Memorandum

To: SAFER Users
From: FMCSA Technical Support Project Manager
Date: March 29, 2005
Subject: Release of SAFER Version 4.7.1

The following changes will be implemented in FMCSA Safety and Fitness Electronic Records system (SAFER) Version 4.7.1 effective March 31, 2005.

1. Enhancement (CR138) – This version of SAFER will implement edit checks for CVIS_DEFAULT_CARRIER. The improved data quality will fulfill a PRISM requirement so that the targeted vehicles will be included in the vehicle target files. For records containing leading zeroes and trailing spaces in CVIS_DEFAULT_CARRIER, the XML service will report the records in the transaction log file and reject those records.

2. Maintenance (CR167) – This version of SAFER has tested the backwards compatibility of PRISM_LSI.dll with the current production version of the SAFER ELQ service. The new PRISM_LSI.dll will be deployed into production in this release.

3. Maintenance (CR168) – This version of SAFER has implemented remediation against potential security vulnerabilities in SAFER web and web services.

4. Enhancement (CR171) – This version of SAFER will implement a new XML transaction called "ISS" to support ISS company data refresh using SAFER web services. The ISS company snapshot will be revised to contain only business required data elements. As a result, New Entrant Code will be included in the ISS snapshot as well.
