RELEASE IS EMBARGOED **INFORMATION:** (202) 691-5200 MEDIA CONTACT: (202) 691-5902 UNTIL 8:30 A.M. (EDT) INTERNET ADDRESS: http://www.bls.gov/cpi/ Friday, October 18, 2002

CONSUMER PRICE INDEX: SEPTEMBER 2002

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.2 percent in September, before seasonal adjustment, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The September level of 181.0 (1982-84=100) was 1.5 percent higher than its level in September 2001.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.2 percent in September, prior to seasonal adjustment. The September level of 177.0 was 1.3 percent higher than the index in September 2001.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.2 percent in September, following an increase of 0.3 percent in August. The index for food, which declined 0.1 percent in August, rose 0.2 percent in September. The index for food at home increased 0.3 percent, with about four-fifths of the increase due to a 2.2 percent rise in the index for nonalcoholic beverages. Energy costs advanced for the third consecutive month--up 0.7 percent in September. Within energy, the index for petroleum-based energy rose 1.0 percent and the index for energy services increased 0.4 percent. Excluding food and energy, the CPI-U rose 0.1 percent after increasing 0.3 percent in August. Smaller increases in the indexes for shelter and for apparel, coupled with downturns in the indexes for education and communication and for public transportation, were largely responsible for the deceleration in September.

food and energy	.1	.3	.2	.1	.2	.3	.1	2.3	2.2

Consumer prices rose at a seasonally adjusted annual rate (SAAR) of 2.5 percent in the third quarter. This followed increases in the first and second quarters at annual rates of 3.0 and 2.5 percent, respectively, and brings the year-to-date annual rate to 2.6 percent. This compares with an increase of 1.6 percent in all of 2001. The index for energy, which had declined sharply in 2001, following large increases in the preceding two years, has reverted back to its 1999-2000 pattern, advancing at a 13.0 percent SAAR in the first nine months of 2002. Petroleum-based energy costs increased at a 30.2 percent annual rate, while charges for energy services declined at a 0.3 percent annual rate. The food index rose at a 1.2 percent SAAR in the first nine months of 2002. The index for grocery store food prices increased at a 0.4 percent annual rate thus far in 2002, as price increases for fruits and vegetables and for cereal and bakery products—up at annual rates of 5.5 and 1.8 percent, respectively—were largely offset by declines in the indexes for dairy products, for meats, poultry, fish, and eggs, and for other food at home.

Excluding food and energy, the CPI-U advanced at a 2.3 percent SAAR in the third quarter, following increases at rates of 2.1 and 1.9 percent in the first two quarters of 2002. The 2.1 percent SAAR for the first nine months of 2002 compares with a 2.7 percent rise in all of 2001. The principal reason for this deceleration was a smaller rate of increase in shelter costs--up at a 3.3 percent SAAR thus far in 2002 compared with a 4.2 percent rise in all of 2001. A smaller increase in the index for recreation and a larger decline in the index for new and used vehicles also contributed to the moderation thus far this year. The annual rates for selected groups for the last seven and \(^3\)4 years are shown below.

The food and beverages index increased 0.2 percent in September. The index for food at home rose 0.3 percent in September, following a 0.3 percent decline in August. Increases in the indexes for nonalcoholic beverages, for other food at home, and for cereals and bakery products, each of which had declined in August, more than offset declines in the indexes for meats, poultry, fish, and eggs and for dairy products. The index for fruits and vegetables was virtually unchanged. Within the fruits and vegetables group, a 1.9 percent rise in the index for fresh fruits was offset by declines in the indexes for fresh vegetables and for processed fruits and vegetables—down 1.5 and 0.2 percent, respectively. The index for meats, poultry, fish, and eggs declined 0.2 percent in September. Declines in prices for beef, for pork, and for eggs more than offset a 1.0 percent increase in poultry prices. The index for dairy products declined for the fourth consecutive month, down 0.5 percent in September. The index for nonalcoholic beverages, which declined 0.6 percent in August, rose 2.2 percent in September, reflecting price increases for carbonated drinks and nonfrozen noncarbonated juices and drinks. The indexes for cereal and bakery products and for other food at home increased 0.4 and 0.5 percent, respectively. The other two components of the food and beverages index, food away from home and alcoholic beverages, increased 0.2 and declined 0.2 percent, respectively.

The index for housing rose 0.1 percent in September, following a 0.3 percent rise in August. Shelter costs, which rose 0.4 percent in August, increased 0.1 percent in September. Within shelter, the indexes for rent and owners' equivalent rent increased 0.1 and 0.2 percent, respectively, while the index for lodging away from home declined 0.6 percent. (Prior to seasonal adjustment, the indexes for rent and for owners' equivalent rent increased 0.2 and 0.4 percent, respectively, while the index for lodging away from home declined 5.0 percent.) The index for fuels and utilities rose 0.4 percent in September. The index for fuel oil increased 1.9 percent in September and has risen 10.0 percent in the first nine months of 2002. In September, the indexes for natural gas and for electricity rose 1.0 and 0.1 percent, respectively. (Prior to seasonal adjustment, fuel oil prices rose 3.3 percent and charges for natural gas rose 1.1 percent, while charges for electricity fell 0.2 percent.) The index for household furnishings and operations declined 0.2 percent in September.

The transportation index rose 0.3 percent in September. The index for gasoline increased for the fourth consecutive month--up 1.0 percent in September. Gasoline prices have risen 26.9 percent thus far this year, but remain 17.1 percent below their peak level in May 2001. The index for new vehicles increased 0.5 percent in September, its first monthly advance since last December. (About 15 percent of the new vehicle sample in September was represented by 2003 models.) New vehicle prices are 1.1 percent lower than in September 2001. The index for used cars and trucks declined 0.8 percent in September. During the last 12 months, the index for used cars and trucks has declined 3.2 percent. Airline fares declined 2.1 percent in September and are 5.2 percent lower than a year ago.

The index for apparel increased 0.1 percent in September, following a 1.1 percent increase in August. (Prior to seasonal adjustment, apparel prices rose 3.4 percent, reflecting price increases associated with the introduction of fall-winter wear.)

The medical care index rose 0.3 percent in September to a level 4.6 percent above its level a year ago. The index for medical care commodities--prescription drugs, nonprescription drugs, and medical supplies--increased 0.2 percent. The index for medical care services rose 0.4 percent in September. Charges for professional services were virtually unchanged, while those for hospital and related services increased 0.7 percent.

The index for recreation was unchanged in September, following increases of 0.1 percent in each of the preceding two months. Increases in the indexes for recreational reading materials and for cable television--up 0.7 and 0.5 percent, respectively--were offset by declines in the indexes for sporting goods, for pets and pet products, for photography, and for toys.

The index for education and communication, which increased 0.7 percent in August, declined 0.2 percent in September. The education index rose 0.6 percent, reflecting a 0.6 percent increase in the index for college tuition and fees. (Prior to seasonal adjustment, charges for college tuition and fees rose 2.4 percent, bringing the change over the last 12 months to 7.2 percent.) The index for communication costs declined 0.8 percent, reflecting decreases in the indexes for telephone services and for personal computers and peripheral equipment--down 0.5 and 4.1 percent, respectively.

The index for other goods and services rose 0.4 percent in September, reflecting a 1.6 percent rise in the index for tobacco and smoking products. Prices for cigarettes increased 1.7 percent, reflecting decreased discounting of some major brands.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers increased 0.2 percent in September.

<u>Chained Consumer Price Index for All Urb</u>an Consumers (C-CPI-U)

The C-CPI-U rose 0.2 percent in September on a not seasonally adjusted basis. The September level of 106.0 (December 1999=100) was 1.2 percent higher than the index in September 2001. Table 7 contains the most recent indexes for all items and the component series that are published. Data will be published monthly in the CPI Detailed Report and are available on the CPI home page: http://www.bls.gov/cpi/. Please note that the indexes for the post-2000 period are subject to revision.

Consumer Price Index data for October are scheduled for release on Tuesday, November 19, 2002, at 8:30 A.M. (EST).

NOTE ON A NEW, SUPPLEMENTAL INDEX OF CONSUMER PRICE CHANGE

The Bureau of Labor Statistics began publishing a consumer price index (CPI) called the Chained Consumer Price Index for All Urban Consumers, effective with release of July data on August 16, 2002. Designated the **C-CPI-U**, the index supplements the existing indexes already produced by the BLS: the CPI for All Urban Consumers (CPI-U) and the CPI for Urban Wage Earners and Clerical Workers (CPI-W).

The **C-CPI-U** employs a Tornqvist formula and utilizes expenditure data in adjacent time periods in order to reflect the effect of any substitution that consumers make *across* item categories in response to changes in relative prices. The new measure, said to be a "superlative" index, is designed to be a closer approximation to a "cost-of-living" index than the CPI-U and CPI-W. The use of expenditure data for both a base period and the current period in order to average price change *across* item categories distinguishes the **C-CPI-U** from the other CPI measures, which use only a single expenditure base period to compute the price change over time. In 1999, the BLS introduced a geometric mean estimator for averaging prices *within* most of the index's item categories in order to approximate the effect of consumers' responses to changes in relative prices *within* these item categories. The geometric mean estimator is used in the **C-CPI-U** in the same item categories in which it is now used in the CPI-U and CPI-W. (See Monthly Labor Review, October 1998, pp. 3-7.)

Expenditure data required for the calculation of the **C-CPI-U** are available only with a time lag. Thus, the **C-CPI-U** is being issued first in preliminary form using the latest available expenditure data at this time and will be subject to two subsequent revisions. Accordingly, with release of the July data, "final" values of the **C-CPI-U** have been issued for the 12 months of 2000, "interim" values have been issued for the 12 months of 2001, and "initial" values have been issued for January-July of 2002. In February 2003, with release of the January 2003 index, revised interim indexes for the 12 months of 2002 will be published, and the index values for 2001 will be revised and will become final. Then, in February 2004, when the monthly expenditure data from calendar year 2002 become available, **C-CPI-U** indexes for the 12 months of 2002 will be issued in final form and values for the 12 months of 2003 will be revised and issued as interim. The **C-CPI-U** index revisions are expected to be small, but in principle each monthly index could be revised from its previously published level.

Facilities for Sensory Impaired

Information from this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200, Federal Relay Services: 1-800-877-8339. For a recorded message of Summary CPI data, call (202) 691-5200.

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time of goods and services purchased by households. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) the CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers households of wage earners and clerical workers that comprise approximately 32 percent of the total population and (2) the CPI for All Urban Consumers (CPI-U) and the Chained CPI for All Urban Consumers (C-CPI-U), which cover approximately 87 percent of the total population and include in addition to wage earners and clerical worker—households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPIs are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments-department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits or telephone calls of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights, which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 26 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period. For the C-CPI-U data are issued only at the national level. It is important to note that the CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and subject to two annual revisions.

The index measures price change from a designed reference date. For the CPI-U and the CPI-W the reference base is 1982-84 equals 100.0. The reference base for the C-CPI-U is December 1999 equals 100.

An increase of 16.5 percent from the reference base, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period market basket of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details visit the CPI home page on the Internet at http://www.bls.gov/cpi/ or contact our CPI Information and Analysis Section on (202) 691-7000.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example below illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change

CPI	115.7
Less previous index	111.2
Equals index point change	4.5

Percent Change

Index point difference	4.5
Divided by the previous index	111.2
Equals	0.040
Results multiplied by one hundred	0.040x100
Equals percent change	4.0

Regions Defined

The states in the four regions shown in Tables 3 and 6 are listed below.

The Northeast--Connecticut, Maine, Massachusetts, New Hampshire, New York, New Jersey, Pennsylvania, Rhode Island, and Vermont.

The Midwest--Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The South--Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia, and the District of Columbia.

The West--Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

A Note on Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data; e.g., data from 1997 through 2001 were replaced at the end of 2001. In January 2002, dependently seasonally adjusted series were revised for January 1987-December 2001 as a result of a change in the aggregation weights for dependently adjusted series. For further information, please see "Aggregation of Dependently Adjusted Seasonally Adjusted Series," in the October 2001 issue of the CPI Detailed Report.

The seasonal movement of all items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period. Note: 39 of the 73 components are seasonally adjusted for 2002.

Seasonally adjusted data, including the All items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the fuel oil, natural gas, motor fuels, and educational books and supplies indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For the Nonalcoholic beverages index, the procedure was used to offset the effects of a large increase in coffee prices due to adverse weather. The procedure was used to account for unusual butter fat supply reductions and decreases in milk supply affecting the Fats and oils series. For the Water and sewerage maintenance index, the procedure was used to account for a data collection anomaly. It was used to offset an increase in summer demand in the Midwest and South for Electricity. For New vehicles, New cars, and New trucks, the procedure was used to offset the effects of a model changeover combined with financing incentives.

A description of Intervention Analysis Seasonal Adjustment, as well as a list of unusual events modeled and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Daniel Chow on (202) 691-6968 or sending e-mail to Chow_Dan@BLS.GOV. If you have general questions about the CPI, please call our information staff at (202) 691-7000.

Indexes on a December 1982=100 base.
 Indexes on a December 1988=100 base.
 Data not available.
 NOTE: Index applies to a month as a whole, not to any specific date.

Not seasonally adjusted.
 Indexes on a December 1997=100 base.
 This index series was calculated using a Laspeyres estimator. All other item stratum index series converted to a geometric means estimator in January, 1999.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

Tampa-St. Petersburg-Clearwater, FL.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

M - Every month.

^{1 -} January, March, May, July, September, and November.

^{2 -} February, April, June, August, October, and December.

² Regions defined as the four Census regions. See technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ; Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA;

⁶ Indexes on a November 1996=100 base.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

Tampa-St. Petersburg-Clearwater, FL.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

M - Every month.

^{1 -} January, March, May, July, September, and November.

^{2 -} February, April, June, August, October, and December.

² Regions defined as the four Census regions. See technical notes.

³ Indexes on a December 1996=100 base.

⁴ Indexes on a December 1986=100 base.

⁵ In addition, the following metropolitan areas are published semiannually and appear in Tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder-Greeley, CO; Honolulu, HI; Kansas City, MO-KS; Milwaukee-Racine, WI; Minneapolis-St. Paul, MN-WI; Phoenix-Mesa, AZ; Pittsburgh, PA; Portland-Salem, OR-WA; St. Louis, MO-IL; San Diego, CA;

⁶ Indexes on a November 1996=100 base.

Data not available.

Table 7. Chained Consumer Price Index for All Urban Consumers (C-CPI-U): U.S. city average, by expenditure category and commodity and service group

(December 1999=100, unless otherwise noted)

C-CPI-U	Relative importance,	Unadjus indexe		Unadjusted percent change to Sep. 2002 from—		
0 01 1 0	1999-2000	Aug. 2002	Sep. 2002	Sep. 2001	Aug. 2002	
Expenditure category						
All items	100.000	105.8	106.0	1.2	0.2	
Food and beverages	15.451	106.0	106.2	1.3	.2
