to the Automated Commercial Environment (ACE) program and the National Targeting Center (NTC). We will integrate a system of advanced integrated non-intrusive detection devices into an overall port sensor and information system that includes automated alert and detection functions.

FY 2005 Accomplishments:

Strategic Planning and Requirements: In FY05, we conducted three aviation security workshops. The information developed and judgments expressed there, taken in conjunction with the results of demonstrations and evaluations, form the basis for developing and refining the technology investments that are key elements of the B&T S&T Strategic Plan.

Border Watch: We are developing a suite of complementary sensors for the Customs and Border Protection border systems of the future. The FY 2005 effort focused on performing sensor trades, modeling and evaluation to identify the most promising sensor technologies for investment.

The B&T Portfolio is testing technology which enables rapid deployment of consent-based data sharing networks. The B&T portfolio has defined the concept and architecture for access and query across applicable Border and Transportation agencies, Department of Justice (DOJ), commercial and USCG databases.

We are addressing the overall border systems architecture through our systems-of-systems engineering effort which will evaluate various domains, including technology, managerial, policy, organizational, political and contextual, for the purposes of modeling their impact on border security. The FY 2005 efforts focused on the Tucson Sector and included: 1) current border security system of systems modeling, 2) identification and analysis of systemic border security barriers and enablers, 3) stakeholder perspectives mapping and analysis, and 4) border security initiatives mapping.

Transportation Watch: The overarching goal is to develop systems that will detect all threats to our transportation systems. In FY 2005, the B&T portfolio, along with other portfolios, jointly invested in a program relating to integrating automated visual recognition capabilities with existing camera systems. The B&T portfolio also supported Federal Air Marshal (FAM) programs including the Air-to-Ground Communications System.

Cargo Security Program: In FY 2005, the B&T portfolio awarded six Advanced Container Security Device (ACSD) contracts to develop and test the efficacy of a container's six-sided intrusion detection. It is expected that design of each ACSD device will be completed in FY 2005. The B&T portfolio is also developing a communications and tracking device to be integrated with the ACSD. Three small business innovative research (SBIR) contracts were awarded in FY05.

As part of developing next generation cargo container technologies, the B&T portfolio awarded five contracts that seek to design a pallets and cartons to automatically detect tampering. Automatic detection is accomplished by integrating sensors into the actual carton.

In collaboration with DHS Policy, the B&T portfolio developed a broad supply chain security framework, the Supply Chain Security Architecture (SCSA) that gives DHS the capability to bridge data and information between container security devices, shoppers, and the National Targeting Center (NTC). This capability will also allow DHS to have a seamless introduction of current and future cargo and container security capabilities into the supply chain. The SCSA underpins DHS's Secure Freight Initiative, highlighted as a critical component resulting from the Secretary's Second Stage Review.

FY 2006 Plan:

Strategic Planning and Requirements: The B&T portfolio will continue the strategic planning process and continue developing and refining B&T technology requirements.

Border Watch: Advanced sensor suites will include improved sensors for an open border detection network or grid that will provide persistent surveillance, of the vast areas between the Port of Entries (POEs). Integrating and fusing the data from these systems will further enhance this new border surveillance capability. Cutting edge information technology will provide a synergistic picture of the border environment. To augment surveillance information with targeting and intelligence information, Border Watch will take advantage of robust connectivity to the rest of the DHS enterprise. Integration of all these domains will provide a common operational picture: the ability to share the same picture of the border with everyone who needs it.

Border Watch will provide robust and easy to use tools for the border security officers to use in making decisions on how to react to border situations. Modern decision support tools that provide automated evaluation of proposed actions through expert systems and modeling and simulation will be exploited. Operational planning tools and improved case management systems with the ability to help manage the apprehension, detention, seizure and removal of suspects and items will be incorporated in Border Watch. The result will be enhanced information upon which local and regional commanders can react to threats and illegal activity in their area.

The FY 2006 effort will build on the sensor trade studies and modeling conducted in FY 2005 to develop and test advanced sensor suites including improved visual and non-visual sensors (video, infrared, seismic, acoustic and radar). These sensors may be deployed on the ground, at sea, and in the air. In addition, data produced by Port of Entry (POE) inspectors, such as traffic and incident information, along with data produced by border inspection systems will be evaluated as part of the surveillance system.

Our efforts to develop a robust and easy-to-use tool for tactical border security operations will result in officer access to an unprecedented amount of available information in a timely manner. This information, piped through the DHS enterprise, will be an important enabler for regional generation and, ultimately, a national COP for DHS. The "pipe" to transmit this information will be scalable and flexible to changes in the future security environment. It will also be designed with an eye toward regularly enhancing technology and capability without significant recapitalization.

In FY 2006 we will demonstrate the capability to develop a robust and easy-to-use for the border security office. This demonstration will aid our development of a comprehensive system architecture and common operating environment for Border and Transportation Information. The objective in FY 2006 is to define a system architecture that fully supports the Border Watch COP with multi-modal access to essential databases, remote communications and intelligence fusion.

In FY 2006, the B&T portfolio will support the Secure Border Initiative (SBI) and America's Shield Initiative (ASI) through our systems of systems engineering (SOSE) efforts. The SOSE effort looks at various domains, such as technology, managerial, policy, organizational, political and contextual as they impact the system of systems for border security. The FY 2006 effort will focus on the longer term contributions of the SOSE effort including:

- 1) Decision Modeling and Impact Analysis: Long range capability for engaging in rigorous analysis of proposed modifications to the security system. Through modeling, the consequences of modification decisions can be assessed for their impact prior to making decisions and committing scarce resources.
- 2) Border System Transformation Support: SOSE provides support for systemic transformation of border security. The basis of SOSE transformation is an integrated strategy that cuts across multiple domains. The strategy must pursue objectives that enhance the state of system capabilities. Based on the model, the impact of system modifications can be examined.
- 3) Strategic Border System Management Support: The management of border security can be enhanced at the strategic level by having an SOSE model to support strategic analysis, decision, and action and transformation assessment. Proactive strategic management of the Border Security System is supported by tools that facilitate detailed analysis of proposed initiatives, determination of the impact of initiatives on system capabilities, system priorities establishment, and anticipated return for investment of scarce resources.

Transportation Watch: Transportation Watch capabilities will be integrated across the transportation domains enabling a Common Operational Picture (COP) across the entire transportation environment. Extensive data sharing, including the ability to discover links in criminal or suspicious activities across domains will be a key requirement to providing an effective Transportation COP.

In FY 2006, as part of the Department's R&D Consolidation effort, the Transportation Security Laboratory became part of the S&T Directorate. The FY 2006 portfolio will assess and integrate the existing Transportation Security Laboratory (TSL) projects into our existing transportation strategies. Our primary efforts will focus on developing and testing autonomous inspection and surveillance technologies that are applicable to such critical elements of the transportation system as ferries and railroads.

Cargo Security: FY 2006 effort will build on the design and development effort accomplished in FY 2005 on the next generation of container security and communications systems to detect intrusion, location, contents and tampering. The requirements for this system include recording and reporting location; detection of intrusion and communication of log history, and sensor and inspection data. The system must have very low false alert rate and an open architecture to readily accept enhancements as technologies mature. Container security work will also include development and integration of data and information networks and predictive targeting technologies. The ultimate objective of the container security effort is to provide a full and near-real-time status of containers entering the United States.

In FY 2006, two companies have been awarded contracts to continue Phase II of this program. Phase II is an 18-month development that completes the final designs and produces prototypes for insertion into an integrated test and evaluation program. The integration of Advanced Container Security Device (ACSD) and the companion Marine Asset Tagging and Tracking System (MATTS), a remote global communications and tracking system will result in a performance specification, made available to the industry at large, for private development of ACSD-like systems. Similarly, the MATTS specification will be made available to the industry for the same purpose.

FY 2007 Plan:

Strategic Planning and Requirements: The B&T portfolio will continue the strategic planning process and continue developing/refining Border and Transportation technology requirements.

Border Watch: The advanced sensor suites will include studies on how improved sensors can be integrated into an open border detection network or grid. With performance measures in evaluating persistent surveillance, both covert and discrete, this will include the vast areas between the Port of Entries (POEs) as well as some efforts at the POEs.

We will continue to develop and refine integrating and fusing the data from various data inputs that will further enhance a new border surveillance capability. Cutting edge information technology will provide a synergistic picture of the border environment. To augment surveillance information with targeting and intelligence information, Border Watch will take advantage of robust connectivity to the rest of the DHS enterprise. Integration of all these domains will provide a common operational picture (COP); the ability to share the same picture of the border with everyone who needs it.

The FY 2007 effort will continue spiral development of an interoperable robust information management network. Building upon the FY 2006 field demonstration of the Field Officer's Digital Assistant, another "build" will provide additional communications and data base access capability.

The FY 2007 effort will build upon the now defined, comprehensive system architecture and common operating environment. The Common Operating Picture, providing a shared tactical situational awareness, will begin initial integration and testing with the sensor detection and communications efforts.

Transportation Watch: Transportation Watch capabilities will be developed and we plan to begin integrating across the transportation domains enabling a Common Operational Picture (COP) across the entire transportation environment. Extensive data sharing, including the ability to discover links in criminal or suspicious activities across domains will be a key requirement to providing an effective Transportation COP.

Cargo Security: FY2007 effort will build upon the FY2005 design and development of next generation container security and communications to detect intrusion; and the FY 2006 efforts of testing these devices. The FY 2007 effort will be integrating the container security devices and communications. We also plan to field test the devices on a large scale to determine the equipment's efficacy of operating in a realistic environment, its scalability, etc. Another part of the test effort will include looking at potential rail and truck applications.

EMERGENCY PREPAREDNESS AND RESPONSE

CURRENT SERVICES PROGRAM DESCRIPTION: The S&T Directorate's Preparedness and Response (P&R) portfolio supports the Department's Preparedness Directorate and FEMA, whose mission is to improve the ability of the nation to prepare for, respond to, and recover from catastrophic emergencies both natural and man-made (all hazards) through development and deployment of enabling capabilities. Emphasis is placed on preparedness for and response to large-scale complex events, especially those involving terrorism. Research thrust areas include incident management, decision support, response and recovery, and technology integration.

Our most important customers are State and local emergency responders, emergency managers, and the public they serve. The emergency response community consists of more than 49,000 separate agencies spread throughout the country. This community's members operate with varied sizes, structures, capabilities and constraints. Of approximately 18,000 law enforcement agencies, the overwhelming majority have 24 or fewer sworn officers. Over 85% of our nation's firefighters are volunteers. Enhancing the capabilities of such a vast and diverse community, especially against terrorist threats, requires a rigorous and systematic approach to the development and transition of a broad range of technology solutions. The EPR portfolio is dedicated to applying the best available science and technology for the safety and security of our emergency responders and homeland security professionals so that they can effectively and efficiently perform their jobs – saving lives and restoring critical services.

Specific objectives of the portfolio are to:

- identify and develop relevant homeland security technology solutions through partnerships with Federal, State, local and tribal operational end-users;

- integrate interoperable and compatible all-hazards technologies into Federal, State, and local emergency response infrastructures; and
- provide the science and technology leadership for implementation of HSPD-5 and HSPD-8.

FY 2005 Accomplishments:

Unified Incident Command and Decision Support (UICDS): A national RDT&E program to develop an advanced incident management system based on the operating principles of the NIMS and the National Response Plan (NRP) was initiated in FY 2005. UICDS develops the necessary capabilities for effective implementation of HSPD-5 (section 15). Saving lives and minimizing damage in the wake of an attack or major disaster depend not only on interoperable communications, but on immediately having the correct, relevant, and complete information necessary to take action. In the aftermath of a major event, responders from all jurisdictions and agencies must fall in smoothly with an extended information and response network that includes data, information, scene awareness, response guides, actions plans, decision support and collaboration tools. This capability must be delivered using the myriad array of communication and information devices and infrastructure that are immediately available. Fortunately, modern IP-based service oriented architectures may make it possible to accomplish this, even with legacy technologies. UICDS is dedicated to achieving this capability. UICDS systems are based on the concept of a highly interconnected and integrated and scalable architecture that will meet the needs of the entire emergency responder community and allow for integration, when needed, between local, State, and Federal information management, situation awareness and command, control, computers, communications, intelligence, surveillance, reconnaissance (C⁴ISR) systems. This framework will integrate with existing commercial-off-the-shelf (COTS)-based information management systems and legacy information and communication systems. The system architecture, developed initially according to Department of Defense Architectural Framework (DoDAF) guidelines, will be reviewed with the end-user community as part of the Phase I work and will be adapted to comply with the Public Safety Architecture Framework (PSAF) to be released shortly by SAFECOM. Following the initial phase of the program, subsequent phases of the program will seek to develop systems, components and interfaces that make it possible for communities to implement systems in keeping with that architecture. The focus of subsequent phases will be to deploy pilots of the accepted UICDS architecture at RTI (see below) locations to demonstrate system capabilities. UICDS systems will be the accepted standard for incident management systems for all Federal, State, local, and tribal jurisdictions and will be incorporated into DHS grant guidance.

The Regional Technology Integration (RTI) Program: The RTI Program completed the integrated community-based vulnerability assessments in four pilot locations in FY05. Technology system solutions have been initiated based on prioritized needs from these assessments. Systems solutions include the design and installation of enhanced chemical detection systems combined with a biological protection system for internal space monitoring and demonstrations of advanced portal system technologies for explosives detection at important venues that may be terrorist targets. These systems include facility hardening, detection, emergency management information systems, atmospheric transport and dispersion modeling, and emergency response protocols. Installed systems will be fully aligned with guidance from the Office of Interoperability and Compatibility (OIC) to ensure they are interoperable and compatible with legacy emergency response infrastructure. Emphasis will be placed on improving situational awareness and survivable communications for large-scale events. In some of the pilot urban areas, technology implementation will focus on improving preparedness and response

planning capability and tools to support risk-based technology selection that includes factors such as baseline emergency response infrastructure and local or regional operations.

Interagency Modeling and Atmospheric Analysis Center (IMAAC): The IMAAC Program has two components:

- Provide S&T development for the implementation of IMAAC and operational support for real world events and National Security Special Event (NSSE) including infrastructure and subject matter expertise.
- Provide the RDT&E required to enhance atmospheric transport and dispersion predictions, especially in urban environments, to support hazard assessments for homeland security.

In the event of a major disaster or terrorist attack (e.g., biological, chemical, radiation dispersion) the ability to accurately predict the movement and spread of the contaminate cloud is crucial to saving lives and making response decisions. IMAAC integrates the nation's best modeling capabilities to provide that information.

IMAAC achieved full operational status in FY05. IMAAC capabilities were successfully integrated into the National Exercise Program. IMAAC supported TOPOFF3 and the related Large Scale Game and Senior Official Exercises in FY05. IMAAC maintained an operational 24/7-response capability and provided support to several National Special Security Events including the G8 Conference, the Republican and Democratic National Conventions, the Presidential Inauguration, and the State of the Union Address. A study is underway to define a process for accreditation of models for given scenarios and IMAAC is currently working with NOAA and EPA to incorporate IMAAC training into ongoing training sponsored by these two agencies. During 2005 IMAAC supported the Queen City Barrel fire in Cincinnati, Ohio. While this was not an incident of national significance, it was nonetheless a large-scale incident. IMAAC products and technical reach-back support to incident commanders in the field resulted in improved shelter-in-place recommendations during the fire and for the period immediately after. This information was critical to decision makers scheduling school and business closures as well as providing fire response teams improved, on-going information on the extent of hazardous chemical levels throughout the incident.

Simulation Based Training, Exercise, & Lessons Learned (TELL): The Training Exercise and Lessons Learned (TE&LL) program is an effort to support continuous improvement of our nation's preparedness to respond to catastrophic events as called for in HSPD-8¹ (sections 17-19). Our national effectiveness in an emergency will be dependent on how well we train and exercise. Without the ability to conduct training and practice beforehand on simulated major events, our responses, despite individual bravery and dedication, stands the real risk of being confused and slow. America's military has learned this lesson well, and is the key to its success. The homeland security challenge is to implement an effective and affordable training and exercise capability to a large number of response agencies that are geographically distant and have diverse operating systems.

The future capability will allow for responders to exercise against simulated catastrophic events that they cannot emulate with current training mechanisms. Ultimately, it will incorporate training objectives, scenarios, and metrics defined by other programs to create a simulation-based training exercise capability that can be used by the response community to improve and maintain preparedness

¹ <http://www.whitehouse.gov/news/releases/2003/12/20031217-6.html>

to evolving threats. A conceptual design and exploration effort was kicked off in FY 2005. This effort will establish the functional requirements and constraints for the cost-effective application of simulation based technologies in training exercises for multi-agency, multi-jurisdictional events that can be used to assess and improve response preparedness of individuals and teams responding to an event. A detailed survey of existing training based simulation technologies has identified numerous maturing systems that could provide immediate capability for this effort. Initial architectural specifications were developed and will be used to validate the training requirements through highly functional prototypical mock-ups. These prototypes will demonstrate how incident management professionals' will be able to maintain their proficiency through the utilization of immersion based simulation technologies that create a realistic environment capable of challenging decision making skills and accurately representing the consequences of decisions made by responders. The results of this work will be ready to transition to full-scale pilot demonstrations in FY 2006.

Response & Recovery: Research, development, test and evaluation (RST&E) to support rapid and effective response and recovery range from personal protective equipment (PPE) for emergency responders to field assessment and tracking of casualties (especially in a mass casualty WMD event) and potential decontamination of individuals, equipment and critical infrastructures. This broad range of capability needs requires both tactical and strategic research investments. The portfolio implemented a national research program to address scientific concerns and challenges relevant to the development of innovative materials for PPE. The core thrust of this program seeks to develop one or more fundamental new material concepts that can be integrated into material systems and garments. This research is aimed at producing garments that can sustain everyday use suitable for law enforcement and emergency medical technician (EMT) personnel and able to be fabricated into patterned garment parts available for commercial manufacturing techniques.

The EPR portfolio and the Rapid Technology Application Program worked in partnership to identify other near term research activities, including: (1) A prototype resource awareness portal that enables multiple jurisdictions to share data about the disposition and availability of resources, supporting and extending many of their mutual-aid agreements. (2) An advanced set of breaching techniques for reaching victims trapped in collapsed structures. (3) An advanced 3D locator that will work outside of and within structures and will support the accountability functions required for effective response personnel management and safety.

FY 2006 Plan:

Unified Incident Command & Decision Support (UICDS): The goals of the UICDS RDT&E program are to:

- Dramatically enhance the information management and information sharing capabilities of incident commanders and emergency responders, as emergencies increasingly demand more highly coordinated responses.
- Improve the response quality, and overall interaction among Federal, State, and local incident commanders and emergency responders.
- Integrate with COTS-based information management systems and existing legacy systems.

In FY 2006, the portfolio will initiate an Advanced Concept Technology Demonstration of candidate UIC architectures that will achieve revolutionary advances in Unified Incident Command and Decision

Support and bring analytical tools to bear on real-time information in-flows and out-flows for incident commanders and emergency responders. Advanced capability will be applicable to a variety of response paradigms, including single incidents, multiple simultaneous incidents, long duration response and recovery operations, and large-scale public health events. Newly deployed technologies will take existing research and capability in other Federal agencies (e.g., DoD, NASA, U. S. Wildland Fire Service) and adapt them to operating environments of emergency responders. These systems will be capable of multimedia and multi-model communication, information sharing both horizontally and vertically, and comprehensive information management (e.g., continuously updating the situational status of personnel, equipment, and other resources), providing for the integrity of information, and incorporating modeling and simulation tools to facilitate response operations, understand hazards, and provide for a common operating picture. The ACTD approach for the FY06 program will provide for the timely development of the first spiral of a demonstrable UICDS system that will be deployed for a targeted set of responder community users. Result of exercising this prototype will provide critical midcourse corrections for the next UICDS spiral and will yield a more refined UICDS framework.

The Regional Technology Integration (RTI) Program: In FY 2006, the portfolio will complete implementation of technology systems solutions for the first four pilot locations, prepare test and evaluation plans and conduct operational readiness exercises to evaluate the overall system performance. Each of the four pilot locations will provide different opportunities for technology implementation based on their existing capability to absorb new homeland security technology systems, risk based prioritization of capability needs and, finally, the ability to provide an enduring new capability for the pilot location. The goals of this phase of the RTIP are:

- Enhance situational awareness capabilities
- Create a model process and system design template that can be replicated at similar regions nation-wide
- Create an infrastructure that can be utilized for test and evaluation of other emerging DHS technology systems (e.g., UICDS, TELL)
- Evaluate system performance and life cycle issues
- Identify capability/technology gaps for future RDT&E

Examples of technology solutions to be implemented range from target facility-based detection systems for chemical, biological, and high explosives that are integrated with existing local and regional emergency operation and watch centers to the implementation of planning tools that are easily configurable by a local community and can be used to evaluate the implementation of various homeland security technology systems. For example The RTIP-Anaheim Convention Center Program will design, install, and integrate a detection system for the Anaheim Convention Center that will provide an early warning system to allow response management through the existing Emergency Virtual Operations Center (EVOC).

The system will provide detection capabilities in the event of a chemical agent or large-scale biological attack in the Convention Center. Chemical agent and biological detectors will be co-located with existing video surveillance equipment both internal and external to the facility. Activation will be electronically reported to the convention center watch desk and the Anaheim EVOC. The internal monitoring system will be invisible to the patrons and the communication infrastructure will be compatible with other Weapons of Mass Destruction (WMD) detectors that may be deployed in the future.

The system will also provide explosives detection capabilities that will safely isolate the potential explosive device and mitigate any significant damage to personnel or facilities. This system will establish an optimum process to check people, packages, containers, and vehicles entering the Convention Center for explosives or explosive devices while minimizing or not interfering with the normal flow of events at the Anaheim Convention Center. Explosives detection capabilities include, but are not limited to: (1) detection of explosives carried by people entering through portals and checkpoints, (2) detection of concealed explosive or weapons through surveillance, (3) inspection of delivery and service vehicles via checkpoint, and (4) preparation to respond to the detection of explosives with training and mitigation technologies.

In FY06, the RTIP will work with the Office of Grants and Training to streamline the RTIP assessment process for broader applicability to other high threat urban areas. This will enable more effective utilization of grant funding as well as provide a more effective transition path for new homeland security technologies.

Interagency Modeling and Atmospheric Assessment Center (IMAAC): In 2006 IMAAC will host researchers from throughout the nation at its facility as well as participate in virtual collaboration both nationally and internationally. Through this collaboration IMAAC will begin the process of developing agreement on atmospheric hazard communication protocols and products compatible with the Homeland Security Information Network (HSIN) the web-based information distribution system of the Homeland Security Operations Center (HSOC). The HSIN is the communications backbone selected to coordinate incident information across Federal agencies and vertically with State and local authorities. It may also be used to share information with international partners during incidents that occur near borders or in areas of interest. A protocol for distribution of IMAAC products across HSIN and agreement on standards for products to insure product consistency by all agencies will be a significant improvement to the existing IMAAC product distribution system.

To use these products and new techniques in atmospheric modeling more effectively IMAAC will define a reach back modeling capability for State and local governments. Drawing on the experience of the Local Integration of NARAC Capabilities (LINC), IMAAC will work with State and local users to define a tiered level of support that insures a NIMS compliant process to handle escalating incidents. IMAAC researchers will seek to improve ATD modeling systems to routinely quantify uncertainties, improve spatial and temporal scale interactions, and incorporate new measurement technologies to better characterize the urban environment. Existing data such as NEXRAD will be investigated as an additional meteorological measurement to improve ATD model predictions. Furthermore, NEXRAD data will be investigated as an operational data feed that could be provided to all Federal, State and local agencies. The provision of improved, consistent, and reliable data across all agencies reduces model variability and improves consistent model predictions.

With the provision of improved data it is also important to verify and validate the result. During 06 IMAAC will define a verification and validation process for accreditation of models. Verification and validation documents the consistency, reliability, and accuracy of model predictions for specific applications. Understanding these characteristics will permit the IMAAC agencies to accredit models for various threat scenarios. IMAAC will begin to incorporate the results of field experiments such as the Urban Dispersion Modeling (UDM) program in New York City and the Joint Urban 2004 Experiment to improve hazard predictions for urban meteorological environments. This multi-year research effort is focused on understanding the transport of hazardous airborne material at the top of

the urban canopy as well as through urban canyons. The results of this research will improve existing urban dispersion models and provide insight for future investigations. The portfolio will also initiate research and development in support of other modeling and assessment requirements including other transport mediums, such as water. A workshop is currently planned for Spring 2006 to begin discussion on water dispersion to define gaps in critical areas.

Simulation Based Training, Exercise & Lessons Learned (TE&LL): Using the functional requirements generated in FY 2005 and existing simulation technology, the portfolio will develop and demonstrate a working prototype that can be utilized for the conduct of a large scale exercise involving multiple jurisdictions for specific homeland security scenarios involving WMD. TE&LL will enable the following capabilities:

- Ability to assess and track current national state of readiness
- Ability to create training exercises based upon emerging threats and the current capabilities of individual response elements
- Capture capability improvements and lessons learned
- Create metrics and processes for measuring response-element proficiency.
- Link future allocation of manpower, equipment, and training to the national preparedness goal
- Allow responders and decision makers, at the local, State, and Federal levels to affordably train together to ensure that the holistic response-system meets the necessary readiness state

Initial demonstrations will focus on large scale, multi-jurisdictional incidents and facilitate implementation of the National Incident Management System and the National Preparedness Goal. Simulation-based systems will place users in realistic environments and in interactive situations and must support all elements of the NIMS including critical decision making, interagency operations, and all functions of the Incident Command System. Applications will provide for the evaluation and enhancement of incident management skills, and will be capable of creating and replaying case studies to capture lessons learned and facilitate corrective actions. This is akin to the notion of "train as you fly, fly as you train" as applied to the responder community. The vision is that as a result of having gone through simulation based training, the responders will be quite ready to tackle complex incidents much better and more efficiently. The deployment concept will maximize the ability to access affordable technologies at all levels of government. The focus of the FY06 activities will be to develop prototypes of a training system, including mockups, in order to exercise key functional requirements and to validate important capabilities that will form the core of the training system for the incident responder/commander community. A key element of this activity is to integrate reusable existing tools and models to accelerate the development of the training system.

Response & Recovery: The portfolio will demonstrate several revolutionary and highly innovative materials for emergency personal protective equipment (PPE) applications. Prototype material/technologies that can be made into functional garments and/or integrated personal protective systems will be demonstrated. Material solution(s) will allow for integrated functions and capabilities to the greatest extent possible and provide modular, mission essential capabilities to be used by as many disciplines and in as many applications as possible. The goal is to have materials that can provide protection during response to chemical, biological, radiological, and explosive (CBRNE) events will have properties such as self-decontamination for chemical and/or biological agents,

localized protection for complex organs, increased service life, self-healing upon being compromised (e.g., ripped, torn), and flame resistance.

In cooperation with the Rapid Prototype Portfolio, Small Business Research Initiative, other Federal agencies and the private sector, new systems for three-dimensional location of responders and victims will be demonstrated. Such systems will accurately and in real time determine the location and identify of a rescuer in a structure and have the ability to track personnel over distances and through materials such as concrete and steel. Extensions of this technology could include two way communications, health and biometric monitoring and visualization. In FY06 the portfolio will kick off a new initiative focused on emergency medical response for mass casualty events, particularly those involving WMD. The portfolio will leverage the community preparedness work previously funded through the Radiological and Nuclear Countermeasures Portfolio to form a basis for developing user requirements and responder's guides.

FY 2007 Plan:

Unified Incident Command and Decision Support: Critical to the successful implementation of the National Incident Management System (NIMS) protocols is the ability to share information and communicate across all levels of command during an emergency. UICDS enables a common operating picture for resource deployment and response coordination. The inability to identify and share actionable information among multiple response agencies and across jurisdictions results in either ineffective or duplicative efforts when time is of the essence. This is critical to the safety of first responders and civilians. The portfolio will continue to fund R&D to dramatically enhance the information management and information sharing capabilities of incident commanders and emergency managers at all levels of government, thus enhancing multi-hazard incident management. The portfolio will continue to emphasize the application of OIC guidance to ensure the development and implementation of interoperable, non-proprietary, scalable, and open architectures that will integrate with COTS-based information management systems and existing legacy systems. A set of system prototypes will be tested based on the standardized concept of operations and architectures developed in the first phase of this program. Pilot implementations of the architecture will be initiated with selected RTI urban areas. The UICDS will develop a certification process to be used by the various jurisdictions when applying for DHS grants to procure incident management capabilities.

The Regional Technology Integration (RTI) Program: The RTI program provides the basis for improved preparedness, mitigation, and response by regional authorities, including cities and counties that will result in lives saved and greater effectiveness of disaster management resources. This program is a fundamental transition path for technologies that will help regional authorities across the Nation counter emerging threats. The RTI program will continue the test and evaluation of a specified suite of technologies deployed in the four pilot locations. Table top and field exercises will be conducted to evaluate the effectiveness of the systems in terms of system performance, interoperability and compatibility. In FY07 the RTI program will continue to work with the Office of Grants and Training to broadly apply the RTI assessment process, lessons learned, and best practices to high threat urban areas nationwide. The application of the RTI program to other urban areas will assure more effective and efficient utilization of grant funds as well as facilitate the deployment of new homeland security technologies. The RTI program will provide the transition venue for other EPR technology systems such as UICDS and TELL which will continue to enhance and sustain regional response networks. The RTI program will collaborate with the Office for Interoperability and Compatibility, the Chemical, Biological, Countermeasures Portfolios, the Domestic Nuclear Detection Office (DNDO), FEMA and

the Preparedness Directorate for the purpose of piloting advanced concepts for regional emergency response technologies and providing technology assistance in support of local and private sector entities that share common regional emergency preparedness and response issues, including CBRNE incident response.

Interagency Modeling and Atmospheric Analysis Center (IMAAC): Response operations involving atmospheric hazards have often been hampered by inaccurate and conflicting hazard predictions. The IMAAC has resulted in a more effective, timely, and organized response to disasters by providing consistent hazard predictions across all response agencies. This means saving the lives of both civilian and first response personnel and restoring public confidence through the elimination of confusing and conflicting model predictions. IMAAC will continue to provide support to response operations, planning and exercises in support of the National Response Plan and the National Preparedness Goal. IMAAC will institute a suite of scientifically accredited models to be used for atmospheric hazard predictions. Reach back support capability will be provided in accordance with requirements developed through collaboration with end users, including State and local governments, FEMA, and other DHS components.

Simulation Based Training, Exercises, & Lessons Learned (TELL): Effective training and practice reduce injury to first responders and increase response efficiency. There is a need to include all possible members of the response community in the planning process, especially for large-scale events. The ability to cooperate across multiple entities and agencies will be critical for mass-casualty events that will quickly overwhelm local responder and trauma capabilities. The National Fallen Firefighters Foundation has identified the effective integration of simulation into training as a high priority issue. The EPR Portfolio will continue our national RDT&E program by teaming industry, academia and the national labs to complete development of system requirements that support national, interoperable simulation based training and exercise. In FY 2007, advanced concept demonstrations will include the capability to simulate large-scale emergency response operations that require nation-wide deployment of resources from Federal, State and local response organizations. The simulation platform will be compatible with the Unified Incident Command Decision Support architecture allowing response organizations to practice using their existing tools and capabilities on high consequence, low frequency CBRNE event simulations. Out-year efforts include enhancements, in support of the National Preparedness Goal, to assess and track current national state of readiness, provide training and exercise opportunities based upon existing and emerging threats, and provide a process for measuring response-element proficiency. Additionally, the out year goals will include integration with other existing infrastructure elements, e.g. Intelligent Transportation System, route planning, evacuation procedure planning and development, so that the responder community can exercise in an integrated response environment.

Response & Recovery: Personal protective equipment (PPE) was identified as the top National Terrorism Response Objective in the Memorial Institute for the Prevention of Terrorism' s *National Technology Plan for Emergency Response to Catastrophic Terrorism* (Project Responder). The safety and security of our responders will result in more effective response operations that will save more lives. The portfolio will continue the Personal Protection & Equipment RDT&E program for the development of highly innovative and revolutionary protective materials and materials systems. Prototypes of new materials and garments with improved protection capability for chemical, biological, and radiological hazards will be tested in accordance with appropriate performance and operational requirements. The portfolio will seek to leverage DoD, other Federal agency investments, and the private sector to explore the application of nano-sensors ("electro-materials") and other

advanced technologies into personal protective equipment for the purpose of alert and warning in CBRN environments, situational awareness, and improvements in Personal Alert Safety Systems (PASS) for emergency responders and homeland security operations professionals. Based on requirements identified in FY06 and the results of initial technology evaluations, the portfolio will begin an RDT&E program specifically focused on technology systems to support emergency medical assistance for mass casualty events, particularly those involving radioactive materials.

UNITED STATES SECRET SERVICE

CURRENT SERVICES PROGRAM DESCRIPTION: The United States Secret Service (USSS) portfolio of the S&T Directorate develops and deploys advanced technologies to enhance that agency's protective and investigative capabilities. This portfolio is coordinated with the United States Secret Service and has established its first direct-funded R&D program. The portfolio focuses on input from the intelligence community (a threat-based model) and direct operational experience obtained over the last century. As a result, this funded technology program is subject to reevaluation and change based on the perceived threats to the safety of those the USSS protects and on the changing nature of criminal activity the USSS investigates.

FY 2005 Accomplishments:

The Emerging Threats Program: The USSS portfolio has selected a performer to conduct the second study in this annual series. The final report is expected to be delivered in January 2006.

The Physical Personnel Safety Program: Under the S&T Directorate's Rapid Technology Application Program (RTAP), USSS was able to put forward three requirements for funding that fulfilled urgent needs for the protective mission (Escape Mask, Handheld Suicide Bomber Detector, and Portable Entry Point Screening Portal for Explosive Detection) effectively tripling the funding available for USSS requirements.

The Operational Security Program: A contract was awarded for Ubiquitous Mobile Computing and work has commenced.

Loss of Location Fidelity Program: Two preliminary studies for tagging, tracking and locating (TTL) technologies are scheduled to be completed and briefed to DHS and USSS personnel. The evaluation results of the studies' results will provide the foundation for a longer-term TTL program.

Other developments: Work on the Optical Imaging Stations (OIS) is nearing completion. Delivery of the first 10 units is scheduled for early in FY 2006.

FY 2006 Plan:

The Emerging Threats Program: The USSS portfolio supports the Secret Service's continuing, comprehensive assessments of emerging threats and evolving technologies that pose a threat to dignitaries and assets protected by USSS personnel. This effort centers on the annual analysis of the common attack methodologies, strategies, and models of operation currently being enacted against assets of a similar nature to those protected by the USSS. This analysis is to be based on open-source information without any information as to the defense, mitigation, and protection models being enacted by the USSS.

The Physical Personnel Safety Program: The USSS portfolio will continue development of appropriate escape hood technology.

The Technical Surveillance Program: The USSS portfolio will begin the development of a mobile platform to detect, exploit, and defend against covert and over electronic surveillance systems.

The Operational Security Program: The USSS portfolio will continue (given a successful proof of concept in FY 2005) with the development of a ubiquitous mobile computing system that would allow secure wireless networked communication between unlike devices with high fidelity data transmission.

Loss of Location Fidelity Program: The USSS portfolio will initiate an Optical & Chemical Tagging/Tracking Project. Its objective will be development of optical and chemical tags that are robust and covertly deployable. Additionally, the mechanism used to track the "tagged" individual or item must also be covertly deployable.

The Cyber Security Program: The USSS portfolio will continue development of the Global Information System project centering on a secure scalable streaming and secure transcoding methodology. Its goal is to send and receive encrypted image data rapidly for actionable requests through a particular enterprise architecture.

FY 2007 Plan

The Physical Personnel Safety Program: The USSS portfolio will initiate a program to develop lighter and more robust body armor for agents.

The Cyber Security Program: The USSS will develop tracking and identification tools for perpetrator identification.

UNITED STATES COAST GUARD

CURRENT SERVICES PROGRAM DESCRIPTION: The United States Coast Guard protects the public, the environment, and U.S. economic interests in the Nation's ports and waterways, along the coast, on international waters, or in any maritime region as required to support national security. The Coast Guard Research Program supports this mission through the development of technologies and systems to enhance Maritime Domain Awareness, and to improve Operational Presence and Response. Maritime Domain Awareness includes all systems, sensors, and command and control systems necessary to detect, identify, and determine the threat potential of all vessel traffic. It also includes Port Security to protect important harbors. Operational Presence and Response involves safely and effectively stopping a vessel, boarding it, and finding or eliminating any threat or contraband. Research and development (R&D) in this program aims to give the Coast Guard the means of neutralizing threats as far away from potential targets as possible, and of responding to emergencies as quickly and effectively as possible. Coast Guard R&D is characterized by its many partnerships with other Federal agencies and international groups to share costs and expedite delivery of important products.

This program also supports such unique and traditional Coast Guard missions as Search and Rescue, Maritime Regulations, and Marine Safety. Research into oil spill prevention and response, and Aquatic Nuisance Species prevention supports the Marine Environmental Protection Program. Development of advanced navigation systems to improve the flow of goods and services via our nation's waterways also serves a traditional Coast Guard mission.

FY 2005 Accomplishments:**Maritime Domain Awareness**

Situational Awareness: The program made significant strides toward the Hawkeye port surveillance system's operational use and toward an assessment of its overall contribution to port security. We developed and implemented new procedures and concepts of operation that take maximum advantage of Hawkeye's capabilities. The program developed innovative staffing and training requirements, system design specifications and physical layout recommendation for the Miami Sector Command Center (SCC), and we recommended common display and information systems for all command centers. Work began on the first generation of "visualization tools" to provide a better sense of the threat and foster a quicker integrated response. Integration of risk analysis into command center decision processes continued, and a study of the opportunities that anomaly detection could have on command center performance was begun.

Short- and Long-Range Sensing: Created a simulation tool that assesses the operational impact of Maritime Domain Awareness (MDA) and Wide Area Surveillance (WAS) alternatives in the Florida Straits. This simulation, the Florida Straits Dual Sector Simulation (FSDSS), represents coastal maritime operations in support of a wide variety of USCG missions. The simulation is being used to support decisions with respect to MDA and WAS, helping to identify high-priority operational and research investment requirements that could significantly improve Coast Guard performance. We have formed a partnership with the Office of Naval Research (ONR) on joint Navy/Coast Guard efforts to develop detection and tracking technologies and data mining solutions to support long range vessel surveillance. This program led the wide area surveillance study and delivered a report in response to HSPD-13. We initiated an analysis of alternatives for airborne Maritime wide area surveillance, and continued to provide leadership to international regulatory bodies on Automatic Identification System (AIS) system standardization. This standardization of AIS technology will enable Coast Guard to efficiently create a national AIS infrastructure to track commercial traffic for both maritime security and safety. We began to transition the experimental AIS reception network to operational use as part of the national AIS acquisition. We also partnered with the Canadian Joint Forces Experimentation Centre (JFEC) to evaluate current Unmanned Aerial Vehicle (UAV) systems and sensor packages against USCG mission requirements. While both countries were using the same platform and sensor package, each country was evaluating different issues. As a result, both countries benefited from each other's experiences, data, and results.

Underwater Technology: In partnership with the Navy and others, we developed a first generation integrated anti-swimmer system that will be used to protect high value assets from underwater attack. The system includes sonar that scans port waters and alerts authorities on land. The commercially available sonar and its Navy processor can distinguish swimmers from dolphins. Work is underway to improve interdiction capabilities to integrate with this detection capability. For static threats like underwater explosive devices, a 3-dimensional sonar is being incorporated into a mobile inspection package. This system provides detailed underwater images no matter what the visibility. We conducted operational tests of the underwater imager (this was a joint project with ONR and the University of South Florida). The system demonstrated could inspect underwater structures and ship hulls much more quickly and effectively than divers, and we are building on this success to develop an operationally deployable system.

Operational Presence and Response

Compel Compliance: This program conducted operational tests of the Boat Trap propeller entangling device and showed that the system deploys safely and reliably and can be accurately deployed directly

in front of the target vessel, thus minimizing the ability to evade entanglement. The system shows great promise, but full entanglement of the propeller by the Boat Trap net was not achieved, and design modifications to the net are in process. We completed evaluation of long range acoustic devices that are capable of projecting voice from USCG cutters over great distances. With Navy and the Joint Non-Lethal Weapons Directorate, we evaluated lightweight acoustic impulse devices as a non-lethal weapon for the interdiction of underwater threats. We began evaluation of the value of intrusion barriers in protecting high value maritime assets such as liquefied natural gas (LNG) tankers. Also evaluated were potential non-lethal delivery systems that can be used from a safe stand-off distance to deliver non-toxic, eye-safe marking technologies that are resistant to defeat by hostile personnel and will enhance the USCG's ability to relocate and identify the target.

Boarding Team Capability: The Directorate tested non-intrusive technologies to quickly inspect shipboard spaces, and to locate or inspect hidden compartments for such contraband as CBRNE (chemical, biological, radiological, nuclear, explosives), illegal migrants, and drugs. We developed a prototype for concept evaluation of a boarding team communications tool that will allow team members below deck to communicate with other team members, and we worked with the U. S. Army Natick Soldier Center to develop an integrated ballistic protection and flotation vest for boarding teams.

FY 2006 Plan:

Maritime Domain Awareness

Situational Awareness: This program is developing tools and procedures to improve Sector Commanders' ability to assess and respond to threats in and around a port. It will continue work on first generation visualization tools and response assessment tools for sector command centers, install and assess the first spiral system in Miami, and develop recommendations for improvements to tools and begin spiral two development process. It will also provide technical oversight of Automated Scene Understanding technology and conduct a technical evaluation of its ability to improve situation awareness while reducing operator workload.

Short and Long Range Sensing: This program is developing technologies to enable tracking, classification and identification of large vessels within 2000 nautical miles off-shore and small vessels within 300 nautical miles off shore. We will continue development of simulation models to examine alternative technologies and estimate their operational benefits. This program intends to continue its partnership with ONR on joint Navy/Coast Guard vessel tracking project, and its collaborative work with the Navy and other agencies to develop test plans and to conduct technology evaluations. We will complete development of international standards for AIS shore stations and small-boat AIS, developing a prototype low-cost, small boat AIS system into a commercial off-the-shelf technology. Engineering studies of AIS reception range and AIS interference will support the development of the national AIS infrastructure, and operational testing of small UAVs will assess their effectiveness in identifying and tracking high interest vessels as well as increase our understanding of the costs and logistic implications of employing small UAVs in USCG missions.

Underwater Technology: This program is developing technologies to prevent damage to critical infrastructure by swimmers, divers, and underwater explosives. It will work with ONR to develop full-scale prototype of mobile inspection package for rapidly scanning underwater structures or vessels for parasitic attachments, and it will conduct detailed operational testing with USCG operators. Continued work with ONR will develop and evaluate sensors that can be carried on autonomous underwater vehicles to improve port security. The program includes an effort to develop a Navy-compatible

method to improve the sensing of potential mines in ports and waterways, and operational demonstration of technology in partnership with NOAA.

Operational Presence and Response

Compel Compliance: This program is developing technologies and tools to stop people and vessels from carrying out acts that are illegal or cause harm. In partnership with the DoD Joint Non-Lethal Weapons Directorate (JNLWD) it will: conduct an engineering study of entangling nets to better understand key net properties that facilitate propeller fouling, redesign Boat Trap net based on results of engineering study, obtain full-scale prototypes for testing, complete a large vessel stopping feasibility study, continue development of vessel marking technology to mark vessels at sea to assist in identification and relocation, develop prototype and conduct at-sea testing, complete testing of underwater loud hailer for warning divers, and develop a full-scale prototype of acoustic impulse prototype to stop divers and begin operational tests with USCG assets.

Boarding Team Capability: This program is developing tools for boarding teams to improve their capability to inspect vessels, locate contraband and weapons of mass destruction, identify the personnel on board a vessel and ensure that boarding operations can be conducted safely. We will continue our strong partnership with the S&T Directorate on detection technologies, and will work with technology developers to improve likelihood that emerging technologies can be applied to support Coast Guard missions. Communication of USCG requirements and maritime constraints is a crucial aspect of this program's role in these partnerships. We will assist in operational testing when technologies mature, assess boarding team communications capability and needs, and complete concept evaluation of a boarding team communications equipment that will allow team members to communicate even when they are below deck on steel ships. Operational tests of emerging technologies that can be used to look non-destructively through steel bulkheads on ships will be conducted. A requirements study will be completed for obtaining biometric information from vessel crews for the purpose of verifying identification for incorporation into Department of Homeland Security's Automated Biometric Identification System (IDENT) program. Work with U. S. Army Natick Laboratory to develop improved boarding team personal protective equipment will also continue.

FY 2007 Plan:

Maritime Domain Awareness (MDA)

The multi-dimensional, cross domain effort of building an MDA system-of-systems requires a sophisticated implementation effort to ensure the requirements of all stakeholders (including warfighters, planners, first responders, law enforcement agencies, commercial interests, and policy makers) are fully considered and maximum "buy-in" is achieved across all departments, agencies, and all other entities within and outside of government. Thus the development of the implementation plan itself requires a structured, analytical approach and the use of proven systems engineering methodologies to the multi-departmental, complex problem of building an effective national maritime domain awareness system.

Situational Awareness: First generation visualization tools and response assessment tools for sector command centers will be completed. Sector command center watchstanders' capability will be improved by pre-processing data and displaying information in a relevant and useful way. Assessment and hand-off system specifications will be developed for USCG acquisition. Automated scene understanding technology will be developed, if successful, specifications for acquisition will be prepared. The sector command center simulator will be completed.

Short and Long Range Sensing: The technology roadmap and system architecture for a sensor network that will provide the capability for the Coast Guard to detect and track all surface vessels greater than 25-ft out to 100 miles from shore will be completed. Development and exercising of simulation models that will help examine alternative technologies and estimate operational benefits will continue, as will our partnership with ONR on the joint Navy/Coast Guard vessel tracking project. We will work with the Navy to develop test plans and to conduct technology evaluations, complete operational testing of small UAVs to assess their effectiveness in identifying and tracking high interest vessels and understand the costs and logistic implications of employing small UAVs in USCG missions, and we will begin development of a barge tracking prototype.

Underwater Technology: We will complete development of low-cost swimmer detection system for commercial facility protection. We will also complete detailed operational testing of the marine inspection package. Collaboration with ONR to develop and evaluate sensors that can be carried on autonomous underwater vehicles to improve port security will continue.

Operational Presence and Response

Compel Compliance: We will conduct operational testing of redesigned Boat Trap, and we will develop concepts of operation, procedures and training recommendations and deliver them to the sponsor. The full-scale prototype portable entangling net will be completed. Based on results of large vessel stopping study, we will invest in development of most promising technology or technique. Testing of an acoustic impulse prototype to stop divers will be completed, and we will begin the process of better integrating all the components of the anti-swimmer system. The most promising non-lethal anti-personnel technologies for subduing personnel during at-sea boardings will be evaluated, as will the effects of non-lethal technologies and their CONOPS on people. In partnership with JNLWD and other Federal Agencies, we will develop, test, and evaluate directed energy technologies for stopping and slowing vessels.

Boarding Team Capability: The program will continue to work with technology developers to improve the likelihood that emerging technologies can be applied to support Coast Guard missions. Operational evaluations of promising search technologies developed by the S&T Directorate, Technical Support Working Group (TSWG), and others will continue. We will assess the state of multi-modal detection technology and provide recommendations for acquisition. Development of a full-scale prototype of a boarding team connectivity solution will begin. We will test and evaluate prototypes non-contact detection of contraband. A maritime biometric identification system to support vessel crew identification will be developed. Means for CG to access the Smart Container system will be developed, and we will continue to conduct operational tests of U.S. Army Natick Laboratory-developed personal protective equipment.

Non HLS Missions

Search and Rescue: We will model efforts to improve search effectiveness, specifically in search object drift and search object detection. Research will continue to model survivor sustainment in different sea conditions to assist in decisions on how long to search for survivors, and we will prototype promising mass rescue operation technologies. We will complete analysis of potential uses of cellular technology to assist the search and rescue mission. We will explore potential improvements for next generation Global Maritime Distress Safety System or future distress notification system. Finally, we intend to develop tools and techniques to improve Coast Guard's capability to plan and execute mass rescues.

Aquatic Nuisance Species (ANS): We intend to finalize cutoff levels for chemical parameters for ballast water exchange verification, and develop methodologies for testing ballast treatment systems installed aboard ships including obtaining representative samples. We intend to provide the Coast Guard the ability to evaluate the effectiveness of treatment methods, and the ability to evaluate exchange as a ballast water management practice to control the spread of ANS. We will evaluate potential ballast water treatment practices necessary to control the spread of ANS.

Spill Response: We intend to continue to evaluate and develop techniques for recovering subsurface oils, including development of simulation tools to aid skills development and decision-making in high consequence, low frequency scenarios. Integration of hazardous materials decision tools within USCG command centers will continue, and we will work to improve the capability to respond to oil spills by partnering with other Federal Agencies to develop decision tools and response techniques needed for use of dispersants in near-shore areas and for responding to oil spills in cold environments.

Marine Safety: We will perform critical fire research to provide the Coast Guard with the information needed to reduce the risk of fires onboard vessels in order to save lives, and protect property and the environment. We will conduct tests of pre-engineered fire extinguishing systems for large and unusual spaces aboard merchant vessels.

PPA: UNIVERSITY AND FELLOWSHIP PROGRAMS

2007 Request	-	-	51,970
Total Change 2006-2007	-	-	(10,400)

Science and Technology Directorate requests \$52 million for this activity. This is a decrease of \$10.4 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: University Programs coordinate, leverage and use the university community's distinctive intellectual capital to address current and future mission-critical homeland security needs, through both research and educational programs. Thus the University Programs portfolio focuses on: 1) developing the scientific research foundation necessary to advancing knowledge in homeland security fields, 2) developing a cadre of technical experts within the Nation's workforce who are trained to address current and future challenges in securing the homeland, and 3) ensuring the results of their research are disseminated to the Department of Homeland Security (DHS) and its partners. The University Programs portfolio is invested largely in two areas: a university-based system of DHS Centers, and a Scholars and Fellows Program intended to attract the next generation of academic researchers to disciplines that are relevant or essential to homeland security. University Programs have therefore become a catalyst for mission-relevant research at more than 40 major research universities, and are building capacity worldwide by attracting hundreds of researchers from more than 110 institutions to focus on issues critical to homeland security.

DHS Centers include both Centers of Excellence and Cooperative Centers. They form a network of universities designated to carry out mission-focused multidisciplinary research that fills specific scientific and technological knowledge gaps identified by Congress, the National Academies of Science, Presidential Homeland Security Directives or DHS. The Centers of Excellence and their partners address major all-hazard like the risk and economic consequences of terrorism events, agricultural security, social and behavioral aspects of terrorism, and preparedness and response to high consequence events. University Programs are also working with other Federal agencies and research centers to develop interagency Cooperative Research Centers that will allow the Federal government to conserve resources, avoid duplication of effort, and coordinate research where there are scientific issues of concern to more than one agency. DHS sees its Centers as vital to building scientific leadership and maintaining core competencies in disciplines of importance to homeland security. Selection for participation in DHS Centers is highly competitive, peer-reviewed, and merit-based.

The Scholars and Fellows Program focus on individuals as opposed to institutions. It seeks a diverse cadre of highly talented students and scholars, competitively selected to pursue courses of study related to homeland security. Scholars and Fellows receive support to continue their education, and they also participate in a formal internship at DHS, a DHS Laboratory, a National Laboratory or a DHS Center.

FY 2005 Accomplishments

In FY 2005, University Programs continued to support three DHS Centers of Excellence, awarded the fourth Center on the Study of Terrorism and Response to Terrorism, selected the fifth Center on High Consequence Event Preparedness and Response, and topics for consideration for additional Centers of Excellence are under active discussion within the Directorate. University Programs also established one Cooperative Research Center on microbiological risk assessment jointly with the Environmental Protection Agency, and issued a BAA for a University Affiliated Center to the DHS Institute of Discrete Sciences. A description of all accomplishments follows.

Continued Support of Three DHS Centers of Excellence:

- **Center for Risk and Economic Analysis of Terrorism Events** – Risk analysis related to the economic consequences of terrorist threats and events. Lead University: University of Southern California. Major Partners: University of Wisconsin at Madison, New York University, and Structured Decision Corporation (affiliated with MIT).
- **National Center for Food Protection and Defense** – Defense of the Nation's food supply. Lead University: University of Minnesota. Major Partners: Michigan State University, University of Wisconsin at Madison, North Dakota State University, Georgia Institute of Technology, and University of Tennessee at Knoxville.
- **National Center for Foreign Animal and Zoonotic Disease Defense** – Threats to animal agriculture, including Foot and Mouth Disease, Rift Valley Fever, Avian Influenza, and Brucellosis. Lead University: Texas A&M University, Major Partners: University of Texas Medical Branch, University of California at Davis, and the University of Southern California.

Creation of Additional DHS Centers of Excellence:

- **National Center for the Study of Terrorism and Responses to Terrorism** – This Center will concentrate on what moves individuals, small groups and social movements to undertake terrorism as a strategy. It will investigate the dynamics of terrorist groups, and study societal responses to actual or possible attacks. Lead University: University of Maryland. Major Partners: University of California at Los Angeles, University of Colorado at Boulder, Monterey Institute of International Studies, University of Pennsylvania, and University of South Carolina.
- **Center for the Study of High Consequence Event Preparedness and Response** – This Center will concentrate on preparation for disasters—high consequence events—with a special emphasis on acts of terrorism. Its multidisciplinary work addresses the technical, systemic, behavioral, and organizational challenges such events pose, particularly when the disaster is caused by weapons of mass destruction. Center selection was in progress at the end of FY 2005, and completed in the first quarter of FY 2006 with the selection of Johns Hopkins University and partners.

Cooperative Research Centers:

- **DHS and EPA Cooperative Center on Microbial Risk Assessment** – This Center focuses on risk assessments for terrorist incidents involving bio-threat agents (including the bacteria, viruses, and biotoxins relating to the Category A agents anthrax, smallpox, botulism, plague, viral hemorrhagic fever, and tularemia) in both indoor and outdoor environments. Michigan State University heads the Center, with major partners at Carnegie Mellon University, Drexel University, the University of Arizona, Northern Arizona University, the University of California at Berkeley and the University of Michigan.
- **University Affiliate Centers to the DHS Institute for Discrete Sciences** – The Institute for Discrete Sciences (IDS) is a joint project between University Programs and the Threat Awareness Portfolio at Lawrence Livermore Labs. DHS will select up to four University Affiliate Centers to participate in the IDS. Discrete sciences underlie key technologies for meeting computational challenges like threat characterization, risk assessment, situational awareness, and scenario planning.

Education Programs and Informal Education Activities

University Programs support training the next generation of researchers. DHS is looking for persistent, productive, creative problem solvers. These diverse and highly talented individuals possess the skills, abilities, attributes and knowledge to advance knowledge in areas of importance to homeland security.

- **Scholarship and Fellowship Program** – Approximately 300 undergraduate and graduate students were supported in FY 2005 in DHS mission-relevant fields. Students participated in DHS-focused research at DHS-affiliated institutions (DHS Laboratories, National Laboratories and DHS Centers of Excellence) thereby connecting their academic interests with homeland security initiatives.
- **Postdoctoral Associateship Program** – The program funds up to ten postdoctoral scientists and engineers to perform advanced research in areas of critical importance to DHS. Postdoctoral scholars enhance work done at DHS Labs, National Labs and DHS Centers of Excellence.
- **Pilot Summer Faculty and Student Research Team Program** – A pilot program was established for faculty and students from Historically Black Colleges and Universities (HBCU), Hispanic Serving Institutions (HSI), Tribal Colleges and Universities (TCU), and Alaska Native and Native

Hawaiian Serving Universities. The Program made awards to 10 faculty and student teams that conducted research at one of the DHS Centers of Excellence.

- **Outreach to Historically Black Colleges and Universities (HBCU) and Minority Serving Institutions (MSI)** – Three informational research exchange workshops were held at Wilberforce University, the University of Southern California, and Tuskegee University. Their goal was to introduce participants to the current and future research needs of DHS S&T, potentially increase the number of collaborations, and foster long-term relationships among HBCUs, HSIs, TCUs and MSIs. Approximately 58 institutions and more than 120 researchers attended the workshops. A number of participants also applied to the Pilot Summer Faculty and Student Research Team Program.
- **American Association for the Advancement of Science (AAAS) Policy Fellows** – The University Programs portfolio supported four AAAS science and technology policy fellows at the S&T Directorate. AAAS provides the opportunity for accomplished and societally aware scientists and engineers to participate in and contribute to the public policy making process.

University Programs Cross Cutting Accomplishments

- **University Programs Symposium** – Topic: Science-Based Risk Analysis: Examining Threats, Vulnerabilities, Consequences and Responses. More than 120 participants attended from other DHS directorates, various Federal agencies and the greater homeland security community.
- **External Program Review** – University Programs External Review was held in September 2005.

FY 2006 Plan

In FY 2006, University Programs received \$63.0 million that will sustain ongoing research by the DHS University Centers of Excellence and continue existing education initiatives. Additionally, University Programs will conduct a peer-reviewed site visit of the first three Centers of Excellence that will provide in-depth technical review in support of assessments on these three-year awards. DHS will evaluate other DHS Centers in subsequent years as appropriate. Additionally, recommendations from external peer reviews conducted in FY2005 are being incorporated into both research and education programs.

DHS Centers:

DHS University Research Centers (focus is multidisciplinary research and education)— DHS Centers form a network of universities designed to conduct mission-relevant multidisciplinary research best performed by the University community to fill specifically identified scientific and technological knowledge gaps as well as educate the next generation of scientists and engineers in research areas of importance to the Department.

Continued Support of Four DHS Centers of Excellence:

- Center for Risk and Economic Analysis of Terrorism Events. Mission objective: to evaluate the risks, costs, and consequences of terrorism, and guide economically viable investments in countermeasures that will make our Nation safer and more secure. Lead University: University of Southern California.
- National Center for Food Protection and Defense. Mission objective: to defend the safety of the food system through research and education; establish best practices, develop new

tools, and attract new researchers to manage and respond to food contamination events.
Lead University: University of Minnesota.

- National Center for Foreign Animal and Zoonotic Disease Defense. Mission objective: To protect against the introduction of high consequence foreign animal and zoonotic diseases in the United States with emphasis on prevention, surveillance, intervention, and recovery. Lead University: Texas A&M University.
- National Center for the Study of Terrorism and Responses to Terrorism. Mission objective: To provide strategies for intervention of terrorists and terrorist organizations, and to strengthen the resilience of U.S. citizens to terrorist attacks. Lead University: University of Maryland.

Launch and Support two Centers of Excellence and two Cooperative Centers in FY2006:

- The National Center for the Study of Preparedness and Catastrophic Event Response was announced in December 2005 and is headquartered by Johns Hopkins University. This Center has a mission objective to optimize our Nation's preparedness in the event of a high consequence natural or man-made disaster, and develop best guidelines to alleviate the effects of such an event.
- Topics and consideration for additional Centers of Excellence are under active discussion within the Directorate.
- In the first quarter of FY 2006, DHS and EPA jointly launched a Cooperative Center on Microbial Risk Assessment. This Center focuses on risk assessments for terrorist incidents involving bio-threat agents (including the bacteria, viruses, and biotoxins relating to the Category A agents anthrax, smallpox, botulism, plague, viral hemorrhagic fever, and tularemia) in both indoor and outdoor environments. Lead University: Michigan State University.
- DHS intends to launch a second Cooperative Center in FY 2006 that will create University Affiliate Centers to the DHS Institute for Discrete Sciences. The Institute for Discrete Sciences (IDS) will be a joint project between University Programs and the S&T Threat Awareness Portfolio led by Lawrence Livermore National Laboratory. Up to four University Affiliate Centers will participate in the IDS. Discrete Science developments underlie the key technologies necessary for meeting computational challenges like threat characterization, risk assessment, situational awareness, and scenario planning.

Education Programs and Informal Education Activities

University Programs will continue programs to develop and build a cadre of highly talented students and scholars, competitively selected to pursue courses of study relevant to homeland security. The programs will provide educational support and relevant experiential learning opportunities to individuals, including those from Minority Serving Institutions (MSIs), to enhance the scientific leadership in areas of importance to DHS.

- Scholarship and Fellowship Program – University Programs plans to support approximately 300 undergraduate and graduate students in FY 2006 in DHS mission-relevant fields. This program also requires a mission-relevant internship period conducting Homeland Security research at a designated laboratory or agency.
- Postdoctoral Associateship Program – University Programs plans to fund up to ten postdoctoral scientists and engineers to perform advanced research in areas of critical

importance to DHS. Postdoctoral scholars enhance work done at DHS Labs, National Labs and DHS Centers of Excellence.

- American Association for the Advancement of Science (AAAS) Policy Fellows – The University Programs portfolio plans to support up to five AAAS science and technology policy fellows within the S&T Directorate. The AAAS Program provides the opportunity for accomplished and societally aware scientists and engineers to participate in and contribute to the public policy making process.
- University Programs will continue the Summer Faculty and Student Research Team Program for faculty and students from Historically Black Colleges and Universities (HBCU), Hispanic Serving Institutions (HSI), Tribal Colleges and Universities (TCU), and Alaska Native and Native Hawaiian Serving Universities. The Program will make awards to 15 faculty and student teams to conduct research at one of the DHS Centers of Excellence.
- Provide continued outreach to Historically Black Colleges and Universities (HBCU) and Minority Serving Institutions (MSI). This will include support for three informational workshops at MSIs to introduce participants to the current and future research needs of DHS S&T, potentially increase the number of collaborations, and foster long-term relationships among HBCUs, HSIs, TCUs and MSIs.

FY 2007 Plan

The current proposed FY 2007 budget is \$52.6 million. University Programs will continue development of a coordinated university-based system to develop further synergies of effort as well as emphasize academic research and education programs:

- Managing, integrating and supporting the existing five Centers of Excellence and one Cooperative Center:
 - Center for Risk and Economic Analysis of Terrorism (Lead University: University of Southern California)
 - National Center for Food Protection and Defense (Lead University: University of Minnesota)
 - National Center for Foreign Animal and Zoonotic Disease Defense (Lead University: Texas A&M University)
 - National Center for the Study of Terrorism and Responses to Terrorism (Lead University: University of Maryland)
 - National Center for the Study of Preparedness and Catastrophic Event Response (Lead University: Johns Hopkins University)
 - DHS and EPA Cooperative Center on Microbial Risk Assessment (Lead University: Michigan State University)
- Continue development of DHS Centers planned for launch in FY 2006
 - Cooperative Center for University Affiliate Centers to the DHS Institute for Discrete Sciences (University Programs plans to select participating Universities in FY 2006)
 - Provide support to ensure mission-relevant research for any additional DHS Centers of Excellence begun in FY2006.

DHS supports academic scholars studying in disciplines of significant importance to the Department.

- University Programs will continue supporting approximately 200 undergraduate and graduate students, fellows and postdoctoral scholars under the Scholars and Fellows Program.
- University Programs plans to support up to ten additional postdoctoral researchers and up to five AAAS Fellows to participate in DHS research.

PPA: EMERGING THREATS

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$13,272
2006 Revised Enacted	-	-	7,920
2007 Adjustments to Base	-	-	(7,920)
2007 Current Services	-	-	-
2007 Program Change	-	-	-
2007 Request	-	-	-
Total Change 2006-2007	-	-	(7,920)

Science and Technology Directorate request no funds for this activity. Resources have been combined in a new portfolio entitled "Emergent and Prototypical Technology".

CURRENT SERVICES PROGRAM DESCRIPTION: The Emerging Threats portfolio addresses the dynamic nature of terrorist threats, as science and technology advancements enable new agents of harm and new ways to employ them. The mission of the Emerging Threats portfolio is to anticipate and define potential threats arising from new scientific and technological advances, terrorist use of existing capabilities in new or unexpected manners, conduct self assessments of the S&T Directorate's research activities and jump-start countermeasures capability development. High priority is placed on developing the capability to use innovative, crosscutting approaches for anticipating and responding to new and emerging threats. Successful identification of emerging threats will permit capabilities to be developed to thwart these emerging threats before they are used.

The Department of Homeland Security's (DHS's) and the S&T Directorate's strategic planning process and risk prioritization ensures that the greatest known and current threats are addressed in order to reduce the risks posed by these threats. However, the Department and the S&T Directorate must also anticipate and respond to newly identified and emerging threats as information becomes known, and then proactively work to reduce the risk of these new and emerging threats. The S&T Directorate must be proactive in conducting Research, Development, Testing and Evaluation (RDT&E) to mitigate new and emerging threats as they become identified, rather than be in a reactive mode after a threat has presented itself. The time period for RDT&E is normally a period of years. The normal planning process is simply too long to address new and emerging threats after they become known. The Emerging Threats portfolio provides a mechanism to shorten the RDT&E cycle for new and emerging threats so that research can be responsive and agile per the Secretary of DHS's direction and effectively support operations.

Relevant R&D is underway at other agencies and organizations; thus, partnerships in this area hold great potential for synergistic focus on homeland security. Work is conducted in partnership as appropriate with the Department of Energy (DOE), Department of Defense (DoD), Department of

Health and Human Services (DHHS), Department of Justice (DOJ), United States Department of Agriculture (USDA), and the Intelligence Community (IC).

FY 2005 Accomplishments:

Transit Security Project (TSP): Transit systems continue to be targets for terrorists. Novel uses of explosives in subway systems to cause catastrophic damage are an important emerging threat to consider. Minimum threshold values of explosives that could cause catastrophic damage (as defined by each participating transit system) were characterized for each system. A better characterization of the risk of catastrophic damage has been obtained and shared with the participating transit systems.

Compounded Infrastructure Threat (CIT): This effort evaluated ways in which infrastructure could be used as a weapon. Although many examples of CIT are known (e.g., planes into buildings, nuclear plants, chemical industry), this effort was designed to discover and identify CITs with potentially catastrophic, national consequences that have not yet been addressed by current DHS or other Federal efforts. Various analysis efforts were conducted to identify and characterize CITs. A workshop of diverse subject matter experts (SMEs) was conducted in March, 2004, to elicit novel CIT scenarios and opinions about the relative importance of CIT versus Weapons of Mass Destruction (WMD) and other highly technical, sophisticated threats. Additional analysis by SMEs in the areas of adversary motivation and intent, intelligence analysis, infrastructure protection and counter-terrorism was also conducted to identify unaddressed CITs. A methodology was developed to evaluate CITs as part of DHS's risk prioritization framework.

A specific CIT, the use of the inherent structural characteristics of a subway system to exacerbate the spread of a WMD release was identified and evaluated. An in-depth evaluation of the potential to mitigate this risk was conducted by a team of national laboratory researchers in collaboration with the Federal Transit Authority, Transportation Security Administration and participation by all of the major US metropolitan transit agencies.

Foot and Mouth Disease (FMD) Study: DHS has an interagency coordination role for any FMD outbreak either intentionally introduced or naturally occurring, per Homeland Security Presidential Directive-9 (HSPD-9). This study, in collaboration with the Biodefense Knowledge Center, delivered a retrospective epidemiological investigation of a recent FMD outbreak in Brazil, specifically evaluating the rumored intentional introduction of FMD and developing a comprehensive but generic analysis framework for expediting future investigations. FMD is an emerging threat because the international prevalence of the disease is increasing and the U.S. is highly vulnerable to rapid transmission of the disease once introduced. After hosting two inter-agency meetings on the topic in Washington, DC, a draft report was delivered to the DHS S&T Directorate and the DHS Information Analysis (IA) Division in April, 2005. In addition, sections of the report have also been distributed to the Armed Forces Medical Intelligence Center (AFMIC) and United States Department of Agriculture (USDA).

Automated Risk and Vulnerability Assessment: The objective of this effort is to rapidly identify areas of high risk and vulnerability within the United States based upon group- and tactic-specific terrorist patterns abroad. The effort rapidly extracts targeting patterns from a wide source of information to include geo-spatial, infrastructure, adversarial behavior, and temporal data. The alpha system has been successfully developed and tested on specific cases in cooperation with the operational community from both DHS and DoD. As a result of this successful testing, DHS's Information Analysis (IA) Division has requested that the S&T Directorate accelerate the fielding schedule of this technology into

IA's operational Sensitive Compartmented Information Facility (SCIF). The system is currently in certification and accreditation phase prior to installation.

Capability Developments: Initiated three sensitive capability development projects in direct support of Departmental Components who identified high-risk emerging threats and for which there were no existing capabilities to counter those threats.

The Next Generation Crimeware Defenses (NGCD) Project: This effort will develop an embedded hardware secure computing environment that would strengthen defenses by defeating crimeware, keyloggers (both software and hardware), pharming and phishing. Furthermore, a secure browser will be developed which, in that environment, could prevent software crimeware. The solution should be compatible with hardware authentication schemes such as PKI, smartcards and other tokens. The solution will provide a widely deployable secure computing hardware environment, without requiring replacement of existing desktop or laptop computers. The contract awarded on September 13, 2005.

Virtual Machine Detection and Escape (VMDE): To confound malicious code researchers, reverse engineers, and other security personnel, malicious software (malware) specimens are starting to hunt for evidence that they are running inside a virtual machine. If the malware detects the presence of a virtual machine, a likely sign that it is being investigated, it behaves differently. To help improve the defender's abilities, this project will investigate the current techniques that malicious code can use to detect virtual machines, as well as techniques that the researchers can use to hide their virtualization and analysis from the malicious code. Armed with such knowledge, malicious code analysts and defenders will better be able to understand the behavior of the latest breeds of pathogenic software. Furthermore, computer attackers have been researching the ability to escape a virtual machine environment, to jump out of a guest operating system into its host. Malicious code with such capabilities would pose a significant threat to the many commercial and government organizations deploying virtual machine farms to lower costs, improve reliability, and simplify system management. This project will also analyze various possibilities for escaping virtual machine environments and how to defend against such tactics as they are introduced into malicious code. The contract was awarded on September 29, 2005.

Evaluation of Toxic Industrial Chemical (TIC) Sensors: Initiate a study to evaluate the performance of various TIC detectors and study the behavior of a chemical release in an office setting. This project has been awarded and work began in September, 2005.

FY 2006 Plan:

Funding will complete the support and evaluation of projects initiated under the Near-Term and Future Technologies solicitation released in FY 2004.

The Emerging Threats portfolio will also complete the projects initiated in FY 2005, and test and evaluate the results from these projects. The portfolio will begin to develop technologies and systems against emerging threats identified as a result of FY 2005 emerging threats analysis.

The Emerging Threats portfolio will fund research dedicated to long-term, undefined threats as a means to exercise technology influence in the marketplace and build infrastructure to incentivize non-requirements driven, high-risk, high-payoff R&D, thereby promoting technology push and collaboration to solve otherwise intractable problems.

The Emerging Threats portfolio will sponsor comprehensive identification and tracking of Emerging Threats across four theme areas: (1) WMD emerging threats, (2) conventional (non-WMD) emerging threats, (3) threats against (and using) infrastructure, and (4) emerging motivation and intent (M&I) factors. Specific plans for FY 2006 include:

- WMD emerging threats: Develop initial framework, ranking, and timescales for identified emerging threats and potential emerging threats across all WMD
- Conventional (non-WMD) emerging threats: Extend methodology and framework to conventional threats, e.g. explosives, to enhance understanding on how terrorists develop and adapt new technology
- Threats against (and using) infrastructure: Initial integration with WMD emerging threat framework to develop consistent methodology for evaluating and tracking all emerging threats
- Emerging motivation and intent (M&I) factors: Extend FY 2005 M&I work to identify trends and how M&I evolves due to external factors; initial integration of M&I analysis into emerging threat methodology and framework

The outcomes of the assessments will lead the strategic programs to integrate multiple disciplines and threat scenarios and comprehensively use intelligence-based information to establish organizational foresight.

PPA: RAPID PROTOTYPING

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$65,626
2006 Revised Enacted	-	-	34,650
2007 Adjustments to Base	-	-	(34,650)
2007 Current Services	-	-	-

2007 Request	-	-	-
Total Change 2006-2007	-	-	(34,650)

Science and Technology Directorate request no funds for this activity. Resources have been combined in a new portfolio entitled "Emergent and Prototypical Technology".

CURRENT SERVICES PROGRAM DESCRIPTION: The mission of the Rapid Prototyping portfolio is to accelerate, through technology clearinghouse, deployment of advanced technologies to address urgent user requirements. The Rapid Prototyping portfolio advances the Directorate's mission to conduct, stimulate and enable research, development, test, evaluation and timely transition of homeland security capabilities to Federal, State and local operational end-users. Accelerating the timeline for development and commercialization of relevant technologies will allow the Science and Technology Directorate to ensure that operational end-users are equipped with the most advanced technologies available. To accomplish this mission, the Rapid Prototyping portfolio will seek to transition two types of technologies. The first are those technologies already in existence that require capability modification to address an immediate or emergent threat. These technologies will undergo a rapid re-engineering process and then be transitioned to the private sector or deployed by government entities on an accelerated schedule to provide defensive countermeasures or response capabilities when needed. The second category is comprised of those technologies that have reached a level of

functional maturity to make them candidates for accelerated development. These technology opportunities will undergo operational testing and pilot deployment to determine their ultimate applicability.

FY 2005 Accomplishments:

Rapid Technology Application Program: The Rapid Technology Application Program (RTAP) was initiated. The RTAP program is intended to provide needed new technologies to Federal, State, and local components of the homeland security mission. User commitment is extremely important in RTAP. The program will not develop technology without user commitment to acquire successful technologies. There are multiple steps within RTAP to ensure this. Eleven Requirements Generation Panels were formed to identify and prioritize rapid technology requirements. First, the panels start with research and development (R&D) needs stated by the Science and Technology Requirements Council (SRC), a council of senior DHS officials representing the various operational elements. Second, the requirements generation panels are appointed by the operational elements leaders (Under Secretaries, Commandant USCG, USSS Director) with the intention that they present the most pressing needs of their portions of DHS. Third, the output of the requirements generations panels are sent back to the operational elements leaders for validation. They are specifically asked to remove or postpone any requirement for which they are not prepared to acquire and field in the out years.

RTAP is designed to ensure that the developed technologies directly benefit the targeted users through user participation in defining and conducting field tests of the technologies. In some cases, the users will also participate in iterative development with the contractors selected under RTAP. This interactive approach is intended to give the contractors a better understanding of user needs and operational environment and to give the user the information needed to make informed acquisitions after the program ends.

By design, strong customer involvement drives the RTAP process, thereby maximizing the likelihood that outputs reach intended beneficiaries within 6-18 months. The RTAP requires direct participation from Federal, State, and local customers to determine and maintain relevance to national needs and DHS missions. The RTAP process was designed to ensure that resources are directly used, minimizing administrative support, to support the DHS counter-terrorism mission.

RTAP has four phases: requirements generation/refinement, competitive solicitation and evaluation, negotiation and contracting, and program execution. This year users generated 28 urgent, Rapid Prototyping requirements. Four examples of these 28 individual projects follow:

1. *Tactical Escape Mask* - develop a lightweight, one-time use, National Institute for Occupational Safety and Health (NIOSH) approved tactical escape mask with 60-minute endurance in Chemical, Biological, Radiological and Nuclear (CBRN) environments meeting the specifications.
2. *Rapid Suspected Bio-agent Screening Tool Kit* - develop a tool and method for rapidly screening suspicious "white powders" to eliminate the probability that the substance is a biological threat agent. The goal is to be able to distinguish between biological threats and common white powdery substances, including proteinaceous materials.
3. *Maritime Safety and Security Team Explosive Trace Detection (MSST)*- develop a small, rugged, portable device capable of accomplishing explosive trace detection onboard assorted vessels and facilities in maritime environments, which are often complicated by diesel fuel, saltwater spray, cargo substances, chemicals, etc.

4. *Advanced 3D Locator System* – develop a system that accurately locates and tracks incident responders inside threatened buildings, collapsed buildings, and subterranean facilities or underground.

Emergency Responders

Next Generation Structural Fire Fighting Protective Ensemble: Improved Level A Ensemble - Twelve complete prototype multi-hazard ensembles consisting of suit, gloves, Self Contained Breathing Apparatus (SCBA) / Powered Air Purifying Respirators (PAPR) and mask have been developed for CBRN testing [National Fire Protection Association (NFPA) 1991/1994] and field evaluations.

Next-Generation Fire Fighter Turnout Gear with Improved Chemical, Biological and Radiological (CBR) Protection: The DHS S&T Directorate funded two teams through the interagency Technical Support Working Group (TSWG) to develop prototype fire fighter structural turnout gear for first responders that offers improved chemical and biological protection and that will be NFPA 1971 certified. The prototype suits from both teams were demonstrated at the Fire Department Instructor's Conference (FDIC) in Indianapolis, IN, April 11-16, 2005, and at the Force Protection Equipment Demonstration (FPED) in Quantico, VA, April 26-28, 2005.

Chemical and Biological Countermeasures

Facility Airborne Biological Toxin Alarm System (FABTAS): Avir TOVA™/EN hybrid sensor for building HVAC protection -This hybrid sensor for building heating, ventilation and air conditioning (HVAC) system protection uses two methods to detect chemical warfare agents and toxic industrial chemicals providing improved reliability, response time, and accuracy. One prototype system is currently undergoing testing. The second prototype system is undergoing testing in a closed-loop duct where realistic inlet conditions have been established. Environmental testing using the closed-loop system has been completed, and testing with single chemicals is nearing completion. System testing with mixtures of chemicals and interferents is also underway.

Direct Detection of Botulinum Toxin: A microliter plate assay to detect botulinum toxin in the presence of bio-materials (milk, liquid, eggs, beverages, baby food, and some fruit juices) was successfully developed. The assay works in most foods, although a pre-treatment may be needed for some food matrices. The assay can be performed in as little as ten minutes making it faster than current botulinum detection platforms. The contract was extended to conduct further evaluation variations in toxin activation.

Biological Backgrounds in Facilities: Both Los Alamos National Laboratory/Lawrence Berkeley National Laboratory (LANL/LBNL) and the University of Minnesota have completed initial 30-day sample collection and have characterized the samples using biochemical, bacteriological and virology methods.

Radiological and Nuclear Countermeasures

Expedient Mitigation of a Radiological Release: Expedient Mitigation of a Radiological Release - Two formulations of a radionuclide fixative (IsoDEF™ and HeloTRON™) designed to lock down radioactive particles in the event of a radionuclide dispersion device (RDD) attack, or in the event of a nuclear accident have been developed. The chemical and physical properties of the coatings were successfully tested and the coatings were successfully tested against simulants. The Seattle Fire Department successfully conducted a small-scale field trial with the material in January, 2005. As a result of the trials, the US Marine Corps has included the formulations in upcoming field trials.

Efficient Detection of High-Z Materials in Cargo: A test of a sub-scale prototype Cargo container inspection system was successfully conducted. The test demonstrated the capability for high-confidence detection of a nuclear weapon by discriminating special nuclear material, lead and other high atomic weight elements from iron and the other common metals of commerce.

Efficient Real-Time Radioisotope Identification and Reporting: Initial user evaluation of a fully functional prototype Advanced Radioisotope Identifier System (ARIS) is scheduled with police, fire and bomb squads the last week of July, 2005.

Explosives Detection:

Railroad Passenger and Baggage Screening System: The initial designs are complete and prototypes are being fabricated for delivery in November, 2005. The designs will address screening at exterior, fixed locations with minimal environmental protection. The throughput for this system will allow up to 200 passengers and 400 bags per hour to be processed with a four person staff. This research and development project was funded through the TSWG.

Mass Transit Surveillance and Early Warning System: Software that recognizes anomalous behavior and detects abandoned luggage/parcels has been successfully developed and implemented on a commercial command and control center console. This project develops these algorithms specifically for transportation venues. Future plans include (1) installing a small-scale, dual-station prototype surveillance system at light rail stations to serve as a test bed for operational evaluations and further developments, including linking tunnel intrusion detection sensors for greater situational awareness; and (2) incorporating the software into an integrated control center/sensor system at a major AMTRAK transportation hub.

Virtual Patdown Using Radar (VIPUR) Hand Wand Detector: The first prototype of a hand wand device that will detect metallic, non-metallic, and explosives concealed on an individual has been fabricated and is currently undergoing laboratory testing and refinement. Three prototypes will be delivered for evaluation in November, 2005. The hand wand device uses miniaturized, low-power microwave radar and a COTS-derivative metal detector that will reliably detect concealed objects as the unit is manually scanned in close proximity to the person being searched. The Transportation Security Administration (TSA), United States Secret Service (USSS), Department of Energy (DOE), Department of Defense (DoD), and the Department of Justice/Bureau of Prisons (DOJ/BOP) are interested in VIPUR and will be involved in the assessment of the three prototypes.

Combined Quadrupole Resonance/X-Ray Inspection (QR-TRX) for Hand Baggage: A prototype system for X-ray inspection of hand-carried baggage that integrates quadrupole resonance (QR) capability for direct bulk detection of plastic explosives was designed and built. The X-ray system is TSA certified and includes threat-image projection capability. The system was demonstrated for the TSWG and DHS S&T Directorate representatives in July, 2005. The prototype will be delivered for evaluation to the TSA Transportation Security Laboratory in Atlantic City, NJ.

Pressure-Activated Wand Sampler for Explosives Trace Detection: The initial prototypes were delivered. Manufacturer testing indicates that sampling performance of prototypes is consistent and equal to the best manual sampling technique. The Pressure Activated Wand System (PAWS) prototypes completed two different laboratory tests in the 4QFY05 and 1QFY06. The advanced

prototypes, based on the test results, are being fabricated and will be delivered in February 2006 for use by the Transportation Security Administration through the Transportation Security Lab.

Other Areas

Rapid Prototyping: Public Safety and Security Institute for Technology (PSITEC) - An integrated project plan to address baseline content and functionality for the Rapid Prototyping Portal was developed (March/April 2005). User and Subject Matter Expert (SME) Groups were organized to identify and validate the initial content, taxonomy, and site layout that will be included in Version 1 of the portal. Discrete data elements were identified as candidates for Version 1 of the portal in June and July, 2005. The system is currently in certification and accreditation phase prior to public release which is expected in July 2006.

Heat Stress Calculator: The heat stress calculator prototype was delivered, evaluated, and validated to provide a risk-balanced estimate of "safe stay time" for first responders using personal protective equipment in emergency situations. Version 1 software is available for purchase.

Expedient Tactical Rebreather: Successfully complete the design and production of the first 10 prototypes of the Tactical Rebreather (TACR). The system is light-weight (less than 20 lbs), low-cost, rapidly donnable, low-profile, and compatible with existing full-face masks with standard North Atlantic Treaty Organization (NATO) interfaces. System testing is ongoing with end-user evaluations. The initial evaluation was conducted at the Houston Police Department. Interest from end users including Federal Protection Service (FPS), Federal Bureau of Investigation (FBI), USSS, United States Marshals Service (USMS), other Federal, State and local Law Enforcement Agencies, fire fighters, urban and rural rescue teams and industrial First Responders is high.

FY 2006 Plan:

In FY 2006, the Rapid Prototyping portfolio will transition mature programs from the development phase to operational testing and evaluation programs and commercial or government entities for deployment. The portfolio will also identify new technology candidates and capabilities to meet the existing and emergent technical requirements of the Department.

Rapid Technology Application Program

Rapid Technology Application Program: RTAP will receive interim prototypes and other results [articles for destructive or field testing, test plans, preliminary or final design reviews, results of preliminary tests, software specifications, etc.] for 16 FY 2005 projects and generate new Rapid Prototyping needs from DHS customers and emergency responders for the FY 2006 round of the annual RTAP cycle.

Emergency Responders

Emergency Responder Tracking and Monitoring System: Development is underway in the Rapid Prototyping portfolio on technologies that will enable response coordinators to locate, track, monitor, and communicate with emergency responders in structures. In FY 2006, development of this system will focus on capabilities to monitor vital signs and environmental working conditions; communicate data, video, and alarms to and from the responders to command posts outside the structure; dynamically map the interior of the structure, and locate casualties in the structure. The system will utilize advanced technology receivers and advanced electromagnetic techniques coupled with a multi-spectrum radio frequency (RF) transmission approach and commercial off-the-shelf (COTS) components.

Support to State and Local Responders: The portfolio will complete the development of projects initiated in FY 2005, and test and evaluate the products from these projects.

Rapid Prototyping Support to Federal DHS Missions: The portfolio will complete the development of projects initiated in FY 2005, and test and evaluate the products from these projects.

Other Areas

Rapid Prototyping: The Rapid Prototyping portfolio will continue to support the Technology Clearinghouse in FY 2006.

PPA: EMERGENT AND PROTOTYPICAL TECHNOLOGY (EPT) PORTFOLIO

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$0
2006 Revised Enacted	-	-	19,451
2007 Adjustments to Base	-	-	19,451
2007 Current Services	-	-	19,451
2007 Program Change	-	-	-
2007 Request	-	-	19,451
Total Change 2006-2007	-	-	19,451

Science and Technology Directorate requests \$19.4 million for this activity. This is a new portfolio combines the former Emerging Threat and Rapid Prototyping portfolios. In total, this a decrease of \$23.1 million below the FY 2006.

Mission Description and Justification:

The Emergent and Prototypical Technology (EPT) portfolio has two distinct programs:

- **Emerging Threats:** The discovery, analysis, and development of rapid prototypical solutions for unanticipated or newly emerging threats.
- **Technology Clearinghouse:** The development of knowledge-based services designed to provide both access and distribution of information and services relevant to public safety technologies through a technology clearing house.

The Emergent and Prototypical Technology (EPT) portfolio is consolidation of two previously distinct portfolios, Emerging Threats and Rapid Prototyping.

Emerging Threats Program: The objective of the Emerging Threats Program is to proactively anticipate and counter new technology-enabled threats. This program takes seriously the encouragement to use imagination to think "out of the box" in anticipating potential terrorist threats. It will anticipate and define potential threats arising from new scientific and technological advances or from terrorists using existing capabilities in new or unexpected ways and it will jump-start countermeasures capabilities development. High priority is placed on developing the capability to use innovative crosscutting approaches to anticipating and responding to new and emerging threats will permit us to develop capabilities to thwart them before they are used.

The Emerging Threats Program is based on a four-phase process that will either counter or bound the potential threat.

- Phase I: Discovery. A discovery process develops candidate threats and threat scenarios. The primary discovery process is a red-teaming or gaming technique successfully developed by the intelligence community, adapted for use in homeland security. Here the capabilities and skills of known or assumed terrorist organizations are given to a red team to discover hitherto unknown or unappreciated threat scenarios. In addition to this gaming process, emerging threats may be identified through intelligence or analysis of events (including non-terrorist events of potentially national significance).
- Phase II: Analysis. Following the discovery phase, the program conducts an analysis of the potential threat to understand our vulnerability to such an attack, the potential consequences, ease of attack and countermeasure alternatives.
- Phase III: Tests. This phase, which is not always required, conducts one or more tests to gather empirical data on the effects or ease of implementation of the threat scenario. These are not solutions, but tests to understand the viability or ease of the attack. They may range from understanding the physical or engineering aspects of a critical link in the scenario to rehearsing a mock-up attack.
- Phase IV: Potential Solution. In this phase a rapid solution is designed and developed to either thwart or disrupt such an attack. The solution may be material (such as a prototype article or software) or doctrinal (such as a change in operating procedures). In some cases solutions may either be intractable or require considerable investment. In the latter case, if the risk warrants, a separate program under the appropriate portfolio would be initiated.

Using a tightly coupled process, the portfolio's goal is to go from discovery of the threat in Phase I to potential solution in Phase IV in less than eighteen months. Because these threats are as yet unanticipated in the open literature, the Emerging Threats Program will be conducted in the classified mode.

Technology Clearinghouse Program: The Technology Clearinghouse Program addresses the Directorate's mission to conduct, stimulate and enable research, development, test, evaluation and timely transition of homeland security capabilities to Federal, State and local operational end-users. Accelerating the timeline for development and commercialization of relevant technologies will allow the Science and Technology Directorate to ensure that operational end-users are equipped with the most advanced technologies available. The Emergent and Prototypical Technology Portfolio will seek to transition two types of technologies. The first include technologies already in existence that requires modification to address an immediate or emergent threat. These technologies will undergo a rapid re-engineering process and then be transitioned to the private sector or deployed by government entities on an accelerated schedule to provide defensive countermeasures or response capabilities when needed. The second category is comprised of technologies that have reached a level of functional maturity to make them candidates for accelerated development. These technology opportunities will undergo operational testing and pilot deployment to determine their ultimate applicability.

Relevant R&D is underway at other agencies and organizations; thus, partnerships in this area hold great potential for synergistic focus on homeland security. Work is conducted in partnership as appropriate with the DOE, DoD, DHHS, DOJ, USDA, and IC.

FY 2007 Plan

Emerging Threats Program: The Emerging Threats Program initiatives begun in FY 2006 will continue through the development of countermeasures. Using the four phase process described above, the Emerging Threats Program will initiate new efforts in the discovery and assessment of threats with an emphasis on: (1) significant multi-vector economic threats, (2) threats which may attempt at psychological or political intimidation, and (3) novel threats against international trade and commerce. Other (or alternate high priority) topics will be identified during FY 2006 in consultation with other DHS and government agencies.

Future Capabilities Research and Development: Conduct high-risk, high-payoff basic technology research in areas relevant to homeland security and assess the exploitation of technology development opportunities as they arise.

Rapid Technology Application Program: RTAP will receive final prototypes for remaining FY 2005 projects and complete them. If funding permits, RTAP projects identified in a FY 2006 requirements solicitation will be initiated in FY 2007. New Rapid Prototyping needs will be generated by DHS customers and emergency responders for the FY 2007 annual RTAP cycle.

Technology Clearinghouse: The Emergent and Prototypical Technology Portfolio will continue to support the Technology Clearinghouse in FY 2007. Development plans include: adding procurement decision support tools and advanced search mechanisms; expanding content to include topics such as public health information; forming communities of interest and professional discussion boards; and establishing a technology transfer community database.

PPA: COUNTER MANPADS

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$51,820
2006 Revised Enacted	-	-	108,900
2007 Adjustments to Base	-	-	(104,020)
2007 Current Services	-	-	4,880
2007 Program Change	-	-	-
2007 Request	-	-	4,880
Total Change 2006-2007	-	-	(104,020)

Science and Technology Directorate requests \$4.9 million for this activity. This is a decrease of \$104 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The Counter-MANPADS Program focuses on demonstrating the viability, economic costs, and effectiveness of adapting existing military technology to protect commercial aircraft from the threat of Man Portable Air Defense Systems (MANPADS). Its goal is to demonstrate and evaluate the migration of existing technologies to the commercial airline industry, not to develop new technologies. Suitable countermeasure systems must have minimal impact on air carrier and airport operations, maintenance, and support activities, and this means that existing systems must be re-engineered both to meet commercial air carrier operation requirements and to protect critical military technology. The Program balances cost, schedule, and performance with the needs and requirements of its aviation community stakeholders. On completion

of a two-phase course (analysis followed by prototyping and testing), DHS will provide the Administration and Congress with options for defending commercial aircraft against shoulder-fired missiles.

To adapt the underlying military technology to commercial standards, validate system effectiveness and suitability in an operational environment, and develop and implement a comprehensive approach to technology protection, a follow-on Phase III has been planned. Phase III will include delivery and installation of pre-production Counter-MANPADS equipment on commercial aircraft operated by U.S. cargo carriers similar to those aircraft dedicated to meet Civil Reserve Air Fleet (CRAF) requirements. This will integrate a limited number of systems on multiple airframes in actual revenue service across the different carriers for the purpose of operational testing and evaluation, data collection, and the certification of a number of different aircraft types.

FY 2005 Accomplishments:

System Development and Demonstration (SD&D), Phase II: The Counter-MANPADS System Program Office (SPO) conducted and completed Critical Design Reviews for two contractors' prototypes. Both contractors provided the government technical data package that fully documents their design, operations and support concepts, as well as their predicted Life Cycle Cost (LCC) models. The contractors initiated Federal Aviation Administration (FAA) Airworthiness Supplemental Type Certification (STC) for three different aircraft being modified in Phase II. This extensive and rigorous certification process is mandatory to comply with the legal requirements of 49 U.S.C. 40101 and the requirements of the Federal Aviation Regulations. (The STC will document that the aircraft as modified with the Counter-MANPADS system meets all FAA standards governing design, materials, and aircraft performance required for continued safety of flight for civil aircraft in commercial operation.) The contractors began extensive development testing to verify environmental qualification of the hardware at the component and subsystem level. They conducted laser sub-system testing at the U.S. Air Force Electronic Warfare Environmental Simulator (AFEWES) at Fort Worth, Texas, to validate critical software against specific MANPADS threats. Both contractors fabricated and integrated prototypes of their system designs, hardware and software, and tested them at their corporate integration laboratories to verify that their designs meet the DHS operational requirements. The prototypes were then integrated with the planned airframes and the contractors performed on-board ground and flight testing to verify system performance and verify continued airworthiness of the aircraft with the countermeasure system installed.

The S&T Directorate established a hardware-in-the-loop (HWIL) test capability at the U.S. Air Force Guided Weapons Evaluation Facility at Eglin Air Force Base in Florida, to conduct independent government ground testing of the countermeasure system. The HWIL provides the capability to test the interaction and performance of actual counter-MANPADS laser hardware and software against real threat missile seekers in a ground environment. These HWIL tests provide the backbone of the system performance assessment because they can be repeated many times to provide a statistical data base of system performance against multiple threats and engagement geometries. HWIL facilities began component and sub-system testing to verify performance of critical sub-systems prior to the planned on-aircraft government operational testing. The SPO has conducted extensive planning with both the prime contractors and the Department of Defense (DoD) range facilities to prepare for the planned government flight testing in FY 2006. The Master Test and Evaluation Plan (MTEP) was updated and the Detailed Test planning process was initiated.

The S&T Directorate intra-agency support for the Counter-MANPADS program extensively—its partners included the FAA, Transportation Security Administration (TSA), Department of State (DoS), Federal Bureau of Investigation (FBI), National Aeronautics and Space Administration (NASA) and DoD. The FAA is supporting the development of concepts of operation and system design requirements for flight safety, maintenance, and operations issues for the National Airspace System, as well as managing the aircraft airworthiness flight certification process. DoS is supporting the Arms Export Control Act compliance and technology protection aspects of the program.

Report SD&D findings: The S&T Directorate provided an interim report to Congress on the status and preliminary findings and trends through December 2004.

FY 2006 Plan:

System SD&D and Demonstration (SD&D), Phase II: In FY 2006, Phase II will be completed. Prototype countermeasure equipment will be integrated on three commercial aircraft, and flight tests will be accomplished with extensive data collection and analysis. Each contractor will deliver two complete countermeasure systems and the related FAA Supplemental Type Certificates to certify the airworthiness of the aircraft with the countermeasure system installed. The Prime Contractors will conduct developmental testing to qualify the design for commercial flight and to verify the countermeasure system performance. Using DoD test facilities and ranges, DHS will test both the prime contractors' systems to provide an independent assessment of the performance of both systems. Phase II will be completed in Q3 2006.

Report SD&D findings: The S&T Directorate will report the Program's findings in January 2006 to the Administration and Congress to aid them in making an informed decision to address protection of commercial airlines from the threat of MANPADS.

SD&D, Phase II was funded using FY 2005-appropriated funds.

System SD&D, Phase III: The Counter-MANPADS Program will initiate Phase III with FY 2006 funding. The Phase III effort will include delivery and installation of pre-production Counter-MANPADS equipment on commercial aircraft operated by U.S. cargo carriers similar to those aircraft dedicated to meet the CRAF requirement. The current DHS plan is to maintain two contractors in Phase III to preserve competition for future deployment options. Phase II designs will be updated to incorporate new design requirements including reliability improvements, technology protection, and emergency ground notification enhancements. Operational testing and evaluation will be performed on multiple aircraft types to capture true operational and maintenance costs as well as technical performance and reliability data. Six to ten Counter-MANPADS systems will be procured to support reliability and test data collection as well as critical technology protection measures. This information is critical to further maturing the life cycle cost impact analysis for the airlines. The extensive reliability analysis will be used to validate and improve system reliability to the 3,000 hour level or above. Dialogue with Original Equipment Manufacturers (OEM) such as Boeing and Airbus will be continued and studies conducted to scope the effort required to include provisions for Counter-MANPADS systems on future production aircraft. Additionally, live fire test evaluations will be conducted to provide insight into the overall effectiveness of the system installed on commercial aircraft. Finally, FAA certification will be completed for the Phase III aircraft types.

FY 2007 Plan:

The Counter-MANPADS Program will continue Phase III in FY 2007. The commercial cargo aircraft modified to carry the Counter-MANPADS prototypes will be flown in normal revenue operations by two different cargo carriers. The SPO will monitor these aircraft to collect and analyze operation and maintenance data to measure the performance and reliability of the prototypes in field service. These data and analyses will be used to validate operational concepts, system performance, and reliability predictions in order to assess operational suitability across multiple aircraft types and different airlines. The goal is to improve system reliability performance from 1,100 to 3,000 plus hours of mean-time-before-failure, critical to reducing the airlines' cost risk. Additionally during Phase III, the SPO will test and validate the Counter-MANPADS emergency notification system with the FAA, DHS, and the FBI. This will demonstrate the communication technology and network from aircraft to the ground if a MANPADS event occurs. Lastly, during Phase III the Counter-MANPADS contractors will implement security designs to protect sensitive military technology onboard the aircraft in order to minimize the risk of exploitation, to comply with International Traffic in Arms Regulation and the Arms Export Control Act, and to reduce potential security costs to the airlines.

2007 Request	-	-	4,710
Total Change 2006-2007	-	-	(2,220)

Science and Technology Directorate requests \$4.7 million for this activity. This is a decrease of \$2.2 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The Office of SAFETY Act Implementation evaluates technologies in accordance with criteria set forth in the Support Anti-terrorism by Fostering Effective Technologies Act (SAFETY Act) of 2002 and Interim Regulations. As part of the Homeland Security Act of 2002, Public Law 107-296, Congress enacted the SAFETY Act to provide "risk management" and "litigation management" protections for sellers of qualified anti-terrorism technologies. The Act's purpose is to encourage development and deployment of anti-terrorism technologies (ATT), particularly those aimed at preventing, detecting, identifying, or deterring acts of terrorism, or to limiting the harm that such acts might otherwise cause. The SAFETY Act creates certain liability limitations for "claims arising out of, relating to, or resulting from an act of terrorism" where qualified anti-terrorism technologies have been deployed.

The Office's evaluations are designed to advise the DHS on whether to grant SAFETY Act protections to technologies that applicants submit. In order to stimulate the development and adoption of valuable new technologies, the Office seeks to raise public awareness of the benefits of the protections available under the SAFETY Act. The Office also coordinates with other DHS elements and other Federal agencies to support those offices' missions and minimize the burden on applicants for SAFETY Act

protection. This crucial advance coordination regularly occurs in cases where the SAFETY ACT plays an important role in a pending Federal procurement.

FY 2005 Accomplishments:

The Department has drafted a revised Interim Rule based on operational experience and feedback from the public, industry, and Congress. The revised Rule is in internal review and will be released for public comment once finalized. We have prepared a revised application kit, easier to use and understand, with examples to assist applicants. On December 13, 2004, a 60-day Paperwork Reduction Act notice for the final version of the new kit was published in the Federal Register. This notice solicited comments regarding the amount of time it would take to complete the new application kit. The Department also received comments concerning the kit's content, which it is taking into consideration. The final 30-day comment period will coincide with the release of the Interim Rule. On May 18, 2005, the Office of SAFETY Act Implementation completed its Certification and Accreditation process and was granted full Authority to Operate the SAFETY Act website and IT system. Since the beginning of 2005, we have participated in or made SAFETY Act presentations to more than two dozen diverse audiences including representatives from industry, small businesses, insurance and risk management, and attorneys. As of July 15, 2005, the program has processed more than 220 pre-applications and 111 full applications. SAFETY Act Designation and Certification have been granted to 17 applicants, 8 have received Designation only.

FY 2006 Plan:

In 2006, the Office of SAFETY Act Implementation will expand its coordination of the program with pending Federal, State and local procurements. We plan to work with recognized procurement organizations and appropriate industry associations to educate them on the availability of SAFETY Act protections to potential vendors. We will begin to provide procurement and acquisition officers with timely input as to whether a specific Request for Proposals (RFP) could be considered for SAFETY Act protections. This input will include appropriate language to be inserted in the RFP either advising respondents how to apply for protections, or notifying them that SAFETY Act protections are not appropriate for this procurement. In FY 2006, the Office also intends to encourage small business applications. Since the establishment of an insurance requirement is an integral part of the award of SAFETY Act benefits, the Office also intends to begin an outreach to appropriate insurance underwriters to familiarize them with the program.

FY 2007 Plan:

In 2007, the Office of SAFETY Act Implementation plans to continue to align the SAFETY Act process with the Federal procurement system to (1) reduce submission of contingent contracts by offerors, (2) streamline the application process for similar or identical technologies containing the same basic scientific principles (such as CAT scans or x-ray systems), and (3) identify, in advance of Requests for Proposals, appropriate anti-terrorism technologies that will be considered for, or entitled to, SAFETY Act protections. We plan to implement a remote evaluation process using subject matter experts. This process will be more cost efficient and allow for more effective processing of applications. We will continue outreach initiatives to foster support for the program and encourage industry participation, particularly by small businesses. Finally, an independent assessment the Office's performance will focus on processing of applications, the impact of outreach programs, and the appropriateness of the standards of review.

PPA: OFFICE FOR INTEROPERABILITY AND COMPATIBILITY

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$6,744
2006 Revised Enacted	-	-	26,235
2007 Adjustments to Base	-	-	3,500
2007 Current Services	-	-	29,735
2007 Program Change	-	-	-
2007 Request	-	-	29,735
Total Change 2006-2007	-	-	3,500

Science and Technology Directorate requests \$29.7 million for this activity. This is an increase of \$3.5million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: the Office for Interoperability and Compatibility (OIC)'s mission is to strengthen and integrate interoperability and compatibility efforts that improve local, tribal, State, and Federal public safety preparedness and response. Non-interoperable, incompatible equipment and a lack of standardized operating procedures have plagued the public safety community for decades. Often public safety agencies cannot perform mission-critical duties because they cannot effectively cooperate with other agencies or operate in other jurisdictions. By coordinating and leveraging the Department's interoperability programs and related efforts, OIC reduces unnecessary duplication of effort, identifies and promotes best practices, and coordinates activities related to interoperability. OIC is housed within the Science and Technology Directorate's Office of Systems Engineering and Development.

OIC manages programs to address interoperability and compatibility for public safety providers and the larger homeland security community. Initial program areas include:

- Communications (including SAFECOM and Disaster Management programs)
- Equipment
- Training
- Other programs (including the Risk Assessment Policy Group)

FY 2005 Accomplishments:

OIC received \$21 million in the FY 2005 DHS appropriation for communications activities. In addition to appropriated funding, OIC's SAFECOM Program received \$8.5 million from Federal partner agencies as part of the E-Government Initiative to focus on standards and architecture development and Federal coordination efforts. SAFECOM is a communications program that provides research, development, testing and evaluation, guidance, tools, and templates on communications-related issues to local, State, and Federal public safety agencies. Through the SAFECOM Program, OIC successfully accomplished the following in FY 2005:

Communications

Regional Communications Interoperability Pilot (RCIP) Projects: The Intelligence Reform and Terrorism Prevention Act of 2004 authorized OIC to carry out at least two RCIP Projects, and it has

done so in the State of Nevada and the Commonwealth of Kentucky. Both pilots focus on developing models for improved communications and interoperability to address the challenges faced nationwide.

OIC is leveraging the lessons learned from the Commonwealth of Virginia's Statewide Communications Interoperability Planning methodology in FY 2004 to develop practitioner-based statewide plans. As part of each RCIP, SAFECOM is assisting a high-risk urban region within the State with recommendations for implementing key urban area interoperability requirements. OIC completed an Interim Report for Congress on the RCIP projects which detailed the process, framework, and approach that it is using to help Nevada and Kentucky develop comprehensive plans to improve regional and statewide communications. OIC has completed its recommendations to Nevada's statewide communications plan and contributed to Kentucky's strategic planning process for developing its strategic communications plan. The Kentucky plan will be submitted to the Commonwealth by mid-February.

Grant Guidance: SAFECOM's coordinated grant guidance was developed with input from the public safety community. It outlines eligibility for grants, the purposes for which grants may be used, and guidelines for implementing a wireless communication system. The FY 2005 SAFECOM Grant Guidance, which must be incorporated in all Federal grant programs touching on interoperability, was incorporated into the Office of Domestic Preparedness (ODP) grant process as well as the Department of Justice's Office of Community Oriented Policing Services (COPS) interoperability grant process.

Statewide Communications Interoperability Planning (SCIP) Methodology: SAFECOM and the Commonwealth of Virginia developed a strategic plan for improving statewide interoperable communications for the State. Based upon lessons learned from the Virginia planning process, SAFECOM published the SCIP methodology, which describes a step-by-step process for developing a locally-driven statewide strategic plan for enhancing communications interoperability.

Public Safety Architecture Framework (PSAF) and Gap Analysis: The SAFECOM process for identifying and developing standards began with the Public Safety Statement of Requirements. Continuing from that work, SAFECOM has developed the PSAF. This outlines a structured approach for identifying where interface standards should develop to achieve interoperability. In short, the PSAF provides the rules and methodology for developing and presenting architecture descriptions. The SAFECOM Program has developed the PSAF with a supporting tool that will allow local and State public safety agencies to identify shortfalls in interoperability and determine the most appropriate solutions. For Federal program managers who are responsible for communications and information sharing standards, the PSAF will highlight gaps in technology and point to areas requiring standardization. In April 2005, a draft of Volumes I and II of the PSAF was completed. Volumes I and II outline the PSAF methodology and will facilitate the development of the supporting tool.

Interoperability Baseline Study: The National Interoperability Baseline will provide a quantitative assessment of the capacity for public safety interoperable communications across the Nation and will:

- assess current interoperable communications capabilities in public safety agencies across the country;
- measure the maturity of essential supporting interoperability elements (including operational, governance, and technical considerations);
- offer a yardstick to identify performance or capability gaps in order to direct Federal investments; and

- serves as an integrated component of SAFECOM's approach to interoperability.

In September 2005, the baseline survey tool questions were finalized, and they are currently posted to the Federal Register for public comment. Upon approval from the Office of Management and Budget, the survey will be administered in Q1 FY 2006.

Accelerating Standards: OIC delivered a report to Congress in July 2005 on *Accelerating National Voluntary Consensus Standards for Public Safety Interoperable Communications* in accordance with the Intelligence Reform and Terrorism Prevention Act of 2004. The report details OIC's approach to accelerating voluntary consensus standards, what we will achieve through this approach, the long-term vision guiding this approach, its key short-term milestones, and the specific initiatives currently underway.

Narrowbanding: OIC delivered a report to Congress on *Narrowbanding* in accordance with the Department of Homeland Security Appropriations Committee Report of 2004. The report provides background information on narrowbanding initiatives, regulatory actions, and spectrum usage. It also offers an overview of public safety technologies and analyzes the impact of narrowbanding on technologies used in the UHF/VHF bands.

Equipment

Equipment Compatibility Program (ECP): ECP was established to address the equipment compatibility and interoperability priority area. Formerly referred to as the Joint Evaluation and Testing (JET) Program, ECP now addresses all aspects of equipment compatibility and interoperability, with testing and evaluation being only one component of the program. ECP works with the public safety equipment industry to identify opportunities to improve equipment interoperability and compatibility. ECP will work closely with the National Institute of Standards and Technology (NIST) to identify and define potential equipment standards.

To date, ECP has performed a stakeholder analysis and is working closely with NIST to define and implement a program governance structure. Moving forward, OIC will work with appropriate stakeholders to identify and prioritize equipment interoperability and compatibility issues and begin engaging the necessary resources to design solutions for the identified issues.

Tech Transfer: OIC developed partnerships with the Department of Defense (DoD) and Department of Justice (DOJ) in support of the DoD's 1401 Program for developing and transferring technologies from the military to first responders. OIC assisted in the evaluation of more than 700 candidate technologies to be transferred and created a Technology Scorecard and Evaluation Criteria to assist in the evaluation and prioritization of DoD technologies. In August 2005, OIC hosted a Practitioner Validation and Review meeting, bringing in practitioners and first responders from across the country to provide input on five DoD technologies selected for possible transfer to civilian use.

Training

OIC conducted extensive research on existing public safety training programs and developed a report summarizing the results of the research and outlining recommendations moving forward. The research determined that the public safety training environment is fragmented, lacks enforced standards, and requires inter-agency and intra-agency collaboration. The following are the key recommendations of the report:

- further develop and validate data on existing training programs;
- convene a steering committee comprised of representatives from across practitioner communities and local, State, and Federal agencies;
- form alliances with local, State, and Federal partners;
- gain leadership commitment across local, State, and Federal partners; and
- drive training standards.

Other OIC areas

Risk Assessment Policy (RAP) Group: In January 2005, risk assessment and risk management stakeholders from S&T (including the Office of Research and Development, the Emergency Preparedness and Response and Critical Infrastructure Protection portfolios), the Office of State and Local Government Coordination and Preparedness, and the Information Analysis and Infrastructure Protection Directorate) asked OIC to facilitate a workshop to begin to develop a standardized approach to risk assessment. Twenty-seven risk assessment stakeholders from the Department attended the workshop. From this workshop the RAP Group was established to address issues or discrepancies regarding risk assessment. It has since developed a unified strategy for improving risk assessment interoperability within the Department. OIC is currently working with the RAP Group to implement this strategy in support of risk assessment interoperability and compatibility across the Department.

FY 2006 Plan:

In FY 2006, the President's Budget requested \$20.5 million in funding for OIC. Congress increased this level to \$26.5 through the Homeland Security Appropriations Act. With \$26.5 million, OIC will further develop Training and Equipment Programs, as well as continue existing communication interoperability efforts through the SAFECOM Program.

Through the SAFECOM Program, OIC will continue communications interoperability efforts and activities related to standards and architecture development. It will continue to coordinate Federal interoperability and communications efforts. It will continue to develop models and templates through piloting and demonstrations, and it will offer technical assistance to the public safety community. The level of funding requested in FY 2006 for OIC is a \$3 million reduction from the level of funding provided for the SAFECOM Program in previous years. As such, the communications interoperability activities offered through the SAFECOM Program will be curtailed in order to plan for and the continued development of OIC's Equipment and Training program areas and to sustain Risk Assessment coordination activities.

FY 2007 Plan:

OIC will continue to focus primarily on continued communications interoperability efforts while it initiates projects for equipment and training interoperability and compatibility and continuing risk assessment coordination efforts.

OIC's activities will have four phases: Interoperability Standards; Research, Development, Testing and Evaluation (RDT&E); Federal Coordination; and Technical Assistance. The phases mutually support one another and work concurrently to achieve the OIC mission. They are further described below.

Interoperability Standards

The strategy for standards and architecture centers on development of an architecture framework that satisfies the real-world requirements of public safety responders and outlines what the overall

structured approach is for facilitating interoperability. Functional standards then define the details of the structure and indicate how the architecture and its components will operate. The development of this framework will enable OIC to identify existing standards that can be used to improve interoperability and relate operational, system, and technical requirements.

Statement of Requirements (SoR): Driven by public safety practitioners, the SoR outlines future requirements for public safety communications. The objective is to encourage industry to align their research and development efforts around public safety needs. The SoR, as a common set of practitioner-supported requirements, promotes standards that increase interoperability and compatibility among products different vendors offer. Version 2.0 of the SoR, which will be released no earlier than Q3 FY 2006, will continue to quantify the public safety communication requirements. Revisions and updates of the SoR will continue to include input from public safety practitioners and organizations at all levels of government. Quantitative requirement recommended by industry will be evaluated by SAFECOM and public safety as future versions of the SoR are developed.

Architecture Framework: The architecture framework is a strategic effort that requires revision and continuous updating as new technologies and public safety requirements are identified. The architecture framework will serve as the basis for research and development and standards planning and requires modification as the SoR is updated and revised.

Gap Analysis: OIC will use the information from the updated SoR and PSAF for two purposes: (1) to perform a gap analysis identifying where standards need to be developed for each program area and (2) to create and distribute tools to allow local and State practitioners to assess gaps within their jurisdictions and regions. As updates and revisions to the SoR and PSAF are identified, SAFECOM will conduct additional standards gap analysis against a key land mobile radio suite of standards, specifically Project 25 (P25). The critical P25 interfaces specified will be targeted for accelerated standards development.

Accelerate and Develop Standards: OIC will facilitate new standards for technologies and operating procedures—including those affecting communications, data sharing, and incident response equipment. Where standards already exist, OIC will coordinate with other standards-developing organizations to ensure that the requirements of the public safety community are represented.

Where standards are absent, public safety agencies are often limited to a single vendor, face large system migration costs, and must upgrade on a vendor's schedule instead of their own. Without standards, agencies are often not permitted to mix and match different vendors' equipment to produce the system that best meets their needs. Consequently, standards that promote uniformity across vendor requirements and increase levels of interoperability and compatibility will generate cost savings for local and State governments. Moreover, the development of these standards is critical to life-saving and property-saving efforts as incompatibility of procedures and technologies has proven to be deadly in incident responses involving casualties.

SAFECOM will continue to partner with the appropriate standards-defining organizations, agencies, and committees to identify, complete, and validate select standards that are core to the technical architecture. Certain standards efforts are currently underway and SAFECOM will engage those committees to assist in accelerating standards development. For example SAFECOM in collaboration with NIST, will continue to support public safety and industry accelerate P25 standards for interoperable communications. SAFECOM will also assist Project MESA, a joint effort of

Telecommunications Industry Association and the European Telecommunications Standards Institute, to develop specifications for broadband digital radio standards. SAFECOM will also identify new standards efforts critical to the completion of the technical architecture, such as specifications for Voice-over-Internet-Protocol (VOIP) networks.

RDT&E

Research and Demonstrations: OIC will support two demonstration projects that apply innovative technologies to improve interoperability and compatibility for public safety in real world environments. These will yield models, templates, and best practices to benefit all public safety responders.

Testing and Evaluation (T&E) for New Technologies: OIC will facilitate testing and evaluating of technologies and programs to ensure that they meet industry standards and practitioner requirements. OIC's efforts will result in short-term and long-term cost saving among all levels of government and industry by coordinating existing T&E efforts and promoting standard methodologies that yield consistent and comparable results.

Through its relationship with NIST's Office of Law Enforcement Standards (OLES), SAFECOM will support the lab testing of these technologies. Based on the State and type of technology tested, SAFECOM and OLES may conduct simple validation of manufacturer's claims, review of the effectiveness of the proposed technology based on available test data, laboratory trials of the technology, or full-scale statistical validation of product specifications. OLES will provide technical test and evaluation reports for each product or technology evaluated, and SAFECOM will make these available to the public safety community.

Federal Coordination

OIC will coordinate with other Federal programs involved in interoperability and compatibility to deliver support to local, tribal, and State public safety agencies that is consistent with the emerging architecture framework and interface standards.

Governance: OIC will continue to support the SAFECOM Program's governance structure, largely comprised of local and State representation. SAFECOM will continue to hold meetings of each governance body, the Executive Committee and the Advisory Group, and consider the recommendations in its strategic planning effort to solve communications interoperability problems among the Nation's first responders.

Grant Coordination: OIC will update coordinated grant guidance to maximize the efficiency with which public safety communications-related grant dollars are allocated and spent and will provide consistent directions, coordinated applications processes, and similar requirements across grant programs. SAFECOM will continue to coordinate this effort with ODP in providing grant guidance to Urban Area Security Initiative grant recipients as well as the DOJ's COPS grant awards.

Technical Assistance

OIC will develop models, tools, and templates based on best practices and lessons learned in all areas of the Interoperability Continuum. These resources will be easily applied to public safety agencies across the Nation.

Pilots: OIC will conduct additional pilot and demonstration projects in operational environments at the local, State and Federal levels. These will identify common criteria, tools, and methodologies to improve interoperability and compatibility. These projects will address all areas indicated in the Interoperability Continuum. Pilot programs focus on operational issues such as improving concepts of operations and developing governance structures to ensure interagency, cross-jurisdictional, cross-disciplinary partnerships are created and sustained to facilitate the sharing of knowledge and resources.

As the RapidCom initiative demonstrated, these pilots provide real-world case studies where the findings are translated into common criteria, tools, and methodologies. The RapidCom initiative improved capabilities for immediate, incident-level, interoperable emergency communications in 10 high-threat urban areas. These common criteria, tools, and methodologies address many of the operational issues that have hampered interoperability and compatibility in the past. Without proven operational methodologies, many investments in technology and equipment are wasted because they do not support an interoperable and compatible environment.

SAFECOM will also expand the RapidCom initiative out of funding set aside by Congress in the Homeland Security Appropriations Act.

Portal: OIC will continue to develop and maintain an Internet portal for public safety in conjunction with the Science and Technology Directorate's Public Safety and Security Institute for Technology initiative that will serve as a location for the exchange of public safety information.

PPA: CRITICAL INFRASTRUCTURE PROTECTION

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$65,313
2006 Revised Enacted	-	-	40,392
2007 Adjustments to Base	-	-	(24,979)
2007 Current Services	-	-	15,413
2007 Program Change	-	-	-
2007 Request	-	-	15,413
Total Change 2006-2007	-	-	(24,979)

Science and Technology Directorate requests \$15.4 million for this activity. This is a decrease of \$25 million below FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The Critical Infrastructure Protection (CIP) Portfolio protects the Nation's critical infrastructure and key assets from acts of terrorism, natural disasters, and other emergencies by developing and deploying tools to anticipate, identify, and analyze risks, and systems to reduce those risks and the consequences of an event. Funded Research, Development, Test, and Evaluation (RDT&E) and required coordination efforts in this portfolio have been categorized into four programs: Modeling, Simulation, and Analysis; Protective Security Technologies; the Kentucky Critical Infrastructure Protection Institute (KCI); and development of the annual National CIP R&D Plan, as required by Homeland Security Presidential Directive (HSPD) - 7, "Critical Infrastructure Identification, Prioritization, and Protection." To accomplish this mission, the following objectives have been established:

- support the scientific prioritization of components and systems of critical infrastructure;

- reduce critical infrastructure homeland security risks by anticipating threats and reducing vulnerabilities and consequences of attacks;
- develop tools to better quantify consequences of an attack – specifically cascading effects and interdependencies;
- Meet critical infrastructure protection science and technology requirements from Department of Homeland Security (DHS) operational components including real-time science and technology support during an event; and
- Partner with other organizations to catalyze development of CIP technologies

FY 2005 Accomplishments:

Modeling, Simulation, and Analysis Program – The CIP Portfolio is developing a Decision Support System (DSS) focused on evaluating and prioritizing investment, protection, mitigation, response, and recovery strategies related to Critical Infrastructure Protection. This overarching system of models, identified as CIP-DSS, includes representation of the fundamental characteristics and processes of all 17 critical infrastructure sectors, identified in HSPD-7 and the *Interim National Infrastructure Protection Plan*. The models are being developed at two interlinked scales: National and Metropolitan / Regional.

CIP-DSS is the only system that focuses on properly analyzing and quantifying critical infrastructure interdependencies across all 17 sectors, simultaneously. This capability is essential for informing risk-based decisions regarding complex critical infrastructure at a systems level and anticipating time-dependent, cross-sector consequences in a consistent, unified framework. As a highly aggregated, executive level model, the CIP-DSS complements the more detailed sector-specific predictive models like those developed by the National Infrastructure Simulation and Analysis Center (NISAC) and other systems and risk analysis activities underway by other Federal agencies and in the private sector.

The CIP-DSS provides the capability to predict and understand the potential for cascading effects and to estimate the consequences of major disruptions using the five metrics identified in HSPD-7: human health and safety, economic costs, environmental impacts, national security, and public confidence. For the first time, this capability enables realistic and comprehensive prediction of the cross-sector effects of major disruptions in our Nation's critical infrastructures. Thus this capability is a powerful tool for identifying, evaluating and prioritizing mitigation, recovery, and reconstitution alternatives.

The CIP-DSS activities this year focused on further developing baseline capabilities and demonstrating the system's applicability to problems of importance to Homeland Security:

- We completed an initial assessment of the full-threat planning spectrum, including biological, chemical, physical assault, explosives, insiders, radiological and nuclear, and cyber threat scenarios. This assessment resulted in a spiral development plan for developing a full risk analysis capability for all critical infrastructures across a comprehensive spectrum of threats.
- We completed and demonstrated the capability to evaluate the tradeoffs between alternative protective measures for a broad range of biological and chemical threat scenarios. This capability includes estimation of consequences with integrated metropolitan and national scale infrastructure interdependency and economic models and the evaluation of those tradeoffs within a formal risk-informed decision analysis methodology. These capabilities are the first two components in developing appropriate representations of cascading events across the full threat spectrum.

- We completed and demonstrated the feasibility of conducting large scale Monte Carlo studies with these models to incorporate and quantify uncertainty in model inputs and analysis processes. This extends the decision methodology within CIP-DSS to support decision making under uncertainty.
- We completed and updated documentation of the model and decision analysis tools to include modeling assumptions, processes for and results of sensitivity analysis, and additional procedures for testing and evaluating results from the CIP-DSS.
- We supported and participated in major two DHS planning exercises: TOPOFF3 and the Senior Officials Exercise. During TOPOFF3, the modeling team demonstrated the capability to estimate disease progression rates in real time - 3 hours. Supported development of the September 2005 Senior Officials Exercise by analyzing the impacts resulting from a disruption in the air transportation system for different periods of time and consequent economic effects across all sectors. Results of such types of simulations help decision makers anticipate needs, improve response, recovery, and policy decisions, and, very importantly, highlight potential unexpected consequences.
- We defined a regional pilot program initiative with the Pacific Northwest Economic Region (PNWER; a multi-state, multi-nation, grass-roots organization with both public and private membership). Conducted a workshop with the PNWER Interdependency Working Group to define objectives, requirements, and boundaries for a pilot study of the region. Since final decisions about implementation of specific protective measures are often made at the State/local government level or within private industry, interactions with regional partnerships are a critical source of requirements and decision making processes for further development of CIP-DSS as well as a mechanism to build consensus on effective and unified strategies for critical infrastructure protection.

Protective Security Technologies – The CIP R&D Portfolio supports the operational branches of the Department of Homeland Security and through this support also leverages the activities of other Federal agencies, State and local officials, and private infrastructure sector owners and operators. This program develops an interoperable, scalable, and economically sustainable suite of protective security technologies for cross-sector and sector specific use. Identification of candidate technologies comes from multiple sources ranging from detailed studies by organizations such as the National Academies of Science to the DHS-hosted system of Government and Private Sector Coordinating Councils. This year's activities we:

- Directed and funded the National Academies of Science study on homeland security aspects of the Chemical Sector. This published study examined the public health, economic, and national security importance to the United States of key chemicals and chemical processes, supply chain vulnerability and the consequences of disruption, and mitigation alternatives. This study provides vital insight to DHS and will help identify and prioritize technological countermeasures for ensuring protection of the Chemical Sector.
- Published two reports, "Enhancing Private Security Office Surety" and "Mitigating Insider Threat" (Official Use Only) that identified technology aids that significantly close existing operational gaps, increase the accuracy, reduce the time, and reduce the cost for personnel background investigations for private security guards and insiders in sensitive positions. Because private security guards have access to the most sensitive areas of our critical infrastructure, guaranteeing their surety can add significantly to homeland security. These recommendations were developed from private industry recommendations, and presented and

discussed with Federal agency experts. The study will be delivered to Congress and interested State and local regulatory bodies.

- Funded three Research, Development, and Deployment proposals in automated scene understanding (using computer software to interpret the output from digital surveillance cameras in order to overcome the fatigue and reduced efficiency that results after 20 minutes of monitoring by people). These include detection of unattended packages and individuals who leave unattended packages in transportation environments (rail, airport, mass transit); persistent tracking of individuals across multiple cameras for surveillance of large segmented areas such as rail concourses and airports; automated threat detection in harbor and airport environments to detect threats to ships; and wide-area scanning for use on the Southwest border.
- Established the Process Control Systems Forum (PCSF) to develop new cross-industry guidelines, protocols and system architecture for provably secure, next-generation Supervisory Control and Data Acquisition (SCADA) and related types of process and distributed control systems. A coordinated approach to securing process control systems will improve the resiliency of the electrical, manufacturing, water, and other critical sectors heavily reliant on SCADA systems and that are vulnerable to terrorist attack. The PCSF, a group comprised of government and private industry stakeholders, owners, and operators, met for the first annual meeting in April 2005. To aid information sharing and communication efforts, a website was established to coordinate news and events for the forum (www.pcsforum.org). The first international standards coordination meeting was organized to discuss standards for the next generation secure SCADA architecture.
- Funded five Phase II Small Business Innovative Research (SBIR) proposals in control system security such as SCADA, distributed control systems, digital control systems, and process control systems. The research topics included advanced encryption, intelligent intrusion detection systems, location-based authentication, distributed cryptographic key management, and a toolkit for security verification of energy management communication systems.
- Completed development of software algorithms for a fast-running modeling and simulation prototype for use in preventing cascading blackouts in coordination with the Electric Power Research Institute (EPRI). This work has achieved increased importance since the cascading power blackouts that occurred in the northeast in August 2003.
- Completed two emerging threat studies, through the Homeland Security Institute, on Geospatial Positioning System (GPS) vulnerabilities and High-Powered Directed Energy Weapons. These studies provide foundation-building assessments of the actual versus perceived threats to critical infrastructures from directed energy sources.

The National CIP R&D Plan – As directed by Homeland Security Presidential Directive 7, the CIP R&D Portfolio, in coordination with the Office of Science and Technology Policy (OSTP), Executive Office of the President (EOP), develops an annual R&D Plan to support the Federal investments in CIP. The Portfolio:

- Issued the first annual National CIP R&D Plan, publicly released in April 2005 that addressed R&D priorities in protection and prevention, sensors and detectors, insider threats, social and behavioral issues, and future needs in modeling, analysis, and decision support, advanced architectures, effective recovery, and reconstitution.
- Held workshops with Federal program managers, government and university research providers, and private industry to obtain information on future research and development efforts in CIP for the 2005 National CIP R&D Plan.

- Obtained information for development of the 2005 Plan incorporating Federal agency activities, levels of effort for these activities, budgets, and a roadmap for future R&D deliverables. Drafted 2005 Plan for interagency review and comments.
- Supported development of the National Infrastructure Protection Plan (NIPP) and Sector Specific Plans (SSPs), especially with respect to the sector R&D plans appearing in Chapter 8. Held a workshop to engage NIPP and SSP writers in R&D discussions relevant to sector-specific needs.

Kentucky CIP Institute - The mission of the KCI is to organize and marshal the knowledge resources of Kentucky's universities and colleges to pursue research and development projects that support the Department of Homeland Security's ability to protect community-based critical infrastructure:

- In response to a detailed program announcement, over 50 proposals were received and reviewed in support of the KyCIPLab. The project selection for FY 2005 has been completed, and 11 projects have begun. These projects are in the areas of blast mitigation, biometrics, securing food sources, container security, command and control, and supply chain recovery.
- The KCI is currently performing 11 focused studies started under the FY 2004 funds in the following topic areas: Risk and Vulnerability Assessments; Emergency Response; Agricultural Monitoring; and Technology Evaluations to protect community-based critical infrastructure. The results of these studies will feed into existing and future CIP R&D plans and programs.

FY 2006 Plan:

Modeling, Simulation, and Analysis Program - The CIP-DSS activities in 2006 are focused on extending the functional modeling capability of the system as well as applying these spirally increasing analytical capabilities to problems of importance to Homeland Security.

- We intend to complete an expanded version of CIP-DSS that will offer a comprehensive capability to model radiological and nuclear, explosives, physical assault, cyber, insider, and natural disaster / accident scenarios. Demonstrate these increased capabilities by applying them in planning activities to support risk-informed decision making. Completing this full-threat spectrum in planning scenarios provides the foundation for a full risk analysis capability in CIP-DSS.
- We will complete the parameterization of the metropolitan-scale modeling capability and integrate it into the larger CIP-DSS framework. This will increase the ability to more rapidly apply the system to broad-spectrum questions and multiple-scale disruption or policy choice scenarios.
- We will integrate adversary-defender constraint and information dynamics models into the CIP-DSS modeling system. This will enable the system to more thoroughly and realistically represent adversary and defender roles, capabilities, and preferences for the spectrum of potential threat scenarios.
- We will complete the regional pilot application, addressing interdependencies, with the Pacific Northwest Economic Region Interdependency Working Group, and initiate a second planned regional application of CIP-DSS.
- We will support or participate in the development of exercise programs such as TOPOFF4, Senior Official Exercises, and other exercises as required by the DHS coordinating councils or exercise program offices.
- We will support DHS resource allocation and prioritization initiatives.

- Our outreach to a broad spectrum of infrastructure experts will continue to improve the sector characterizations, flow of interdependencies, and content of supporting databases. This collaborative development and broader exposure to the modeling process will also help build confidence in the analytical results and better formulate features of the threat scenarios through the synergistic interactions with additional infrastructure experts.
- We will form a Technical Review Panel to examine and guide technical aspects of the future development of CIP-DSS.

Protective Security Technologies

- We will publish the National Academy of Sciences Study on the future Electrical Transmission and Distribution (T&D) System in the U.S. This study examines approaches for reducing vulnerabilities, enhancing robustness, and increasing the resilience and ability to recover from attacks. The study will identify priority technology opportunities, R&D directions, policy and institutional actions, and strategies that will lead to more secure, resilient electrical T&D. In cooperation with DOE, this study will provide vital insight to DHS into the threats to the electricity sector and will help identify and prioritize technological countermeasures for the protection of those facilities.
- We will complete the end-to-end System Study for Municipal Domestic Water Security. This study examines vulnerabilities of water systems to insider threats, the ability to detect and decontaminate a threat, and post-event recertification of a system, in order to provide direction for future R&D investments for both DHS and EPA. It is intended that the unclassified results will be provided to local utilities to help them enhance their own protective measures.
- We intend to deliver improved automated scene recognition and understanding components for enhanced threat detection and detecting unattended objects (e.g., packages) as a beta version resulting from RD&D funding).
- Working with the PCSF, we will complete a secure SCADA systems analysis and evaluation architecture that includes provably secure protocols and encryption standards.
- We will provide information to assist the adaptation of the Safety Act for application in SCADA and distributed process control technologies.

The National CIP R&D Plan

- We will deliver the 2005 National CIP R&D Plan with Federal agency CIP program budget information and a technology roadmap for future deliverables. Incorporate relevant stakeholder inputs from: a) Federal agencies including activities and levels of effort; b) critical infrastructure sector owners and operators; and c) private and public research institutions and universities. Provide a coordinated Federal R&D research agenda for CIP related programs.
- We will identify focused R&D activities in protecting critical infrastructures from catastrophic events and leverage private sector and State and local government contributions to securing sector infrastructures.

KCI

- We intend to transition the results of the FY 2004 funded KyCIPLab programs to applicable commercial products and pilot programs.
- We intend to continue monitoring of projects started in FY04 and FY05.

- We will provide focused topic areas based on current year CIP R&D requirements for FY 2006 proposals and select projects for FY 2006 funding.

FY 2007 Plan:

Modeling, Simulation, and Analysis Program - The CIP-DSS activities in FY 2007 seek to further extend the functional capability of the system as well as applying the (maturing) analytical capabilities to problems of importance to DHS. We plan to:

- Refine infrastructure model and infrastructure interdependency representations based on application experience, evolving needs within the Department, and continued interactions with domain experts.
- Refine threat scenario modeling capability based on application experience and evolving needs within the Department, as well as by interactions with external regional homeland security groups.
- Incorporate improved human behavioral response functions into appropriate infrastructure models within the CIP-DSS framework. This enhancement will continue to improve the fidelity and accuracy of the infrastructure impacts characterized by the system.
- Apply CIP-DSS framework models and decision analysis to DHS or regional homeland security portfolio resource allocation and prioritization needs.
- Provide training on the capabilities and use of CIP-DSS to designated DHS organizations and support early adoption by the user community.

Protective Security Technologies

- We will stand-up the Insider Threat Mitigation Working Group to provide a long-term, sustained level of effort to find effective means of addressing the insider threat through a private-public partnership forum.
- We will deliver enhanced scene understanding/Closed Captioned Television (CCTV) technology suite Version 1.0 to more effectively apply video surveillance, provide processed and actionable information to security monitoring personnel, and to do this in a cost-effective manner with greatly reduced computer memory and data-transmission requirements.

The National CIP R&D Plan

- We will deliver the third annual National CIP R&D Plan with agency budget information and a roadmap for deliverables. Incorporate relevant stakeholder inputs from: a) Federal agencies including current and future activities, and levels of effort; b) critical infrastructure sector owners and operators; and c) private and public research institutions and universities.
- We will identify focused R&D activities in protecting critical infrastructures from catastrophic events and leverage private sector and State and local government contributions to securing sector infrastructures.

Kentucky CIPLab

- We will transition results of the FY 2005 funded KyCIPLab programs to applicable commercial products and pilot programs.
- We will monitor the projects started in FY06.
- We will provide topic areas for FY 2007 proposals and select projects for funding.

PPA: CYBER SECURITY

	Perm Pos.	FTE	Amount
2005 Actual	-	-	\$17,690
2006 Revised Enacted	-	-	16,533
2007 Adjustments to Base	-	-	(900)
2007 Current Services	-	-	15,633
2007 Program Change	-	-	7,100
2007 Request	-	-	22,733
Total Change 2006-2007	-	-	6,200

Science and Technology Directorate requests \$22.7 million for this activity. This is an increase of \$6.2 million over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION: The Cyber Security R&D Portfolio leads cyber security research, development; testing and evaluation endeavors to secure the Nation's critical information infrastructure. It does so through coordinated efforts to improve the security of the existing cyber infrastructure and provide a foundation for a more secure infrastructure. It has these strategic objectives:

- conduct research, development, testing, and evaluation of cyber security technology aimed at preventing, protecting against, detecting, responding to, and recovering from large-scale, high-impact cyber attacks;
- enable the creation of and migration to a more secure critical information infrastructure, through the development and use of more secure communication protocols;
- address cyber security R&D needs in support of DHS mission component needs (primarily the National Cyber Security Division and National Communications Systems in IAIP)
- address cyber security R&D needs that are unique to critical infrastructure sectors, particularly those that rely on the Internet to a great extent (Information and Telecommunications, Banking and Finance, and in coordination with the CIP Portfolio, address the cross-cutting issue of securing process control systems).
- provide a foundation for the long-term goal of economically-informed, risk-based cyber security decision making; and
- provide novel and next-generation secure information technology concepts and architectures through long term research efforts.

Three additional strategic objectives that do not address specific threats and vulnerabilities, but are critical to portfolio planning, execution, technology transition, and outreach are:

- actively pursue opportunities to serve as a catalyst for private sector activity, including public-private partnerships, as well as increased cooperation and communication among private sector companies and organizations;
- actively pursue strategies for facilitating technology transfer and diffusion of Federally-funded R&D into commercial products and services, and private sector use; and
- coordinate research, development, testing and evaluation activities with related ongoing activities at other Federal agencies.

The Cyber Security Portfolio's R&D investments will yield technologies that improve the security of information and information systems in two complementary ways: through the development of a new

generation of cyber security technologies that can be used to increase the security of information and information systems, and through the development of tools and methodologies used to develop more inherently secure systems. The portfolio also fosters technology transfer and diffusion of Federally-funded R&D into commercial products and services, and private sector use. This technology diffusion will result in broad-based benefits to the Information Technology (IT) sector and to users of IT among the other critical infrastructure sectors.

The portfolio coordinates with other Federal agencies through the National Science and Technology Council's (NSTC's) Cyber Security and Information Assurance (CSIA) Interagency Working Group (co-chaired by DHS and the Office of Science and Technology Policy (OSTP)), and the InfoSec (Information Security) Research Council. It also collaborates informally with other agencies that share interests in the area of cyber security R&D, including the National Science Foundation (NSF), various organizations within the Department of Defense (DoD), and the National Institute of Standards and Technology (NIST). The portfolio strongly emphasizes actively pursuing opportunities to catalyze private sector activity. Such opportunities include public-private partnerships as well as increased cooperation and communication among private sector companies and organizations. Finally, the portfolio participates in international efforts to develop common areas of collaboration in cyber security R&D.

The S&T Directorate has both formal and informal processes for gathering requirements for the cyber security portfolio. Internal cyber security requirements are provided to the S&T Directorate by the DHS Infrastructure Protection Directorate (IP), specifically by the National Cyber Security Division (NCS) and the National Communications System (NCS). Broader input regarding requirements is derived from a variety of sources. These include national policy documents (principally the *National Strategy to Secure Cyberspace*); external documentation and sources such as Federal, infrastructure sector, and other cyber security research documents; discussions and coordination with members of the government research community in various interagency for a; discussions with the private sector, including both cyber security technology developers and end users. Prioritization efforts are guided by the overall context of the DHS Science and Technology Directorate mission and the prioritized requirements list is developed using a risk assessment methodology.

FY 2005 Accomplishments:

Cyber Security R&D Center: The goal of the Cyber Security R&D Center is to be the primary S&T Directorate interface with the academic and industrial cyber security research communities. In FY 2005, an emerging security technology forum (ESTF) was conducted that introduced government representatives to smaller-sized information security technology vendors with innovative technology approaches. For this ESTF vendors presented and demonstrated current and emerging information security technologies that defend against Distributed Denial of Service (DDOS) and worm attacks, that is, technology that can continually assess and prevent security risks in the nation's critical infrastructure. In FY 2005 the following assessments and exercises and experiments were conducted:

- A joint US/Canada project to investigate and assess architectures for national/international secure email using security-enhanced Blackberry devices.
- A LOGI²C (Linking Oil & Gas Industry to Improve Cyber-Security) project workshop to assist DHS, Department of Energy (DOE), and the National Laboratory Testbeds with R&D of new solutions focused on the oil and gas industry that will address existing security weaknesses and security solutions.
- A Secure Sockets Layer (SSL) auditing project that will enable organizations to audit secure communications to prove policy compliance, arbitrate disputes, and investigate attacks. In FY

2005 a detailed system design was developed and an alpha version of the turnkey system was built that met the requirements specified in the system design.

- The System for Internet Relay Chat Underground Information Tracking (SIRCUIT), developed in collaboration with local US Secret Service offices, to monitor Internet Relay Chat (IRC) used for commerce in stolen credit numbers and related data. In FY 2005, the requirements were specified and the software tool developed.
- An economic analysis of cyber security and private-sector investment decisions project to investigate Internet stakeholders' investment decisions for bolstering the security of their IT networks. In FY 2005 a contract was awarded. The following documents were delivered: industry specific business cases for appropriate IT security expenditures and final report that identifies the potential role for the Federal government in stimulating investment in cyber security.
- Prototyping of a Business Process Model (Computer Simulation) of the Financial Sector to simulate impacts resulting from cyber and physical disruptions of business processes and transactions between critical entities in the Financial Sector. In FY 2005, a system model for a proof-of-concept and the prototype were completed.
- Revision of the "Information Security (InfoSec) Hard Problems List", a report developed by government subject matter experts on the interagency InfoSec Research Council. The initial report, which identified important information security research challenges, was first published in 1999 and has been in need of updating due to the significant advances and evolution in information technology in the past five years.
- Institute for Infrastructure Protection (I3P). Two research projects for cyber security, one in Supervisory Control and Data Acquisition (SCADA) systems, and one in economic and policy issues have been implemented. The S&T Directorate has project management responsibilities.
- The "virtual" Cyber Security R&D Center technical support funding provides support for the S&T Directorate in pre-research activities (such as developing roadmaps, organizing workshops and meetings, aids in drafting research solicitations and proposal review), as well as post-research activities (such as facilitating pilot tests and exercises, venture capital community outreach, private sector outreach, and interfacing with non-government R&D communities).

International Collaborations: In FY 2005, the joint international projects initiated in FY 2004 were completed. In addition, interactions with Canada and the United Kingdom continue to identify joint projects of collaboration. Discussions with the UK focus on the Cyber Defense Technology Experimental Research (DETER) testbed and projects for development assessment methodologies for *black box* testing. Work with Canada focused on a coordinated risk assessment to identify cyber security research areas of joint interest.

Infrastructure Security Program: The goal of this program is the development of secure and robust mechanisms that will enable the Internet to support the Nation's needs now and in the future. This will include securing the protocols on which the Internet is based. In FY 2005 the following prototypes and documents were developed: a Domain Name System Security (DNSSEC) deployment roadmap, NIST Special Publication 800-series guidance document on DNSSEC, specifications for end system application and operating system use of DNSSEC, the Global DNSSEC Monitoring Tool (GDMT), and training and tools for the DNSSEC pilot deployment. In addition, summits were held at several international meetings, for example, in Kyoto, Japan and Argentina. The Border Gateway Protocol (BGP) is the routing protocol that connects Internet Service Providers (ISPs) and subscriber networks to form the Internet. In FY 2005, a government and industry steering committee was formed, and industry and operator requirements workshops were held.

Next-Generation Cyber Security Technologies Program: This program will pursue two sets of R&D activities in FY 2005. The FY 2004 Broad Agency Announcement (BAA) contract awards were completed in FY 2005. Its technical topic areas are: Vulnerability Prevention, Vulnerability Discovery and Remediation, Cyber Security Assessment, Security and Trustworthiness for Critical Infrastructure Protection (CIP), Wireless Security, Network Attack Forensics, and. A second overlapping but separate three year next-generation technologies program will be initiated, and the BAA published in FY 2005. The BAA includes: (1) robot networks (BotNets); (2) rapid recovery and reconstitution of information technology networks or systems, (3) open source tools for network management, and (4) technologies to defend against identify theft. And the following FY 2005 emerging threats topics were announced: virtual machine detection and escape and next-generation crimeware (spyware and 'phishing' tools) defenses.

Cyber Security Testbed Program: The goal of the program is to create, operate, and support a researcher-and-vendor-neutral experimental infrastructure that is open to a wide community of users and produce scientifically rigorous testing frameworks and methodologies to support the development and demonstration of next-generation cyber defense technologies. A particularly important feature of this program is that it enables research into threats to network security without risk of compromising the actual internet. This program is jointly funded by DHS and NSF. In FY 2005, the DETER testbed program included expansion of the size of the testbed to add an additional 100 nodes, bringing the total to over 200 nodes. To support this expansion, additional hardware from various vendors will be installed. In addition, a security assessment, security architecture, and remote management/configuration capabilities were completed. The assessment was performed by a red team to assess and verify the security of the testbed network (including the data sets program addressed next). In FY 2005 a workshop and demonstration brought together various research groups participating in the testbed and highlighted the Worm and Distributed Denial of Service (DDoS) attack and defense experiments and the Border Gateway Protocol (BGP) advanced attack re-creation. FY 2005 plans for the Evaluation Methods for Internet Security Technologies (EMIST) testing framework include the demonstration of the visualization and specification tools, emulated routers, and collaborative defense. Finally, an annual report will be generated.

Large-scale Network Data Sets Program: The goal of the program is to produce datasets for information security testing and evaluation of maturing networking technologies. In FY 2005 the following capabilities were implemented: a large scale virtual data repository website/web portal for accessing a wide range of network data; websites for providing structured access to raw, compressed Voice over Internet protocol (VoIP) and BGP data resources; topology traces, address usage scans, and DDoS attack information; and Code-Red, Nimda and Witty worm datasets available to PREDICT researchers. In addition, internal and external PREDICT process pilots were completed and the PREDICT repository became operational. A final pilot report and standard operating procedures for all functions within the system were developed. A red team assessed and verified the security of the program resulting in an improved design and security of the DETER testbed and PREDICT coordinating center.

Small Business Innovation Research:

Cross-Domain Attack Correlation Technologies: Developed a system to efficiently correlate information from multiple intrusion detection systems (IDSes) about "stealthy" sources and targets of attacks in a distributed fashion across multiple environments.

Real-Time Malicious Code Identification: Developed technologies to detect anomalous network payloads destined for any service or port in a target machine to prevent the spread of destructive code through networks and applications. These technologies focused on detecting "zero day attacks," the first appearance of malicious code for which no known defense has been constructed.

FY 2006 Plan:

Cyber Security R&D Center: The "virtual" Cyber Security R&D Center technical support funding will continue to provide support for the S&T Directorate in pre-research activities and post-research activities. FY 2006 activities will have a significant focus on private sector and venture capital community outreach. There is a recognition that the ability of DHS cyber security R&D investments to improve the protection of the nation's critical information infrastructure is strongly dependent on the extent to which outcomes of R&D programs diffuse into mainstream commercial use. As DHS prior cyber security R&D investments mature, efforts will be undertaken to foster and accelerate transition of new technology into commercial cyber security products and services.

Infrastructure security program: Plans for FY 2006 in the area of Domain Name System security include a focus on system-level DNSSEC implementation, with development of software reference implementations for servers and client applications, and planning for pilot deployments of DNSSEC. Work will be undertaken to address as-yet unsolved technical issues associated with change cycles for static and dynamic zone data, and zone signing keys. FY 2006 investments in the area of routing protocol security will be directed at the development of a modeling and simulation framework for impact assessment of secure routing protocols on the Internet performance. Road mapping activities will take place in conjunction with other government and non-government stakeholders to develop future development paths, and requirements for future development of reference implementations.

Next-Generation Cyber Security Technologies Program: In FY 2006, a new two-year R&D program phase will be initiated, again overlapping with the program started in FY 2005. As the FY 2004 program comes to a close in FY 2006, progress against the FY 2004 technical topic areas will be evaluated. We do not expect these areas to go from priority challenges to solved problems within a span of two years, and therefore expect this assessment to highlight a subset of the 2004 technical topics for which investments should continue. Additional topics lined up for consideration include (1) identity management, and (2) network survivability, or insider threat detection from a cyber security perspective. We expect at least one of the topics under consideration for 2005 to slide to 2006 due to budget constraints. In order to catalyze transfer of DHS-funded technologies into mainstream commercial products and services, FY 2006 activities will also emphasize testing, evaluation, and piloting of the most promising technologies emerging from the now completed program that began in FY 2004.

Cyber Security Testbed Program: Cyber security DETER testbed plans for FY 2006 include completion of the full-scale operational testbed, acquisition and generation of network data sets, enhancement of remote management and configuration capabilities, and a final project report. FY 2006 plans for the EMIST cyber security testing framework include the documentation of additional attack scenarios and defense mechanisms, in-depth Phase II experimentation and testing on the full scale testbed, a workshop to disseminate and discuss project results and outcomes, and reports documenting benchmarks, testbeds, evaluation, data collection and analysis, and general results in testing of security mechanisms.

Large-scale Network Data Sets Program: FY 2006 plans in the area of large-scale network data sets include ongoing collection, refreshing, and sharing of data sets, and addition of new partners as applicable. FY 2006 efforts will also focus on pursuing partnerships that allow broader non-government participation, accompanied by a greater role of non-government organizations and funding sharing responsibility for oversight and financial support for this capability.

FY 2007 Plan:

In FY 2007, the Cyber Security R&D Portfolio plans to:

- conduct R&D aimed at large-scale, high-impact cyber attacks
- address cyber security R&D needs that are unique to critical infrastructure sectors, particularly those sectors that rely on the Internet, and
- provide continuity of government to ensure the safety of:
 - the government's cyber infrastructure and
 - the assets required for supporting essential missions

The programs within the portfolio address these objectives and the following threats: unauthorized modification of user or system data, malicious code exploitation, resource denial of service, and eavesdropping on communications. The focus is on the following vulnerabilities: inadequately protected data; inadequate or weak authentication; and insecure infrastructure for internet communications, applications, operating systems, and networks. The goal is to mitigate the risk associated with the threats and vulnerabilities.

Cyber Security R&D Center: The "virtual" Cyber Security R&D Center technical support funding will continue to provide support for the S&T Directorate in pre-research activities and post-research activities.

Infrastructure security program: This program will develop technologies and capabilities to improve security of existing infrastructure and support migration to a more secure infrastructure. Plans for FY 2007 in the area of Domain Name System include early-stage deployment activities within the U.S. government infrastructure and developing a draft guidance document on routing protocol (BGP) security.

The requirement for the following two programs is the development of a research infrastructure to provide broad-based support to government/university/private sector research communities, through development and support of a cyber security testbed and cyber security data sets collection and dissemination program.

Cyber Security Testbed Program: In FY 2007, the testbed will be transitioned to an operations and maintenance phase – allowing the funding to be primarily used for specific projects.

Large-scale Network Data Sets Program: In FY 2007, the Data Sets program will be transitioned to an operations and maintenance phase. As a consequence, the data sets program will focus on specific projects executed by government, public, and private sector organizations. In addition, the goal is to expand the list of data contributors.

Cyber Security Experiments and Exercises Program: This program focuses on cyber security technology experiments and pilot projects, and supports S&T Directorate participation in cyber security exercises. The objective of this program is to support the use of next-generation cyber

security technologies. The intent is to provide an understanding of critical cyber security weaknesses and capabilities in an operational environment. The objective will be accomplished by validating security techniques and methods, testing the performance of technologies, and accelerating the transition of next-generation technologies into broader use and/or commercialization by putting them into use in operational environments.

Cyber Security Assessment Program: This program focuses on cyber security assessment by conducting studies and holding workshops.

IV. Program Justification of Changes

**Department of Homeland Security
Science and Technology Directorate
Research, Development, Acquisitions, and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Joint Agro-terror Defense Office (JADO)

Strategic Goal(s) & Objective(s): PREVENTION -- Detect, deter, and mitigate threats to our homeland
2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism, and other illegal activities.

PPA: Biological Countermeasures

Program Increase: Positions 0 FTE 0 Dollars \$2,000

Funding Profile

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$0
Program Increase									2,000
Total Request	0	0	\$0	0	0	\$0	0	0	\$2,000

Description of Item

The additional funds (\$2 million) are to instantiate and staff a Joint Agro-terror Defense Office (JADO), which will enhance inter-agency coordination of advanced development of countermeasures for agro-defense.

Justification

DHS responsibilities for agro-defense are defined in several public laws and Homeland Security Presidential Directives (HSPD), including the Homeland Security Act of 2002; Congressional appropriations for FY 2004-2006; "Critical Infrastructure Identification, Prioritization, and Protection" (HSPD-7); "Defense of United States Agriculture and Food" (HSPD-9); and "Bio-defense of the 21st Century" (HSPD-10).

HSPD-9 provides a clear definition of roles and responsibilities for DHS and the sector specific agencies (SSAs), including those for which there is a clearly stated agency lead for DHS, shared responsibility for DHS and other agencies, or led by one or more SSA. In particular, DHS is identified as the lead to coordinate Federal activities to "accelerate and expand development of current and new countermeasures against intentional introduction or natural occurrence of catastrophic animal, plant, or zoonotic diseases". DHS and USDA are also required to "develop a plan to provide safe, secure, and

state-of-the-art agriculture bio-containment laboratories that research and develop diagnostic capabilities for foreign animal and zoonotic disease”.

DHS and its SSA partners currently work through established inter-agency venues, including the Homeland Security Council’s Policy Coordinating Committee for Agriculture, Food, and Water, and the National Science and Technology Council’s Foreign Animal Disease Threats Subcommittee (co-Chaired by the Director of the Biological Countermeasures Portfolio and USDA), which provide valuable inter-agency input and coordination on these issues.

With a dedicated staff (executive director and an inter-agency staff of 4-5 FTEs), JADO will provide continuity and functional linkages to these inter-agency interactions, including issues concerning policy (guidance and coordination, development of requirements) and research coordination (leadership and coordination of domestic and international programs for requirements-driven advanced development of countermeasures). To provide overall coordination and guidance, JADO will establish a Senior Advisory Group, to be chaired by the Under Secretary of DHS S&T, with representatives from the research and regulatory agencies, and homeland security office, of USDA.

Impact on Performance (Relationship of Increase to Strategic Goals)

We anticipate that JADO will provide a significant enhancement to inter-agency coordination by DHS for the development of countermeasures for agro-defense (see HSPD-9 above). Thus, this initiative is consistent with DHS Strategic Goal and Objective 2.3: Prevention -- Detect, deter, and mitigate threats to our homeland -- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism, and other illegal activities.

Program Increase 2: Cyber Security

Strategic Goal(s) & Objective(s):

2.3: Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

3.2: Reduce infrastructure vulnerability from acts of terrorism.

PPA: Cyber Security

Program Increase: Positions 0 FTE 0 Dollars \$7,100

Funding Profile

	FY 2005 Actual			FY 2006 Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									\$3,875
Program Increase									7,100
Total Request	0	0	\$8,059	0	0	\$5,596	0	0	\$10,975

Description of Item

The Cyber Security Portfolio Office is funded at \$22.9 million, \$7.1 million above the Department's request. Of the funds provided for cyber security R&D above the request, \$1.25 million is provided to enhance domain name infrastructure security R&D; \$1.25 million is provided to support R&D to secure Border Gateway Protocols under the Secure Protocols for Routing Infrastructure program; \$1 million is provided to support cyber security test beds; \$1 million is provided to support large-scale cyber security data sets; and \$2 million is provided to support R&D for highly scalable identity management with an emphasis on the ability to deploy this technology to wide-area networks. The remaining additional funds may be allocated as the portfolio sees fit.

Justification

Domain Name Infrastructure Security:

The security of the Domain Name System (DNS) requires security of the DNS resolvers (both domain and end-system) and end-host applications, which do not currently exist. In FY 2007, the domain name security program will develop secure domain resolvers and associated end-system resolvers, as specified by Internet standards, and DNSSEC-aware applications as part of the next stage of the deployment activity.

Secure Protocols for Routing Infrastructure:

In FY 2007, the secure routing protocols program will develop and deploy a public key infrastructure with the global registries to support the authentication of IP address allocation, autonomous system numbers, and the mapping between them to ensure the security of global routing announcements.

Cyber Security Testbed Program:

In FY 2007, the current testbed will be federated with several other government funded testbeds to provide a larger capability as part of the next stage of the testbed development. This will be

accomplished by modifications to the current testbed management software as well as upgrades to existing key hardware components, including VPNs and routers.

Large-scale Network Data Sets Program:

In FY 2007, the large-scale datasets program will be expanding the number of datasets in the repository from 100 to 150. The new datasets will include datasets with full packet content, whereas the current datasets include only packet headers. Additionally, a new repository containing identity theft related datasets will be established.

Highly Scalable Identity Management:

In FY 2007, this program will develop new identity management technologies that are in compliance with newly announced HSPD-12 standards for government identity management.

Impact on Performance (Relationship of Increase to Strategic Goals)

The Cyber Security Testbed Program, Large-scale Network Data Sets Program, and Highly Scalable Identity Management efforts support the goal of Prevention by developing new technologies and tools for defending cyberspace. The Domain Name Infrastructure Security and Secure Protocols for Routing Infrastructure efforts support the Protection goal through deployment of technologies to reduce vulnerabilities of existing cyber infrastructure. The Domain Name Infrastructure Security item will have possible impact on the performance of other DHS components as it is deployed into the operational infrastructure.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

**Department of Homeland Security
Science and Technology Directorate
Justification of Proposed Changes in Research, Development, Acquisition and Operations
Appropriation Language**

For necessary expenses for science and technology research, including advanced research projects; development; test and evaluation; acquisition; and operations; as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.); purchase and lease of up to ten (five for replacement only) motor vehicles; [\$1,420,997,000.] ~~\$806,370,000.~~ to remain available until expended. [; Provided, That of the total amount provided under this heading, \$23,000,000 is available to select a site for the National Bio and Agrodefense Facility and perform other pre-construction activities to establish research capabilities to protect animal and public health from high consequence animal and zoonotic diseases in support of Homeland Security Presidential Directives 9 and 10: Provided further, That of the amount provided under this heading, \$318,014,000 shall be for activities of the Domestic Nuclear Detection Office, of which \$125,000,000 shall be for the purchase and deployment of radiation portal monitors for United States ports of entry and of which no less than \$81,000,000 shall be for radiological and nuclear research and development activities: Provided further, That excluding the funds made available under the preceding proviso for radiation portal monitors, \$144,760,500 of the total amount made available under this heading for the Domestic Nuclear Detection Office shall not be obligated until the Committees on Appropriations of the Senate and the House of Representatives receive and approve an expenditure plan for the Domestic Nuclear Detection Office: Provided further, That the expenditure plan shall include funding by program, project, and activity for each of fiscal years 2006 through 2010 prepared by the Secretary of Homeland Security that has been reviewed by the Government Accountability Office.]

Explanation of Changes:

S&T has a need to purchase replacement vehicles for the Plum Island facility. These vehicles were originally purchased by the Department of Agriculture and were transferred to DHS/S&T along with PIADC. As existing vehicles reach the end of their useful lives they must be replaced.

National Biodefense Analysis and Countermeasures Center (NBACC)

1. Project Description, Justification and Scope

This Non Information Technology construction project is currently going through the Capital Planning and Investment Control Process (CPIC) as a part of the DHS FY 2005 budget submittal. It was first identified as part of the DHS FY 2004 budget request as a transfer from the DoD during the stand-up of the department and is a continuation of construction planned and justified initially in the FY 2003 DoD, Defense-wide military construction justification that resulted in appropriation of \$5 million for construction planning of this project at Fort Detrick, Maryland. In accordance with section 303(2) of the Homeland Security Act of 2002 (Pub. L. 107-296) this project was transferred to the DHS effective March 1, 2003. Congress provided an additional \$88 million in FY 2004 DHS appropriations to initiate construction of the proposed NBACC Facility.

² All funds previously requested

³ Includes the following investments: BWIC (still need to add Workforce Management, Booz Allen Financial System, and Enterprise Portfolio Management)

This construction project is being planned to provide laboratory and administrative facilities for the NBACC. NBACC is a key component in implementing the President's *National Strategy for Homeland Security* by addressing the need for substantial research into relevant biological and medical sciences to better detect, and mitigate the consequences of biological attacks and to conduct risk assessments (Office of Homeland Security, 2002).

The mission of NBACC is to provide the nation with the scientific basis for awareness of biological threats and attribution of their use against the American public by:

- Understanding current and future biological threats, assessing vulnerabilities, and determining potential impacts to guide the development of biodefense countermeasures; and
- Providing national capability to conduct forensic analysis of evidence from bio-crimes and terrorism to attain a "biological fingerprint" to identify perpetrators and determine the origin and method of attack.

The proposed NBACC Facility at Fort Detrick will be comprised of:

- The Biological Threat Characterization Center (BTCC), for assessing the risk of attack with biological threat agents and conducting research to fill scientific knowledge gaps that impact the ability to perform those assessments; and
- The National Bioforensic- Analysis Center (NBFAC), designated in Presidential Directive *Biodefense for the 21st Century*, to be the lead Federal agency for conducting forensic analysis of evidence from a bio-crime or terrorist attack to attain a "biological fingerprint" to determine where the agent came from and the perpetrators of the attack.

The work in these laboratories will be for defensive purposes only. The *Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction*, also known as the Biological and Toxin Weapons Convention (BWC) prohibits the development, production, stockpiling, and acquisition of offensive biological weapons. The U.S. is a signatory to this treaty, and all activities performed at the NBACC Facility will comply with this treaty and all other applicable laws.

NBFAC directly supports the Federal Bureau of Investigation (FBI) and other Federal agencies in scientific assessment of biological materials leading to attribution of use and legal proceedings. The FBI has primacy in the mission to collect, analyze and document a legal case from events related to criminal misuse of biological pathogens and biotoxins. The capability of the NBFAC to conduct and facilitate integrated and coordinated analyses of evidentiary samples potentially containing or contaminated with high consequence biological threat agents requiring BSL-3 or BSL-4 containment is critical to national security.

NBACC's risk assessment, threat characterization, and forensics missions require laboratory facilities rated up to BSL-4 to conduct studies with disease-causing microbes which spread through the air or have an unknown cause. However, existing biocontainment facilities (both commercial and governmental) in the U.S. are lacking in capacity, capability, and flexibility to satisfy NBACC's mission requirements. There is not enough BSL-4 laboratory space available nationwide to support NBACC's planned laboratory biodefense research studies and bioforensic casework.

2. Significant Changes

The FY 2004 project request submitted to Congress was \$90M to begin design/construction on the NBACC facility; \$88M was actually appropriated for FY 2004. The Department has been going through an extensive development of an Environmental Impact Statement (EIS) for the project and subsequent operations. It was decided to delay the award of any contracts for design and construction until public concerns were analyzed and considered during the EIS process. As a result, the contract for design of the NBACC facility was awarded near the end of 2Q FY 2005. The contract for construction is anticipated for award during 4Q FY 2005. Construction of the NBACC facility is projected to be completed by 4Q FY 2008. No further funding is requested in FY 2007.

3. Project Schedule

	Fiscal Quarter and Year				Total Estimated Completion Cost (\$000)	Total Project Cost (\$000)
	Work Initiated	Work Completed	Physical Construction Start	Physical Construction Complete		
Concept for Design	3Q FY 2003	2Q FY 2004			1,500	
Environmental Impact Statement	1Q FY 2004	2Q FY 2005			500	
Design	1Q FY 2005	1Q FY 2005			-	
Procurement	2Q FY 2005	2Q FY 2005			-	
Construction	2Q FY 2005	4Q FY 2006			11,500	
Phase	2Q FY 2005	3Q FY 2008	3Q FY 2006	3Q FY 2008	99,000	
Final Commissioning / Certification	1Q FY 2008	4Q FY 2008			15,500	
Start Operations	1Q FY 2009					128,000

4. Schedule of Project Funding

Funding	Prior	FY 2003	FY 2004	FY 2005	FY 2006	FY 2007	FY 2008	Total
Appropriation		5,000	88,000	35,000	0	0	0	128,000
Obligation (actual and planned)		1,600	400	101,000	10,000	10,000	5,000	128,000
Expenditure (actual and planned)		1,600	400	15,000	36,500	39,000	35,500	128,000
Breakdown - Project Expenditures:								
Planning		1,500	500					2,000
Design Phase		0	0	10,000	500	500	500	11,500
Construction Phase		0	0	5,000	36,000	36,000	22,000	99,000
Final Commissioning/ Certification						2,500	13,000	15,500
Total Project Expenditures		1,500	500	15,000	36,500	39,000	35,500	128,000

5. Cost Estimate Detail and Changes

	Current Estimate	Previous Estimate
Detailed Breakdown - Project Phases		
Planning:	2,000	2,000
Project Planning and Development (Concept for Design)	1,500	1,600
Completion of Environmental Impact Statement	500	400
Issue Contract for Design (Design Procurement)	0	0
Issue Contract for CMc (Construction Procurement)	0	0
Design Phase:	11,500	11,500
Fees & other related design costs	11,500	11,500
Construction Phase:	99,000	99,000
Project Management	3,500	3,500
Construction	95,500	95,500
Facility Commissioning/Certification:	15,500	15,500
Transition costs	12,000	12,000
Other costs	3,500	3,500
Project Total	128,000	128,000

6. Method of Performance

Performance-based management systems will be used to manage the development and operation of this construction project. Competitive performance-based contracts will delineate project scope and performance expectations and will be used to implement requirements for reporting, controlling, and tracking project progress through the various phases of the project. DHS will implement and manage design, construction, and commissioning related activities and will populate and track essential performance

parameters using performance-based tracking tools to ensure project completion within cost and schedule.

7. Related Annual Funding Requirements

	FY 2007 (\$ 000)	
	Current Estimate	Previous Estimate
<i>No O&M for FY 2007</i>	\$0	\$0

 Biological Countermeasures
 (Dollars in Thousands)

PPA: Biological Countermeasures		2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Changes
Object Classification					
11.1	Permanent Positions	450			0
12.1	Civilian personnel benefits	28			0
21.0	Travel and transportation of persons	240			0
23.3	Other rents, communications, and utilities	637			0
25.1	Advisory & assistance services	25,627			0
25.2	Other services	297,732			0
25.3	Purchase of goods/services from Gov't. accounts	7,785	376,200	337,200	(39,000)
31.0	Equipment	72			0
Total, Biological Countermeasures		332,571	376,200	337,200	(39,000)

Mission Description: The biological countermeasures portfolio places its greatest emphasis on those biological attacks that have the potential for widespread catastrophic damage, which in general provides some measure of protection against most attack scenarios. Such high consequence threats include, but are not limited to: aerosolized anthrax, smallpox, and genetically engineered airborne pathogens; highly virulent agricultural diseases such as foot and mouth disease; and high volume contamination of selected food supplies. Work is pursued in partnership with the Department of Health and Human Services (HHS), the Department of Defense (DoD), the Environmental Protection Agency (EPA), the Department of Agriculture (USDA) and others. Key elements of an early biological warning system have been demonstrated and piloted at the research level and a subset are operational (e.g. the BioWatch program). The program performs additional research on non-traditional forms of biological surveillance, advanced detection technologies to include biological signatures and assays, bioforensics, and restoration to deal with existing and next-generation threats.

Key elements of the Biological Countermeasures Portfolio are: (1) Surveillance and Detection R&D, which provides research, development, and piloting of technologies and systems to support the spiral development of the operational capabilities, such as the BioWatch Program; the Biological Warning and Incident Characterization System (BWIC) to be used in BioWatch cities to aid in interpreting the public health significance of BioWatch signals and to inform and guide the initial responses and event reconstruction; (2) Plum Island Animal Disease Center, which is a facility used to research the most sensitive rapid identification techniques, the most effective and reliable vaccination approaches, and develop genetic databases of foreign disease pathogens in order to detect and stem the effects of an intentional attack with agricultural bioagents; and (3) the National Biodefense Analysis and Countermeasures Center, to include the Biothreat

Characterization Center and National Bioforensics Analysis Center, which provides: a) scientific support to biological threat net assessments, b) bioforensic analysis for attribution, c) validated countermeasures, and d) in conjunction with the Biodefense Knowledge Center, an information clearing-house which supports interagency efforts in countering biological terrorism focused on law enforcement, national security, and public health.

Total, Chemical Countermeasures	61,393	94,050	83,092	(10,958)

Mission Description: The mission of the Chemical Countermeasures portfolio is to enhance the nation's capability to anticipate, prevent, protect from, respond to and recover from chemical threat attacks through interagency leadership and conduct of innovative research, development, and technology transition. Research and Development (R&D) activities reflect prioritization of the many possible chemical threats and targets, development of new detection and forensic technologies, and integrated protective systems for high-value facilities such as airports and subways. These activities are informed by end-user input and systems studies that identify gaps in current capability and guide technology investment. The portfolio has been organized to reflect needs in preparedness against current and future chemical threats requiring capabilities in four key areas: Chemical Analysis and Coordination, Architecture, Detection, and Response and

Recovery. The portfolio's scope includes classical chemical warfare (CW) agents, toxic industrial chemicals (TICs), and non-traditional agents (NTAs).

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Communications, Utilities, and miscellaneous charges (OC 23.3)	22	0	0	0

Communication, Utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services.

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Other Services (OC 25.2)	11,410	0	0	0

Threat Awareness Portfolio
(Dollars in Thousands)

PPA: Threat Awareness Portfolio		2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Changes
Object Classification					
11.3	Positions other than permanent				0
12.1	Civilian personnel benefits				0
21.0	Travel and transportation of persons	11			0
23.3	Other rents, communications, and utilities	88			0
25.1	Advisory & assistance services	1,093			0
25.2	Other services	3,590			0
25.3	Purchase of goods/services from Gov't. accounts	78,783	42,570	39,851	(2,719)
25.5	Research & development contracts	750			0
Total, Threat Awareness Portfolio		84,315	42,570	39,851	(2,719)

Mission Description: The RDT&E activities funded through the Threat Awareness Portfolio (TAP) primarily support two DHS strategic goals, namely, awareness and prevention. The portfolio's mission is to develop, test, and deliver – in collaboration with intelligence, law enforcement, and homeland security community agencies – computationally based tools and methodologies for assessing terrorist threats and understanding terrorism. Such tools and methods are intended to enable and enhance Federal, State, and local awareness of a broad range of threats through intelligence fusion and information sharing. TAP currently prosecutes its mission through eight interrelated programs in three critical areas: Capability Assessment and Attribution, Social-Behavioral Analyses of Terrorist Threat, and Knowledge Management Tools for Fusing and Sharing Intelligence. To achieve its objectives, TAP's science and technology efforts focus on developing a Federal-level enterprise for threat assessment. Activities in this portfolio are designed to help evaluate extensive amounts of diverse threat information; detect and document terrorist intent; couple threat information with detailed knowledge of terrorists' capabilities for developing and sources for obtaining weapons of mass effect and with accurate forensic analyses; and enable analysts to draw timely insights and distribute assessments from the information. The technologies include knowledge discovery and

dissemination, information analysis, visual analytics for synthesis of dynamic, disparate, distributed information sets containing multiple data types; information extraction and pattern discovery from massive data sets; semantic networks and high-performance processing techniques for multi-modal data correlation; integrated simulation and modeling techniques for threat assessment, scenario planning, and incident response; security and privacy; CBRNE capability assessments; field and laboratory forensic analyses of radiological and nuclear materials; and continuous assessment of individual- or group-related motives, behaviors, and intentions signifying terrorist actions. Capabilities appropriate to Federally managed information sources as well as security and privacy tools required to share information and collaborate among various Federal, State, and local government organizations, as well as foreign governments and international organizations, involved in homeland security are also being developed and implemented. Such activities directly support the Office of Information Analysis, the Directorate for Preparedness, the Transportation Security Administration, Customs and Border Protection, and Immigration and Customs Enforcement, as well as other operational entities within DHS.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Travel (OC 21)	11	0	0	0

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations.

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Communications, Utilities, and miscellaneous charges (OC 23.3)	88	0	0	0

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Advisory and Assistance (OC 25.1)	1,093	0	0	0

Advisory and Assistance includes services acquired by contracts from non-Federal sources as well as from the other units within the Federal Government.

2143

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Other Services (OC 25.2)	3,590	0	0	0

Other Services include report contractual services with non-Federal sources.

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Purchases from Government Accounts (OC 25.3)	78,783	42,570	39,851	(2,719)

Purchases from Government Accounts include costs for purchases from other Federal Government agencies. The FY 2007 request includes an increase of \$8,000,000 for the realignment of Forensic Attribution program from the Radiological and Nuclear Countermeasures portfolio and resources from other portfolios to better support the Department's and Directorate's mission, a technical adjustment of \$-219,000, a increase of \$4,000,000 due to differences between the FY 2006 President's Budget and Congressional action, and a realignment of \$14,500,000 to DNDO.

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Research and Development Contracts (OC 25.5)	750	0	0	0

Research and Development Contract include cost for contracts for the conduct of basic and applied research and development.

BORDER AND TRANSPORTATION SECURITY

Mission Description: The Border and Transportation Portfolio's mission is to develop and transition capabilities that improve the security of our nation's borders and transportation systems without impeding the flow of commerce and traveler. One of the Department of

Homeland Security's first priorities is to prevent the entry of terrorists and the instruments of terrorism into the United States while simultaneously ensuring the efficient flow of lawful traffic and commerce. In the Department, the Border and Transportation Security (BTS) Directorate has this responsibility.

EMERGENCY PREPAREDNESS AND RESPONSE

Mission Description: The S&T Directorate's Emergency Preparedness and Response (EP&R) portfolio supports the Department's Preparedness Directorate and FEMA with a mission to improve the ability of the nation to prepare for, respond to, and recover from all-hazards emergencies through development and deployment of enabling capabilities. Particular emphasis is placed on technology integration and interoperability at all levels of government; personal protection and equipment for emergency responders; technologies to enhance training and exercise capability; emergency medical response operations, and long-term sustained performance of emergency response systems.

UNITED STATES SECRET SERVICE

Mission Description: The mission of the United States Secret Service (USSS) portfolio of the S&T Directorate is intended to support the unique USSS mission by development and deployment of advanced technologies to enhance protective and investigative capabilities. This portfolio is coordinated with the United States Secret Service and has established its first direct-funded R&D program. The USSS portfolio effort focuses upon input from the intelligence community (threat based model) and direct operational experience obtained over the last century. As a result, this funded technology program is subject to reevaluation and change based upon the perceived threats to the safety of those protected by the USSS.

UNITED STATES COAST GUARD

Mission Description: The United States Coast Guard's mission is to protect the public, the environment, and U.S. economic interests in the Nation's ports and waterways, along the coast, on international waters, or in any maritime region as required to support national security. The Coast Guard Research Program supports this mission through the development of technologies and systems to enhance Maritime Domain Awareness, and to improve Operational Presence and Response. Maritime Domain Awareness includes all systems, sensors, and command and control systems necessary to detect, identify, and determine the threat potential of all vessel traffic. It also includes Port Security research to protect important harbors. Operational Presence and Response is the development of the safest and most effective means of stopping a vessel, boarding it, and finding/eliminating the specific threat. The objectives of this R&D work areas to neutralize the threat as far away from potential targets as possible and to respond to emergencies as quickly and effectively as possible. The Coast Guard Research and Development program is characterized by its many partnerships with other Federal agencies and international R&D groups. Working together on mutual problems has shared costs and expedited delivery of important R&D products.

This program also supports Coast Guard unique traditional missions such as Search and Rescue and, Maritime Regulations in support its Marine Safety mission. It researches oil

spill prevention and response, and Aquatic Nuisance Species prevention in support of its Marine Environmental Protection Program. Further it works on the development of advanced navigation systems to improve the flow of goods and services via our nation's waterways.

Summary Justification and Explanation of Changes

11.1	Permanent Positions				0
12.1	Civilian personnel benefits				0
25.3	Purchase of goods/services from Gov't. accounts	0	0	19,451	19,451
Total, Emergent and Prototypical Technology		0	0	19,451	19,451

Mission Description: The mission of the Emergent and Prototypical Technology Portfolio is to; through six major thrust areas; address the dynamic nature of terrorist threats, as science and technology advancements enable new agents of harm and new ways to employ them, and; to accelerate, through rapid prototyping, the deployment of advanced technologies to address urgent user requirements.

The Emerging Threats-Identification and Assessment, Countermeasure Development of Identified Hi-Priority Emergent Threats, and Future Capabilities Research and Development are the thrust areas of the Emergent and Prototypical Technology Portfolio that focus directly on Emerging Threats. Through these three thrust areas, the Emergent and Prototypical Technology Portfolio will focus on anticipating and defining potential threats arising from new scientific and technological advances, terrorist use of existing capabilities in new or unexpected manners, and self assessments of S&T research activities and jump-start countermeasures capabilities development. High priority is placed on developing the capability to use innovative, crosscutting approaches for anticipating and responding to new and emerging threats. Successful identification of emerging threats will permit capabilities to be developed to thwart these emerging threats before they are used.

The Technical Support Working Group (TSWG), Rapid Technology Application Program (RTAP), and Technology Clearing House are the thrust areas within the Emergent and Prototypical Technology Portfolio designed to address the Directorate's mission to conduct, stimulate and enable research, development, test, evaluation and timely transition of homeland security capabilities to Federal, State and local operational end-users. Accelerating the timeline for development and commercialization of relevant technologies will allow the Science and Technology Directorate to ensure that operational end-users are equipped with the most advanced technologies available. Through these three thrust areas, the Emergent and Prototypical Technology Portfolio will seek to transition two types of technologies. The first are those technologies already in existence that require capability modification to address an immediate or emergent threat. These technologies will undergo a rapid re-engineering process and then be transitioned to the private sector or deployed by government entities on an accelerated schedule to provide defensive countermeasures or response capabilities when needed. The second category is comprised of those technologies

that have reached a level of functional maturity to make them candidates for accelerated development. These technology opportunities will undergo operational testing and pilot deployment to determine their ultimate applicability.

Relevant R&D is underway at other agencies and organizations; thus, partnerships in this area hold great potential for synergistic focus on homeland security. Work is conducted in partnership as appropriate with the DOE, DoD, DHHS, DOJ, USDA, and IC.

Summary Justification and Explanation of Changes

Total, Counter-MANPADS		51,820	108,900	4,880	(104,020)

Mission Description: Beginning in May 2003, the Department of Homeland Security (DHS), in partnership with other Federal agencies, initiated a Congressionally-directed aggressive System Development and Demonstration (SD&D) program to counter the threat of shoulder-fired missiles, known as MAN-Portable Air Defense Systems (MANPADS), to civilian commercial aviation. The DHS Science and Technology Directorate (S&T) is leading the technology aspects of the effort through its Counter-MANPADS Program. The Program demonstrates and evaluates the possible migration of existing military Counter-MANPADS technologies to the commercial airline industry. The re-engineering of countermeasure technologies and components is necessary to meet commercial air carrier operation requirements, including protection of critical military technology in a civilian aviation environment.

Summary Justification and Explanation of Changes

		2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Changes
PPA: Office for Interoperability and Compatibility					
Object Classification					
11.1	Permanent Positions				0
12.1	Civilian personnel benefits				0
25.3	Purchase of goods/services from Gov't. accounts	6,744	26,235	29,735	3,500
Total, Office for Interoperability and Compatibility		6,744	26,235	29,735	3,500

Mission Description: Non-interoperable and incompatible equipment and a lack of standardized procedures for their operation have plagued the public safety community for decades. In many cases, public safety agencies in times of multi-jurisdictional emergency responses, such as terrorist attacks, cannot perform their mission-critical duties because of these challenges. To address these issues, the Secretary of the Department of Homeland Security directed the Science and Technology Directorate to create the Office for Interoperability and Compatibility (OIC). This Office coordinates the Federal response to the challenges of interoperability and compatibility, and was implemented in coordination with other DHS programs. By coordinating and leveraging the vast range of interoperability programs and related efforts spread across the Federal government, the OIC will reduce unnecessary duplication in programs and spending, identify and promote best practices, and coordinate Federal activities related to research and development, testing and evaluation, standards, technical assistance, training, and grant funding guidance related to interoperability.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Revised Enacted	2007 Request	2006-2007 Change
Purchases from Government Accounts (OC 25.3)	6,744	26,235	29,735	3,500

Purchases from Government Accounts include costs for purchases from other Federal Government agencies. The FY 2007 request includes an increase of \$7,500,000 which is the result of a realignment of resources from other portfolios to better meet the Department's and the Directorate's mission, an increase in the amount of \$1,000,000 due to differences between the FY 2006 President's Budget and Congressional action, and a decrease in the amount of \$5,000,000 for Rapid Com is included.

Strategic Context for the FY 2007 Budget

I. Mission and Description of the Science & Technology Directorate

The Homeland Security Act of 2002 (Public Law No. 107-296) established the Department of Homeland Security (DHS) with the following mission:

- Prevent terrorist attacks within the United States,
- Reduce the vulnerability of the United States to terrorism, and
- Minimize the damage, and assist in the recovery, from terrorist attacks that do occur within the United States.

An essential component of the Department's ability to accomplish this mission is its ability to develop/organize the Nation's scientific and technological resources to prevent and mitigate the effects of terrorism against the United States.

Within the Department of Homeland Security, the principal responsibility for coordinating and organizing research and development (R&D) activities in support of the Department's mission rests with the Science and Technology (S&T) Directorate.

Mission Statement

The S&T Directorate will conduct, stimulate, and enable homeland security research, development, testing and evaluation and the timely transition of capabilities to Federal, State, local, and tribal end-users.

The S&T Directorate provides leadership for directing, funding and conducting research, development, test and evaluation (RDT&E) and procurement of technology and systems to prevent the importation of chemical, biological, and related weapons and material and to protect against and respond to terrorist threats. The S&T Directorate partners and coordinates with Federal, State and local government and private sector entities in conducting its activities. It establishes an efficient system to transfer homeland security developments and technologies to the operational elements of the Department to enhance their ability to execute all missions, now and in the future, and to meet the high priority homeland security RDT&E needs of the nation.

Description of Directorate

The S&T Directorate implements its science and technology activities through focused portfolios that address biological, chemical and explosive threats; support the research and development needs of the operational components of the Department; and cross-cutting areas such as standards and interoperability that impact all aspects of the Directorate's RDT&E process. These portfolios cut across the four elements of the Directorate and integrate the innovative input from private industry and academia as well as national and Federal laboratories. The four elements of the Directorate are:

- Office of Plans, Programs, and Requirements (PPR);

S&T - 2

- Homeland Security Advanced Research Projects Agency (HSARPA);
- Office of Research and Development (ORD); and
- Office of Systems Engineering and Development (SED).

PPR provides the strategic and technical vision for the Directorate and its RDT&E process. HSARPA has an essential role in meeting the goals and objectives of the Department and the Directorate, through R&D, and technology maturation in industry and academia. ORD executes the Directorate's RDT&E programs within the national and Federal laboratories; establishes the University Centers of Excellence; and maintains the Nation's enduring R&D complex dedicated to homeland security. SED oversees the transition of large-scale and pilot systems to the field through program offices, which bring mature technologies from the laboratory to the user through a rapid, efficient, and disciplined project management process.

II. Major Activities and Key Strategic Issues

The Nation's technical superiority in science and technology is a key factor in the effort to ensure a secure homeland. The fulfillment of the Department's mission requires a concerted effort to access, leverage, and enhance the vast resources and expertise of the Nation's public and private sectors, academic community, non-governmental organizations, and other scientific bodies. This effort is primarily the responsibility of the S&T Directorate. That responsibility involves ensuring the Nation's homeland security R&D efforts are focused on meeting mission requirements, are adequately funded, and meet long-term as well as near-term objectives. To achieve these objectives, the S&T Directorate has created and implemented a robust research, development, demonstration, testing, and evaluation plan that include investments in both evolutionary and revolutionary capabilities with high payoff potential.

In FY 2006, the S&T Directorate received an appropriation of \$1,487,075,000. In addition to the appropriation, 60 FTE were transferred to the S&T Directorate from the Transportation Security Administration and seven from Customs and Border Protection. Following are a few examples of how the S&T Directorate is using the appropriated FY 2006 funding:

- Biological Countermeasures – In FY 2006, the program was appropriated \$376.200M and will use part of this funding to complete the deployment of Gen 2 BioWatch systems to the top threat cities while continuing to operate and optimize already extant BioWatch systems. In addition, the groundbreaking for the National Biodefense Analysis and Countermeasures Center (NBACC) to be located at Ft. Detrick, MD, is expected to occur in mid 2006.
- Explosives Countermeasures- In FY 2006, the program was appropriated \$43.560M which will include the integration of the Transportation Security Laboratory (TSL) at Atlantic City, NJ into the S&T Directorate. The FY 2006 funds will be utilized in order to continue this key government laboratory resource with expertise in: development and application of leading edge technology for aviation security; analysis, prediction, and mitigation of explosive effects; and development of procedures, processes, and technology for explosives detection.
- Counter-MANPADs – In FY 2006, the program was appropriated \$108.900M. It will seek three Federal Aviation Administration (FAA) Experimental Flight Certificates. The prototypes will be integrated with airframes and on-board ground and flight testing to verify system performance and

verify continued airworthiness of the aircraft. In addition, the program will initiate Phase III which will include delivery and installation of pre-production Counter-MANPADS equipment on commercial aircraft operated by U.S. cargo carriers similar to those aircraft dedicated to meet the Civil Reserve Air Fleet (CRAF) requirement.

- Office of Interoperability and Compatibility – In FY 2006, the program was appropriated \$26.235M; with base and additional funding SAFECOM will begin survey administration in February 2006, pending the successful completion of the requirements of the Paperwork Reduction Act. Provided that the survey is administered starting in February 2006, an initial report will be released in June 2006 and a follow-on report, incorporating more extensive analysis of the data will be released in September 2006.
- University Programs - In FY 2006, the program was appropriated \$62.370M. Two additional Homeland Security Centers of Excellence will be established. Within the Educational Programs Scholarships and Fellowships approximately 300 highly talented and diverse students will continue to be maintained. In addition, ten additional postdoctoral associateships, up to seven AAAS Fellows, and a Young Investigators Program and Visiting Scientists Scholars programs will be funded.

A more robust description of FY 2005 accomplishments, as well as plans for FY 2006 and 2007, are discussed within the Budget request section of the FY 2007 Congressional Justification.

III. Resources Requested and Performance Impact

The proposed FY 2007 President's Budget of \$1,002,271 will maintain ongoing activities in science and technology research to detect and counter threats and attacks; protect the Nation's critical infrastructure, both physical and cyber; analyze and assess threats and vulnerabilities; and provide cutting edge technologies to operational end-users. The S&T Directorate supports the Department's strategic goals and objectives by performing RDT&E while addressing the following criteria:

- *Risks facing the Nation* that are identified and weighed by the S&T Directorate and others, including DHS's Office of Intelligence and Analysis;
- *Homeland security needs* that are identified through a systematic science and technology needs identification process that the S&T Directorate conducts with its partners;
- *Estimated costs, benefits, implementability, and potential effectiveness* of results of science and technology research and programs; and
- *DHS's overall priorities*, since the S&T Directorate supports and enables DHS's overall homeland security efforts.

The S&T Directorate invests most heavily in developing technologies, tools, systems, and information to support the Preparedness and Operations areas of the Department. The S&T Directorate also provides the scientific foundation to support Policy and Information Analysis and Sharing areas of the Department.

OMB Performance Assessment Rating Tool (PART)

To date, six S&T portfolio/programs have been evaluated through the Office of Management and Budget's (OMB) Performance Assessment Rating Tool (PART) – Biological Countermeasures,

Standards, Threat and Vulnerability Testing and Assessment, Emerging Threats, Rapid Prototyping, and University Programs in support of Fiscal Year 2005, 2006, and 2007 budget cycles. The S&T Directorate is incorporating OMB's recommendations as well as those recommendations that come out of the external program peer reviews in its planning, programming, budgeting and executing stages. The Directorate is also working to address any shortcomings of its programs.

PART scores in the FY 2006 cycle showed an effective planning and evaluation system was beginning, but had not been fully implemented or gone through a complete cycle. The Biological Countermeasures portfolio was evaluated for the FY 2006 cycle and was shown to be highly effective at providing countermeasures and protective technologies to mitigate the effects of biological agents. In alignment with the PART the budget was increased. The Standards portfolio was evaluated for the FY 2006 cycle and received a rating of "adequate." As a result of this rating, the funding level was decreased. Both portfolios are working on conducting an external, independent evaluation to validate program performance targets by the end of 2006.

The Threat Awareness Portfolio (TAP) formerly known as Threat and Vulnerability, Testing and Assessment (TVTA) was evaluated for the FY 2006 cycle and received a rating of "results not demonstrated." The original rating was attributed to things outside its control such as the fact that outside evaluators have not had a chance to conduct plenary analysis and because legal impediments have hindered their success. To address this concern, TAP sponsored a successful external program review in April 2005 and is also working to improve its performance metrics and targets.

During the FY 2007 Budget cycle, Emerging Threats, Rapid Prototyping and University Programs received scores of "Moderately Effective." In general the programs received excellent scores in program purpose, design, strategic planning and program management, but had weakness in program results and accountability. OMB's recommendations to the programs included development of more focused performance metrics as well as conducting independent program assessments. New performance metrics for these programs will be in place by March 2006. In September 2005, the Office of University Programs and each of the four Centers of Excellence in operation were evaluated by an independent board of visitors/review panel. The program review provided valuable information in the areas of mission relevance, technical competency, and management effectiveness. Once the programs have reached a steady state, UP will be able to design an independent evaluation which can demonstrate meaningful results. Emerging Threats and Rapid Prototyping are working to address the need of independent program reviews.

In addition to the above programmatic actions, the S&T Directorate's overarching RDT&E process requires each program to be clearly defined and to develop specific long-term performance measures to demonstrate progress in meeting its strategic objectives.

The S&T Directorate is also working to address the Budget and Performance Integration initiative of the President's Management Agenda (PMA). The S&T Directorate is providing DHS a quarterly self-assessment on how it is incorporating OMB's PART recommendations and addressing the shortcomings of its programs.

IV. How Science and Technology Programs and Their Performance Goals Align to and Support the DHS Strategic Plan Objectives.

The S&T Directorate supports the Department's strategic plan and continues to evaluate its own strategic goals and objectives as well as its alignment to the Department's goals and objectives. The S&T Directorate programs support many DHS components and thus indirectly support several DHS strategic objectives; however they directly support and align to one DHS strategic objective. The following list of S&T Directorate programs with their performance goals are followed by the DHS strategic objective they support:

Biological Countermeasures Program Long-Term Performance Goal - Provide dependable risk analyses, effective systems for surveillance and detection, and reliable bioforensic analyses to protect the nation against biological attacks.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Chemical Countermeasures Program Long-Term Performance Goal - Provide dependable risk analyses, effective systems for surveillance, detection, and cleanup, and reliable chemical forensic analyses to protect the nation against chemical attacks.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Explosives Countermeasures Program Long-Term Performance Goal - Improve explosives countermeasures technologies and procedures to prevent attacks on critical infrastructure, key assets, and the public.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Threat Awareness (formerly Threat and Vulnerability, Testing and Assessment) Program Long-Term Performance Goal - Advance capabilities for threat discovery and awareness, information management and sharing, linkage of threats with vulnerabilities, and capability and motivation assessments for terrorist organizations.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Standards Program Long-Term Performance Goal - Develop well-designed standards and test and evaluation protocols for products, services, and systems used by the Department of Homeland Security and its partners to ensure consistent and verifiable effectiveness.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Support to Department of Homeland Security Components Program Long-Term Performance Goal - Develop effective technologies and tools to increase the capabilities of the Department of Homeland Security operational components to execute their mission to secure the homeland.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

University and Fellowship Programs Long-Term Performance Goal - Establish and sustain a coordinated university-based research, development and education system to enhance the Nation's homeland security.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Emergent and Prototypical Technology Program Long-Term Performance Goal - Prevent terrorist attacks by developing effective capabilities to characterize, assess, and counter new and emerging threats and identify and rapidly develop, prototype, and commercialize innovative technologies to thwart terrorist attacks.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Safety Act Long-Term Performance Goal - Encourage the development and deployment of anti-terrorism technologies by awarding SAFETY Act benefits to homeland security technology producers.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Counter-MANPADS Program - Provide effective and economical capabilities to dramatically reduce the threat to commercial aircraft posed by man-portable anti-aircraft missiles.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Office for Interoperability and Compatibility Long-Term Performance Goal - Ensure interoperability and compatibility between emergency response agencies at the local, state, and federal levels and standardize federal testing and evaluation efforts for emergency response technologies.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Critical Infrastructure Protection Long-Term Performance Goal - Produce actionable information and recommend reliable technologies to help protect U.S. critical infrastructure.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Cyber Security Long-Term Performance Goal - Enable the creation of and migration to a more secure critical information infrastructure.

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

V. Performance-Based Budget Highlights by Program

Performance Goal: Provide dependable risk analyses, effective systems for surveillance and detection, and reliable bioforensic analyses to protect the nation against biological attacks.						
Measure: Number of collectors deployed.	Fiscal Year:	FY2003	FY2004	FY2005	FY2006	FY2007
	Target:				223	223
	Actual:					
Program: Biological Countermeasures	\$ Thousands		\$178,591	\$478,886	\$402,979	\$419,120
	FTE		48	100	100	161

Performance Goal: Provide dependable risk analyses, effective systems for surveillance, detection, and cleanup, and reliable chemical forensic analyses to protect the nation against chemical attacks.						
Measure: Percent completion of an effective restoration capability.	Fiscal Year:	FY2003	FY2004	FY2005	FY2006	FY2007
	Target:				25%	35%
	Actual:					
Program: Chemical Countermeasures	\$ Thousands		\$25,278	\$64,931	\$100,745	\$103,279
	FTE		10	25	25	40

Performance Goal: Improve explosives countermeasures technologies and procedures to prevent attacks on critical infrastructure, key assets, and the public.						
Measure: Cumulative number of air cargo and rail passenger screening pilots initiated.	Fiscal Year:	FY2003	FY2004	FY2005	FY2006	FY2007
	Target:				4	7
	Actual:					
Program: Explosives Countermeasures	\$ Thousands		\$7,675	\$19,911	\$46,661	\$107,618
	FTE		3	11	61	41

Performance Goal: Advance capabilities for threat discovery and awareness, information management and sharing, linkage of threats with vulnerabilities, and capability and motivation assessments for terrorist organizations.						
Measure: Average expert reviews of improvement in the national capability to assess threats of terrorist attacks.	Fiscal Year:	FY2003	FY2004	FY2005	FY2006	FY2007
	Target:				7	7
	Actual:					
Program: Threat Awareness Portfolio	\$ Thousands		\$63,100	\$89,174	\$45,600	\$49,532
	FTE		18	16	16	18

Performance Goal: Develop well-designed standards and test and evaluation protocols for products, services, and systems used by the Department of Homeland Security and its partners to ensure consistent and verifiable effectiveness.						
Measure: Number of Department of Homeland Security official technical standards introduced.	Fiscal Year:	FY2003	FY2004	FY2005	FY2006	FY2007
	Target:				15	20
	Actual:					
Measure: Percent of standards introduced that are adopted by Department of Homeland Security and partner agencies.	Fiscal Year:	FY2003	FY2004	FY2005	FY2006	FY2007
	Target:				67%	75%
	Actual:

Note: FY 2006 Focused Excess amounts were included in the FY 2005 DDES Science and Technology Appropriation. This request includes those Appropriation as transfers to the DNDO in FY 2007.

iii. Status of Congressionally Requested Studies and Reports

**Department of Homeland Security
Domestic Nuclear Detection Office**

Status of Congressionally Requested Studies, Reports, and Evaluations

1. House Report 109-241, page 79 directs the DNDO to submit a detailed spend plan prior to the obligation of any funds. Target response to Committee is February 2006.
2. House Report 109-241, page 80 directs the Department, in conjunction with the Department of Energy, to provide a report on the progress of various radiation technology efforts, the degree of coordination between Megaports and the Container Security Initiative, the types of technology being deployed at specific locations, and the extent to which next generation technology is being explored and developed for future use. Target response to Committee February 10, 2006.

iv. Schedule of Authorized/Unauthorized Appropriations by PPA

BUDGET REQUEST AND SUPPORTING INFORMATION
--

DOMESTIC NUCLEAR DETECTION OFFICE
RESEARCH, DEVELOPMENT, ACQUISITION, AND OPERATIONS

I. Appropriation Overview

A. Mission Statement for Appropriation Name: Key to the success of the Department of Homeland Security is improving the Department's ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Department has integrated all nuclear detection research, development, test, evaluation, acquisition, and operational support in a single office. To this end, the Domestic Nuclear Detection Office will develop the global nuclear detection architecture, and acquire and support the deployment of the domestic detection system to detect and report attempts to import or transport a nuclear device or fissile or radiological material intended for illicit use.

B. Budget Activities:

Systems Engineering and Architecture – The DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) establishing, implementing, and supporting a disciplined systems engineering approach throughout the DNDO. The global architecture comprises several key elements: a multi-layered structure of radiological and nuclear countermeasures, both domestic and international; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering based principles and guidelines governing the architecture's design and evolution over time. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and sustenance of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous established performance standards and specifications, while balancing total system performance and total ownership costs within the family of rad/nuc detection systems context.

Systems Development and Acquisition – The Office of Systems Development and Acquisition serves as the nuclear detection systems Research, Development and Acquisition component within the Domestic Nuclear Detection Office. Systems Development and Acquisition is responsible for the engineering development, production, and all developmental logistics products associated with the current and next generation of nuclear detection systems. The product line includes: passive Radiation Portal Monitors, Radiography, Human-Portable Systems, Materials development and facilitation; and Integration Programs to address the needs of our inter-agency customers (States, Localities, and Tribal Authorities).

Transformational Research and Development – The Domestic Nuclear Detection Office established the Office of Transformational Research and Development to conduct, support, coordinate, and encourage an aggressive transformational program of Research and Development that will

DNDO - 1

dramatically improve national capabilities to detect and report attempts to import or transport a nuclear device, Special Nuclear Material, or radiological materials intended for illicit use.

Assessments – The DNDO research, development, test, evaluation, and acquisition process is anchored by an independent assessment of technologies as they are developed, deployed, and operated, as well as a constant assessment of the overall systems effectiveness of the Nation’s detection network, through a variety of means. This approach is motivated by the requirement to thoroughly understand all aspects of systems performance and potential vulnerabilities prior to deploying technologies, and continually reevaluating their performance to ensure an accurate awareness of systems effectiveness.

Operations Support – The Operations Support program is responsible for developing the training, information sharing capability, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

Radiological and Nuclear Forensics and Attribution – The Radiological and Nuclear Forensics and Attribution Program (Rad/Nuc FAP) seeks to develop and maintain an enduring national capability for the processing of radiological and nuclear materials and associated evidence for the purpose of comprehensive and timely forensic analysis and attribution. This capability is pertinent to terrorism and criminal investigations in that it can serve to prevent and deter terrorist attacks, or if a threatened or actual attack occurs, to identify and prosecute those responsible. The Rad/Nuc FAP will develop the technical capability to rapidly, accurately, and credibly attribute the origins and pathways of intercepted or collected materials, intact nuclear and radiological devices, radiological dispersal devices after detonation, and nuclear devices after nuclear yield. In addition, it can provide decision makers with information necessary to determine appropriate government action.

C. Budget Request Summary: The Domestic Nuclear Detection Office requests 112 positions, 112 FTE, and \$535,788,000 for FY 2007. The total adjustments-to-base are 20 positions, 20 FTE, and \$338,640,000. The program increases include 92 positions, 92 FTE, and \$197,148,000 to:

- Fully staff the DNDO, including the reimbursement of all detailed staff (66 detailed FTE);
- Initiate research, development, test, evaluation, and operations support programs to continue the evolutionary development of the global nuclear detection architecture; and
- Transition the acquisition of fixed radiation portal monitors to include next-generation Advanced Spectroscopic Portals, and begin the acquisition of a Federally-owned “surge” detection capacity, deployable to Federal, State, or local agencies in periods of heightened threat.

II. Summary of FY 2007 Budget Estimates by Program/Project Activity (PPA)
Department of Homeland Security

Note: FY 2006 Revised Enacted amounts were included in the FY 2006 DHS Science and Technology Appropriation. This request includes these Appropriations as transfers to the DND0 in FY 2007.

III. Current Services Program Description by PPA

Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, Acquisition, and Operations
Program Performance Justification
(Dollars in thousands)

PPA: MANAGEMENT AND ADMINISTRATION

	Perm Pos	FTE	Amount
2005 Actual
2006 Revised Enacted
2007 Adjustments-to-Base	20	20	\$4,554
2007 Current Services	20	20	\$4,554
2007 Program Change	92	92	\$25,914
2007 Request	112	112	\$30,468
Total Change 2006-2007	112	112	\$30,468

The Domestic Nuclear Detection Office requests \$30,468,000 for this activity. This is an increase of \$30,468,000 over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

Mission Description and Justification:

The Management and Administration request provides for the execution of salaries, benefits, and expenses related to 112 FTE.

As a jointly-staffed office, the DNDO staff is made up of approximately 66 interagency detailees, augmenting the approximately 46 DNDO Federal staff members. Prior to FY 2007, these detailees were provided by the parent organization on a non-reimbursable basis. However, beginning in FY 2007, the DNDO has agreed to reimburse parent organizations for all detailed staff. Additionally, the staff of the DNDO is expected to continue to grow to the full compliment of 112 FTE (DNDO employees and detailees) throughout FY 2007, through continued hiring of DNDO employees.

Additionally, the Management and Administration request includes all DNDO rent payments and contributions to the DHS Working Capital Fund.

DHS Infrastructure Transformation Program

The Department's Infrastructure Transformation Program (ITP), led by the Office of the Chief Information Officer (OCIO), will integrate the IT infrastructures of the 22 legacy components into "One Infrastructure". Currently, most of the Department's components fund and are supported by separate and largely stove-piped IT infrastructures. This environment makes it difficult to share information across components and has resulted in redundant investments and wasted resources. The ITP will eliminate the duplicative infrastructures and provide common capabilities and services for all components to leverage.

The ITP consists of five domains with a Department component assigned as a steward responsible and accountable for the performance of each domain. The domains and their stewards are listed below:

- Network Services led by Customs and Border Protection (CBP);
- Data Center Services led by CBP;
- Email Services led by U.S. Coast Guard (USCG);
- Help Desk Services led by USCG; and
- Video Operations Services led by Federal Emergency Management Agency (FEMA).

The OCIO oversees the work of the stewards and the other components to ensure operational requirements are met and investments and resource allocations are balanced across the components.

Implementation of the ITP will eliminate the need for components to spend resources on improving their own infrastructures. Instead, some of the investment funding previously used for stovepiped infrastructures will be used to support the department-wide ITP effort. For example, CBP's IT initiatives such as the Automated Commercial Environment will benefit from the capabilities and services the ITP will provide such as network access, data center hosting, email/collaboration services, wireless access, integrated help desk, voice access, video services, and on-site support. Rather than independently developing new capabilities or augmenting legacy capabilities within CBP, the ITP will provide enterprise-level services that will benefit all components.

By investing in the ITP, DHS components will benefit from economies of scale while promoting Department integration, and improving information sharing and interoperability. The amount of IT investment funding from components to support the ITP is still under deliberation and any such proposal will be fully vetted with the Congress prior to any actions being taken.

Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, Acquisition, and Operations
Program Performance Justification
(Dollars in thousands)

PPA: RESEARCH, DEVELOPMENT, AND OPERATIONS

	Perm Pos	FTE	Amount
2005 Actual
2006 Revised Enacted
2007 Adjustments-to-Base	\$209,086
2007 Current Services	\$209,086
2007 Program Change	\$118,234
2007 Request	\$327,320
Total Change 2006-2007	\$327,320

The Domestic Nuclear Detection Office requests \$327,320,000 for this activity. This is an increase of \$327,320,000 over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:**Mission Description and Justification:**

Because no single detection layer can prevent the illicit importation of nuclear or radiological material, partnerships across Federal, State and local government agencies and the private sector are critical in creating a well coordinated, layered defense. To meet this need, the DNDO is responsible for developing the overall global detection architecture, with the significant involvement of all relevant Federal agencies and State and local stakeholders. The DNDO will assess and link existing programs, in addition to initiating new programs. This approach will ensure that architecture deployments proceed as part of a unified prevention, detection, and interdiction strategy. This strategy is based on defensible and measurable assessments of the effectiveness of specific system components. The resulting architecture will then be steadily improved by developing better detection technologies, real-time reporting of detection alarms, and rapid and effective responses to real threats.

The architecture also provides a clear roadmap for all DNDO activities, be it research, development, acquisition, or operations. Outcomes from DNDO programs will address gaps identified by the architecture analysis. This ensures that DNDO programs are firmly grounded in operational needs.

The DNDO has the lead responsibility for conducting the necessary research, development, test, and evaluation (RDT&E) to implement the proposed domestic nuclear detection system. In this regard, the DNDO is initiating several major technology development programs to meet immediate operational requirements. This includes programs in passive spectroscopic portal systems, advanced radiography imaging systems, and advanced handheld, backpack, and mobile detection systems. A major tenet of these development programs is an emphasis on high-fidelity test and evaluation as well as user-based operational testing, followed by rigorous red team assessments of deployed systems. Furthermore, the DNDO will provide significant and sustained funding to ensure that the National Laboratories, the private sector, and academia are devoting the best minds to the advancement of detection technologies.

While technology is a critical tool in combating terrorism, the nuclear threat cannot be effectively overcome by technology alone. Accordingly, the DNDO has initiated significant efforts to ensure that the right people and infrastructure are in place to develop a fully-integrated operating environment. Key to this integration is the ability to fuse detection data and intelligence assessments in a near real-time environment to maintain situational awareness. This requires that the DNDO maintain a close, working relationship with the Intelligence Community. This integrated approach to detection and information analysis will ultimately provide substantial improvements in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of mission success.

Developing a fully-integrated operating environment extends beyond establishing information sharing and analysis capabilities. Information can only be utilized effectively if it is shared in a timely manner with the appropriate personnel, based on established protocols. To facilitate this process, all detection equipment deployed using DNDO resources will be accompanied by thorough training and exercise materials and established response protocols for resolving alarms.

Systems Engineering and Architecture – The DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) establishing, implementing, and supporting a disciplined systems engineering approach throughout the DNDO.

The global architecture comprises several key elements: a multi-layered structure of radiological and nuclear countermeasures, both domestic and international; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering based principles and guidelines governing the architecture's design and evolution over time. The architecture is developed with interagency and intra-DHS partner inputs, as part of the organic DNDO systems architecture staff.

At the time of the formation of the DNDO, the global nuclear detection system existed as a disparate patchwork of systems, distributed and implemented in recent years across multiple departments, jurisdictions and locations without the benefit of a centralized plan or strategy. From its initial stand-up, DNDO recognized the importance and need for the application of a systems engineering approach in achieving an integrated and balanced global nuclear detection system solution. Effective implementation and sustenance of detection systems begins with the design and development of reliable and maintainable systems, built to rigorous established performance standards and specifications, while balancing total system performance and total ownership costs within the family of rad/nuc detection systems context.

The established and implemented DNDO systems engineering approach provides a foundation and a unified, consistent methodology for everything DNDO does, from setting requirements and specifications, to research and development, acquisition planning and execution, testing and evaluation, and operations.

Systems Development – The DNDO, as the nuclear detection research component of the Department, is responsible for ensuring that this Nation maintains a preeminent research and development program to address the technical challenges in radiation detection science and technology, while at the same time capitalizing on the benefits of integrating this program with larger acquisition efforts. In response, the DNDO has implemented a consistent development methodology to address technical requirements arising from gaps in operational capabilities. This methodology begins with the competitive selection of multiple vendors to facilitate engineering development, with the resulting

delivery of operational prototypes. The delivered prototypes will be thoroughly tested and evaluated to fully understand equipment capabilities prior to any acquisition selection. Additionally, prior to the beginning of system deployments, appropriate training, operations, and response protocols must be developed to ensure that deployed systems are operated properly and any alarms are appropriately resolved and reported.

Transformational Research and Development – The DNDO has established a transformational research and development program to identify, explore, and develop scientific and technological approaches that will dramatically improve the performance of nuclear detection components and systems. One of the primary motives for the establishment of the DNDO was to create such a mechanism for significant and sustained funding into radiation detection technologies through innovative approaches. Historically, these efforts have been driven by the rise and fall of arms control treaties and nuclear weapons development. Today the face of terrorism demands a long-term continuous effort to improve our abilities to sense the presence of dangerous nuclear materials in the midst of deliberate shielding.

Dramatic technological improvements may be defined in a number of ways: in system or component effectiveness and performance characteristics; in cost of acquisition or maintenance; or in ease of operation by users in the field. R&D investments will be made based on competitive awards, with investigators in all sectors – government laboratories, academia and private industry – encouraged to participate. This program will take advantage of the qualities and respective advantages of all three sectors to develop products, and will strongly encourage teaming among them.

Two instruments will be used to implement our transformational R & D program. The first of these will be a series of well-funded, multi-year technical challenge areas that will span the technology needs and gaps in the Nation's nuclear detection architecture. Research participants will be selected through Broad Agency Announcements (BAAs) that solicit proposals in each challenge area. The other will be an Academic Research Initiative, based at universities, with a lead institution to be selected on a competitive basis. This institution will operate as a hub in promoting R&D among all three sectors, as above, and will develop a program that emphasizes incubating innovative ideas that may initially be small in scope, at an early stage of development, or that may be of high risk, but could result in high payoffs.

In addition to defining and executing the research programs previously described, mechanisms are in place to ensure active coordination with other agencies funding related research and development. These agencies include the Department of Energy (DOE) nonproliferation nuclear detection programs, various Department of Defense programs, including detection R&D programs at the Defense Threat Reduction Agency, and the Intelligence community. Other examples are the Transportation Security Administration (TSA) and DHS S&T high-explosive detection technology programs, which could be integrated with DNDO-developed systems to detect nuclear shielding materials and radiation threats in air cargo and luggage, and the National Science Foundation (NSF), which supports enabling technologies for radiation detection. Further, DNDO has established measures and procedures to assure the successful transition of select product prototypes into systems development and systems acquisition programs for further development and eventual acquisition for field use.

Test and Evaluation Planning and Operations – The DNDO research, development, test, evaluation, and acquisition process is anchored by an independent assessment of technologies as they are developed, deployed, and operated, as well a constant assessment of the overall systems effectiveness.

of the Nation's detection network, through a variety of means. This approach is motivated by the requirement to thoroughly understand all aspects of systems performance and potential vulnerabilities prior to deploying technologies, and continually reevaluating their performance to ensure an accurate awareness of systems effectiveness.

Red Teaming and System Assessments – As part of the overall assessments mission of the DNDO, continuous evaluation of system performance is required, including threat and vulnerability assessments, assessments of proposed architectures, modeling and simulations, and operational red teaming, both domestic and international. The basic objective of the DNDO red team is to deepen DNDO understanding of adversary capabilities and potential and likely responses to DNDO and national efforts to significantly improve our domestic nuclear detection capabilities. This team will develop into surrogate adversaries to contest DNDO strategies, concepts and approaches, making them more robust and better to deal with resourceful and adaptive adversaries.

Information and Analysis – While technology is a critical tool in combating the nuclear threat, it cannot be effectively overcome by technology alone. All efforts must be conducted in coordination with Federal, State, Tribal, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities. Accordingly, while the DNDO has initiated large-scale technology research, development, and acquisition programs, the Information and Analysis program is responsible for developing the information sharing and analysis tools to create a fully integrated operating environment. The DNDO must ultimately have the ability to fuse detection data and intelligence assessments in a near real-time environment to maintain an overall system and situational awareness. While this will require the DNDO to closely interact with the Intelligence Community as a developer of intelligence requirements and consumer of intelligence products, *the DNDO will not act as an intelligence collection agency*. This integrated approach to detection and information analysis will ultimately provide substantial improvement in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of mission success.

To meet the Information and Analysis mission, the DNDO has established the Joint Center for Global Connectivity (JCGC). The JCGC will enhance the effective sharing and use of nuclear detection information and intelligence from all mission related detection systems to provide a greater situational awareness of the nuclear and radiological threat. By fusing the international and domestic detection streams and information generated by the intelligence and counterterrorism communities, the JCGC will be able to provide a better informed decision making environment, enabling more effective alarm resolution, trend analysis, and threat awareness. Additionally, this information and analysis capability will be integrated with a detailed understanding of current and future detection system performance to increase our awareness and confidence in the global detection architecture.

Support to Field Operations – As nuclear detection technology is deployed across the global architecture, the Federal government must commit to providing the necessary technical support to ensure that equipment is used effectively, alarms are resolved accurately, and the appropriate personnel are notified in the event of a legitimate detection of a threat. In recognition of this need, the DNDO provides operational support services, including 24/7 technical reachback support for alarm resolution, effective training and response protocols, and operational support coordination to ensure appropriate expertise is in place to support prompt resolution of nuclear/radiological detection alarms. The effective utilization of these services will assure that deployed equipment is properly used and alarm information is reported and escalated to response agencies when appropriate.

Radiological and Nuclear Forensics and Attribution – The Radiological and Nuclear Forensics and Attribution Program (Rad/Nuc FAP) seeks to develop and maintain an enduring national capability for the processing of radiological and nuclear materials and associated evidence for the purpose of comprehensive and timely forensic analysis and attribution. This capability is pertinent to terrorism and criminal investigations in that it can serve to prevent and deter terrorist attacks, or if a threatened or actual attack occurs, to identify and prosecute those responsible. The Rad/Nuc FAP will develop the technical capability to rapidly, accurately, and credibly attribute the origins and pathways of intercepted or collected materials, intact nuclear and radiological devices, radiological dispersal devices after detonation, and nuclear devices after nuclear yield. In addition, it can provide decision makers with information necessary to determine appropriate government action. The Rad/Nuc FAP encompasses:

- Development of sample collection and analysis infrastructure;
- Research, development, testing, and evaluation (RDT&E) of radiological and nuclear signatures;
- Development of radiological and nuclear domain expertise and knowledge management infrastructure; and
- Radiological and nuclear forensics and attribution operations and exercises.

This program is jointly managed by DHS and the FBI, and integrates facilities and expertise within DOE, DoD, and other partner agencies. A “hub and spokes” network of laboratories and associated facilities is being configured to conduct comprehensive and timely forensics and attribution to support the law enforcement and intelligence communities; DoD, public health, and other Federal partners; and other customers.

FY 2006 Plan:

Systems Engineering and Architecture – The DNDO competitively awarded the Systems Engineering Support Program contract in August 2005. This contract serves as the DNDO’s primary vehicle to implement and institutionalize systems engineering processes and principles across every DNDO function and mission. Expenditures in FY 2006 are focused on accomplishing a number of tasks, as outlined below:

- Develop the Systems Engineering Master Plan and the Master Test and Evaluation Program Plan (MTEPP) to provide a technical framework and documentation for the global nuclear detection architecture;
- Establish a systematic process to coordinate with the DNDO Joint Requirements Board (JRB), which includes interagency detection system operators and users, to understand, capture, and evaluate user-defined requirements and capabilities;
- Complete initial translation of requirements into engineering specifications for the Cargo Advanced Automated Radiography System program, sodium iodide (NaI) detector crystals, and next generation handheld and backpack detection systems;
- Complete an engineering system trade study and modeling of portal deployment scenarios and commence additional trade studies to support implementation decisions for gaps and priorities identified in the global architecture;
- Develop a comprehensive database describing currently deployed radiation detection systems and those planned for near-term domestic deployment;
- Begin a comprehensive assessment of the global detection information technology (IT) architecture, focused on optimizing information flow; and

- Develop a preliminary design of an integrated system accounting for connectivity to overseas assets, as well as Federal, State, and local continental United States (CONUS)-based systems.

A major systems engineering thrust in FY 2006 is the chartering and implementation of functional IPTs to assure accountability of system design considerations for critical life-cycle factors such as interoperability; software requirements; commercial-off-the-shelf options; manufacturing capability; quality; reliability, availability and maintainability; supportability; human systems integration; environment, safety and occupational health; corrosion prevention and control; disposal; information assurance; anti-tamper provisions; system security; and accessibility.

The first version of the enhanced global nuclear detection architecture was completed in November 2005 and coordinated with key stakeholders. The findings were initially presented in the form of briefings; stand-alone summary reports with supporting documentation will be available in May 2006. Although the detailed analysis of system effectiveness and vulnerabilities is not suitable for public release, selected non-sensitive portions of the architecture and supporting analysis will be available in broad-distribution form at that time.

While the baseline architecture will continue to be documented, the architecture team has begun to explore options for strengthening the architecture in the near and long-term. These options will be examined in terms of risk reduction, direct and indirect costs, operational feasibility, and other relevant decision factors. In addition, recommended enhancements are being identified and prioritized. The DNDO and its internal interagency staff are reviewing and refining the recommendations to reflect the full range of technical and policy factors that must be addressed in determining the preferred overall architecture.

The international portions of the architecture are being developed in close coordination with the DoD, DOE, and DOS, as well as components of DHS with international responsibilities and relationships. The border portions are closely coordinated both within DHS (e.g., with CBP and the Coast Guard), as well as with other relevant agencies. The interior portions of the architecture are being closely coordinated with the DOJ, Federal Bureau of Investigation (FBI), and other Federal, State, and local entities.

Systems Development – Primary amongst the development programs planned for FY 2006 is the ASP program, which was initiated in early FY 2005. The ASP program improves upon existing polyvinyl toluene (PVT) - based radiation portal monitors which are currently being deployed to the Nation's Ports of Entry (POEs), as well as overseas venues through the Department of Energy's Megaports program and via the DHS Container Security Initiative (CSI). ASP systems address a substantial capabilities gap in the currently deployed architecture by increasing the probability of detecting a smuggled nuclear device, while decreasing the probability of falsely alarming on naturally occurring radioactive materials or innocent radioactive materials (such as granite tiles, ceramics, and kitty litter) or incorrectly dismissing nuclear material. ASP systems use their ability to identify the source of detected radiation through spectroscopic isotopic identification to accomplish this.

With current-generation systems, which only indicate the presence of radiation but provide no information as to its identity, operational requirements often require a 'sensitivity threshold' to be set to alleviate the need for labor-intensive and time-consuming secondary inspections. ASP systems do not implement this type of threshold. Rather, ASP portals systems automatically detect all sources of radiation – and use the identification capability to sort the threat material from the innocent sources of radiation. The use of spectroscopic identification will dramatically reduce false positives – and allow

for considerably improved throughput at high-volume ports, while simultaneously improving our security.

FY 2005 efforts resulted in the selection and award of ten contracts for prototype development and manufacture. Each of the ten vendors developed and delivered one ASP portal to the Nevada Test Site for high-fidelity testing. The results of this testing (conducted from August to October 2005) will be used in FY 2006 to competitively select several vendors to conduct engineering development, low rate and full scale production of ASP systems. ASP systems include several variants (e.g. standard cargo portal, rail portal, POV) appropriate to the CBP venues. DNDO intends to award contracts in the third quarter of FY 2006. The DNDO intends to award contracts for medium resolution ASP portals (based on NaI-based crystal technology) and contracts for high resolution systems (based upon high-purity germanium (HPGe) or high pressure xenon (HPXe) sensor technology).

Fundamentally, DNDO asserts that detection of special nuclear material must be accomplished with a combination of passive spectroscopic systems and advanced radiography systems. Together, these two technologies provide a capability to detect unshielded, lightly shielded and heavily shielded nuclear materials, components and weapons that may be illicitly transported in cargo containers, air cargo bundles or other conveyances.

While spectroscopic portals will provide a next generation capability to passively detect unshielded or lightly shielded nuclear materials, no passive system can detect nuclear materials that are heavily or completely shielded. DNDO estimates that 65% of the material imported in cargo containers will be shielded to the extent that passive spectroscopic systems will be unable to find it. Radiography systems (using active imaging techniques) are indicated as a solution to the detection of this shielded material.

Current radiography systems, however, lack the ability to automatically detect shielded special nuclear materials. Current radiography devices, similar to one dimensional x-ray devices used in a doctor's office, do not provide the capability to distinguish between innocent materials such as steel, and aluminum; shielding materials such as lead; and threat materials such as uranium or plutonium. Current radiography devices generally produce a simple gray-scale image that requires an operator to provide a possible interpretation. In the medical imaging field, successful use of simple x-ray radiography is made possible by the consistency of the expected outcome, and the extent to which deviations from this expected outcome indicates a problem (e.g. the dental x-ray of 'healthy' teeth is well understood, cavities are easily seen). Even in this simple case, each image might take a skilled professional several minutes to analyze. In the case of cargo inspection, the expected radiographic image is very uncertain. Given the seemingly infinite combination of items that may be loaded into a cargo container, one-dimensional radiographic inspection by Customs and Border Protection Officers has proven to be quite difficult. While skilled CBP operators do indeed find a variety of contraband (including guns, drugs, and people attempting to illegally enter the country), the existing radiography systems do not provide them with an appropriate tool to find shielded nuclear material – as this material appears to be similar to many ordinary materials in a standard two dimensional x-ray. In addition to the impracticality of finding shielded special nuclear material (SNM) in cargo because of its similarity to standard cargo, the labor intensive nature of the current machines inherently limit the number of scans which can be accomplished with the current limited staff of CBP officers. In fact, CBP typically inspects only approximately 5% of all incoming cargo containers.

The Cargo Advanced Automated Radiography System (CAARS) will address both of these deficiencies (ability to 'see' SNM in the image, and throughput rate) – and thereby reduce the vulnerability of the United States. It will scan cargo containers or other conveyances of interest and provide an automated alert based upon the threat. The implemented technology will distinguish between low density non-threat materials such as aluminum and steel, and higher density materials such as lead, uranium or plutonium. CAARS will also be capable of the detection of traditional contraband such as high explosives and drugs, but may not do so with the same level of automation. Search for traditional contraband will continue to require operator image analysis.

The DNDO will launch, in FY 2006, the CAARS program to automate radiographic image processing, as well as provide considerable improvements in the rate of radiographic inspection, striving to achieve 50% coverage within the next 5 years.

The DNDO will competitively award up to three twenty-four (24) month concept development and prototype manufacture contracts to demonstrate several advanced imaging and automated detection techniques (current technologies include computed tomography, dual-energy radiography, and nuclear resonance fluorescence). These higher resolution imaging techniques will provide the necessary data required to provide more accurate density estimation and automated image alert processing, removing the need for human operators to analyze each resulting image. This improvement would result in automated detection or dismissal within seconds rather than the current five-minute human inspection rate, and improve throughput rates from approximately 12 containers per hour to approximately 120 containers per hour. The maximum passive sensitivity achieved by ASP, when coupled with the automated radiography achieved by CAARS provides a comprehensive solution for our manned ports of entry (POE).

The ASP and CAARS systems deployed at our official POEs only fulfill one element of the overall nuclear detection systems architecture. The DNDO systems development program also includes a program to deliver next generation handheld and man-portable systems required by operators such as the U.S. Coast Guard, CBP, Border Patrol, State, local and tribal law enforcement agencies and first responders. These handheld, mobile and backpack systems are used as primary detection tools by our Border Patrol and USCG personnel subsequent to interdiction. CBP uses this equipment as a secondary inspection tool; while state, local and tribal law enforcement agencies and first responders use this equipment for queued search and secondary identification.

While handheld detection systems have been available for some time, their performance in their required operational environments is insufficient. These systems can be greatly improved, particularly with regards to their probability of detection, probability of correct isotopic identification, their ability to communicate with a joint reachback center and their ability to survive in the rugged operational environments in which they are used. The DNDO is currently developing technical specifications and requirements for next-generation handheld systems and will award contracts for the design, engineering, and prototype manufacture of these systems in FY 2006. These systems will likely incorporate new high-resolution detector materials such as HPGe, lanthanum halides, or cadmium zinc telluride.

In FY 2006, the DNDO will initiate the Securing the Cities initiative that will develop regional deployment strategies aimed at achieving the most effective and integrated use of detection equipment for domestic detection and interdiction.

The Securing the Cities initiative will provide design engineering support to State and local agencies in the development of procurement, deployment and lifecycle upgrade strategies suited to their individual locale. This support will enable the DNDO to ensure that State and local agencies will acquire and deploy systems with proven performance characteristics, that these deployments are consistent with the global detection architecture, and that they will be interoperable with the DNDO Joint Center for Global Connectivity. Once the city-wide deployment strategy has been developed, the DNDO will be able to provide Federally-owned equipment to State and local agencies on a short-term basis, allowing these agencies to gain a familiarity with equipment. Eventually, the State and local agencies may purchase equipment, as well as related training, exercise, and support packages, using Federal grant funding, thus freeing up the Federally-owned equipment for use in additional engagements.

In FY 2006, the Securing the Cities initiative will select and engage candidate high-risk regions. The DNDO will purchase a limited set of equipment to be used for proof of design efforts. The DNDO will prioritize cities and begin the high-level architecture development that will provide a baseline for all State and local deployments.

Transformational Research and Development – In FY 2006, the DNDO will establish a Transformational Research and Development program to explore and develop novel or advanced concepts for nuclear detection. This research program will be conducted through three “tracks”: exploratory research, Advanced Technology Demonstrations, and academic research.

Exploratory Research – In FY 2006, the DNDO will fund exploratory research in all areas and disciplines that could have a dramatic impact on nuclear and radiological detection technology and performance. These research areas have been organized as into the following broad categories:

- innovative detection materials and concepts;
- algorithm development for components and systems;
- advanced SNM interrogation and verification; and
- physics-based phenomenology studies.

Innovative detection materials and concepts: The discovery and development of new detection materials or concepts is a major focus of DNDO exploratory research over the next five years. Significant advances in radiation detection technology could potentially impact all capability gaps in our present detection architecture, from the ubiquitous, distributed network of inexpensive radiation detectors to highly sensitive, standoff detection systems for sensing mobile threats in transit.

The mid-term goals for next-generation gamma detection technologies are challenging, but within reach over the next five years: energy resolution of better than .5% with significant improvement in overall detection efficiency. Operation at room temperature and directional acuity are highly desired.

Neutron detection goals focus on the discrimination of neutrons from background and screening sources (including photons) and those generated by the fission chain of SNM. These challenges will require energy discrimination between thermal, epithermal, and higher-energy neutrons, significantly greater processing speeds to discriminate prompt and delayed neutron signatures, the ability to reliably discriminate photons from neutrons, and directional information for standoff neutron detection.

The DNDO will solicit and fund research in the following areas: search for new detection materials (specifically scintillation materials and semiconductor materials); improve the performance of the

current leading candidates through advances in associated electronics and bonding technologies; investigate new fabrication/manufacturing techniques for producing higher purity materials at lower cost; accelerate the development of directional detection technology for both small and large application venues; and explore innovative detection concepts that directly measure the energy and direction of impinging photons and neutrons without absorbing materials.

Algorithm development for components and systems: Algorithms are needed for nearly every stage of detection technology innovation, from exploratory research, through prototype development, and to the final operational system. In research and development, physics-based models and simulations are employed to articulate and verify the critical physical properties of materials, devices, and/or integrated systems. After verifying and calibrating against experimental data, these algorithms are used to predict performance beyond the test bed, to optimize commercial design performance by varying select parameters, and to perform cost-benefit trade analysis for the defense architecture. Some of these algorithms may end up as part of deployed detection systems to process incoming data in reverse: spectral data from detectors used to discriminate radioactive isotopes; radiography data processed for image reconstruction.

In support of the detection mission, DNDO will fund algorithm development as follows: adapt and upgrade the leading Monte Carlo codes, developed by the National Laboratories over the past 50 years, for detection applications; develop new physics-based simulation codes to model detectors, devices and systems; produce the next generation of decision algorithm codes used for spectral analysis and in RIID devices.

Advanced SNM interrogation and verification: The detection and verification of shielded SNM is the one of the primary and most challenging missions of the DNDO. Advances in passive spectral detection technology – energy resolution, speed, sensitivity, cost, size – will help to increase the detection of SNM in weakly shielded enclosures, but well shielded SNM continues to present a challenge. Transmission radiography technology, such as those being developed in the CAARS program, will detect shielding and SNM of sufficient size, but will not verify the presence of SNM. Advanced concepts and component technologies are needed to detect and verify SNM at multiple application venues, including:

- alarm resolution in high throughput ports;
- air cargo at foreign ports of departure;
- vehicles or persons crossing U.S. land borders at and between ports of entry;
- boats and small ships near the U.S. coastline; and
- remote, standoff interrogation – both covert and overt – of vehicles and general aviation.

DNDO will fund research that explores new concepts, approaches and signatures that will, if successful, have a significant impact on SNM detection and verification. DNDO will continue to invest in new concepts such as the nuclear resonance fluorescence (NRF) – a new signature – that can turn an x-ray screener into an isotopic discrimination device for the verification of HEU, plutonium, shielding material, explosives, and any other contraband of interest.

Physics-based phenomenology studies: DNDO will fund studies of physics-based phenomenology to understand and exploit the limits of physics for detection and identification of nuclear and radiological materials. Specifically, in FY06, the DNDO will focus on the characterization of the “long-dwell, in-transit” radiation environment in large cargo-container ships. This type of research could lead to the

development of cost-effective technologies with unprecedented discrimination capability. These technologies could lead to, for example, the creation of a detection system that could be integrated into supply chain security systems applicable in air, land, and sea transportation. In FY 2007, the results of this study will end in a solicitation for an Advanced Technology Demonstration (ATD) of long-dwell, in-transit detection prototypes.

Advanced Technology Demonstrations – In FY 2006, the DNDO will fund 3-year prototype-development efforts for stand-off detection and imaging and for smart personal radioisotope identifiers (RIIDs) and imagers.

Stand-off detection and imaging addresses the need for the capability to locate and identify nuclear threat materials at a distance, in both land and maritime environments. Imaging techniques will be studied for sensitivity, directional accuracy, and isotope identification accuracy. The goal is to extend the range of detection to over 100 meters, potentially allowing for airborne platform applications. The DNDO will look at key existing technologies like gamma-ray imaging, advanced alarming algorithms, and sensor and data fusion techniques that may dramatically improve sensitivity and directional accuracy. This program will culminate in an advanced technology demonstration at the Rad/NucCTEC for comprehensive testing and evaluation in FY 2008.

Smart personal radioisotope identifier and imager is intended to ultimately replace the existing, ineffective radiation pager with a pocket-sized RIID that will wirelessly communicate with similar devices in the vicinity, automatically combining data to increase sensitivity and triangulate directional information. These devices must have sufficient energy resolution and sensitivity to reliably discriminate between NORM, background, and potential threats, and will be used by law enforcement, first responder, counterterrorism, and possibly intelligence agencies in routine activities and surveillance, maintaining constant vigilance at all defensive layers. This advanced technology demonstration stage will culminate in an ATD at the Rad/NucCTEC for testing and evaluation in FY 2009.

Academic Research – In FY 2006, the DNDO will solicit proposals from colleges and universities to fund DNDO Academic Research. Institutions will be encouraged to form teams with one university as the lead and “hub”. Although only one team will be competitively selected, a portion of the Academic Research funding will be used to fund academic research in institutions outside the selected team. The initial FY 2006 budget will be used to establish administrative and management functions and to begin the process of soliciting, evaluating, and selecting academic research proposals, planning and preparing workshops and symposia, educating the academia, private industry and the national/government labs on its near-term and long-term program plans and activities.

Test and Evaluation Planning and Operations –

Radiological and Nuclear Countermeasures Test and Evaluation Complex (Rad/NucCTEC) – Construction of the Rad/NucCTEC will be completed at the Nevada Test Site by November 2006. Due to its location and proximity to the Device Assembly Facility (DAF), the Rad/NucCTEC will provide the capability for high-fidelity testing of detection systems against special nuclear materials in significant quantities and in realistic configurations. This facility will provide a unique capability within the USG to bridge the gap between “bench-top testing” performed by developers and operational field-testing including pilot deployments. The Rad/NucCTEC will include appropriate capabilities to support the development, test, and evaluation of active and passive radiation detection systems.

T&E, Pilots, and Demonstrations – In FY 2006, the DNDO will execute a test and evaluation (T&E) program that includes further-developing its own T&E capabilities, as well as direct acquisition support (i.e. providing T&E for planned and deployed products such as ASP, CAARS, handheld detectors) and pilot programs:

Building T&E capabilities – In keeping with its focus on rigorous systems engineering processes, the DNDO will be developing a MTEPP that will provide administrative guidance for oversight of all T&E conducted under the auspices of the DNDO. The MTEPP establishes the planning, execution, and reporting processes and procedures that the DNDO will follow to all test and evaluation and pilot programs. It outlines the T&E management approach, the organization of the required working groups and support teams, along with their assigned responsibilities. Also included is a Milestone Review Process and corresponding documentation required at each step. The MTEPP includes a summary of resources required for the T&E efforts, including test articles, test sites, test support equipment, threat representation, models and simulations, funding and personnel requirements, and test personnel training. The MTEPP and subsequent individual Test Execution Plans will be developed and maintained within this program.

The DNDO will also develop standards and protocols in cooperation with the National Institute of Standards and Technology (NIST). A formal certification process will be developed to provide all vendors the opportunity to demonstrate compliance with DNDO performance requirements. A qualified equipment list will be developed to aid in the selection of equipment by the DHS Office of Grants and Training (formerly the Office of Domestic Preparedness).

In support of T&E activities at the Rad/NucCTEC, the DNDO will procure, develop, and maintain a supply of test articles, including critical (threat-representative) sources, simulants, and representations of naturally-occurring radiation materials. The development of these test objects will continue to improve the DNDO ability to provide highly realistic testing environments and evaluation tools to support development and acquisition programs.

The DNDO will undertake efforts to improve the ability to analyze the enormous amounts of data generated by the test programs. This will include the development of modeling tools to facilitate the analysis of test data, as well as a data quality assurance and control program.

Support to development and acquisition programs: The DNDO T&E program serves, in many ways, as a support program to the systems development and acquisition and transformational R&D programs. The T&E program provides the infrastructure and institutional experience necessary to conduct independent evaluations of developed technologies. Additionally, the T&E program provides venues for R&D and acquisition program managers to evaluate prototype systems prior to technology transitions or acquisition decisions.

Several test and evaluation series will support systems development as part of the ASP program. Developmental test and evaluation will be completed for the first and second rounds of improvement to the ASP product-family using threat-representative sources. Operational performance of the low-rate initial production ASP systems will be measured at a variety of venues, including land crossings, rail crossings, secondary inspection stations, and using mobile platforms. Pilots of ASP technology will be conducted at two domestic venues to develop appropriate CONOPs for State and local authorities, and to acquire realistic data for architectural analysis.

The DNDO T&E program will conduct a comprehensive evaluation of currently available hand-held radioisotope identifiers, backpacks and other search tools, and mobile platforms. Lessons learned as a consequence of these tests will form the basis for the research and development requirements for next-generation technology development efforts.

Because of the vastly different technical approaches to materials detection between passive detection systems such as ASP and active imaging systems under development in the CAARS program, T&E preparation for CAARS will differ considerably from previous ASP test series. The DNDO will begin preparing for test and evaluation of these active imaging systems, including the design and manufacture of threat-representative test objects, site preparation, and methods for evaluating automated image analysis software.

Test and evaluation is also being planned and will be conducted in support of the NaI crystal production program. The DNDO will enable a quality assurance and control process to ensure that crystals developed by the vendors reliably and repeatedly meet DNDO requirements and specifications.

Pilot Programs: As part of the Test and Evaluation Planning and Operations program, the DNDO will conduct the Congressionally-mandated effort to deploy radiation detection systems at highway weigh stations. The deployment effort will include thorough testing of detection and communications technologies, development of appropriate CONOPs for preventive detection and resolution of alarms, curricula for training State and local authorities in the use of the technologies and execution of the CONOPs, and the development of a communications capability for effective information sharing as well as the acquisition of realistic data for defensive architectural analysis. The DNDO will also conduct other test and evaluation efforts as needed in true operational settings (airports, maritime terminals, and along roadways and railways) in conjunction with end-users to support the development of the Nationwide nuclear detection architecture.

Red Teaming and System Assessments – In FY 2006, the DNDO will initiate planning of Red Team efforts and stand up an Adversarial Cell as part of the system assessments program, with participants from multiple Federal agencies. Plans will be developed drawing on resources such as open source reviews, behavior and technology assessments, and existing vulnerability studies. The Adversarial Cell will initiate the development of an evolving Adversary Playbook and White Cell operation to challenge deployed and proposed detection and response architectures.

Additionally, this program will identify and stand up an Exercise Opposing Forces (OPFOR) Cell with responsibility for participating in a series of Table Top Exercises and Command Post Exercises (CPX), as well as providing an on-the-ground OPFOR Cell during protocol testing and pilot program development in order to challenge assumptions and provide feedback to systems architects. The Exercise OPFOR Cell will also begin development of exercise scenarios. The overall threat objects and procedures used for both component validation and operational effectiveness testing of deployed systems will be reviewed to ensure that they accurately replicate the full range of potential threats.

In FY 2006, one active (Red Team) exercise will be conducted focusing on various aspects of the overall detection architecture. Lessons learned and gathered and archived data, including recommendations to mitigate potential vulnerabilities, will be captured and shared within DHS and

across other Federal agencies. Planning and preparation for exercising against FY 2007 pilot programs will be initiated in FY 2006.

In addition, the DNDO will spearhead the development of methodologies, required support agreements with other Federal, State and local government agencies, and Memoranda of Agreements with international partners (FY 2007) to permit the conduct of Red Team operations and OPFOR efforts to allow evaluations of the effectiveness of the outer layers of the global nuclear detection architecture.

Finally in FY 2006, the DNDO will stand up a Net Assessment Cell with initial responsibility for gathering and reviewing operational data from DHS (CBP, USCG), operational entities in other Departments, and State and local agencies to determine trends and key systems performance parameters, as defined by system engineering studies. Pilot program studies will be assessed to extract quantitative data for use in architecture development and system effectiveness studies.

Information and Analysis – The JCGC will continue its current core activities (previously conducted as the “Nuclear Assessment Program”) in assessing communicated nuclear threats and monitoring world-wide illicit trafficking in nuclear and radiological materials, and assessing illicit nuclear trafficking incidents and trends. Additionally, there will be significant emphasis on strengthening processes and enhancing the JCGC’s information infrastructure at the Homeland Security Operations Center (HSOC) to better facilitate information integration.

The JCGC will begin to define and assess the IT requirements and capabilities that will underpin the global nuclear detection system. This effort will assure the IT system will effectively collect, transmit and support reporting, identification and evaluation of relevant information and raw data from the wide range of detection activities and assets.

Additionally, the JCGC will characterize and document the nuclear/radiological detection systems currently being deployed in CONUS within various Federal, State, and local programs. This effort will culminate in a comprehensive database describing the radiation detection systems already deployed and planned to be deployed.

Support to Field Operations – The Technical Reachback (TRB) element of the Support to Field Operations program will continue to provide timely and accurate interpretation of data collected by field personnel to determine if a radiological or nuclear threat exists. TRB personnel will also assess detection data, perform trend analysis, improve existing sensor algorithms, and characterize radiation detector performance and limitations when used in the operational environment. TRB is a fully-operational, 24/7 capability.

Further, appropriate training and alarm response protocol guidance will be developed, incorporating operational end-user requirements. These services will assure that front-line law enforcement officers are appropriately trained on equipment capabilities, nuclear/radiological basics and safety, and overall awareness of routine and abnormal nuclear signatures that could be encountered in their jurisdictions.

Radiological and Nuclear Forensics and Attribution – This program is being executed in FY 2006 through the DHS S&T Radiological and Nuclear Countermeasures portfolio.

FY 2007 Plan:

Systems Architecture – The DNDO will continue to leverage the Systems Engineering Support Program to implement and institutionalize formal systems engineering principles and processes across all DNDO activities. The program will support the global architecture refinement process described above, with the Systems Engineering Master Plan being revised as necessary to keep pace with the advancing architecture.

In FY 2007, thorough requirements analyses will be performed for the second phase of next generation handheld and backpack detectors; the intended CONOPS will be documented; the results of rigorous threat-based testing will be analyzed and detector system performance specifications will be developed. Additionally, similar analyses will result in a sound understanding of requirements, operational concepts, and specifications for the DNDO's Defense of Cities Program, Pier-side Transfer Station Program, and final design of the JCGC.

In FY 2007 and continuing each year thereafter, the DNDO will perform rigorous engineering trade-off studies, modeling and simulation efforts to identify and assess major capabilities gaps that lack current technical or operational solutions. Modeling will focus on evaluations of alternative deployment strategies and mixes for plastic portals, Advanced Spectroscopic Portals (ASP), and Cargo Advanced Automated Radiography Systems (CAARS) in terms of geographic locations, impact on flow of commerce, detection probability, cost, and placement within Port of Entry footprints. Trade-off studies will focus on evaluating technical and operational constraints that are exemplified in general aviation scenarios, unattended borders and seacoasts, long dwell maritime detection options, and masking/shielding of threat materials in various cargo configurations. As the interagency responds to the implementation of the global architecture, these assessments will help the DNDO to most effectively target and accomplish its efforts in improving the global architecture, filling gaps, and prioritizing systems development, testing and acquisition.

The initial version of the global architecture, completed in FY 2006, will be further developed and refined in FY 2007. Select architecture components of particular importance to risk or cost, or which are subject to significant technical uncertainties or policy debates, will receive additional in-depth analysis, including rigorous peer review and stakeholder engagement.

In addition, feedback processes are in place to incorporate technical developments and lessons learned, and produce revised recommendations. Inputs to this process will come from ongoing RDT&E and system assessments (e.g., red teaming), as well as lessons learned from operational experience and feedback from key stakeholders (e.g. implementers and users of systems and technologies).

Because the architecture is based on risk/cost analysis methodology, and because application of this methodology to radiological and nuclear countermeasures is still relatively new, a concerted effort will be undertaken in FY 2007 to validate the employed methodology on the basis of independent peer review. Risk and economic impact methodology documents suitable for broad peer review (i.e., free of sensitive vulnerability information) will be prepared and subjected to peer review by recognized experts.

The methodology will also be made available to the Department for further risk management applications. This is consistent with DHS policy to make risk management, including decisions on radiological and nuclear matters, an integral part of homeland decision-making processes.

Systems Development – The DNDO will complete the design of several critical variants of ASP, including the SUV-based, one-sided mobile and rail configurations. Each of these variants will have undergone complete preliminary and critical design reviews, as well as production readiness reviews and be ready to enter into production.

The DNDO will derive the architecturally recommended mix of PVT, NaI and HPGe systems based upon venue-specific requirements. The ASP variant hardware configurations may implement sodium iodide, Xenon and/or germanium solutions based upon the venue-specific needs. The ASP spiral development program will provide Block-2 of the critical spectroscopy computer program.

In FY 2007, the three selected vendors will complete preliminary and critical design reviews for CAARS. Each vendor will begin to manufacture and order components, integrate subsystems and develop the prototype system. The automated 'high-z recognition software' will undergo a data driven systems development process to optimize this performance. This will require data collection at the Nevada Test Site as well as in the stream of commerce, and an associated algorithmic build-test-build process. In cooperation with CBP, the DNDO will derive a detailed deployment plan and begin site preparation and begin associated negotiations for pilot testing to be conducted in FY2008. The DNDO, in cooperation with CBP and other operating agencies, will also update the radiography CONOPS and standard operating procedures to ensure that the deployment of CAARS will be effective and not be disruptive to port operations.

The DNDO will award up to two contracts for the design, development and prototype manufacture of advanced Deployment Structures, including crane mounts and pier side transfer stations. Four of these units will be purchased for pilot deployment.

The DNDO will execute multiple contracts for the development and production of next generation handheld and man-portable systems, conduct preliminary and critical design reviews, conduct engineering development and test and enter production. Crystal manufacturing R&D will be conducted for the large lanthanum halide crystals as required for next generation handhelds. Additional R&D associated with HPGe crystals and coolers will be conducted as required.

Transformational Research and Development – In FY 2007, the Transformational Research and Development program will leverage the successes achieved in FY 2006.

Exploratory Research – Successful efforts in exploratory research will continue into FY 2007. As solutions and concepts mature, technologies will transition either into enabling component in existing ATDs or become new ATD initiatives. Successful research originating from the ARI may also transition to exploratory research or an ATD initiative.

Advanced Technology Demonstrations – In FY 2007, the DNDO will continue the ATDs begun in FY 2006, as well as initiating additional ATDs in long-dwell detection, and active SNM verification.

Long-dwell, in-transit detection prototype development will be initiated in FY 2007 after a thorough study of the radiation environment in large cargo-container ships in FY 2006 conducted under the exploratory research program. It is extremely important that this radiation environment be well characterized in order to evaluate the probability of false alarms during ocean transit – the goal is to achieve less than one false alarm per year cumulatively for all ship transits. Viable detection concepts and CONOPS will be evaluated and selected to meet this criterion, as well as keeping the cost low per

container. This ATD will leverage advances in small, efficient, directional detectors developed under the exploratory research program in innovative detection materials and concepts.

Advanced, low-dose SNM verification prototype development will start in FY 2007, leveraging the exploratory research and experiments undertaken in FY 2006. Prototype development may include hand-portable, mobile, or fixed-gantry solutions utilizing low and high-energy neutron sources, low-dose, monochromatic gamma-ray sources, and low-dose, hardened x-ray sources.

The ATD is the final stage of the DNDO transformational research and development program. A successful ATD will transition to a systems development or acquisition program if a cost-benefit advantage is found in the defense architecture. Each ATD effort is expected to last for a pre-defined period of time, usually from 2 to 5 years, depending on the maturity of the technology.

Academic Research – In FY 2007, the Academic Research budget will increase substantially to cover the academic research grants and personnel exchange programs for students and scientists to work across sectors of the R&D community.

The Academic Research program is expected to grow rapidly, nearly doubling every year until FY 2010. The academic community as a whole is expected to respond to this reliable, growing investment in nuclear related R&D by attracting more researchers and faculty from related disciplines in nuclear, particle, solid state, materials, accelerators, chemistry, plasma, astrophysics, etc, which in turn attracts more students and post-doctoral researchers. These new scientists in nuclear detection and related fields are desperately needed to generate creative, novel solutions and to replace our Nation's aging scientists in the National Laboratories and private industry.

Test and Evaluation Planning and Operations – Developmental test and evaluation will be completed for prototype next generation imaging systems using threat-representative sources. These tests will provide the vendors will the opportunity to refine hardware and image identification software. Planning and site preparation will be underway for CBP demonstrations of these initial prototypes.

Pilots of new implementations of ASP technology, such as “close-to-the-pier”, “on-the-crane”, and mobile platforms, will be underway at operational ports and other venues to develop appropriate concepts of operations.

The Rad/NucCTEC will be fully operational in FY 2007. During this first year of operation, a variety of active interrogation technologies will be tested against threat-representative sources, as well as ongoing evaluation of improved radiological and nuclear detection equipment. In cooperation with the NNSA Device Assembly Facility (DAF), DNDO will construct improved test objects based on inputs from the jointly funded (DHS/NNSA) National Labs Threat Matrix study.

Red Teaming and System Assessments – In FY 2007, the Adversarial Cell will continue to refine the Adversarial Playbook by drawing on resources and expertise across the Federal government. Completion of the open source review will determine any additional information available to prospective adversaries as new technologies and systems are implemented by DHS and other agencies. This will also serve as a metric to evaluate improvements in the control of sensitive information that may have been recommended from previous assessment results. Planning and execution of interagency protocol testing procedures, CPXs and Table Top Exercises will be conducted in parallel with active operational exercises.

The DNDO will conduct multiple active (Red Team) exercises across the entire domestic architecture, resulting in the capturing, archiving, and sharing of lessons learned with all Federal, State and local government agencies. In addition, the DNDO will continue to develop methodologies and agreements with international allies in order to improve and expand the ability to conduct Red Team operations against the outer rings of the global nuclear detection architecture.

The Exercise OPFOR Cell will continue to develop and refine the OPFOR Playbook, exercise scenarios and Table Top exercises as well as participate in US-based operational assessments.

The Net Assessment Cell will continue with on-going data mining and trend analysis across the detection and response architecture. Additionally, modeling and simulation tools will be developed as an aid in analyzing architectures and CONOPS in a virtual environment reflecting adversary behavior.

Information and Analysis – The JCGC will make significant investment in accelerating and expanding on-going, comprehensive, all-source searches for, and review of, information related to: nuclear/radiological detections and threats; nation states and terrorist groups that could be associated with radiological/nuclear terrorism; and world-wide illicit nuclear trafficking and intelligence warnings. Emphasis will be placed on documenting the results of these activities into a structured situational awareness matrix – the framework for organizing and prioritizing study activities to be conducted by JCGC analysts to address and fill key “information gaps”.

The JCGC will continue to define and assess the IT requirements and capabilities that will underpin the global nuclear detection system. This effort will assure the IT system will effectively collect, transmit and support reporting, identification and evaluation of relevant information and raw data from the wide range of detection activities and assets. This will include participation in regional pilots to determine the overall system requirements and provide operational lessons learned.

Additionally, current efforts will be accelerated and expanded to develop methods and information data-mining tools that will be used to retrieve and process large volumes of information, which will be evaluated and assessed by the JCGC analytic staff. This information will also be indexed and stored in a variety of JCGC databases for later use by the DNDO and appropriate Federal, State, and local stakeholders.

Support to Field Operations – TRB will implement a scalable technical reachback capability to support additional radiation detection deployments to State and local entities and to new Federal customers. These scalable resources will reflect further development of the cadre of alarm experts who are familiar with all deployed equipment and the radiation signatures associated with both innocent and threat material. Technical personnel who support the TRB capability will continue to be required to develop expertise through knowledge of equipment capabilities and limitations, intelligence situational awareness, and specific knowledge of end-user concepts of operations. The TRB network will include regional support groups that are capable of rapidly resolving or initiating resolution to calls made by the frontline law enforcement community. These regional support groups will be trained to respond to requests for assistance at a level that is understandable for the caller.

Through a centralized operational support Joint Requirements Board, an interface will continue to develop with the user community to facilitate the exchange of end-user requirements and lessons learned gleaned from operational pilots and deployments to refine training and alarm response protocols. These

efforts will enhance the awareness of the adequacy of the Nation's screening process and provide insights that lead to more effective systems and operational procedures.

Radiological and Nuclear Forensics and Attribution – Beginning in FY 2007, the DNDO will assume responsibility for Radiological and Nuclear Forensics and Attribution, a program previously managed by the DHS S&T Radiological and Nuclear Countermeasure portfolio. Specifically, in FY 2007, the DNDO will:

- Refine the Radiological and Nuclear Forensics and Attribution Program to enable DHS to fuse information on the potential capabilities of terrorist organizations to develop and deploy threat agents with laboratory-based forensics techniques that determine the specific source of any nuclear and radiological materials or devices ultimately employed by those groups.
- Develop new forensics techniques for rapid analysis of nuclear and radiological materials; establish a laboratory and telecommunications infrastructure with the FBI, Department of Energy, and Department of Defense to support the collection and analysis.

Program Performance Justification
(Dollars in thousands)

PPA: SYSTEMS ACQUISITION

	Perm		Amount
	Pos	FTE	
2005 Actual
2006 Revised Enacted
2007 Adjustments-to-Base	\$125,000
2007 Current Services	\$125,000
2007 Program Change	\$53,000
2007 Request	\$178,000
Total Change 2006-2007	\$178,000

The Domestic Nuclear Detection Office requests \$178,000,000 for this activity. This is an increase of \$178,000,000 over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:**Mission Description and Justification:**

Beginning in FY 2006, the DNDO assumed management responsibility for all DHS procurement and deployments of the domestic nuclear detection architecture. In FY 2006, this included only acquisition of systems to the Nation's POEs. However, beginning in FY 2007, this responsibility will expand to include the acquisition of a Federally-owned "surge" detection capacity.

The DNDO acquisition program is directly tied to robust Systems Development and Systems Engineering programs. The methodology employed in this program ensures that all acquired systems have been fully evaluated prior to any acquisition decisions, such that all systems deployed are operated in a known and efficient manner. Additionally, all deployed technologies will be accompanied by the appropriate training, exercise, and response protocols. This will ensure that all systems are operated properly, and all alarms are immediately reported to the appropriate agencies and personnel.

FY 2006 Plan:

A critical component of the DHS nuclear countermeasures architecture is a passive radiation detection portal suitable for examining cargo containers, trucks, privately-owned vehicles, mail, and bundled cargo. The primary technical challenge associated with the development of such a device is the accurate and rapid detection of threat objects, including improvised nuclear devices (INDs), special nuclear materials (SNM), and radiological dispersal devices (RDDs), with efficient discrimination of innocent radiating materials from dangerous SNM. ASP improves our ability to address the threat of RDDs, INDs, or a nuclear weapon being used by terrorists within the U.S. DNDO is implementing a comprehensive systems approach that emphasizes early detection and effective intervention capabilities at the Federal, State, and local levels, as well as post-event capabilities for remediation.

Unlike gross-counting portals, such as the first generation RPMs currently deployed by CBP, the ASP portals will use the “radiation signature” of inspected material to make a detection and discrimination decision. The ASP spectroscopic identification capability to differentiate between threat and innocent materials reduces the number of false alerts and, as such, reduces the need to “threshold down” the portal in order to balance the workload in secondary inspection. It is the intent of DNDO to deploy ASP systems in CBP primary and secondary inspection, as appropriate. ASP next-generation portals are a key component of the DNDO national nuclear detection and interdiction architecture.

The DNDO intends to award contracts for medium resolution ASP portals (based on NaI-based crystal technology) and contracts for high resolution systems (based upon high-purity germanium (HPGe) or high pressure xenon (HPXe) sensor technology).

Each of these systems provides different capability at a different price point, necessitating development of both to fulfill the requirements of the architecture. FY 2006 plans include the acquisition and deployment of 163 current generation systems for low volume ports of entry, 106 next generation ASP systems, twenty-five (25) SUV-based variants and ten (10) truck-mounted relocatable. Finally, the DNDO will acquire four (4) of the HPGe or HPXe-based systems to determine the true operational challenges involved with their installation (i.e. the need for cryogenic cooling and extremely high power requirements), as well as to investigate measures to address some these challenges.

	NUMBER TO BE ACQUIRED	SCHEMATIC REPRESENTATION
CURRENT-GENERATION PVT-BASED PORTAL MONITORS	163	
ASP FIXED PORTALS	106	
HIGH-RESOLUTION PORTAL SYSTEMS	4	
SUV-BASED ASP SYSTEMS	25	
TRUCK-MOUNTED RELOCATABLE ASP SYSTEMS	10	

The DNDO is also in discussions with NA-25 to investigate the pilot deployments of ASP systems at foreign ports through the Megaports program.

The primary component of the medium resolution ASP systems described above is the sodium iodide (NaI) detector crystal, which also accounts for a majority of the cost of an ASP system. Existing worldwide NaI production capacity will not support the full-scale production rates that the DNDO will require to complete deployments as planned. As such, the DNDO will conduct a competition in which multiple vendors will be selected to fulfill this requirement. DNDO recognizes that substantial investment will be required to capitalize industry to provide this capability. As such, DNDO intends to invest approximately \$25M in FY 2006 to FY2010 to improve crystal production capacity, and will

require a considerable matching investment on the part of the selected vendor(s). The DNDO may recoup the Government investment through cost reductions in future years resulting from a competitive environment in NaI production.

FY 2007 Plan:

The DNDO will conduct pilot deployment of the first 24 ASP Units at sites agreed to by CBP, testing their efficacy and operability. The DNDO also intends to pilot several units internationally in cooperation with the Departments of State and Energy. The DNDO will complete the environmental qualification testing and the subsequent engineering changes as required – ensuring the pilot and production ASP units can withstand the shock, vibration, temperature gradient and other environmental stresses. The DNDO, in cooperation with CBP, will install and commission the fixed and mobile ASPs ordered in FY 2006 (including the 24 pilot units) and will place orders for approximately 150 additional cargo portals, 42 SUV based systems, 30 one-sided relocatable systems, and 4 rail systems. The installation of the FY 2006 units at high volume POEs and the relocation of the RPM units previously installed at those sites to lower volume ports will constitute a quantum improvement in our Homeland Security.

	NUMBER TO BE ACQUIRED	SCHEMATIC REPRESENTATION
CURRENT-GENERATION PVT-BASED PORTAL MONITORS	0	
ASP FIXED PORTALS	150	
HIGH-RESOLUTION PORTAL SYSTEMS	4	
SUV-BASED ASP SYSTEMS	42	
TRUCK-MOUNTED RELOCATABLE ASP SYSTEMS	30	

In FY 2007, the DNDO will award contracts for increased production capacity of sodium iodide crystals, and ensure that adequate manufacturing capacity of the required high quality crystals is available. New manufacturer(s) will complete manufacturing process planning, produce first article crystals from the newly installed furnaces and crucibles, undergo qualification testing, and enter production. The DNDO will complete the financial investment in these facilities by ordering the second set of crystals as production-facility burdened prices. The DNDO will place on order all the ASP crystals required for FY 2007 production requirements to be provided as Government Furnished Equipment. Additionally, the DNDO will order 127 handheld and man-portable systems under the competitively awarded handhelds R&D and procurement contracts, for use by Customs and Border Patrol agents at and between the Nation's ports of entry.

In FY 2007, the DNDO will begin the procurement of a national nuclear detection "surge" capability, a suite of mobile and relocatable detection systems, deployable to varying locations based upon

heightened threat levels. This Federal capacity fills the gap in capabilities between State and local deployments of radiation detection equipment in routine safety and security operations and the Department of Energy's Nuclear Emergency Search Teams, responsible for locating nuclear devices based upon specific intelligence cuing. This request will provide initial funding for the procurement of these mobile detection assets, to be deployed to provide increased security in specific areas in periods of heightened alert. The DNDO will procure a number of mobile (man-portable) and relocatable (vehicle-mounted) detection assets, as well as the accompanying communications and information infrastructure. These systems will be Federally owned, and operated in conjunction with State and local agencies.

IV. Program Justification of Changes

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, Acquisition, and Operations
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Management and Administration

Strategic Goal(s) & Objective(s): 2.3
PPA: Management and Administration

Program Increase: Positions 92 FTE 92 Dollars \$25,914

Funding Profile

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)

Program Increase							92	92	\$25,914
Total Request	0	0	\$0	0	0	\$0	112	112	\$30,468

Description of Item

The requested funding will allow for the full staffing of the DNDO, as agreed to by all interagency members. Included in this is the agreement that the DNDO will assume budgetary responsibility for 66 detailed FTE.

Justification

As a new office formed in FY 2005, the DNDO has, until now, relied on funding from other DHS components, as well as interagency partners, to staff the office. As agreed to across the interagency, the DNDO is to accept budget responsibility for all detailed staff (66 FTE) beginning in FY 2007. Additionally, the DNDO will now be expected to fully contribute to all DHS shared services through the Department's Working Capital Fund (\$9,840,000 FY 2007 contribution estimated), and become administratively self-sufficient.

Impact on Performance (Relationship of Increase to Strategic Goals)

The \$25,914,000 Salaries and Expenses increase will directly improve the DNDO ability to meet Strategic Objective 2.3, "Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism, and other illegal activities." Particularly, the increase will fund the required salaries and expenses to fully staff the office.

Program Increase: Positions 0 FTE 0 Dollars \$118,234

Funding Profile

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$209,086
Program Increase							0	0	\$118,234
Total Request	0	0	\$0	0	0	\$0	0	0	\$327,320

Description of Item

The requested increase will fund new initiatives across multiple program areas within the DNDO Research, Development, and Operations program. These initiatives address gaps in the existing architecture, as identified through the DNDO-led interagency global nuclear detection architecture analysis.

Justification

The Nuclear Detection Research and Integration program increase funds initiatives across multiple DNDO Research, Development, and Operations program areas. The largest increases will impact the Systems Development, Transformational Research and Development, and Information and Analysis program areas.

The Systems Development program increase will allow for multiple integration programs to develop deployable “systems of systems” for specific operational circumstances. Examples include POE integration, defense of cities, maritime integration, and general aviation protection. Each program will determine the necessary suites of detectors, as well as the interfaces amongst the components, to provide the greatest degrees of prevention in each venue. The Securing the Cities program, for example, would examine the technical requirements needed to deploy a large number of mobile (likely man-portable) systems, as well as the communications and data infrastructures to integrate them, needed to provide a random screening capability in a major metropolitan area. The increase will also provide significant funding to the development of a “crane-mounted” or “close-to-pier” detection system that would significantly reduced the operational burdens, particularly to the flow of commerce at seaports, imposed by current detection systems.

The Systems Development program increase will also provide full year funding of the Cargo Advanced Automated Radiography System (CAARS) program, begun in mid-FY 2006. The CAARS program aims to automate radiographic image processing, as well as provide considerable improvements in the rate of radiographic inspection, striving to achieve 50% coverage within the next 5 years. These higher resolution imaging techniques developed through the CAARS program will provide the necessary data required to provide more accurate density estimation and automated image alert processing, removing the need for human operators to analyze each resulting image. This improvement would result in automated detection or dismissal within seconds, rather than the current five-minute human inspection rate, and improve throughput rates from approximately 12 containers per hour to approximately 120 containers per hour. The maximum passive sensitivity achieved by ASP, when coupled with the automated radiography achieved by CAARS provides a comprehensive solution for our manned ports of entry (POE).

The program increase to the DNDO Transformational Research and Development program area, initiated in FY 2006, will focus on advanced detection concepts likely to deliver the highest payoff improvements in detection capabilities needed to address critical capability gaps in the Nation's detection architecture, such as the direct detection of shielded SNM, as well as far greater stand-off detection capabilities to detect significant quantities of SNM at greater distances, and systems capable of detecting materials in transit to the Nation's ports, rather than once they have reached our borders. The improvements expected from the transformational research and development programs are not intended to incrementally improve deployed capabilities; rather, there improvements will fundamentally change the operational bounds of deployed systems. However, these operational concepts will require substantial increases in technical capability, only achievable by the significant and sustained funding originally requested. The requested funding will allow for the continuation of research programs begun in FY 2006, as well as the exploration of additional topics areas not funded within the initial-year programs, but still directly applicable to the DNDO mission.

The Information and Analysis program increase will provide funding to begin the acquisition and implementation of the DNDO Joint Center for Global Connectivity (JCGC). The JCGC will provide nuclear detection situational awareness and 24x7 technical reachback support to integrate nuclear detection information streams to be able to share databases related to radiation detection equipment, development, alarm history, and trend analysis, conduct data trend analysis of deployed nuclear detection to maintain required capabilities, and identify future acquisition requirements and modifications, and produce operational and actionable intelligence reports for all national support levels and integrate into globally shared data reports.

The JCGC provides a means for efficiently gathering raw data from multiple sources (portal monitoring equipment, mobile radiation detection equipment, intelligence sources, etc), analyzing and disseminating it to key decision-makers and those agencies charged with the response mission. The JCGC fills a major gap in DHS' ability to accomplish a primary aspect of its mission: protecting America from terrorist threats. The JCGC Initiative functions to collect data from regional fusion centers, which consists of data from portal monitoring equipment, including advanced spectroscopic radiation data and analysis, reliability data (where available), normal commerce flow data, state and local law enforcement information and other historic information. This fusion center information will be joined with previously completed modeling and simulation information, current intelligence from various agencies and other data which will enable the Joint staff to understand the scope of the situation and to quickly establish risks and options from a scientific perspective for advising the

President and response organizations. The JCGC will provide the best, most efficient method of creating real-time situational awareness for leaders and decision-makers.

Impact on Performance (Relationship of Increase to Strategic Goals)

The \$118,234,000 Nuclear Research and Integration increase will directly improve the DNDO ability to meet Strategic Objective 2.3, "Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism, and other illegal activities." Particularly, the increase will fund initiatives within the Systems Development, Transformational Research and Development, and Information and Analysis program areas.

**Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, Acquisition, and Operations
Justification of Program Changes**
(Dollars in Thousands)

Program Increase 3: Fixed and Mobile Detection Systems Acquisition

Strategic Goal(s) & Objective(s): 2.3
PPA: Systems Acquisition

Program Increase: Positions 0 FTE 0 Dollars \$53,000

Funding Profile

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							0	0	\$125,000
Program Increase							0	0	\$53,000
Total Request	0	0	\$0	0	0	\$0	0	0	\$178,000

Description of Item

This request will provide funding for the procurement of fixed radiation portal monitors (RPMs) at the Nation's ports of entry (POEs), as well as mobile and relocatable "surge" detection systems, deployable to varying locations based upon heightened threat levels. These systems will be Federally owned, and operated in conjunction with State and local agencies.

Justification

Beginning in FY 2006, the DNDO was given budget authority for the acquisition of RPMs, previously executed by Customs and Border Protection (CBP). Through FY 2006, the DNDO has worked with CBP to refine the original RPM deployment strategy to incorporate technical improvements made through the DNDO Advanced Spectroscopic Portal (ASP) program. Unlike gross-counting portals, such as the first generation RPMs currently deployed by CBP, the ASP portals will use the "radiation signature" of inspected material to make a detection and discrimination decision. The ASP spectroscopic identification capability to differentiate between threat and innocent materials reduces the number of false alerts and, as such, reduces the need to "threshold down" the portal in order to balance the workload in secondary inspection. It is the intent of DNDO to deploy ASP systems in CBP primary and secondary inspection, as appropriate. Approximately \$32,000,000 of this increase will fund the transition of the RPM acquisition program to include ASP system procurements.

While deployments to RPMs to POEs are vital and provide substantial opportunities for inspecting a large portion of incoming people and goods, the DNDO has long recognized the need for a multi-layered detection approach, providing for multiple detection and interdiction opportunities. This request will also provide initial funding for the procurement of mobile detection assets that can be deployed to urban areas in periods of heightened alert.

Unlike the Department of Energy's Nuclear Emergency Search Teams, the assets to be provided with this request will not be deployed based on specific threat intelligence—DOE will retain this unique responsibility. However, these specialized DOE assets are not sustainable for longer periods of heightened alert, such as that experienced by the U.S. mass transit sector following the London subway bombings of July 2005. In response to these sustained requirements, the DNDO will procure a number of mobile (man-portable) and relocatable (vehicle-mounted) detection assets, as well as the accompanying communications and information infrastructure. Approximately \$21,000,000 of this increase will fund the initial procurement of this mobile detection capability.

Impact on Performance (Relationship of Increase to Strategic Goals)

The \$53,000,000 Fixed and Mobile Detection Systems Acquisition increase will directly improve the DNDO ability to meet Strategic Objective 2.3, "Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism, and other illegal activities." Particularly, the increase will fund the procurement of fixed, mobile, and relocatable detection systems, deployable to varying locations permanently, or based upon heightened threat levels.

V. Exhibits and Other Supporting Materials

A. Justification of Proposed Legislative Language

Department of Homeland Security
Domestic Nuclear Detection Office
Justification of Proposed Changes in Research, Development, Acquisition, and Operations
Appropriation Language

For necessary expenses of the Domestic Nuclear Detection Office, including nuclear detection research, development, testing and evaluation, acquisition, operations, managements and administration, \$535,788,000, to remain available until expended, of which not to exceed \$178,000,000 is for the purchase and deployment of radiation detection equipment in accordance with the global nuclear detection architecture; and of which not to exceed \$100,000,000 is for radiological and nuclear transformational research and development.

Explanation of Changes:

No substantive changes proposed.

ADVANCED SPECTROSCOPIC PORTAL PROGRAM**1. Project Description, Justification and Scope**

The Department of Homeland Security (DHS) intends to develop and acquire a family of advanced spectroscopic medium resolution portals (based upon sodium iodide [NaI] gamma detection technology) and a family of high resolution portals (based upon gamma detection materials that have a full-width-half-maximum resolution finer than sodium iodide, to include such materials as high-pressure xenon and high-purity germanium). This technology insertion will improve the radiation detection performance of first generation Radiation Portal Monitor (RPM) systems currently being deployed at all Customs and Border Protection (CBP) ports-of-entry. DHS will continue to develop, deploy, and enhance national nuclear and radiological capabilities in an effort to better detect, report on, disrupt, and prevent attempts to import, possess, store, transport, develop, or use such devices and materials.

Covert nuclear attack is the foremost threat facing the United States and is a primary focus of the war on terror. DNDO is chartered to develop, acquire, and support the deployment and improvement of a domestic system to detect attempts to import, assemble, or transport a nuclear explosive device, fissile material, or radiological material intended for illicit use. The Advanced Spectroscopic Program (ASP) is a high-priority program in DHS and a key component of the DHS nuclear detection and interdiction architecture. ASP provides significant improvement in probability of detection of special nuclear materials (SNM). ASP has superior capability to detect U.S.- and Russian-produced shielded highly enriched uranium (HEU). ASP provides reductions in false alarm rates with automated discrimination of normally occurring radioactive materials (medical, industrial). ASP also provides a reduction in false dismissal rate (in which threat material is not identified, but is present).

A critical component of the DHS nuclear countermeasures architecture is a passive radiation detection portal suitable for examining cargo containers, trucks, privately-owned vehicles, mail, and bundled cargo. The primary technical challenge associated with the development of such a device is the accurate and rapid detection of threat objects, including improvised nuclear devices (INDs), special nuclear materials (SNM), and radiological dispersal devices (RDDs), with efficient discrimination of innocent radiating materials from dangerous SNM. ASP improves our ability to address the threat of RDDs, INDs, or a nuclear weapon being used by terrorists within the U.S. DNDO is implementing a comprehensive systems approach that emphasizes early detection and effective intervention capabilities at the Federal, State, and local levels, as well as post-event capabilities for remediation.

Unlike gross-counting portals, such as the first generation RPMs currently deployed by CBP, the ASP portals will use the "radiation signature" of inspected material to make a detection and discrimination decision. The ASP spectroscopic identification capability to differentiate between threat and innocent materials reduces the number of false alerts and, as such, reduces the need to "threshold down" the portal in order to balance the workload in secondary inspection. It is the intent of DNDO to deploy ASP systems in CBP primary and secondary inspection, as appropriate. ASP next-generation portals are a key component of the DNDO national nuclear detection and interdiction architecture.

An ASP system is typically composed of: (1) radiation sensor panels (containing sensor material and computer preprocessors), (2) deployment support structures, (3) ancillary equipment (including occupancy sensors, a Visual Identification System [VIS], and signal and data processors), (4) remote station (containing a supervisor workstation and an annunciator), and (5) optional echo computer to be used by a secondary operator. DNDO intends to compete and procure ASP systems as integrated products in complete configurations tailored to each prospective site. In the course of ASP spiral development, subsystem comparisons and evaluation will provide for best performance and reduced costs.

2. Significant Changes

No information was submitted for this Capital Investment as part of the FY 2006 Congressional Justification.

3. Project Schedule

	Fiscal Quarter and Year				Total Estimated Cost (\$000)	Total Project Cost (\$000)
	Work Initiated	Work Completed	Project Start	Project Complete		
Concept Exploration	4Q FY 2004	1Q FY 2006			\$35,000	
Engineering Development	2Q FY 2006	4Q FY 2011			\$148,100	
Production	2Q FY 2006	4Q FY 2011			\$985,270	

4. Schedule of Project Funding (Dollars in Thousands)

	Prior	FY 2005	FY 2006	FY 2007	Total
Appropriation				\$174,100	\$174,100
Obligation (actual and planned)				\$174,100	\$174,100
Expenditure (actual and planned)				\$174,100	\$174,100

Project Total	\$174,100	

6. Method of Performance

Earned Value Management System (EVMS) techniques will be used by the program office and by the system vendors.

Specific project performance measures from the Exhibit 300 are listed below.

Fiscal Year	Strategic Goal(s) Supported	Existing Baseline	Planned Performance Improvement Goal	Actual Performance Improvement Results	Planned Performance Metric	Actual Performance Metric Results
2006	Awareness	No capability	Improve capability for RPM to discriminate between innocent and other nuclear materials in cargo containers in the flow of commerce	Capability developed	Identify normally occurring radioactive material (NORM) and industrial material	NORM and industrial material identified in testing at NTS
2007	Awareness	Very limited capability	Improve capability of Human Portable Radiation Detection Systems to identify nuclear materials in cargo containers	To be reported at the end of the fiscal year	Identify radioactive material	To be reported at the end of each fiscal year

2007	Prevention	Varies by border crossing lane	Improve the rate of detection of nuclear materials (innocent alert or referral to secondary) in the flow of commerce at RPM/ASP locations	To be reported at the end of the fiscal year	Increase the average number of detections at each traffic lane by 100%	To be reported at the end of each fiscal year
2007	Prevention	Number of vehicles referred to secondary inspection in 2005	Improve the detection opportunity at Otay Mesa Cargo Lane #4, World Trade Bridge Lane #4, Blue Ware Bridge Lane #4, Peace Bridge Lane #2	To be reported at the end of the fiscal year	Double the detections with 50% resolved prior to referral to secondary	To be reported at the end of each fiscal year
2007	Prevention	Sensitivity set too high to detect threat material	Improve the screening effectiveness at RPM/ASP locations without disrupting the flow of commerce	To be reported at the end of the fiscal year	Reduce the sensitivity settings	To be reported at the end of each fiscal year
2007	Prevention	All alerts referred to secondary	Improve performance by reducing the false positive detection rate due to NORM and industrial nuclear material at RPM/ASP locations	To be reported at the end of the fiscal year	Resolve 50% of alerts without referral to secondary	To be reported at the end of each fiscal year
2007	Prevention	2006 production capacity	Improve the production capacity of sodium iodide material needed for medium resolution RPM/ASP	To be reported at the end of the fiscal year	Increase capacity by 50%	To be reported at the end of each fiscal year

2008	Awareness	Limited capability	Improve the capability to identify nuclear materials in the flow of commerce	To be reported at the end of the fiscal year	Correctly identify smaller source materials in mixed cargo	To be reported at the end of each fiscal year
2008	Awareness	Limited capability	Improve the capability to resolve alerts at RPM/ASP locations without devanning	To be reported at the end of the fiscal year	Resolve 50% of referrals to secondary inspection	To be reported at the end of each fiscal year
2008	Prevention	2007 Production Capacity	Improve the production capacity of sodium iodide material needed for medium resolution RPM/ASP	To be reported at the end of the fiscal year	Increase capacity by 100%	To be reported at the end of each fiscal year
2009	Prevention	2006 rates	Improve the capability to identify nuclear threat materials in the flow of commerce	To be reported at the end of the fiscal year	Screen 20% of inbound cargo containers with effective sensitivity settings	To be reported at the end of each fiscal year
2010	Prevention	2006 rates	Improve the capability to identify nuclear threat materials in the flow of commerce	To be reported at the end of the fiscal year	Screen 40% of inbound cargo containers with effective sensitivity settings	To be reported at the end of each fiscal year
2011	Prevention	2006 rates	Improve the capability to identify nuclear threat materials in the flow of commerce	To be reported at the end of the fiscal year	Screen 90% of inbound cargo containers with effective sensitivity settings	To be reported at the end of each fiscal year

9. Compliance with applicable Public Laws, Regulations, Standards and Executive Orders

The Advanced Spectroscopic Portal (ASP) Program is compliant with all applicable laws, regulations, standard, and executive orders.

CARGO ADVANCED AUTOMATED RADIOGRAPHY SYSTEMS PROGRAM**1. Project Description, Justification and Scope**

While spectroscopic portals will provide a next generation capability to passively detect unshielded or lightly shielded nuclear materials, no passive system can detect nuclear materials that are completely shielded. Current radiography systems also lack the ability to detect shielded special nuclear materials. These radiography devices, similar to one dimensional x-ray devices used in a doctor's office, do not provide the capability to distinguish between innocent materials such as steel, and aluminum; shielding materials such as lead; and threat materials such as uranium or plutonium. In addition, current radiography devices rely heavily upon operator actions to interpret the image. Each image might take several minutes to analyze. Such a labor intensive process negates the practicality of very high throughput radiographic inspection. The Cargo Advanced Automated Radiography System (CAARS) will reduce the vulnerability of the United States by addressing these shortfalls. It will scan cargo containers or other conveyances of interest and provide an automated estimation of threat. The implemented technology will distinguish between low density non-threat materials such as aluminum and steel, and higher density materials such as lead, uranium or plutonium. CAARS will also be capable of the detection of traditional contraband such as high explosives and drugs, but may not do so with the same level of automation. Search for traditional contraband will continue to require operator image analysis.

Unlike the ASP program, that was able to leverage existing deployment structures and agreements, the CAARS Program must address deployment structures as part of the development process. That is, the deployment of CAARS to land and sea-ports may require fixed, gantry, mobile and/or secondary crane systems. Thus, the CAARS Acquisition Plan provides for the execution of necessary contracts with radiography providers as well as container terminal operators to design and deliver necessary CAARS infrastructure or modifications.

Thus, the DHS goal of 100% physical screening of all cargo containers for radiological and nuclear threat objects can only be attained through deployment of both passive (ASP) and radiographic (CAARS) detection systems to screen all cargo entering the United States. The goal to achieve 100% national coverage of radiographic screening with CAARS will be accomplished incrementally from FY08-FY12 as follows: 1) In FY08, approximately 4% of the total number of CAARS production systems will be deployed; 2) In FY09 approximately 18%; 3) In FY10 approximately 37%; 4) in FY11 approximately 60%; and 5) In FY12 100% of all CAARS production units will be deployed, resulting in the capability to conduct 100% radiographic screening of all cargo containers entering the United States.

In early FY 2006, DHS intends to issue an RFP, and to subsequently select up to three vendors to conduct an 18-24 month Concept and Technology Development phase, followed by a 2 month Developmental Test and Evaluation (DT&E) Phase. The DT&E includes developmental data collection against a variety of highly dense material (shielded and unshielded) in empty cargo containers and containers with various types of cargo. A performance-focused DT&E program will be conducted at the Nevada Test Site (NTS) at the Radiological and Nuclear Countermeasures Test and Evaluation Complex (Rad/NucCTEC). Based on the results of the DT&E, DHS intends to release a subsequent RFP in the 3rd Quarter of FY07 to down select to up to one vendor and award a contract in FY08 for Engineering Development, Pilot Deployment and Operational Test and Evaluation (OT&E), and Low Rate Initial Production (LRIP, Spiral Development and Full Rate production. DNDO, in cooperation with container terminal operators, will contract for and fund the delivery of radiography

DNDO - 48

facilities or modifications suitable for CAARS Pilot deployment.

2. Significant Changes

Full Time Equivalents		---	---	112	112

Note: FY 2006 Revised Enacted amounts were included in the FY 2006 DHS Science and Technology Appropriations. This request includes these Appropriations as transfers to the DNDO in FY 2007.

PPA Mission Statement

The Management and Administration request provides for the execution of salaries, benefits, and expenses related to 112 FTE.

As a jointly-staffed office, the DNDO staff is made up of approximately 66 interagency detailees, augmenting the approximately 46 DNDO Federal staff members. Prior to FY 2007, these detailees were provided by the parent organization on a non-reimbursable basis. However, beginning in FY 2007, the DNDO has agreed to begin to reimburse parent organizations for all detailed staff. Additionally, the staff of the DNDO is expected to continue to grow to the full complement of 106 FTE (DNDO employees and detailees) throughout FY 2007, through continued hiring of DNDO employees.

Additionally, the Management and Administration request includes all DNDO rent payments and contributions to the DHS Working Capital Fund.

Summary Justification and Explanation of Changes

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Salaries and Benefits	\$0	\$0	\$17,202	\$17,202

Salaries and Benefits includes costs for 106 FTEs. The FY 2007 request includes increases of \$14,093,000 in program changes and \$3,109,000 in adjustments to base, including transfers from DHS S&T.

2235

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Travel	\$0	\$0	\$210	\$210

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2007 request includes an increase of \$210,000 in adjustments to base (transfers from DHS S&T) and program increases.

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
GSA rent	\$0	\$0	\$3,000	\$3,000

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2007 request includes increases of \$3,000,000 in adjustments to base (transfers from DHS S&T) and program increases.

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Other Services	\$0	\$0	\$5,590	\$5,590

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2007 request includes increases of \$5,590,000 in adjustments to base (transfers from DHS S&T) and program increases.

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Operation & Maintenance of equipment	\$0	\$0	\$4,258	\$4,258

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2007 request includes increases of \$4,258,000 in adjustments to base (transfers from DHS S&T) and program increases.

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Supplies & materials	\$0	\$0	\$208	\$208

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2007 request includes increases \$208,000 in adjustments to base (transfers from DHS S&T) and program increases.

PPA Mission Statement

Because no single detection layer can prevent the illicit importation of nuclear or radiological material, partnerships across Federal, State and local government agencies and the private sector are critical in creating a well coordinated, layered defense. To meet this need, the DNDO is responsible for developing the overall global detection architecture, with the significant involvement of all relevant Federal agencies and State and local stakeholders. The DNDO will assess and link existing programs, in addition to initiating new programs. This approach will ensure that architecture deployments proceed as part of a unified prevention, detection, and interdiction strategy. This strategy is based on defensible and measurable assessments of the effectiveness of specific system components. The resulting architecture will then be steadily improved by developing better detection technologies, real-time reporting of detection alarms, and rapid and effective responses to real threats.

The architecture also provides a clear roadmap for all DNDO activities, be it research, development, acquisition, or operations. Outcomes from DNDO programs will address gaps identified by the architecture analysis. This ensures that DNDO programs are firmly grounded in operational needs.

The DNDO has the lead responsibility for conducting the necessary research, development, test, and evaluation (RDT&E) to implement the proposed domestic nuclear detection system. In this regard, the DNDO is initiating several major technology development programs to meet immediate operational requirements. This includes programs in passive spectroscopic portal systems, advanced radiography imaging systems, and advanced handheld, backpack, and mobile detection systems. A major tenet of these development programs is an emphasis on high-fidelity test and evaluation as well as user-based operational testing, followed by rigorous red team assessments of deployed systems. Furthermore, the DNDO will provide significant and sustained funding to ensure that the National Laboratories, the private sector, and academia are devoting the best minds to the advancement of detection technologies.

While technology is a critical tool in combating terrorism, the nuclear threat cannot be effectively overcome by technology alone. Accordingly, the DNDO has initiated significant efforts to ensure that the right people and infrastructure are in place to develop a fully-integrated operating environment. Key to this integration is the ability to fuse detection data and intelligence assessments in a near real-time environment to maintain situational awareness. This requires that the DNDO maintain a close, working relationship with the Intelligence Community. This integrated approach to detection and information analysis will ultimately provide substantial improvements in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of mission success.

Developing a fully-integrated operating environment extends beyond establishing information sharing and analysis capabilities. Information can only be utilized effectively if it is shared in a timely manner with the appropriate personnel, based on established protocols. To facilitate this process, all detection equipment deployed using DNDO resources will be accompanied by thorough training and exercise materials and established response protocols for resolving alarms.

Summary Justification and Explanation of Changes

	2005 Actual	2006 Rev. Enacted	2007 Request	2006 - 2007 Change
Advisory and Assistance Services	\$0	\$0	\$19,900	\$19,900

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2007 request includes an increase of \$19,900,000 in adjustments to base (transfers from DHS S&T) and program increases.

	2005 Actual	2006 Rev. Enacted	2007 Request	2006 - 2007 Change
Operation & maintenance of facilities	\$0	\$0	\$7,000	\$7,000

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2007 request includes an increase of \$7,000,000 in program increases to fund the operations of the Radiological and Nuclear Countermeasures Test and Evaluation Complex.

	2005 Actual	2006 Rev. Enacted	2007 Request	2006 - 2007 Change
Research and Development	\$0	\$0	\$300,420	\$300,420

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2007 request includes an increase of \$53,768,000 due to program changes and \$246,652,000 in adjustments to base (transfers from DHS S&T) and program increases.

Department of Homeland Security
Domestic Nuclear Detection Office
Research, Development, Acquisition, and Operations
Systems Acquisition
Funding Schedule
(Dollars in Thousands)

PPA: Systems Acquisition		2005	2006	2007	2006 to 2007
		Actual	Rev. Enacted	Request	Change
Object Classes:					
25.3	Purchase from Govt. Accts.	---	---	50,340	50,340
31.0	Equipment	---	---	127,660	127,660
Total, Systems Acquisition		---	---	\$178,000	\$178,000
Full Time Equivalents		---	---	---	---

Note: FY 2006 Revised Enacted amounts were included in the FY 2006 DHS Science and Technology Appropriations. This request includes these Appropriations as transfers to the DNDO in FY 2007.

PPA Mission Statement

Beginning in FY 2006, the DNDO assumed management responsibility for all DHS procurement and deployments of the domestic nuclear detection architecture. In FY 2006, this included only acquisition of systems to the Nation's POEs. However, beginning in FY 2007, this responsibility will expand to include the acquisition of a Federally-owned "surge" detection capacity.

The DNDO acquisition program is directly tied to robust Systems Development and Systems Engineering programs. The methodology employed in this program ensures that all acquired systems have been fully evaluated prior to any acquisition decisions, such that all systems deployed are operated in a known and efficient manner. Additionally, all deployed technologies will be accompanied by the appropriate training, exercise, and response protocols. This will ensure that all systems are operated properly, and all alarms are immediately reported to the appropriate agencies and personnel.

Summary Justification and Explanation of Changes

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Purchase from Government Accounts	\$0	\$0	\$50,340	\$50,340

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2007 request includes increases of \$50,340,000 in adjustments to base (transfers from DHS S&T) and program increases.

	2005	2006	2007	2006 - 2007
	Actual	Rev. Enacted	Request	Change
Equipment	\$0	\$0	\$127,660	\$127,660

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2007 request includes increases of \$21,000,000 in program changes to fund the procurement of mobile detection assets and \$106,660,000 in adjustments to base (transfers from DHS S&T) and program increases.

A. Mission and Description of Domestic Nuclear Detection Office (DNDO)

Key to the success of the Department of Homeland Security is improving the Department's ability to mitigate risks across the entire threat spectrum. In recognition of the catastrophic risk posed by the use of a nuclear weapon within the United States, the Department has integrated all nuclear detection research, development, test, evaluation, acquisition, and operational support in a single office. To this end, the Domestic Nuclear Detection Office will develop the global nuclear detection architecture, and acquire and support the deployment of the domestic detection system to detect and report attempts to import or transport a nuclear device or fissile or radiological material intended for illicit use.

The DNDO will:

- Develop the global detection architecture and ensure linkages across Federal, State, and local agencies;
- Create a well-integrated detection and reporting system for interdicting nuclear and radiological materials, both domestically and internationally;
- Enhance current detection capabilities to improve probability of detection and interdiction by integrating and deploying current technologies, continually improving these technologies through near-term enhancements and transformational research and development, and expanding detection capabilities at the State and local levels; and
- Establish standards, response protocols, and training across the Federal, State, and local levels to ensure that detection leads to timely response actions.

The DNDO has the primary responsibility within the Department of Homeland Security to integrate efforts across the Department in combating the threat of nuclear attack. Equally importantly, the DNDO is the lead Departmental representative for all interagency activities to coordinate the U.S. Government (USG) nuclear defense posture. To meet this diverse mission, the DNDO is jointly-staffed, with representatives from the Department of Defense (DoD), Department of Energy (DOE), Department of Justice's (DOJ) Federal Bureau of Investigation (FBI), the State Department, and the Nuclear Regulatory Commission (NRC), as well as DHS components, including the Science and Technology Directorate, U.S. Customs and Border Protection, the Transportation Safety Administration, and the U.S. Coast Guard. The five major subdivisions of the DNDO are the Office of Systems Engineering (OSE), Office of Systems Development and Acquisition (OSDA), Office of Transformational Research and Development (OTRD), Office of Assessments (OA), and Office of Operations Support (OOS). Each of these subdivisions performs a unique and critical role within the DNDO.

The DNDO implements the technology development cycle across all of the subdivisions. The cornerstone of all effective systems development and deployment efforts must be a well-defined systems architecture, implemented according to clear systems engineering practices; OSE performs this critical initial work. Technology solutions to meet the emerging requirements from these systems analyses are developed within two subdivisions: OSDA and OTRD. OSDA pursues near-term, operationally-driven technology development programs, resulting in fully-tested, deployable systems within three years of the conclusion of concept exploration. OTRD, concurrently, executes the long-range, higher risk research programs that are likely to deliver the highest payoff improvements in detection capabilities needed to address critical capability gaps in the Nation's detection architecture. The research, development, and acquisition programs executed by these two subdivisions are anchored by an independent assessment of technologies, conducted by OA, as

DNDO-1

they are developed, deployed, and operated. Finally, OOS must ensure that the developed technologies are deployed into an environment that is informed by the Nation's intelligence, counterterrorism, and law enforcement communities and operated according to standardized training and response protocols.

B. Major Activities and Key Strategic Issues

No single detection layer alone can prevent the importation of nuclear or radiological material with the intent to harm the Nation. Therefore, partnership across government agencies and the private sector is absolutely critical in creating a well coordinated, robust layered defense with built-in redundancies. To meet this need, the DNDO is responsible for developing the overall global detection architecture, with the significant involvement of all relevant Federal agencies. This architecture will assess and link existing programs, as well as potentially initiate new programs, to ensure that deployments proceed according to as complete of a prevention and detection strategy as possible. This strategy must be based on defensible and measurable assessments of the effectiveness of specific system components of that strategy for improving homeland security. The resulting architecture must then be steadily improved by developing better detection technologies, real-time reporting of detections of threatening materials, and effective responses to real threats.

As the primary component within the Department responsible for addressing the threat of a nuclear attack, the DNDO has sole responsibility for the research, development, test, and evaluation (RDT&E) necessary to implement the proposed domestic detection system. In this regard, the DNDO is initiating several major technology development programs to meet immediate operational requirements. These include programs in passive spectroscopic portal systems, advanced radiography imaging systems, and advanced handheld, backpack, and mobile detection systems. A major element of these development programs is the focus on high-fidelity test and evaluation as well as user-in-the-loop operational testing. The transformational research and development program represents an additional major initiative to provide significant and sustained funding to ensure that the National Laboratories, the private sector, and academia are devoting the best and brightest minds to pushing the state-of-the-art in detection technologies through innovative approaches.

While technology is a critical tool to combat terrorism, the nuclear threat is not one that can be effectively overcome by technology alone. Accordingly, while the DNDO has initiated major programs to develop and acquire technologies, significant efforts have also been undertaken to ensure that the people and infrastructure required are available to develop a fully integrated operating environment. Key to this integration is the ability to fuse detection data and intelligence assessments in a near real-time environment to maintain an overall system and situational awareness. This requires that the DNDO closely interact with the Intelligence Community as a developer of intelligence requirements and consumer of intelligence products; this integrated approach to detection and information analysis will ultimately provide substantial improvement in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of mission success.

C. Resources Requested and Performance Impact

The proposed President's Budget of \$535,788,000 will maintain ongoing activities to develop the global nuclear detection architecture, and acquire and support the deployment of the domestic detection system to detect and report attempts to import or transport a nuclear device or fissile or

DNDO-2

radiological material intended for illicit use. The DNDO will continue to support the Department's strategic mission and goals by serving as the primary organization within the Department to integrate efforts across DHS in combating the threat of nuclear attack, including all research, development, test, and evaluation of nuclear detection systems, as well as the acquisition and operational support of the domestic nuclear detection system.

The DNDO had no activities included in current or past Office of Management and Budget (OMB) Performance Assessment Rating Tool (PART) reviews.

D. How DNDO Programs and Their Performance Goals Align to and Support the DHS Strategic Plan Objectives.

The following list of DNDO programs, with their performance goals, are followed by the DHS strategic objective they support.

Systems Engineering and Architecture program performance goal – Develop the systems architecture, conduct all associated systems engineering, and develop technology roadmaps for risk areas in nuclear detection.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Systems Development and Acquisition program performance goal – Incrementally design, develop, acquire, and support the deployment of a system capable of rapid and high-reliability detection and identification of special nuclear material with out restriction to commerce.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Transformational Research and Development program performance goal – Develop the future nuclear detection technologies that will be capable of detecting all nuclear material entering the United States Homeland.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Assessments program performance goal – Develop the tools and methodology for and to assess the Nation's domestic nuclear detection capabilities through a combination of developmental and operational test and evaluation, as well as active red-teaming exercises.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Operations Support program performance goal – Establish and maintain a real-time situational awareness and support capability for the national nuclear detection architecture, including information analysis, technical reachback, and the development of training and operational response protocols.

2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

Radiological and Nuclear Forensics and Attribution program performance goal – Provide the Nation with the ability to determine the origin and method of nuclear or radiological attack for the purpose of prosecution or other U.S. Government action.

DNDO-3

- 2.3 Provide operational end users with the technology and capabilities to detect and prevent terrorist attacks, means of terrorism and other illegal activities.

E. Performance Based Budget Highlights by Program

For each FYHSP program, the performance goal, performance measure/s, budget including allocation of non-programmatic overhead, and FTE are:

Performance Goal: Develop the systems architecture, conduct all associated systems engineering, and develop technology roadmaps for risk areas in nuclear detection.						
Measure: Number of Architecture layers defined.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	9	N/A
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Percentage of Architecture layers assessed.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	22%
	Actual	N/A	N/A	N/A	N/A	N/A
Program: Systems Engineering and Architecture	\$ Thousands	N/A	N/A	N/A	\$20,129	\$30,158
	FTE	N/A	N/A	N/A	3	17

Performance Goal: Incrementally design, develop, acquire, and support the deployment of a system capable of rapid and high-reliability detection and identification of special nuclear material with out restriction to commerce.						
Measure: Number of Cargo Advanced Automated Radiography Systems acquired.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	2 prototypes
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Number of individual Urban Area Security Designs prepared for the Securing the Cities Program.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	1
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Number of multi agency working group program reviews held for the Securing the Cities Program.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	3	6
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Number of next generation detection systems acquired.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	112	155
	Actual	N/A	N/A	N/A	N/A	N/A
Program: Systems Development and Acquisition	\$ Thousands	N/A	N/A	N/A	\$186,802	\$293,158
	FTE	N/A	N/A	N/A	3	22

DNDO-4

Performance Goal: Develop the future nuclear detection technologies that will be capable of detecting all nuclear material entering the United States Homeland.						
Measure: Number of advanced detection technologies successfully demonstrated.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	1
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Percent of proposals awarded.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	3%	6%
	Actual	N/A	N/A	N/A	N/A	N/A
Program: Transformational Research and Development	\$ Thousands	N/A	N/A	N/A	\$56,955	\$102,519
	FTE	N/A	N/A	N/A	2	9

Performance Goal: Develop the tools and methodology for and to assess the Nation's domestic nuclear detection capabilities through a combination of developmental and operational test and evaluation, as well as active red-teaming exercises.						
Measure: Number of Red Teaming exercises conducted.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	1
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Number of Net Assessments performed.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	1
	Actual	N/A	N/A	N/A	N/A	N/A
Measure: Number of tests conducted annually to assess system capability.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	2	2
	Actual	N/A	N/A	N/A	N/A	N/A
Program: Assessments	\$ Thousands	N/A	N/A	N/A	\$26,668	\$38,198
	FTE	N/A	N/A	N/A	3	15

Performance Goal: Establish and maintain a real-time situational awareness and support capability for the national nuclear detection architecture, including information analysis, technical reachback, and the development of training and operational response protocols.						
Measure: Number of personnel trained in radiological and nuclear preventive detection skills.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	300	1,200
	Actual	N/A	N/A	N/A	N/A	N/A
Program: Operations Support	\$ Thousands	N/A	N/A	N/A	\$26,838	\$54,055
	FTE	N/A	N/A	N/A	3	43

Performance Goal: Provide the Nation with the ability to determine the origin and method of nuclear or radiological attack for the purpose of prosecution or other U.S. Government action.						
Measure: New Program for FY 2007; Measure to be developed.	Fiscal Year	FY2003	FY2004	FY2005	FY2006	FY2007
	Target	N/A	N/A	N/A	N/A	N/A
	Actual	N/A	N/A	N/A	N/A	N/A
Program: Radiological and Nuclear Forensics and Attribution	\$ Thousands	N/A	N/A	N/A	N/A	\$17,700
	FTE	N/A	N/A	N/A	N/A	6

* The Preparedness Directorate did not exist prior to FY 2006. For FY 2005, the funding amounts are provided for those organizations/programs that had comparable FY 2005 funding levels. Please see the Department Overview section of the Budget for FY 2005 Actuals from the legacy agencies of BTS, IAP, and OSLGCP.

iii. Status of Congressionally Requested Studies and Reports

**Department of Homeland Security
Preparedness Directorate**

Status of Congressionally Requested Studies, Reports, and Evaluations

1. 1Q FY06 Protective Security Field Personnel Report: House Report 109-79, page 106 directs the Committee the continuation of the quarterly report summarizing the status of the implementation of the PSA and FSD programs, including the number and locations of field personnel, the number of site assistance visits, buffer zone protection plans, and site verification and assistance visits that have been completed. Target response to Committee March 14, 2006.
2. Comprehensive Review High Value Sectors: House Report 109-79, page 106, directs IAP to provide a report (classified if necessary) on the progress of the Comprehensive Review including progress to date, a summary of the findings, action plans for addressing vulnerabilities (especially spent nuclear fuel storage), and a plan for expansion to other high value sectors. Target response to Committee March 24, 2006.
3. Chemical Sector Security Requirements: Conference Report 109-241, page 34 directs a report on the resources needed to implement mandatory security requirements for the Nation's chemical sector and to create a system for auditing and ensuring compliance with the security standards. The report should also include a description of the security requirements and any reasons why the requirements should differ from those already in place for chemical facilities that operate in a port zone. Target response to Committee March 24, 2006.
4. National Center for Critical Information Processing and Storage (NCCIPS): Conference Report 109-241, Senate Report 109-83, pages 71 & 84 directs a report, no later than February 10, 2006, on the progress of further developing NCCIPS. Target response to Committee March 24, 2006.
5. Catastrophic Planning: Conference Report 109-241, page 68 directs the Secretary to report on the status of catastrophic planning, including mass evacuation planning in all 50 states and the 75 largest urban areas by February 10, 2006. The report should include certifications from each state and urban area as to the exact status of plans for evacuations of entire metropolitan areas in the state and the entire state, the dates such plans were last updated, the date exercises were last conducted using the plans, and plans for sustenance of evacuees. Target response to Committee March 24, 2006.
6. 2Q FY06 Protective Security Field Personnel Report: House Report 109-79, page 106 directs the Committee therefore directs the continuation of the quarterly report summarizing the status of the implementation of the PSA and FSD programs, including the

PREP - iii

- number and locations of field personnel, the number of site assistance visits, buffer zone protection plans, and site verification and assistance visits that have been completed. These reports shall be provided no later than 30 days after the end of each quarter. Target response to April 30, 2006.
- 7: 3Q FY06 Protective Security Field Personnel Report: House Report 109-79, page 106 directs the Committee the continuation of the quarterly report summarizing the status of the implementation of the PSA and FSD programs, including the number and locations of field personnel, the number of site assistance visits, buffer zone protection plans, and site verification and assistance visits that have been completed. These reports should be provided no later than 30 days after the end of each quarter. Target response to Committee July 30, 2006.
8. 4Q FY06 Protective Security Field Personnel Report: House Report 109-79, page 106 directs the Committee the continuation of the quarterly report summarizing the status of the implementation of the PSA and FSD programs, including the number and locations of field personnel, the number of site assistance visits, buffer zone protection plans, and site verification and assistance visits that have been completed. These reports shall be provided no later than 30 days after the end of each quarter. Target response to Committee October 30, 2006.
9. Rail and Transit Security: Conference Report 109-241, House Report 109-79, pages 66 & 81, the Committee is concerned by a recent ODP risk assessment that highlights the need for redundant transit operations control abilities in the national capital region to maintain Federal government continuity of operations. The Committee directs ODP to submit a report no later than February 10, 2006, on the steps they may take to ensure that this deficiency is addressed. Target response to Committee March 24, 2006.
10. Commercial Equipment Direct Assistance Program (CEDAP): Conference Report 109-79, page 82 directs the Committee a report on any proposed changes to the program. The report shall also include a summary of current and proposed technologies, feedback received from recipients, and how ODP coordinates these awards with State and local governments and their homeland security strategies. Target response to Committee March 24, 2006.
11. Analysis of Training Backlog: House Report 109-79, page 83 directs ODP to comprehensively assess this training backlog and whether providing states and localities with funding targeted to establishing regional first responder training centers will help meet these needs and provide a report on their findings. Target response to Committee March 24, 2006.
12. Grants Management System: House Report 109-79, page 86 directs ODP to provide a report on the requirements, feasibility, and costs of an automated grants management system for the States. Target response to Committee March 24, 2006.
13. Authorized Equipment List: Conference Report 109-79, page 86 directs ODP to review this procedure and provide a report, no later than January 16, 2006, on the benefits and detriments to allowing previous year grant funds to be used for current authorized equipment purchases. Target response to Committee March 24, 2006.

PREP - iv

14. Decontamination Rapid Response Capability: Conference Report 109-241, page 69 directs ODP, in consultation with S&T, the Environmental Protection Agency, and other relevant Federal agencies, to report, not later than February 10, 2006, on the feasibility and plan for establishing a regionally based, pre-positioned rapid response capability for the decontamination of biological and chemical agents based on technologies that meet the decontamination standards for those agents. Target response to Committee March 24, 2006.
15. Open Grants: Conference Report 109-241, page 65 directs the Department to report, by February 10, 2006, on the status of all open grants made prior to fiscal year 2003, including the specific reasons why the grant dollars have not yet been expended. Further, the report should include recommendations on actions being taken to ensure grant funds are spent in a timely manner and include an update on the execution of recommendations of the Task Force on State and Local Homeland Security Funding Report, dated June 2004. Target response to Committee March 24, 2006.
16. Survey of State & Local Government Emergency Officials (interim report): Conference Report 109-241, Senate Bill 2360 EAS, pages 66 & 52 directs the Secretary shall submit an interim report to the Committees on Appropriations of the Senate and the House, the Committee on Homeland Security and Governmental Affairs of the Senate, and the Committee on Homeland Security of the House of Representatives on the specific design of the survey. Target response to Committee June 30, 2006.
17. Survey of State & Local Government Emergency Officials (final report): Conference Report 109-241, Senate Bill 2360 EAS, pages 66 & 52 directs the Secretary of Homeland Security shall submit a report to the Committees on Appropriations of the Senate and the House of Representatives, the Committee on Homeland Security and Governmental Affairs of the Senate, and the Committee on Homeland Security of the House of Representatives that includes—(1) the results of the survey under subsection (c); and (2) a plan to implement changes to address problems identified in the survey. In preparing the report under subsection (a), the Secretary of Homeland Security shall conduct a survey of State and local government emergency officials that— (1) involve enough respondents to get an adequate, representational response from police, fire, medical, and emergency planners on the regional, State, county, and municipal levels, and other State and local homeland security officials as determined by the Secretary; and (2) identifies problems relating to the effectiveness and user-friendliness of programs in which the Department of Homeland Security interacts with State and local officials, including grant management, intelligence sharing, training, incident management, regional coordination, critical infrastructure prioritization, and long-term homeland security planning. Target response to Committee September 30, 2006.
18. Grant Fund Purchases: Conference Report 10-9241, Senate Report 109-83, pages 70 & 69 directs Senate report language on the preparedness of local fire departments; however, the report shall be provided by March 1, 2007, instead of February 18, 2006. [Senate language directs a report to the Committee detailing what State and local governments have purchased with fiscal year 2005 homeland security State and local assistance grants; whether these expenditures have complied with State homeland security plans; and how homeland security has been enhanced by such expenditures.] Target response to Committee March 01, 2007.

PREP - V

19. National Disaster Medical System (NDMS): House Report 109-359, Supplemental to HR 109-359 directs that Chief Medical Officer provide a report to the House and Senate Committees on Appropriations by April 30, 2006, outlining the goals of NDMS, the ability of the current program to meet these goals, the resources (people, training, and funding) required to maintain a system design to rapidly meet nationwide disaster medical needs, and the appropriate roles of DHS and the Department of Health and Human Services in the oversight and management of this critical program. Target response to Committee April 30, 2006.
20. National Strategy for Chemical Facility Security: Conference Report 109-241, page 71 directs the Department to complete a national security strategy for the chemical sector by February 10, 2006. Target response to Committee March 24, 2006.

BUDGET REQUEST AND SUPPORTING INFORMATION
--

PREPAREDNESS DIRECTORATE
Office of the Under Secretary Preparedness

I. Appropriation Overview

In 2005, after a systematic evaluation of the Department's operations, policies and structure, DHS realigned its organizational structure. Central to this reorganization was the establishment of the Preparedness Directorate intended to enhance coordination of preparedness and increase overall preparedness, particularly for catastrophic events. All of the Department's existing preparedness efforts – including identifying, assessing and evaluating risk, and then planning coordinating, training, exercising and funding activities to reduce those risks – are now consolidated into a single Directorate led by the Under Secretary for Preparedness.

The Preparedness Directorate lead by the Under Secretary for Preparedness (OUS) unifies preparedness activities among the DHS organizations, with other federal agencies and with the state, local, tribal governments and other stakeholders. The OUS Preparedness leads and manages the resources and activities of seven major Appropriations, including Office of the Under Secretary Preparedness (OUS), State and Local Programs (SLP), Firefighter Assistance Grants (AFG), Radiological Emergency Preparedness Program (REPP), U.S. Fire Administration (USFA), Infrastructure Protection and Information Security (IPIS), and Biodefense Countermeasures. These Programs lead preparedness efforts for natural disasters as well as chemical, nuclear, biological, radiological, and explosive attacks or accidents.

A. Mission Statement for Office of the Under Secretary Preparedness Appropriation

The Office of the Under Secretary Preparedness is the Department and U.S. Government's focal point for building our Nation's preparedness to defend and secure the United States of America from terrorist attack, and to respond to and recover from attacks, major disasters, and other emergencies.

B. Budget Activities:

This justification specifically addresses the Office of the Under Secretary Preparedness Appropriation, which includes the following program activities: Office of the Under Secretary (OUS), National Capitol Region Coordination (NCRC), Chief Medical Officer (CMO), and National Preparedness Integration Program (NPIP).

Office of the Under Secretary (OUS):

The Office of the Under Secretary for Preparedness oversees and directs all activities of the Directorate, coordinates preparedness activities throughout the Department, and serves as an advocate for preparedness across all governmental sectors, preparedness stakeholders, and citizens.

Office of National Capital Region Coordination (NCRC):

The Office of National Capital Region Coordination (NCRC) oversees and coordinates federal programs for and relationships with state, local, and regional authorities in the National Capital Region

(NCR). NCRC also serves as a principal on the NCR Senior Policy Group (SPG), a decision-making and policy entity comprised of the senior direct reports to the Secretary of Homeland Security, the Governors of Maryland and Virginia, and the Mayor of the District of Columbia; and Chairs the Joint Federal Committee, which coordinates activities across all three branches of the Federal government.

Chief Medical Office (CMO):

The CMO ensures internal and external coordination of all medical preparedness activities of the Department; serves as the Secretary's principal advisor on medical issues; and serves as the Department's primary point of contact for external entities on medical preparedness issues.

National Preparedness Integration Program (NPIP)

NPIP recognizes the capabilities and strengths of existing systems and personnel from all levels of government and responders: NPIP will design and realign mechanisms and integrate resources to improve the state of readiness nationwide. This includes specific efforts to align preparedness planning for federal, state, and local command and control processes; improve catastrophic planning effort; enhance communication systems available in an emergency; harmonize medical coordination across all levels of government and provider systems; and encourage and implement innovative ideas and methods for preparedness, as a culture, across the Nation.

C. Budget Request Summary:

Office of the Under Secretary Preparedness Appropriation

This appropriation request continues prior year programs for the Office of the Under Secretary, the Office of National Capitol Region Coordination, and the Chief Medical Officer; in addition, new funding is requested for the National Preparedness Integration Program The FY 2006 revised enacted appropriation is \$15,918,000 and 85 FTE; in comparison, the FY 2007 Office of the Under Secretary Preparedness Appropriation request totals \$74,468,000 and 106 FTE, which is an increase of \$58,550,000 and 21 FTE.

Office of the Under Secretary Preparedness. The Office of the Under Secretary Preparedness requests \$17,497,000 and 71 FTE for FY 2007. The total adjustment to base is \$3,292,000. This program now includes the transferred Ready.gov program, which was previously managed by the Office of Secretary and Executive Management where its FY 2006 appropriation was \$1,629,000. Two increases are requested: An increase of \$150,000 and one FTE (two positions) is requested to meet the acquisition support responsibilities of the Office of the Under Secretary Preparedness. An increase of \$1,000,000 is also requested for compliance with Public Law 108-330, The Department of Homeland Security Financial Accountability Act.

National Capital Region Coordination (NCRC): The Office of National Capital Region Coordination requests six FTE and \$1,991,000 for FY 2007. The NCRC program increases include one FTE (two positions) and \$1,108,000 for coordination, support and facilitation of national policy guidance, and to address protocol and alert notification procedure gaps.

Chief Medical Office (CMO): The CMO requests \$4,980,000 and 15 FTE for FY 2007. Program increases are requested for an additional five FTE, (10 positions), and \$3,000,000 to establish protocols, priorities, and benchmarks for Department-wide medical issues.

National Preparedness Integration Program (NPIP) This new initiative will focus on national preparedness gaps and improving the Nation's ability to prepare, respond and mitigate natural or other

2261

disasters. The new NPIP activities include the addition of 14 FTE (28 positions) and \$50,000,000 funding national preparedness integration and synchronization activities.

* The Preparedness Directorate did not exist prior to FY 2006. For FY 2005, the funding amounts are provided for those organization/programs that had a comparable FY 2005 funding level. Please see the Department Overview section of the Budget for FY 2005 Actuals from the legacy agencies of BTS, IAIP, and OSLGCP.

Preparedness requests \$17,497,000, which reflects an increase of \$4,442,000 over FY 2006. The preparedness activity component, Ready.gov, will transfer to this program from the Office of Secretary and Executive Management, which had base FY 2006 funding of \$1,629,000.

CURRENT SERVICES PROGRAM DESCRIPTION:

Under Secretary Office functions include: (1) Advise and assist the Secretary on preparedness matters; (2) Implement national strategies and policies in all matters relating to national preparedness; (3) Establish priorities for directing, funding and conducting national preparedness programs, activities and services for preventing, protecting against, and responding to and recovering from terrorist attacks, major disasters and other emergencies; (4) Oversee and direct all activities of the Directorate and coordinate preparedness activities throughout the Department, (5) Provide administrative functions for the Directorate to include out-year planning and budget formulation, budget execution, disclosure services, facility planning, acquisition support, human capital management, and future-years implementation strategy planning (6) Develop and coordinate training activities for DHS personnel to improve the knowledge base for Counterterrorism techniques and catastrophic planning processes and (7) through the Office of State and Local Government Coordination (SLGC), coordinates state, territorial, tribal and local governments activities for the Department of Homeland Security, (8) support individual and community preparedness through the Ready Campaign websites, (9) the Department's Infrastructure Transformation Program, and (10) an internal audit control function is requested to be added in FY 2007.

DHS Infrastructure Transformation Program

The Department's Infrastructure Transformation Program (ITP), led by the Office of the Chief Information Officer (OCIO), will integrate the IT infrastructures of the 22 legacy components into "One Infrastructure". Currently, most of the Department's components fund and are supported by separate and largely stove-piped IT infrastructures. This environment makes it difficult to share

information across components and has resulted in redundant investments and wasted resources. The ITP will eliminate the duplicative infrastructures and provide common capabilities and services for all components to leverage.

The ITP consists of five domains with a Department component assigned as a steward responsible and accountable for the performance of each domain. The domains and their stewards are listed below:

- Network Services led by Customs and Border Protection (CBP);
- Data Center Services led by CBP;
- Email Services led by U.S. Coast Guard (USCG);
- Help Desk Services led by USCG; and
- Video Operations Services led by Federal Emergency Management Agency (FEMA).

The OCIO oversees the work of the stewards and the other components to ensure operational requirements are met and investments and resource allocations are balanced across the components.

Implementation of the ITP will eliminate the need for components to spend resources on improving their own infrastructures. Instead, some of the investment funding previously used for stovepiped infrastructures will be used to support the department-wide ITP effort. For example, CBP's IT initiatives such as the Automated Commercial Environment will benefit from the capabilities and services the ITP will provide such as network access, data center hosting, email/collaboration services, wireless access, integrated help desk, voice access, video services, and on-site support. Rather than independently developing new capabilities or augmenting legacy capabilities within CBP, the ITP will provide enterprise-level services that will benefit all components.

By investing in the ITP, DHS components will benefit from economies of scale while promoting Department integration, and improving information sharing and interoperability. The amount of IT investment funding from components to support the ITP is still under deliberation and any such proposal will be fully vetted with the Congress prior to any actions being taken.

FY 2006 Accomplishments:

Learning Activities for DHS Preparedness Directorate

- Developed a *Preparedness Directorate Leadership Academy* to address the needs of the workforce and assist them to do their jobs better at all levels. The Leadership Academy provide Supervisory, Managerial and Leadership training to the workforce at three levels— GS10 and below, GS11-13 and GS14/15 in an interactive classroom environment.
- Developed, and delivering on a quarterly basis, a 40hr *Terrorism/Countering Terrorism* course and series of sub-courses for the professional development of the workforce. This course will serve as the benchmark of professional knowledge for the workforce and incorporates subject matter experts from throughout the intelligence and law enforcement communities.
- Develop and deliver a *Mandatory Training Program*: Standing up a robust Preparedness Directorate mandatory training program in the second quarter of FY 2006 that will also serve as the basis for the Department program since the Directorate has the lead for developing the DHS Training Leaders Council Strategic Plan for mandatory training of the Department workforce.

- Developing the *Preparedness Directorate Strategic Plan for Training, Education and Professional Development* of the workforce. The Preparedness Strategic Plan will establish goals and priorities for the training and education of the workforce. It guides and integrates the internal training programs of the newly formed Preparedness Directorate and its component organizations.

Mission Support / Administrative Services

- Chair, develop and deliver a *Comprehensive Senior Level Strategic Planning Course for Catastrophic Events*. This is a joint DHS/DoD project being chaired by the Preparedness Directorates Chief Learning Officer. This course will serve as the foundation-training course for learning and implementing joint planning processes and procedures with DoD and other federal, state, local counterparts. This course addresses many of the recommendations of the soon to be published White House Commission on "Katrina Lessons Learned".
- Office of State Local Government Coordination (OSLGC) will continue to coordinate state, territorial, tribal and local government's activities for the Department of Homeland Security. SLGC serves as a liaison to the Department's directorates, agencies, and bureaus on matters involving policy, operations, programming and initiatives that impact state, territorial, tribal and local homeland security agencies, and their ability to plan and implement homeland security missions and activities.
- Coordinated Human Capital recruitment, on-boarding, and management requirements for a 966-person organization.
- Prepared, planned, managed, and executed the budget and program requirements for a large diverse organization with 966 FTE and a \$4 billion budget.
- Developed and implemented a Performance Measurement training program in conjunction with the Department's Chief Financial Office for continuous manage performance measurements and data reporting for the Directorate Programs. This program complies with legislative reporting requirements of the GPRA Act of 1993 and the President's Management Agenda.
- Transitioned the entire Directorate from using paper procurement requests (PR's) to and electronic PR system, PRISM, and emphasized competitive procurements to prevent over reliance on sole sourced based contracts.

Individual and Community Preparedness. The design of the Ready campaign is to educate and empower American citizens to prepare for and respond to potential terrorist attacks and other emergencies.

- The Ad Council has declared the Ready campaign one of the most successful public service advertising campaigns in its 63-year history. Since its launch, the campaign has generated more than \$453 million in donated media support. As of September 30, 2005, the campaign's website has received more than 1.9 billion hits and 20 million unique visitors; its toll-free number has received more than 241,000 calls and more than 4.6 million brochures have been requested or downloaded from the website.

- In the wake of Hurricanes Katrina and Rita and National Preparedness Month 2005, the DHS recorded a significant rise in traffic to its Ready Campaign websites and calls to its toll-free phone line, 1-800-BE-READY. During the month of September 2005:
 - o Ready.gov logged more than 7 million hits and nearly 290,000 unique visitors;
 - o Listo.gov logged more than 300,000 hits and 10,000 unique visitors;
 - o Ready Business section logged approximately 830,000 hits;
 - o Visitors downloaded 42,000 Ready brochures from the website; and
 - o The Campaign's toll free phone received more than 3,100 calls requesting over 98,900 brochures.

FY 2007 Planned Accomplishments:

- Office of State Local Government Coordination (SLGC) will continue to coordinate state, territorial, tribal and local government's activities for the Department of Homeland Security. SLGC serves as a liaison to the Department's directorates, agencies, and bureaus on matters involving policy, operations, programming and initiatives that impact state, territorial, tribal and local homeland security agencies, and their ability to plan and implement homeland security missions and activities.

Learning Activities for DHS Preparedness Directorate

- Continue to deliver the DHS employee *Mandatory Training Program*. Continue to develop and maintain the *DHS Training Leaders Council Strategic Plan* for mandatory training of the Department workforce.
- Continue to maintain the *Preparedness Directorate Strategic Plan for Training, Education and Professional Development* of the workforce and the *Preparedness Directorate Leadership Academy*.
- To create the greatest preparedness benefit for the American people, we will strengthen the Performance Measures process to collect and analyze data more effectively to make corrective actions and program/activity changes that minimize risk and maximize preparedness value.

Mission Support / Administrative Services

- Continue to coordinate Human Capital recruitment, on-boarding, and management requirements for a existing personnel and the new requested personnel
- Continue monitoring and improving the *Comprehensive Senior Level Strategic Planning Course for Catastrophic Events* course to improve planning and communication among all preparedness stakeholders. Initiate the transition of this course to the NPIP program to be expanded and to serve as the foundation-training course for learning and implementing joint planning processes and procedures with DoD and other federal, state, local counterparts.
- Complete the transition of all programs transferred to the Directorate in FY 2006 including consolidation of accounting functions.
- Strengthen the Directorate knowledge base of program management techniques to enhance status reporting and to reduce program/project risk.

- Prepare, plan, manage, and execute the Directorate budget and program requirements.
- Increase strategic planning coordination activities with other DHS entities.
- **Public Awareness Campaign** Through the Ready.gov website, invaluable information will be disseminated to citizens, business and communities that will establish preparedness responsibilities, roles, and necessary preparedness steps that will increase resiliency for unexpected events. This awareness campaign will save lives, reduce suffering, and speed regaining control during a disaster and lessen the recovery time.

NCRC requests \$1,991,000 for its activities. This is an increase of \$1,108,000 over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

In FY 2007, NCRC will continue its aggressive efforts to advance homeland security and all hazards preparedness in the National Capital Region (NCR), serving as a model for other parts of the country. NCRC will focus on developing a common regional approach to homeland security that results in integrated strategies and interoperability among federal, state, regional, local and private/nonprofit stakeholders.

NCRC is uniquely positioned to bring together the numerous and diverse stakeholders (federal, state, regional, local, private and nonprofit sector) to proactively address inter-agency, multi-jurisdictional issues that would be difficult for any one stakeholder to move forward. Many of these challenges (e.g., interoperability, identity management, coordinated protocols, mutual aid) have surfaced in the region because of 9/11 and subsequent natural disasters such as Hurricane Isabel. Recent events of national scope, such as Hurricane Katrina, once again underscore the proactive need to address such challenges. NCRC's funding request provides resources for federal responsibilities, while the state, regional, local and private/nonprofit sector partners are supporting their responsibilities.

Additionally, NCRC's responsibilities encompass daily "bread and butter" activities, including events, drills and exercises in the region, and participation and coordination with the NCR's regional governance structure and Regional Emergency Support functions.

Examples of Multi-jurisdictional Interagency Coordination Activities

Strategic Planning and Coordination

Among others, NCRC initiated and is shepherding the development and implementation of the NCR Strategic Plan, the first regional strategic planning effort in the Nation. The NCR Strategic Plan establishes coordinated regional goals and priorities for the enhancement of homeland security and first responder capabilities in the NCR. It guides and integrates efficient spending of homeland

security grant and budget dollars throughout the NCR. Moreover, it drives many of the activities of NCRC and our homeland security partners.

Integration and Interoperability Program

NCRC will continue efforts started in 2006 (with the addition of one new senior coordinator FTE) to ensure integration and interoperability between key federal, state, regional and local authorities and stakeholders. The focus of NCRC and its homeland security partners will be (1) situational awareness and collaboration, and (2) identity management processes. In addition to modest contractor support, NCRC is leveraging technical expertise from the DHS Preparedness Directorate CIO to address five components in particular, working with the region's Interoperability Committee, the HSOC and other appropriate stakeholders.

Federal Protective Measures Coordination

The uniquely large presence of the Federal Government in the (NCR) makes the coordination and exercising of protective measures in advance of an incident especially important, as past incidents have demonstrated. In 2007 NCRC will initiate a more sustained effort with selected federal agencies (e.g., Secret Service, FBI, Capital Police) to identify protective measures in place throughout the federal community and their impact on the NCR.

Information Sharing Protocols and Alert Notification Coordination

The March 2005 Anthrax scare and the May 2005 airplane incursion, which resulted in the evacuation of the White House and Congress, illustrate the negative consequences that can occur when protocols and alert notifications are not adequately coordinated in advance. In 2007, with the addition of two new positions, NCRC will coordinate with appropriate federal, state, regional and local entities (including DHS' HSOC, Chief Medical Office and Domestic Nuclear Detection Office) to implement national policy guidance in the NCR, and to address gaps regarding NCR protocols and alert notification procedures. Emerging trends for 2007 include avian influenza and CBRN; both are anticipated to be labor-intensive efforts.

Examples of Daily NCRC Responsibilities

Events, Exercises and Drills

NCRC is called upon to help prepare for, coordinate, lead and/or participate in several dozen events, exercises and drills of mass scale each year, including changes in alert status (e.g., Yellow to Orange), state funerals, Nationally Significant Security Events (NSSEs), July 4th Celebrations, demonstrations (e.g. IMF/World Bank) and actual incidents and resulting after action reviews (e.g., March 2005 Pentagon/Skyline anthrax scare). This labor-intensive responsibility requires the involvement of everyone on NCRC's staff.

Regional Governance Participation and Coordination

The NCRC Director represents DHS and/or DHS Secretary on various regional decision-making bodies and committees, including the Senior Policy Group (SPG), the senior homeland security decision-making body in the NCR.

The Director, NRCR, also represents DHS to the Metropolitan Washington Council of Governments and its related committees, including the NCR Emergency Preparedness Committee (private and nonprofit sectors); the Chief Administrative Officers Committee; and, the Region's various Emergency Support Functions (R-ESFs), among many others.

Regional Emergency Support Function Coordination

NCRC is the federal homeland security portal to the Region's Emergency Support Functions (R-ESFs). Per the National Response Plan, R-ESFs include 15 communities (e.g., transportation; law enforcement; fire, emergency response services and hazardous materials; emergency management; medical and public health). Each R-ESF has dozens of stakeholders.

Coordination of Federal Activities in the NCR

The NCRC Director chairs the Joint Federal Committee, an important means to develop, coordinate and implement inter-agency/departmental activities and plans in the NCR, and participates in numerous other federal decision-making and advisory bodies to bolster coordination of federal activities in the NCR. Additionally, the NCR is an ideal test bed and, in 2007, NCRC anticipates increased pilot programs to test national ideas and initiatives. NCRC will endeavor to ensure that homeland security pilot programs are adequately coordinated in advance and, where possible, integrated with the plans and operations of affected state, regional and local stakeholders. NCRC will direct a portion of the program funding from the NPIP to expand assemble a sound knowledge base from which the rest of the Directorate can improve coordination methods and processes. A portion of this funding will go toward a core component of improving preparedness -- a system for documenting lessons-learned and maintaining the focus to follow-through to correct systemic inadequacies. The unique nature of the NCR and its responsibilities position this office to assist regions nationwide.

Selected FY 2005 Accomplishments

- Assisted regional, state and local partners in building a regional governance structure for homeland security. Represented the DHS Secretary as a principal member of this governance structure.
- Developed resource-sharing protocols to permit state, local and regional authorities to leverage scarce resources, e.g., established regional caches of radiation detection equipment and radios in lieu of every jurisdiction using scarce resources to purchase such equipment.
- Initiated and developed a strategic plan for the National Capital Region to align and integrate policies, programs and activities, working collaboratively with federal, state, local and regional partners from government, the private sector and nonprofit organizations.
- Began development and coordination of the NCR First Responder Partnership Initiative to provide first responders from multiple jurisdictions with standardized identity management processes and access cards that will enable electronic identity authentication during an emergency incident. NCRC leveraged resources from the Department of Defense, Department of Homeland Security, Department of the Interior, and Veteran's Affairs; NCR state, regional and local leaders committed Urban Area Security Initiative Grants for their portion.
- Coordinated and facilitated various federal initiatives (e.g., DC Rail Corridor Project, National Response Plan and National Incident Management System roll out, Operation Protect).
- Led, coordinated and/or participated in nearly two dozen events and drills, in addition to numerous exercises, including state funerals, the WWII Memorial Dedication, the Presidential Inauguration, the July 4th celebration, the IMF/World Bank Protests, various threat level increases, and the Anthrax Incident resulting in a hot wash, and other mitigation efforts.

Selected FY 2006 Accomplishments

- Began implementation of the NCR Strategic Plan, defining and implementing specific tasks to meet the plan's 4 overall goals and 14 initiatives, and conducted gap analysis on which to base FY2007 efforts.
- Initiated the Integration and Interoperability Program activities (in addition to First Responder Partnership Initiative); partnered with NCR stakeholders to conduct an information technology inventory and gap analysis, establish routine secure communications checks between key NCR stakeholders, and conduct quarterly communications exercises.
- Coordinated with selected federal agencies/departments in the NCR to lay the groundwork for a protective measures coordination project in FY 2007.
- Coordinated with selected federal, state, regional and local offices to identify areas (other than anthrax and airplane incursions) that require coordination of information sharing protocols and alert notifications. Avian flu and CBRN were identified as priorities.
- Led, coordinated and/or participated in planning, preparation, response, and after action reviews for several dozen events, drills and exercises.
- Worked with state and local partners to implement initiatives such as EMap.
- Worked with state, regional and local partners to align the existing Regional Emergency Coordination Plan (RECP) and other regional plans with the new National Response Plan.
- Increased coordination with key Regional Emergency Support Function (ESF) committees, with addition of new FTE (2), participating in weekly law enforcement and other R-ESF meetings.

Selected FY 2007 Planned Accomplishments

- NCRC and its homeland security partners will refresh the NCR Strategic Planning Process and implement specific tasks to fulfill goals and initiatives in the plan and to address gaps identified in FY 2006. Homeland Security strategic planning will be refreshed periodically thereafter.
- The NCR will have an operable, secure, communications network using STE, secure cell phones, and secure video teleconferencing between DHS, its federal partners, and state and local jurisdictions and regional authorities.
- Integration will be achieved between the DHS HSIN and the NCR's Web-based Emergency Operations Center Network (WEBEOC).
- A fully functional First Responder Partnership Initiative access card will be fielded (limited basis) to achieve physical and local access.
- NCRC's Federal Protective Measures Coordination Project will track the implementation status of protective measures at selected key federal agencies and begin tabletop exercises with state, regional and local partners to identify synergies, conflicts, unintended consequences and best solution options. This effort will, in FY 2008, include more participants and culminate in draft recommendations. Depending on the scope of recommendations, formal coordination activities may continue into the out-years with the concurrence of the Secretary and the state and local authorities.
- NCRC will coordinate and ensure NCR implementation of anticipated national policy guidance on avian influenza and/or biological agents generally from the DHS Chief Medical Officer (and federal counterparts), along with associated information sharing protocols and alert notifications.
- NCRC will lead, coordinate and/or participate in events/drills planning, preparation, participation/response, and after actions for several dozen events and exercises.

- NCRC will submit an annual report to Congress identifying needed NCR homeland security resources and progress status as directed by the Homeland Security Act of 2002.
- NCRC will provide ongoing coordination for the RECP and other regional plans with the new National Response Plan. This is a key annual function/need for the NCR.

Department of Homeland Security
Preparedness Directorate
Office of the Under Secretary Preparedness
Program Performance Justification
(Dollars in thousands)

PPA: Chief Medical Officer

	Perm Pos	FTE	Amount
2005 Actual
2006 Revised Enacted	10	10	\$1,980
2007 Adjustments-to-Base
2007 Current Services	10	10	\$1,980
2007 Program Change	10	5	3,000
2007 Request	20	15	\$4,980
Total Change 2006-2007	10	5	3,000

* CMO is a new activity in FY 2006.

CMO requests \$4,980,000 for its activities, which reflects a \$3,000,000 increase over FY 2006.

CURRENT SERVICES PROGRAM DESCRIPTION:

The CMO is the Secretary's principal advisor on medical issues, serves as the Department's primary point of contact for external entities on medical preparedness issues, and ensures internal and external coordination of all medical preparedness activities to prevent and mitigate biologically based attacks on human health or on our food supply. CMO will fully engage with state and local authorities, associations of medical professionals, and other stakeholders that deal with medical consequences of natural disasters or terrorist attack.

Additionally, CMO is responsible for discharging the Department's responsibilities for Project BioShield. The primary goal of the Office is to improve the medical community's knowledge base of public health needs, and in particular, the Federal government's medical response to terrorist or biological attacks, pandemic and natural disasters

FY 2006 ACCOMPLISHMENTS:

Appointment of Dr. Jeffrey W. Runge, Chief Medical Officer in September 2005, initiated the beginning phase of a centralized medical structure to coordinate medical preparedness activities inside DHS or with other Departments in the Administration

Establish the CMO Organizational Infrastructure

- Recruit and hire CMO support staff that is exceptionally qualified and effective.

Integrate and Leverage Medical Assets for Effective Planning and Response

- Establish the Integrated Medical Readiness Network (IMRN). The IMRN will document and support the working relationships that will allow greater coordination and preparation with the key medical organizations representing stakeholders such as physicians, nurses, emergency

medical professionals, ambulance drivers, licensing boards, as well as state and local governments.

Increase the Nation's Resilience to Biological Incidents

- Oversee the Department's responsibilities for Project BioShield.
- Prepare for the likelihood of an avian influenza pandemic through coordination with the Department of Health and Human Services (HHS), the U.S. Department of Agriculture, the National Capital Region Coordinator, and the Homeland Security Council to plan for the government's response to contain this disease and protect our Nation's critical infrastructure.

FY 2007 PLANNED ACCOMPLISHMENTS:

- Work in concert with the DHS Science and Technology to bring cutting-edge science, technology, and intelligence to bear on the Department's policy-making.
- Build strong interdepartmental alliances and integrate various knowledge bases with DoD, HHS and the intelligence community vital to preparedness, operations and response, and mission support functions for threat-based programs and countermeasures.
- Develop policy driven initiatives to ensure that the Nation and its critical infrastructures are medically prepared for catastrophic events,
- Garner best practices, set agenda and establish priorities for the Integrated Medical Readiness Network (IMRN) to enable providing advice that is data driven and scientifically based.
- Improve communication systems by addressing command and control issues such as dissemination of medical information using methodologies such as electronic message traffic, response reporting, local, state and Federal database integration and industry conferences/summits.
- Coordinate medical intelligence and surveillance activities of the Department.
- Develop strategy to ensure medical assets are aligned to support operations and response functions when catastrophic events arise.
- Coordinate medical intelligence and surveillance activities of the Department
- Establish doctrine and priorities for the National Disaster Medical System (NDMS), consistent with NIMS and the NRP, and ensure NDMS mission readiness;
- Coordinate with other Department organizational elements on their medical preparedness activities to provide technical guidance and direction; such activities include, but are not limited to, Noble Training Center, National Bio-Surveillance Information System (NBIS), and the Metropolitan Medical Response System (MMRS) program.

Department of Homeland Security
Preparedness Directorate
Office of the Under Secretary Preparedness
Program Performance Justification
(Dollars in thousands)

PPA: National Preparedness Integration Program

	Perm Pos	FTE	Amount
2005 Actual
2006 Enacted
2007 Adjustments-to-Base
2007 Current Services
2007 Program Change	28	14	50,000
2007 Request	28	14	\$50,000
Total Change 2006-2007	28	14	50,000

* National Preparedness Integration Program is a new activity in FY 2007.

The Preparedness Directorate requests \$50,000,000 for the new National Preparedness Integration Program.

CURRENT SERVICES PROGRAM DESCRIPTION:

The National Preparedness Integration Program is an enhancement in FY 2007.

FY 2007 PLANNED ACCOMPLISHMENTS:

The National Preparedness Integration Program (NPIP) will improve our Nation's disaster preparedness planning, which will improve future response and mitigation outcomes through the following actions:

1. **Improving federal, state, and local governments' ability to plan, prepare and work together through:**
 - a. **Assistance to State and Local Government –**
 - i. Provide direct technical assistance to state and local governments to improve catastrophic planning development, implementation, monitoring, and reporting.
 - ii. Expand the *Strategic Planning for Catastrophic Emergencies* course (joint DHS/DoD) to ensure common understanding and operational actions in times of crisis.
 - iii. Provide coordination assistance and technical expertise for regional command and control, and communication enhancements.
 - iv. Initiate activities to define criteria for locally based knowledge management. This will initially include specifications for a locally established and maintained data set for crisis/knowledge management. These specifications are envisioned to be designed for compatibility and to assist in local management of command and control, mass casualty management, medical

response capabilities and emergency communications issues. This program will complement the Homeland Security Information Network in that it will concentrate in defining a baseline set of recommended content, and will rely on existing systems to move the data from one point to the other.

b. Federal, State and Local Integration

- i. Augment the National Preparedness Assessment and Reporting system including system development and establishment of the management processes. Establish a dedicated program executive staff to oversee contractual efforts, support readiness management processes, and compile required readiness reports.
- ii. Identify and support DHS core planning and liaison personnel who provide resources and expertise dedicated to a specific region. Federal Preparedness Coordinators (FPC) positions were established in FY 2006. FPCs are assigned from the spectrum of DHS components and are located throughout the country, which provides the institutional knowledge and experience to reach-back and outward to multiple entities within DHS. These FPCs will support national emergency planning and preparedness through stronger focus on comprehensive regional, state, and local jurisdictions planning and preparedness. In FY 2007, this cadre of personnel will:
 1. Recommend methods to ensure preparedness and response is interoperable with contiguous localities and is scaleable to each likely incident.
 2. Develop information sharing initiatives and strategic partnerships between locally based DHS and other Federal officials, as well as key state, local and private sector stakeholders.
 3. Coordinate resource and operational planning in preparation for incident response.
Coordinate planning for, and participate in, local, regional, and national-level homeland security exercises and drills.
- iii. Support pilot programs in the National Capital Region and provide reports as to feasibility of using programs in other regions across the Nation. The pilots will coordinate the Federal Protective Issues and Passport programs. These reports will articulate the successes and difficulties of regional coordinating activities and will include recommendations for transferring coordination activities to other regions nationwide.

- c. Intra-Federal Coordination.** Initiate activities and joint task force to evaluate and recommend sustainable improvements in coordinating preparedness activities in conjunction with DHS operational entities and personnel. This task force will work in close coordination with the Department's operational elements, other Federal departments and agencies, and in consultation with state and local governments for development of a shared operational planning system. This project capitalizes on the current nationwide emergency plans review directed by the President and Congress, the planning priority in the National Preparedness Goal, the lessons of Hurricanes Katrina and Rita, and previous proposals within DHS to develop an integrated planning process.

2. **Leading change allowing the communication systems of first responder and emergency management communities to work together.** Includes an in-depth review and enhancement of the Emergency support function (ESF #2) mission; development of new operational guidance; enhancement of computer-based modeling and analytical assessment capabilities; expand test and evaluation of evolving -- as well as COTS -- communications technologies; and development of a strategy to acquire rapidly deployable communications assets.
3. **Creating Opportunities that Foster Collaborative Innovation and Best Practice Outcomes.** Assess and identify best practices and innovation implemented at all levels of government and first responders. Identify successful strategies and define methods to transfer the best ideas to other regions where they might be applicable.
4. **Identifying, assessing, evaluating, and developing risk based-earned value preparedness plans which will strategically allocate and position limited assets and resources;**
 - a. Analyze catastrophic planning gaps and identify requirements shortfalls. Define capability structure that serves as the basis for grant guidance.
 - b. Evaluate all hazard preparedness planning for the most vulnerable segment of the population. FY 2007 activities to include a baseline definition and initial segment evaluation.
 - c. Initiate actions to define gaps, actions, and difficulties on federal and regional efforts to strengthen medical surge and mass prophylaxis capabilities.

IV. Program Justification of Changes

**Department of Homeland Security
Preparedness Directorate
Office of the Under Secretary Preparedness
Justification of Program Changes
(Dollars in Thousands)**

Program Increase 1: Acquisition Personnel

Strategic Goal(s) & Objective(s): Protection 3.7
PPA: Office of the Under Secretary (OUS)

Program Increase: Positions 2 FTE 1 Dollars \$150

Funding Profile

	FY 2005 Actual			FY 2006 Revised Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							70	70	14,718
Program Increase							2	1	150
Total Request	-	-	-	70	70	\$13,055	72	71	\$14,868

* The Preparedness Directorate did not exist prior to FY 2006. For FY 2005, the funding amounts are provided for those organization/programs that had a comparable FY 2005 funding level. Please see the Department Overview section of the Budget for FY 2005 Actuals from the legacy agencies of BTS, IAIP, and OSLGCP.

Description of Item

This items funds two additional positions, one FTE, to support the Department's objective of increasing the number of contracts that are released for full and open competition.

Justification

Existing staffing level is not sufficient to process competitive solicitations in a timely manner. The process includes time-intensive activities such as definition of performance requirements, selection criteria, multiple proposal review, documentation requirements, and attending source-selection-coordination meetings. The two additional positions (1 FTE) will provide additional staff to assist in the definition of requirements, documentation of selection criteria, and ensure proposals are reviewed and contracts issued in time to meet operational requirements. The additional personnel will provide the expertise and resources to complete the expected increase in acquisition volume in FY 2007.

Impact on Performance (Relationship of Increase to Strategic Goals)

This funding will allow the Directorate to build internal expertise and an expanded contractor base to improve the Nation's preparedness and protection posture.

Program Increase 2: Department-wide Internal Controls Audit

Strategic Goal(s) & Objective(s): Organizational Excellence 7.0
 PPA: Office of the Under Secretary

Program Increase: Positions 0 FTE 0 Dollars \$1,000

Funding Profile

	FY 2005 Actual			FY 2006 Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									---
Program Increase									1,000
Total Request									\$1,000

* The Preparedness Directorate did not exist prior to FY 2006. For FY 2005, the funding amounts are provided for those organization/programs that had a comparable FY 2005 funding level. Please see the Department Overview section of the Budget for FY 2005 Actuals from the legacy agencies of BTS, IAIP, and OSLGCP.

Description of Item

An internal controls audit is an unfunded legal requirement. Public Law 108-330, The Department of Homeland Security Financial Accountability Act, directs the Department to perform an annual Performance and Accountability Report (PAR), provide by an audit opinion and the Secretary's assertion of the adequacy of internal controls that apply to financial reporting.

Justification

A sound and reliable internal controls audit will enable the Department to focus on its goal of building, sustaining, and improving the Nation's capability to prevent terrorist attacks in the United States. A clean audit will ensure the public that funds are being used properly and effectively, so that the true mission of the organization is the focus of the Department's efforts.

These requirements for internal control reporting and audit impose significant management challenges and resource demands on the Department and its Components. To comply with the Act the Department's Components must develop documentation, perform test-work, and support remediation efforts to transform legacy internal control structures to an integrated internal control framework

Impact on Performance (Relationship of Increase to Strategic Goals)

The effectiveness of the Department's mission is bound to the quality, reliability, accuracy, and accountability of its ability in leading and managing resources. Internal controls are proven methods of assuring good stewardship of public funds.

Program Increase 4: Chief Medical Officer

Strategic Goal(s) & Objective(s): Protection – 3.7
 PPA: CMO

Program Increase: Positions 10 FTE 5 Dollars \$3,000

Funding Profile

	FY 2005 Actual			FY 2006 Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							10	10	1,980
Program Increase							10	5	3,000
Total Request				10	10	\$1,980	20	15	\$4,980

* CMO is a new activity in FY 2006.

Description of Item

This item requests additional funds for ten additional positions, five FTE, and an additional \$3,000,000 to support the Chief Medical Officer.

Justification

The additional funding will allow the CMO to expand DHS activities to accomplish the following responsibilities:

- Coordinate medical intelligence and surveillance activities of the Department.
- Ensure internal and external coordination of all medical preparedness activities to prevent and mitigate biologically based attacks on human health or on our food supply.
- Expand the areas to establish doctrine and priorities for the National Disaster Medical system (NDMS), consistent with NIMS and the National Response Plan, and ensure NDMS mission readiness.

Impact on Performance (Relationship of Increase to Strategic Goals)

This increase will allow the CMO to expand the build and coordinate contingency plans with the stakeholders in order to improve regional preparedness and response posture.

Program Increase 5: National Preparedness Integration Program (NPIP)

Strategic Goal(s) & Objective(s): Protection – 3.7
 PPA: NPIP

Program Increase: Positions 28 FTE 14 Dollars \$50,000

Funding Profile

	FY 2005 Actual			FY 2006 Enacted			FY 2007 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level									
Program Increase							28	14	50,000
Total Request							28	14	\$50,000

* The Preparedness Directorate did not exist prior to FY 2006. NPIP is a new activity in FY 2007.

Description of Item:

Requested NPIP funding is \$50,000,000 for support 14 FTE (28 positions) and nationwide preparedness planning improvements, which will strengthen the National preparedness posture through: 1) catastrophic planning, 2) alignment of command and control functions, 3) emergency communications systems, 4) medical preparedness, and 5) identification, fostering and knowledge sharing of innovative planning, response, or coordination methods for preparedness nation-wide. ..

Catastrophic Planning - activities will improve emergency planning by 1) developing a shared contingency planning system, 2) conditioning grant funding to ensure states and urban areas comply with the nationwide plan review and grant compliance monitoring to ensure corrective actions are taken, 3) providing guidance and technical assistance for resource planning, operational planning, and exercise planning and coordination. These activities will be supported by cross- functional teams that include technical experts, trainers, infrastructure specialists, operational personnel, and preparedness coordinators. These teams will effectively provide disciplines, expertise, and knowledge resources necessary to address our National priority of developing regional catastrophe planning.

Command and Control Alignment activities – will be accomplished in conjunction with DHS operational elements, other federal agencies as appropriate, and in coordination with state and local government and first responders. The three components to this project include: 1) an Intra-Federal Preparedness Coordination Task Force; 2) technical assistance to state, local and regional entities; and 3) Federal, state, and local integration activities. For example, as part of NPIP, Federal Preparedness Coordinators (FPCs) will work to build and maintain positive relationships with the identified partners, coordinate exercises, and support situational awareness and information sharing initiatives to ensure that proper command and control alignment can be achieved quickly in the event of an incident. This will contribute to improved alignment during incident response and recovery operations.

Communications Systems - In order to improve ESF #2 response to national emergencies, the National Communications System proposes to enhance its capabilities to conduct predictive assessments, and improve coordinated response and recovery operations to protect and restore the Nation’s telecommunications resources after a catastrophic Incident of National Significance and

national emergencies. The task to overhaul the ESF #2 operation will involve a multi-faceted approach:

- Review and revise policy, procedures, operational instructions, and standard operational plans
- Develop and execute an enhanced training and exercise program that integrates the knowledge, skills and resources of the ESF #2 Support Agencies
- Identify, catalogue, acquire, operate, and maintain portable or transportable communications systems for emergency deployment.

Medical Preparedness - The Chief Medical Officer, working cooperatively with the Secretary of Health and Human Services, as well as with state and local government personnel and first responders, will guide the Department's medical preparedness activities. These activities will include efforts to improve medical surge capacity and further develop a global medical preparedness knowledge base. The CMO will also continue the development of scientifically derived, evidence based medicine-driven policy initiatives to ensure that the Nation and its critical infrastructures are medically prepared for catastrophic events, particularly those with medical consequences. The CMO will fully engage with state and local authorities, associations of medical professionals, and other stakeholders that are involved with medical consequence management following a natural disaster or terrorist attack.

Best Practices and Innovation – Provide opportunities to identify and share innovative ideas and best practices in order to augment the knowledge base of federal, state and local government and first responders nationwide. These activities will allow the Preparedness Directorate to identify successful strategies and define methods to transfer the best ideas to other regions where they might be applicable. One of the mechanisms for identifying such best practices and innovation will be the FPCs who, as locally based federal officials, will be positioned to identify and share innovative state and urban area preparedness across the country and to DHS headquarters.

Justification

National Preparedness Integration Program is a Department-wide effort to synchronize and publicize government, private sector, and citizen preparedness goals, plans and processes in advance of disaster. This includes specific efforts to align federal, state, and local command and control processes; improve catastrophic planning efforts for our most vulnerable citizens – children, the elderly, and those with special needs; enhance communication systems available in an emergency; harmonize medical coordination across all levels of government and provider systems; and encourage and implement innovative ideas and methods for preparedness.

Strengthening emergency operations is a national priority, which includes planning and citizen protection capabilities through a comprehensive national planning review and establishing a shared contingency planning process for the federal and state and local governments.

This national priority focuses on the Planning, Citizen Protection, and Mass Care capabilities from the Target Capabilities List (TCL). Hurricane Katrina demonstrated the need for renewed emphasis on the currency and quality of emergency operations plans. President Bush highlighted this requirement in a recent address to the Nation when he identified emergency planning as a *national security priority*. The Nation's homeland security system is a complex set of interdependent relationships through and among government sectors, organized to achieve the mission of preparing the public, protecting them, and responding, and mitigating disasters incidents. Planning is a methodical and logical way to think through potential crises beginning with recognizing a problem, developing a solution, and preparing to

execute the plan. A good plan repays the investment of time and effort in its development and rehearsal by shortening the time required to gain control over an incident, and by providing an environment and favorable conditions for rapid and effective exchange of information about a situation, its analysis and alternative responses. If roles, responsibilities, tasks and resources can be delineated before an incident, uncertainty is reduced, which leads to higher confidence and competence among responders. This is the key to success in protecting people and property in crises.

The President and Congress have directed a comprehensive national review of catastrophic planning, including planning for mass evacuation. This effort will include analysis and reporting by the Federal and state and local governments of the status of their plans, and their efforts to strengthen the planning-training-exercising-evaluation cycle. The intent of this review is to identify and undertake actions to update and test plans prior to the 2006 hurricane season. While planning applies to all capabilities identified in the TCL, three capabilities are central to addressing this national priority: "Planning," "Mass Care (Sheltering, Feeding, and Related Services)," and "Citizen Protection: Evacuation and/or In Place Protection." The national review is an initial step in establishing a shared contingency planning process to develop sound plans that describe in detail how the Federal and state and local governments will jointly accomplish their respective missions and apply the full range of capabilities at their disposal to achieve overall national objectives.

This initiative capitalizes on the current nationwide emergency plans review directed by the President and Congress, the planning priority in the National Preparedness Goal, the lessons of Hurricanes Katrina and Rita, and previous proposals within DHS to develop an integrated planning process.

The planning system develops plans to employ capabilities and identifies requirement shortfalls. The Directorate requires a mechanism, linked to the outputs of the planning system, to conduct capability requirements analysis/generation to define, document, validate and approve requirements for both PPBE submission and inclusion in grant guidance. This system would analyze and adjust requirements based on fiscal guidance to arrive at a capability program structure that serves as the basis for budget requests and grant guidance.

Improved Communications Emergency Support. The 2005 hurricane season created catastrophic destruction of the communications infrastructure across the Gulf Coast Region of the United States. The magnitude of damage and the resulting challenges for restoration of the region's communications services and other vital infrastructure eclipsed all previous operational experience and procedures. The current *National Response Plan*, which replaced the former *Federal Response Plan*, did not provide sufficient guidance or authority to support the expeditious coordination and application of government and commercial resources to meet the identified communications needs. ESF #2 organizational guidelines and procedures that had been developed and refined through years of experience with national emergencies were frequently ignored by many ESF 2 responders as too restrictive, unresponsive, or counterproductive when applied to the intensified demands and politically-charged conditions that were created in the Gulf States Region. This program provides resources to address these issues.

2285

Impact on Performance (Relationship of Increase to Strategic Goals)

This increase will allow the Preparedness Directorate to strengthen the integrity and resiliency of the Nation's Preparedness posture. This aligns to the DHS strategic goal of protection.

OUS PREP - 27

* National Preparedness Integration Program is a new activity in FY 2007.

** Totals may not add due to rounding to the nearest thousand dollars.

PPA Mission Statement

NPIP provides nationwide preparedness planning improvements, which will strengthen the national preparedness posture through: 1) catastrophic planning, 2) alignment of command and control function, 3) emergency communications systems, 4) Medical preparedness, and 5) identification, fostering and knowledge sharing of innovative planning, response, or coordination methods.

Summary Justification and Explanation of Changes

	<u>2005</u>	<u>2006</u>	<u>2007</u>	<u>2006 - 2007</u>
	<u>Actual</u>	<u>Revised Enacted</u>	<u>Request</u>	<u>Change</u>
Salaries and Benefits	\$0	\$0	\$1,757	\$1,757

Salaries and Benefits includes costs for 14 FTEs. The program enhancements are \$1,756,892 for FY 2007.

	<u>2005</u>	<u>2006</u>	<u>2007</u>	<u>2006 - 2007</u>
	<u>Actual</u>	<u>Revised Enacted</u>	<u>Request</u>	<u>Change</u>
Travel	\$0	\$0	\$636	\$636

The FY 2007 request of \$635,953 is a program increase for travel, which includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with federal travel regulations.

	<u>2005</u>	<u>2006</u>	<u>2007</u>	<u>2006 - 2007</u>

BUDGET REQUEST AND SUPPORTING INFORMATION**OFFICE OF GRANTS AND TRAINING**
STATE AND LOCAL PROGRAMS**I. Appropriation Overview****A. Mission Statement for State and Local Programs:**

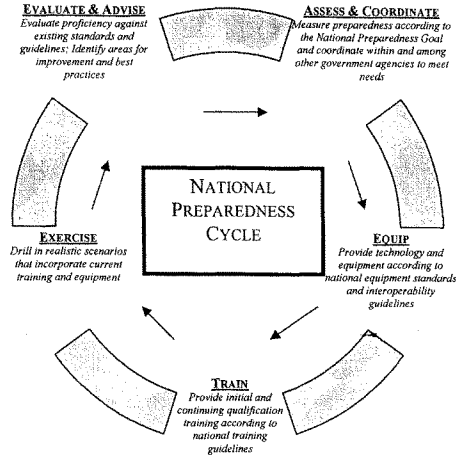

The Office of Grants and Training (G&T) is the principal component of the Department of Homeland Security (DHS) responsible for preparing State and local governments to prevent or respond to threats or incidents of terrorism and other catastrophic events. In carrying out its mission, G&T is responsible for providing grants, training, and support for the planning and execution of exercises, technical assistance, and other support to assist Federal agencies, States, territories, tribal, and local jurisdictions to prepare, prevent, plan for, and respond to acts of terrorism.

G&T is a key component of the Preparedness Directorate's mission to enhance the Nation's readiness for acts of terrorism, well as other strategic issues that are vital to national preparedness. Through the implementation of the Homeland Security Presidential Directive #8 (HSPD-8), G&T will establish policies that strengthen national preparedness for terrorist attacks, major disasters and other emergencies by implementing the National Preparedness Goal, improving delivery of Federal preparedness assistance to State and local governments, strengthening other capabilities of Federal, State, and local entities. G&T major program initiatives have all been developed in the context of HSPD-8, as well as supportive of implementing HSPDs on incident management and infrastructure protection.

The following diagram (Figure I-1) illustrates how G&T's core program activities facilitate ensuring our Nation's preparedness. Taken individually, each step in the cycle is represented in G&T's budget request.

PREP G&T (SLP) - 1

Figure 2-1: National Preparedness Cycle

B. Budget Activities:

State Homeland Security Grants Program

The State Preparedness Grants Program manages and oversees three grant programs that enhance the homeland security and emergency preparedness of State and local level jurisdictions. The first program in the portfolio is the State Homeland Security Grant Program. This program awards grants to all 50 States, the District of Columbia, Puerto Rico and 4 U.S. territories and is based on risk and need. The second program, the Citizen Corps Program, is the Department’s grass-roots initiative to actively involve all citizens in hometown security through personal preparedness, training, and volunteer service. The third program is the Emergency Management and Performance Grants (EMPG) Program. The EMPG Program provides funds to support emergency management initiatives at the State and local level, and improve mitigation, preparedness, response, and recovery capabilities for all hazards.

Targeted Infrastructure and Capability Grants Program

Incorporates two programs that strengthen homeland security of the metropolitan regions and infrastructure facing the greatest threats, grants are awarded on the evaluation of both risk and need. The Urban Area Security Initiative requires regional collaboration to enhance the security and readiness of the nation’s high risk urban areas. A major restructuring of the UASI program in FY 2006 broadened the geographic reach of regions, focusing available funding on a smaller number of large

regions. The Targeted Infrastructure Protection Program enhances the security of the Nation's critical infrastructure by leveraging the DHS assessments of infrastructure vulnerabilities to enable key transit systems, port assets, and other critical infrastructure to prevent and respond to the threat of terrorism.

National Exercise Program

The National Exercise Program oversees the Department's Federal, State and local exercise programs, which includes the Top Officials (TOPOFF) exercise series. It is responsible for testing the capacity, at the State and local levels, to effectively implement best practices and deploy response plans and assets efficiently and effectively.

State and Local Training Program

The State and Local Training Program manages the development of, and approves training to prepare emergency responders for a WMD terrorism event. This program identifies and addresses training needs of State and local communities and prioritizes those needs to facilitate the identification of existing and new funding for course development. This program also includes the Center for Domestic Preparedness, the only WMD training facility that provides hands-on training to civilian emergency responders in a toxic chemical agent environment, and the National Domestic Preparedness Consortium, which also plays a major role in delivering training to America's first responders.

Technical Assistance Program

G&T's Technical Assistance Program provides direct assistance to State and local jurisdictions to improve their ability to prevent, respond to, and recover from threats or acts of WMD terrorism. The primary focus of the TA program is to enhance the capacity of State and local jurisdictions as well as special needs jurisdictions such as port authorities and mass transit agencies to develop, plan, and implement effective strategies for WMD preparedness.

Evaluation and National Assessment Program

The Evaluation and National Assessment Program gathers, analyzes, and interprets national and program specific data. As the focal point for information collection and evaluation, this program reviews and assesses the execution of State strategies against the supporting threat, vulnerability, and needs assessment data. As data is evaluated, meaningful and timely feedback highlighting best practices can be identified for replication and knowledge gaps can be addressed and mitigated. This information is then distributed to States and jurisdictions by G&T.

C. Budget Request Summary:

For State and Local Programs, the Office of Grants and Training requests 200 positions/FTE and \$2,456,559,000 in FY 2007. This represents a net decrease of \$257,728,000 as compared to FY 2006. The change from FY 2006 is explained by a series of upward and downward adjustments as described below, and discussed in greater detail in the Current Services Section and Section IV.

State Preparedness Grant Program: -\$374.8 million. The reduction in funding under this program activity reflects the continuing shift of resources from state-based programs to the Targeted Infrastructure Capability Grants Program.

Targeted Infrastructure Capability Grants Program: +\$294.6 million. The increase in funding under this program activity reflects the continuing shift of resources to programs that emphasize regional approaches to enhancing our nation's homeland security.

National Exercise Program: -\$2.8 million. This reduction reflects an \$11.1 million decrease to the Exercise Support Program, reflecting the increased state and local capability to develop self-sustaining exercise programs. Off-setting this reduction is a \$2.9 million increase in national, state and local exercise activities and \$5.5 million for program administration, enabling NEP to improve its coordination with Federal, state, and local exercise partners.

State and Local Training Program: -\$115.5 million. The FY 2007 budget request proposes an overall reduction for training center operations. The remaining resources, totaling \$92.4 million, are proposed to be allocated on a competitive discretionary basis and are consistent with funds previously requested by the Administration. DHS will continue to encourage state and urban area grantees to support training efforts that comply with DHS standards.

Technical Assistance Program: -\$8.3 million. This reduction reflects a reprioritization of resources to focus Technical Assistance on core competencies for improving state and local homeland security planning. The Office of the Undersecretary will be providing technical assistance to align state and local preparedness planning including catastrophic planning efforts and dissemination of innovative preparedness concepts.

Evaluation and Assessment: +\$8.8 million. The implementation of HSPD-8 will continue to be a G&T priority in FY 2007. The increase in resources will be targeted towards the implementation of the mechanisms and tools demonstrating how the nation is leveraging billions of homeland security grant resources to improve the priorities and capabilities identified in HSPD-8.

Systems Support Program: -\$59.8 million. The FY 2007 budget request, proposes to eliminate the resources available under this program activity, which were appropriated but not requested in FY 2006. In addition, the \$10.3 million provided within the Katrina Supplemental to replenish equipment stockpiles is not requested in FY07. This program activity was a one-time replenishment of response assets, and the FY 2007 budget proposes to transfer this program to FEMA which is responsible for managing similar equipment stockpiles.

Total Changes 2006-2007	0	0	(374,750)

G&T requests \$838 million for this activity. The reduction in funding under this program activity reflects the continuing shift of resources from state-based programs to the Targeted Infrastructure Capability Grants Program.

Specifically, the reduction reflects (1) the non-recurrence of \$38.4 million for REAL ID grants and \$28.8 million for Metropolitan Medical Response System (MMRS) grants; (2) the non-recurrence of \$384.1 million for the Law Enforcement Terrorism Prevention Program activities, which are proposed to be funded under the State Homeland Security Grant Program (SHSGP); (3) the reduction of \$11.9 million for the Emergency Management Performance Grants (EMPG) program, which, for FY 2007, is consistent with the level of resources previously requested; and (4) a reduction of \$14.6 million in related program administration. Off-setting these reductions are programmatic increases for the State Homeland Security Grant Program totaling \$88.1 million and Citizen Corps totaling \$14.9 million. DHS will continue to improve the targeting of state-based grants towards the most critical priorities to be identified in the National Preparedness Goal.

CURRENT SERVICES PROGRAM DESCRIPTION:

State Homeland Security Grants Program: For FY 2007, DHS is proposing to continue the homeland security funding process begun in FY 2006 by awarding State Homeland Security Grant Program funds based on an evaluation of risk and need. This allocation would reflect a results-based planning process that supports achievement of minimum baseline capability levels nationally. This discretionary grant program would be based on the following principles:

- All 50 States, the District of Columbia, Puerto Rico, and the U.S. territories will be eligible to apply for funding.
- States will submit detailed applications including macro-level goals and activities and associated justifications detailing how those activities address capability shortfalls and enable

achievement of the minimum baseline capability levels laid out in the National Planning Guidance (NPG).

- Applications will be evaluated and funds awarded based on *risk and need*, consistent with national priorities.
- Funding will be awarded based on a relative evaluation of risk and need (as presented in the applications), but each State or territory will receive no less than 0.25 percent of the total.
- At least 20 percent of funds awarded will be dedicated to support law enforcement terrorism prevention activities.

In FY 2005, States were required to update their existing homeland security strategies as a part of the process to ensure alignment with national priorities and achievement of the minimum capability levels established in the National Planning Guidance. Updated strategies will be submitted in advance of the FY 2006 grant applications. State applications will include an action plan detailing how FY 2006 grant funds will support achievement of these priorities and minimum capability levels.

In FY 2007, State applications will again demonstrate core focus areas, how funding will be used to close critical capability gaps in support of the National Planning Guidance, and a funding allocation plan. States will be asked to develop enterprise-wide homeland security strategies for FY 2007-2009 that reflect the necessary integration and collaboration across all mission areas and support the establishment of the National Preparedness System and the realization of the National Preparedness Goal.

Applications will be reviewed and evaluated based on how proposed grant-funded activities align with identified capability gaps, State strategic goals and objectives, and national preparedness priorities. Award determinations will be made based on an evaluation of both need (as presented in the applications) and risk. DHS will consider factors such as threat, presence of critical infrastructure, vulnerability, population, borders, and ports of entry in making final award determinations.

The accelerated funding cycle, under which guidance and applications must be developed and released in a matter of weeks, has impeded the program's ability to require grantees to develop a coordinated grant allocation strategy that can be used to track program resources. This method will establish a more deliberate, up-front planning process. As such, greater time will be allotted for state application development and application review; DHS anticipates making grant awards by the 3rd quarter of FY 2007, similar to FY 2006.

Citizen Corps Program: The Citizen Corps Program (CCP) is the Department's grass-roots initiative to actively involve everyone in America in hometown security through personal preparedness, training, and volunteer service. CCP funds support Citizen Corps Councils and programs with efforts to engage citizens in preventing, preparing for, and responding to all hazards. This includes planning and evaluation, public education and communication, training, participation in exercises, providing proper equipment to citizens with a role in response, and management of Citizen Corps volunteer programs and activities.

Emergency Management Performance Grants Program: The Emergency Management Performance Grants (EMPG) Program provides funds to support emergency management initiatives at the State and local levels to improve mitigation, preparedness, response, and recovery capabilities for

all hazards. DHS is responsible for leading and supporting the Nation in a comprehensive, risk-based, all-hazards emergency management program.

Cross-walk of FY 2005 – FY 2007 Funding Allocations

	FY 2005 Funding Allocation	FY 2006 Funding Allocation	Proposed FY 2007 Funding Allocation
SHSP	All 56 States and territories are eligible. Formula using a base amount of 0.75% of the total allocation for each State (including the District of Columbia and the Commonwealth of Puerto Rico), and 0.25% of the total allocation for each U.S. Territory with the balance of funds being distributed on a population-share basis.	All 56 States and territories are eligible.	All 56 States and territories are eligible.
LETPP		With the exception of CCP and MMRS, discretionary allocation using a base amount of 0.75% of the total allocation for each State and territory with the balance of funds being awarded based on both risk and need with a minimum grant size of equal to 0.75% of the total, approximately \$3.1 million.	With the exception of CCP, allocation of all funds awarded will be based on risk and need, with each state or territory receiving not less than 0.25% of the total, approximately \$2.7 million. Initial risk/need based allocations below that amount will be adjusted to reach the 0.25%.
CCP			
MMRS	Each of the 124 MMRS jurisdictions received \$227,592.	A minimum of 20% of funding targeted for law enforcement prevention activities.	A minimum of 20% of funding targeted for law enforcement prevention activities.

PPA: Targeted Infrastructure Capability Grants Program

	FTP	FTE	Amount
2005 Actual	32	32	1,184,939
2006 Revised Enacted	54	54	1,143,451
2007 Adjustments to Base	0	0	294,550
2007 Current Services	54	54	1,438,000
2007 Program Changes	0	0	0
2007 Request	54	54	1,438,000
Total Changes 2006-2007	0	0	294,550

G&T requests \$1.4 billion for this activity. The increase in funding under this program activity reflects the continuing shift of resources to programs that emphasize regional approaches to enhancing our nation's homeland security.

Specifically, the increase reflects an \$82.5 million enhancement to the existing UASI program, funding for the Targeted Infrastructure Protection Program (TIIPP) totaling \$585.2 million, and a slight increase in program administration of \$1.4 million. Off-setting this increase is a reduction of \$374.6 million,

which reflects the consolidation of individual transportation infrastructure grant resources under the larger (+55%), discretionary-based TIPP.

UASI Regional Grants: For FY 2007, DHS is proposing to continue the Urban Area Security Initiative (UASI) funding process established in FY 2006 by awarding UASI funds based on an evaluation of both *risk and need*. This allocation would reflect a results-based planning process that supports achievement of minimum baseline capability levels in our Nation's high threat urban areas. This discretionary grant program would be based on the following principles:

- All eligible urban areas may apply, but all applicants are *not* guaranteed funding.
- Applications will be submitted through the States, and will include strategic goals and activities and associated justification detailing how those activities address capability shortfalls and enable achievement of the minimum baseline capability levels laid out in the National Planning Guidance (NPG).
- Applications will be evaluated and funds awarded based on *risk and need*, consistent with national priorities as discussed in the National Preparedness Goal.
- Multi-jurisdictional coordination and regional preparedness initiatives will be required and will play a factor in funding allocations.

Applications will demonstrate core focus areas, how funding will be used to close critical capability gaps in support of the National Planning Guidance, and support for regional initiatives.

Applications will be reviewed and evaluated based on how proposed grant-funded activities align with identified capability gaps, strategic goals and objectives, and national priorities. Award determinations will be made based on an evaluation of both need (as presented in the applications) and risk.

DHS anticipates making grant awards by the 3rd quarter of the fiscal year, similar to FY 2006.

Cross-Walk of FY 2005 – FY 2007 UASI Funding Allocations

	FY 2005 Funding Allocation	Proposed FY 2006-2007 Funding Allocation
UASI	FY 2005 UASI funding allocated to the top 50 urban areas determined based on credible threat, presence of critical infrastructure, vulnerability, population, population density, law enforcement investigative and enforcement activity, and the existence of formal mutual aid agreements.	Eligible applicants determined by risk-and-need-based criteria, which included potential consequences and vulnerabilities. Funding awarded based on evaluation of both risk and need.

Targeted Infrastructure Protection Program: Enhancing the security of the Nation's critical infrastructure is a high priority for the Department. Funds provided through this program will directly enhance the preparedness of the owners and operators of key transit systems, port assets, and other infrastructure to prevent and respond to large scale incidents. Funds provided through this program will also allow the Department to build on and leverage partnerships with other Federal agencies and industries that seek to advance the state of the Nation's preparedness through better security solutions and information sharing approaches.

The FY 2007 Targeted Infrastructure Protection (TIP) Program will continue to build on enhancements made in prior years by utilizing a discretionary approach for allocating funds between sectors to close vulnerability gaps. This approach is similar to the FY 2006 request. In coordination with the DHS Office of Analysis and Operations and relevant threat and intelligence data from other key DHS and Federal agencies, the \$600 million for an integrated, discretionary grant program will enable G&T to better supplement State, local, and private sector infrastructure protection efforts based on critical vulnerabilities. This effort will also support one of the national priorities in the National Preparedness Goal, implementation of the National Infrastructure Protection Plan.

Additional priorities for the FY 2007 program include further enhancing the linkages between critical infrastructure protection and regional planning efforts.

PPA: National Exercise Program

	FTP	FTE	Amount
2005 Actual	27	27	52,000
2006 Revised Enacted	30	30	51,480
2007 Adjustments to Base	0	0	(2,772)
2007 Current Services	30	30	48,708
2007 Program Changes	0	0	0
2007 Request	30	30	48,708
Total Changes 2006-2007	0	0	(2,772)

G&T requests \$48.7 million for this activity. This reduction reflects an \$11.1 million decrease to the Exercise Support Program, reflecting the increased state and local capability to develop self-sustaining exercise programs. Off-setting this reduction is a \$2.9 million increase in national, state and local exercise activities and \$5.5 million for program administration, enabling NEP to improve its coordination with Federal, state, and local exercise partners.

CURRENT SERVICES PROGRAM DESCRIPTION:

National Exercise Series/TOPOFF: The TOPOFF (Top Officials) National Exercise Series provides a critical mechanism for assessing the Nation's preparedness to prevent, deter, respond to, and recover from a large-scale terrorist attack. TOPOFF is a biennial cycle of increasingly complex events, which culminates in a week-long, full-scale simulation of a significant multi-point terrorist attack. TOPOFF provides a realistic opportunity for the Federal, State, and local senior officials and emergency response communities, as well as the private sector, volunteer agencies, and international partners, to test their plans, policies, and procedures in the event of such an attack. TOPOFF also helps the Department identify requirements for policy changes, training, technical assistance, and financial assistance. Procedural and policy shortcomings identified during the TOPOFF review process are remedied through the Secretary's Remedial Action Management Program (RAMP) and the Corrective Action Program (CAP).

The TOPOFF 3 Full Scale Exercise (FSE) took place over a five day period in April 2005, and involved over 22,000 participants representing the entire spectrum of emergency response activities. In preparation for TOPOFF 3, G&T conducted a series of "building block" exercises, including a command post exercise (CPX), a series of seminars addressing prevention and response issues,

national and local planning conferences, and Senior Official Exercises addressing chemical and biological attacks.

TOPOFF 3 was followed by a three-day large-scale game, which addressed medium and long-term recovery issues resulting from a massive terrorist attack. These exercises involved Federal, State, and local partners, as well as representatives of the private sector, volunteer agencies, and our international partners, the United Kingdom and Canada.

The TOPOFF exercises are designed in accordance with G&T's Homeland Security Exercise and Evaluation Program (HSEEP), which provides standardized doctrine and procedures for the management, design, implementation, and evaluation of homeland security exercises. The use of HSEEP promotes a common standard for exercise design, and thus facilitates coordination with Federal, State, and local partners. G&T has already begun preparations for TOPOFF 4, which is scheduled for FY 2007.

National Special Security Events Exercises: The National Special Security Event (NSSE) Program assists States and local jurisdictions with the design, planning, conduct, and evaluation of exercise activities for high-priority events that the Federal government designates as NSSEs. Examples of recently conducted NSSEs for which G&T has provided exercise support include the G8 summit at Sea Island, Georgia, the Republican National Convention in New York City, and the Democratic National Convention in Boston. G&T NSSE support provides a forum for Federal, State, and local personnel to rehearse the coordination and response activities that may arise in the event of a terrorist act during a high-profile special event. G&T will continue to support designated NSSE events.

Federal State and Local Exercises: The Federal, State, and Local Exercise Program focuses on regional coordination and bridging the gap between national TOPOFF exercises and State and local homeland security exercises. The program's exercises examine the regional impacts of a terrorist attack and the need for multi-jurisdictional and multi-State responses. Cross-cutting issues with regional impact include mutual aid agreements, emergency management assistance compacts, agriculture, food safety, and critical infrastructure.

Prevention Exercises: The Prevention and Deterrence Exercise Program enables G&T to meet its responsibility for building and sustaining Federal, State, and local capabilities to prevent and deter acts of terrorism. In FY 2005, G&T initiated the Prevention and Deterrence Exercise Program, conducting a twenty-three day pilot exercise in New York State. This pilot exercise featured unprecedented Federal, State, and local cooperation in testing a State's intelligence fusion center's capabilities, with "red-team" play simulating an adversary's actions. An After-Action Report details the best practices and areas for improvement identified during the pilot exercise, and proposes improvement actions. In FY 2006, G&T aims to, at minimum, conduct a second pilot exercise of greater scope and complexity, featuring Federal partners such as the FBI and Homeland Security Operations Center, while testing multiple State and local players simultaneously. As part of its Homeland Security Exercise and Evaluation Program (HSEEP), G&T is currently in the process of developing exercise evaluation standards for prevention and deterrence exercises. These evaluation standards, which enumerate detailed "critical tasks", will provide a means of assessing the Nation's prevention and deterrence capabilities, and will provide a yardstick by which to gauge progress in this area. In FY 2006, this program focuses on developing, distributing, and supporting the implementation of validated exercise methodologies and tools, which highlight prevention related activities such as Intelligence Analysis and Fusion, Information Collection and Threat Detection, and Information Sharing and Collaboration.

Exercise Support Program: G&T provides two forms of direct exercise support to States. First, G&T provides experienced contractor support to assist States in the development of ongoing, self-sustaining Statewide exercise programs. This support includes workshops, training courses, and an automated on-line toolkit to assist exercise managers with exercise design and implementation. Second, G&T provides assistance in the design, planning, conduct, and evaluation of individual exercises. In FY 2005, G&T provided direct support for 62 exercises at the State or local levels. In FY 2006 G&T's plans include 50 or more such exercises.

All G&T exercise support to States is provided in accordance with G&T's Homeland Security Exercise and Evaluation Program (HSEEP). HSEEP provides a detailed set of standards for exercise design, planning, conduct, and evaluation, and has been adopted by all 56 States and territories, as well as a number of Federal partners. The promulgation of HSEEP has introduced a set of common terms, concepts, and standards that are used by a broad array of agencies and organizations in the exercise planning process. G&T is currently in the process of revising HSEEP to reflect the critical tasks and target capabilities defined in the upcoming National Preparedness Goal.

Because it provides exercise support to a wide array of State and local partners using standardized evaluation methodologies, G&T's Exercise Support Program provides a valuable tool for comprehensive analysis of the Nation's terrorism preparedness. G&T is currently in the process of implementing an After Action Report/Improvement Plan (AAR/IP) knowledge management system. This system will track the success of partner jurisdictions at performing HSEEP critical tasks during exercises. The data gathered through AAR/IP system will provide a national-level view of preparedness capabilities, allowing analysts to identify shortcomings in the Nation's readiness for terrorist attacks. The system will also track the rate at which "Action Items" identified in After-Action Reports are addressed, thus providing a yardstick for measuring improvements in readiness. By providing such data, G&T's Exercise Support Program will continue to fulfill its critical preparedness assessment role.

Emerging Exercise Needs: The Emerging Exercise Needs Program is designed to enable G&T in meeting a variety of ongoing exercise needs, including:

- the development and conduct of exercises that address emerging threats;
- new technical approaches to the conduct of exercises;
- new approaches to the collection of exercise results; and
- the need to collaboratively conduct exercises with other DHS elements in areas such as port security, mass transit, and critical infrastructure.

PPA: State and Local Training Program

	FTP	FTE	Amount
2005 Actual	26	26	195,000
2006 Revised Enacted	44	44	207,900
2007 Adjustments to Base	0	0	(115,549)
2007 Current Services	44	44	92,351
2007 Program Changes	0	0	0
2007 Request	44	44	92,351
Total Changes 2006-2007	0	0	(115,549)

G&T requests \$92.4 million for this activity. This is a decrease of \$115.5 million from FY 2006. The FY 2007 budget request proposes an overall reduction for training center operations. The remaining resources, totaling \$92.4 million, are proposed to be allocated on a competitive discretionary basis and are consistent with funds previously requested by the Administration. DHS will continue to encourage state and urban area grantees to support training efforts that comply with DHS standards.

CURRENT SERVICES PROGRAM DESCRIPTION:

Continuing and Emerging Training: G&T, in conjunction with Federal, State and local training providers as well as emergency response practitioners, identifies emerging training needs based on continuous task analysis and performance assessment, exercise after action reports, and data reported in State and urban area homeland security strategies. In addition, opportunities are continually identified for more effectively reaching larger portions of the emergency response community with capability-based training tied to national preparedness priorities with consideration for risk-based allocation of resources. Entities eligible to receive funding under this program include: national associations representing public safety agencies and institutions of higher education, institutions of higher education, private corporations working in conjunction with the nonprofit sector, and nonprofit organizations. Applicants are invited to submit training proposals that enhance State and local prevention, preparedness, and response capabilities. Proposals must include, but are not limited to, the following elements:

- An element addressing how the proposed project builds sustainable preparedness at the State and local level;
- A capacity-building component for the State and local jurisdictions which includes a leave-behind capability for jurisdictions to employ themselves;
- A process for identifying lessons learned and best practices for inclusion in ongoing DHS efforts; and
- Incorporation of a blended learning approach.

G&T is committed to a competitive process for making these awards. All proposals are subject to an independent peer-review panel evaluation. Peer review panels will consist of representatives from academia, industry, or Federal Government organizations, along with practitioners from Federal, State and local criminal justice and public safety agencies
