Acknowledgments

Many people regularly participate in the quarterly production of this report, which is prepared under the general direction of **Ruth Runyan**, Assistant Chief for Financial Statistics, and under the general supervision of **Ewen M. Wilson**, Chief, Company Statistics Division.

Ronald H. Lee, Chief, Financial Report Branch, plans and manages the financial data collection effort. **Ronald B. Horton** directs the data analysis activities of **James Clayton**, **Katherine Lee**, **James Pierce**, **Yolando St. George**, **Joseph White**, and **Zenaida Williams**. **Joseph C. Kirby, Jr.**, manages the telephone follow-up work of **Altessia Blake**, **Traci Gillespie-Brown**, and **Lolita Curtis-Hammond**, and the data keying by **Katrina Reed** and **Lakeisha Tyson-Cook**. **Octavia A. Dockery** provides secretarial support to the branch.

Frank M. Hartman, Chief, Corporate Analysis Branch, assisted by **Ruth Gladden**, **Cecilia Johnson**, **James Mercury**, **Irene Miller**, **Joan Sanders**, **Jack Schroeder**, and **Angela Walker**, reviews and analyzes corporate structure and industry classification of companies participating in the program. **Shirley Ayres**, **Donna Moore**, and **Minnie Whiteside**, maintain the program's records, control correspondence, and record receipt of reports.

Laura Gonchar Schmitz, assisted by **Frances Tucker**, and **Cheryl Nelson**, provides sample maintenance, production planning, and data processing support. **Donna Farley** coordinates the various phases of the publication process, including table preparation. **Durwin W. Knutson** provides support for the Internet, including the preparation and dissemination of electronic files.

Ruth Detlefsen, Assistant Chief for Research and Methodology, provides monitoring of the integrity of the samples. **Carol Caldwell**, Chief of the Research and Methods Branch, directs sample design and quality control with primary responsibility for these activities assigned to **Mark S. Sands**, assisted by **Barbara F. Blass** and **Amy M. Newman-Smith**.

Mitchell L. Trager, Assistant Chief for Evaluation and Information Systems, Governments Division, provides general direction of the computer processing of data. Computer programs and network applications are provided under the direction of **John Sullivan**, Chief of the Systems and Technology Branch. **John Studds** is responsible for computer program development and network design.

The staff of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, provides publication planning, design, composition, editorial review, and printing planning and procurement. **Nelsa Brown** provides publication coordination and editing. **Gloria T. Davis** provided composition services.

A special acknowledgment is due to the many corporations whose cooperation each quarter is essential to the success of this report.

SPECIAL NOTE

Beginning with the first quarter of 1998, the reporting forms used by the Quarterly Financial Report Program were updated to conform with changes in accounting principles and to provide more meaningful data to users. The new format provides for reporting of interest expense, bonds and debentures, and more detailed information on significant economic events, such as asset sales and disposal of business segments. Net income before and after tax have been redefined to include minority stockholders' interest. Where possible, prior quarter data have been restated on the new format. In some instances, however, old data items were not fully comparable with the new format. Where this occurs, the new data items for the prior quarter are noted as not available (n.a.).

Introduction

THE QUARTERLY FINANCIAL REPORT PROGRAM publishes up-to-date aggregate statistics on the financial results and position of U.S. corporations. Based upon an extensive sample survey, the *Quarterly Financial Report* (QFR) presents estimated statements of income and retained earnings, balance sheets, and related financial and operating ratios for all manufacturing corporations and large mining and trade corporations. The statistical data are classified by industry and by asset size. Pertinent data are provided, when possible, on material distortions in comparability owing to changes in accounting conventions or user needs.

Purpose of Report: The main purpose of the QFR is to provide timely, accurate data on business financial conditions for use by Government and private-sector organizations and individuals. Among its users, the Commerce Department regularly employs QFR data as an important component in determining corporate profits for GDP and National Income estimates; the Federal Reserve Board uses the QFR to assess industrial debt structure, liquidity, and profitability; the Treasury Department estimates corporate tax liability through use of QFR data; the Council of Economic Advisors and Congressional Committees utilize key indicators derived from QFR data as they design economic policies and draft legislation; the Federal Trade Commission (FTC) utilizes the series as a basic reference point in analyzing the financial performance of American industries; and banking institutions and financial analysts draw upon the series in making investment evaluations.

Responsibility: The QFR is prepared by the Company Statistics Division, Bureau of the Census, Washington, DC 20233, telephone 301-457-3343. The FTC had been responsible for the program from inception in 1947 until December 1982. That responsibility was shared with the Securities and Exchange Commission until 1971.

The program designs and maintains on a current basis statistical cross sections (i.e., probability samples) of corporate enterprises; collects, analyzes, and summarizes periodic confidential reports from those corporations; estimates national aggregates based upon the individual company reports; and publishes the resulting aggregates.

Publication Schedules: QFR data is scheduled for release approximately 75 days after the end of the first, second, and third calendar quarters and approximately 95 days after the end of the fourth calendar quarter. The QFR

publishes information on the most recently closed quarter for manufacturing, mining, and wholesaling and the preceding quarter's data for retailing except in the fourth quarter, when the 95-day publication lag permits synchronized presentation. The following table defines the four reporting quarters for the surveyed industry divisions in terms of the month in which any given surveyed corporation's fiscal quarter ends:

Reporting Quarters for Surveys Industry Divisions*

QFR Quarter	Manufacturing, Mining, and Wholesale Trade	Retail Trade
First	Jan., Feb., or Mar.	Feb., Mar., or Apr.
Second	Apr., May, or Jun.	May, Jun., or Jul.
Third	Jul., Aug., or Sep.	Aug., Sep., or Oct.
Fourth	Oct., Nov., or Dec.	Nov., Dec., or Jan.

*Coverage is for corporations whose quarter ends as indicated.

Coverage: Since the fourth quarter of 1973, reporting corporations have been instructed to consolidate the domestic operations of every corporation which is taxable under the U.S. Internal Revenue Code and is owned more than 50 percent by a reporting corporation and its majority-owned subsidiaries. In addition, consolidation is required for every majority-owned Domestic International Sales Corporation. Corporations that manufacture goods within the United States or base their sales activity in the United States and export their goods are considered domestic and are consolidated. Specifically excluded from consolidation are foreign entities (either corporate or noncorporate), foreign branch operations, and domestic corporations primarily engaged in foreign operations. Therefore, subsidiaries that were created in foreign countries to manufacture and/or sell primarily in foreign markets are not consolidated. Also excluded from consolidation are domestic corporations primarily engaged in banking, finance, or insurance (as defined in Major Groups 60-63 and in Group 672 of the *Standard Industrial Classification Manual, 1987* (SIC Manual)). Consolidation is optional for domestic corporations required to file monthly or quarterly financial statements with the Interstate Commerce Commission, the Federal Communications Commission, or the Federal Energy Regulatory Commission.

Nonconsolidated subsidiaries are accounted for on either the cost or equity method of accounting, at the option of the reporting company. Mining, wholesale, and retail trade corporations and manufacturing corporations with assets

less than \$50 million report their dividend or equity income with other nonoperating income (expense). Manufacturing corporations with assets of \$50 million and over report their dividend or equity income on designated data lines.

How Corporations Are Classified by Industry: The industry combinations used in the QFR are defined in accordance with the *Standard Industrial Classification Manual, 1987*. The SIC Manual has the industry detail necessary to classify the product lines used for coding the sample corporations.

Each corporation in the survey is required to provide a breakdown of gross receipts by source industry. These data are analyzed to determine the classification of each corporation. A reporting corporation is initially classified into the SIC division accounting for more gross receipts than any other SIC division. To be in scope for the QFR, more gross receipts of the reporting corporation must be accounted for by either (not a combination of) SIC Division B (Mining), Division D (Manufacturing), Division F (Wholesale Trade), or Division G (Retail Trade) than by any other SIC division.

For the most part, after a corporation is assigned to a division, it is further classified by the 2-digit SIC major group accounting for more gross receipts than any other 2-digit group within the division. In certain cases, corporations are further classified into 3-digit SIC groups. QFR data are published for these major groups except when precision criteria are not satisfied. In those cases, major groups are collapsed into a residual category, such as Other Durable Manufacturing Industries.

Note that these procedures may lead to a conglomerate corporation being assigned to a major group from which only a small proportion of its receipts are obtained. For example, if a corporation obtains 25 percent of its gross receipts from mining activities, 30 percent from manufacturing, 20 percent from wholesale, and 25 percent from retail, it would be classified in the Manufacturing Division. Furthermore, if the 30 percent of manufacturing activity was conducted in two major groups, 20 percent in one and 10 percent in the other, the activities of the corporation as a whole would be classified in the major group accounting for 20 percent of total receipts.

When a corporation is drawn into the sample, its classification is determined using the most current information available. The corporation remains in that category for eight quarters unless there is a change in its corporate structure or it is deleted from the sample. After eight quarters, its classification is reviewed again using the most current information available. If there is a change in reporting entity's corporate structure (e.g., merger, acquisition, or divestiture), its industry classification is reviewed at the time of change.

How Corporations Are Classified by Size: Each reporting manufacturing corporation is classified and tabulated according to its total assets reported for that quarter. Prior

to 1973, each manufacturing corporation was classified according to its total assets at the end of the quarter for which it first submitted a report. Unless deleted from the sample in the interim, it remained in the same asset size category until the first quarter of the following calendar year when it was classified according to its total assets at the end of that quarter. Mining and trade corporations are classified and tabulated according to total assets at time of sample selection. Prior to fourth quarter 1987, they were classified according to total assets at the end of the reference quarter.

Ratio Formatted Data: Many quantitative indicators are used to assess the financial strength of an enterprise and the success of its operations. The simplest is to assemble related financial items, such as sales and profits, and to express this relationship in the form of a ratio. Using these ratios, various aspects of corporate operations may be compared with the performance of other corporations or groups of corporations of similar size or in a similar industry.

The QFR's ratio formatted income statement and selected balance sheet ratios are expressed as a percent of net sales and total assets, respectively. The operating and financial characteristics of the respective industries and asset size groups are thus reduced to a common denominator to facilitate analysis.

The ratio tables include the following additional basic operating ratios:

- a. *Annual Rate of Profit on Stockholders' Equity at End of Period.* This ratio is obtained by multiplying income for the quarter before or after domestic taxes (including branch income (loss) and equity in the earnings of nonconsolidated subsidiaries net of foreign taxes) by four, to put it on an annual basis, and then dividing by stockholders' equity at the end of the quarter. It measures the rate of return which accrues to stockholders on their investment.
- b. *Annual Rate of Profit on Total Assets.* This ratio is obtained by multiplying income, as defined in deriving the rate of profit on stockholders' equity, both before and after taxes, by four, and then dividing by total assets at the end of the quarter. This ratio measures the productivity of assets in terms of producing income.
- c. *Total Current Assets to Total Current Liabilities.* This ratio is obtained by dividing total current assets by total current liabilities. It measures the ability to discharge current maturing obligations from existing current assets.
- d. *Total Cash and U.S. Government and Other Securities to Total Current Liabilities.* This ratio is obtained by dividing total cash and U.S. Government and other securities by total current liabilities. It measures the ability to discharge current liabilities from liquid assets.
- e. *Total Stockholders' Equity to Total Debt.* This ratio is obtained by dividing total stockholders' equity by the

total of short-term loans, current installments on long-term debt, and long-term debt due in more than 1 year. It indicates the extent of leverage financing used.

Description of the Sample: The frame from which the major portion of the sample is selected consists of the Internal Revenue Service (IRS) file of those corporate entities which are required to file Form 1120, 1120A, or 1120S and which also have as their principal industrial activity either manufacturing, mining, or wholesale or retail trade. The IRS frame is stratified based on industry classification and size of total assets and gross receipts. This frame is sampled once each year. Nearly all corporations whose operations are within the scope of the QFR and which have total assets of \$250 million and over are included in the sample with certainty (i.e., they have a 1-out-of-1 sampling fraction).

Manufacturing corporations with total assets of less than \$250 million are subject to a noncertainty stratified simple random sample, as are those corporations in mining, wholesale trade, and retail trade with total assets equal to \$50 million and over and less than \$250 million. The sampling rates range from approximately 1-out-of-160 to 1-out-of-2. Table J summarizes the resulting active sample sizes by division and size groups. Corporations in the noncertainty portion of the sample are rotated into the survey using a replacement scheme which provides that one-eighth of the sample is replaced each quarter. Corporations removed are those that have been in the reporting group the longest (usually eight quarters). Therefore, samples of noncertainty corporations for adjacent quarters are seven-eighths identical; for quarters ending nine months apart, they are five-eighths identical, etc.

The IRS frame does not contain those corporate entities whose first income tax return had not been processed. In addition, several months elapse between the sample selection and its introduction into the QFR program. To keep the QFR sample of larger corporations (i.e., those with total assets of at least \$250 million) as up-to-date as possible, a separate nonprobability procedure is followed. Each quarter, a file containing applications for a Federal Social Security Employer's Identification Number filed with the Social Security Administration during the previous quarter by new corporations is reviewed. Corporations thought to meet QFR's in-scope criteria are mailed classification forms. If their response indicates that the corporation does meet QFR's in-scope criteria, they will be included in the survey with certainty for the remainder of the year.

Precision of the Estimates: There are two types of errors possible in an estimate based on a sample survey, sampling and nonsampling. Sampling errors occur because observations are made only on a sample, not on the entire population. Nonsampling errors can be attributed to many sources in the collection and processing of data. The accuracy of a survey result is determined by the joint effects of sampling and nonsampling errors.

Measures of Sampling Error: The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same design. Estimates derived from the different samples would differ from each other. The average of these estimates would be close to the estimate derived from a complete enumeration of the population. This assumes that a complete enumeration has the same nonsampling errors as the sample surveys. The standard error of the estimate is a measure of the variability among the estimates from all possible samples of the same size and design and, thus, is a measure of the precision with which an estimate from a particular sample approximates the results of a complete enumeration. The coefficient of variation (expressed as a percent) is the standard error of the estimate times 100 percent, divided by the estimate. Note that the coefficient of a variation is an estimate derived from the sample and is also subject to sampling variability.

Table K gives the estimates of the coefficients of variation in percent for the quarterly dollar value of Net sales, Depreciation, Inventories, and Total assets estimates as shown in this report. Also in Table K are the estimates of the standard errors for the item Income before income taxes. Note that these estimated coefficients of variation and standard errors are biased downward because of present estimation techniques for the standard error. Therefore, the estimated coefficients of variation and the standard error represent a lower bound to this measure of precision.

The coefficients of variation presented in the table permit certain confidence statements about the sample estimates. As noted before, the particular sample used in this survey is one of a large number of samples of the same size that could have been selected using the same design. In about 2 out of 3 (67 percent) of these samples, the estimate would differ from a complete enumeration by less than the corresponding percent for that estimate shown in the sampling variability table. In about 19 out of 20 (95 percent) of these samples, the estimates would differ from the results of a complete enumeration by less than twice the percentage shown.

To illustrate the computations involved in the above confidence statements as related to dollar volume net sales estimates, assume that an estimate of net sales for all manufacturing published in Table 1.0 is \$525,000 million for a particular quarter and that the coefficient of variation for this estimate, as given in Table K is 0.2 percent or 0.002. Multiplying \$525,000 million by 0.002 yields \$1,050 million. Therefore, a 67-percent confidence interval is \$523,950 million to \$526,050 million (\$525,000 million plus or minus \$1,050 million). If corresponding confidence intervals were constructed for all possible samples of the same size and design, approximately 2 out of 3 (67 percent) of the intervals would contain the figure obtained from a

complete enumeration. Similarly, a 95-percent confidence interval is \$522,900 million to \$527,100 million (\$525,000 million plus or minus \$2,100 million).

To illustrate the computations involved in the above confidence statements as related to income before income taxes estimates, assume that an estimate of income before income taxes for all manufacturing published in Table 1.0 is \$18,571 million for a particular quarter and that the standard error for this estimate, as given in Table K is 0.3. Thus, a 67-percent confidence interval is \$18,570.7 million to \$18,571.3 million (\$18,571 million plus or minus \$0.3 million). This 67-percent confidence interval would have the same properties as the 67-percent confidence interval discussed in the previous paragraph. A 95-percent confidence interval is \$18,570.4 million to \$18,571.6 million (\$18,571 million plus or minus \$0.6 million).

Nonsampling Errors: Nonsampling errors arise from many sources: (1) inability to obtain information about all cases in the sample, (2) response errors, (3) definitional difficulties, (4) differences in the interpretation of questions, (5) mistakes in recording or coding the data obtained, and (6) other errors of collection, response, coverage, and estimation of missing data. These nonsampling errors also occur in complete censuses.

Some examples of circumstances and individual corporate practices which lead to nonsampling errors are:

- a. Corporations in Chapter XI bankruptcy are unable to prepare a report within QFR time frames. Although these corporations have continuing operations and are therefore required to file QFR reports, court-imposed constraints sometimes make timely compliance impossible.
- b. Requiring precise, audited data to be reported within 25 days after the end of the corporation's quarter could impose a significant burden. Therefore, the submission of estimated data is permissible. This practice may lead to some measurement error.
- c. Small corporations frequently lack sophisticated record-keeping systems to generate quarterly financial data. They also may lack the staff to prepare precise, detailed QFR reports. Inconsistency in classification of data items from quarter to quarter may lead to a bias of unknown direction.
- d. Occasionally, corporations electing to be taxed through their shareholders (1120S) and cooperatives are drawn into the sample. These enterprises use specialized systems of accounts and terminology in reporting financial results. There are parallel classifications created to link traditional corporate accounting to this specialized accounting, but the resulting match is not perfect. The sales and profits of cooperatives and 1120S corporations are small relative to most industry totals, but their special problems do lessen estimate accuracy.

As calculated for this report, the coefficients of variation measure certain nonsampling errors but do not measure any systematic biases in the data. Bias is the difference, averaged over all possible samples of the same size and design, between the estimate and the true value being estimated. Although no direct measures of the biases have been obtained, precautionary steps were taken in all phases of the collection, processing, and tabulation of the data in an effort to minimize their influence.

One major source of bias in the published estimates is due to imputing data for nonrespondents, for late reporters, and for data which fail edit.

Comparisons with Other Statistics: QFR estimates will not necessarily agree with other financial and industrial statistics compilations whether based upon a sample or complete canvass. For example:

- a. The QFR eliminates multiple counting of interplant and other intracompany transfers included in census establishment statistics. It also eliminates multiple counting of intercorporate transfers included in statistics based upon nonconsolidated, partly consolidated, or combined reports from multicorporate enterprises.
- b. Each corporation which filed either a U.S. Corporation Income Tax Return (i.e., Form 1120 or 1120S) or an application for a Federal Social Security Employer's Identification Number and was classified in one of the four QFR industry divisions has a known probability of being drawn into the QFR sample. Each corporation in the QFR sample is therefore given its proper weight in computing the QFR estimates. The composition of the sample changes each quarter to reflect the effects of corporate births, deaths, acquisitions, divestitures, mergers, consolidations, and the like. Furthermore, to redistribute the reporting responsibility as equitably as possible among the smallest corporations, one-eighth of the nonexhaustive sample stratum is replaced each quarter. The QFR estimates may therefore differ significantly from estimates based upon reports for identical groups of corporations.
- c. The conventional accounting concept of profits is used in the QFR estimates. This differs from the concept of profits employed in the national income and product accounts. In measuring profits for national income accounting purposes, capital gains and dividends received by corporations are deducted from profits, capital losses and depletion charges are added to profits, and adjustments are made for international flows affecting profits.
- d. Corporations' QFR submissions generally embody the accounting conventions adopted for financial reporting purposes. As such, they may differ from those used by corporations for reporting income to the IRS; e.g., in the more frequent application of accelerated depreciation on tax returns. Therefore, annual income and balance sheet information derived from tax returns

dating back to 1909, which can be found in the IRS report series *Statistics of Income: Corporation Income Tax Returns*, may not be comparable.

- e. QFR estimates by corporation size are based upon the total assets of consolidated corporate enterprises. They differ from estimates based upon other criteria such as value of shipments or number of employees. They differ also from estimates based upon other reporting units such as establishments, nonconsolidated corporations, or enterprises consolidated differently than in the QFR.
- f. QFR estimates are based upon a changing sample of audited, unaudited, and estimated reports required to be submitted within 25 days after the end of each quarterly reporting period by corporations which are not necessarily identical entities from quarter to quarter. Aggregated for any four consecutive quarters, the QFR estimates will differ from similar aggregations of finalized and audited annual reports for accounting years which are not necessarily identical from corporation to corporation.

Changes in the Series—Accounting: When the QFR series began in 1947, corporations were instructed to consolidate all of their subsidiaries which were taxable under the U.S. Internal Revenue Code and which were fully consolidated in their latest report to stockholders. All other subsidiaries were to be accounted for as investments. Closely held corporations which did not prepare stockholder reports were to report on a basis consistent with their audited or corporation prepared reports.

The income tax liability rule was expected to eliminate most foreign operations. However, as the number of multinational corporations increased between 1947 and 1973, foreign operations gradually became more and more significant in the QFR data.

An interagency task force composed of user agency representatives was created to resolve this problem. New consolidation rules were put into effect in the fourth quarter of 1973 to maximize coverage and minimize the impact of foreign operations on QFR statistics (see Coverage). As a result of these changes, foreign operations are included on an investment basis. In addition, the breadth of the new consolidation rules was expanded to include certain domestic subsidiaries previously excluded under the old rules. Also, the rules were clarified with respect to the scope of coverage. Domestic subsidiaries engaged in banking, finance, or insurance are not to be consolidated.

The change in consolidation rules and the creation of a line item to reflect equity in earnings from nonconsolidated subsidiaries significantly lessened the comparability of pre- and post-Q4 1973 reports. QFR internal accounting procedures prior to the rule change required the classification of equity in earnings (losses) as a direct credit or charge to retained earnings. Therefore, when a reporting corporation indicated by footnote that its equity in nonconsolidated

subsidiary earnings (losses) was included in its current quarter's income (loss), the QFR accounting staff made the appropriate adjustment. With the advent of this format, this adjustment is not made. Thus, the equity in earnings (losses) is accounted for as an element of the parent corporation's quarterly income (loss) after taxes. The treatment of dividend income received from nonconsolidated subsidiaries accounted for by the cost method has remained consistent under both the new and old format. In these instances, dividends received are included in net income before taxes through the nonoperating income line.

A comparison of aggregated totals published under both the old and new consolidation rules indicates the following:¹

- a. There was a net decrease in sales, apparently due to the exclusion of foreign activities previously included.
- b. There was a net decrease in Net Income Before Taxes (NIBT), apparently due to two major effects. Equity in earnings (losses) from nonconsolidated subsidiaries is reflected on a designated line below NIBT, whereas prior reports often included this amount in NIBT. If the reporting company did not footnote this inclusion, QFR accountants were unable to make the proper adjustment. If foreign activity was fully consolidated, foreign earnings were also included in NIBT. The new consolidation rules minimize this effect as well.
- c. The net effect of the rule changes on Net Income After Taxes (NIAT) was small. Under both rules, foreign activity should be included above the NIAT line. The slight degree of difference also suggests that the QFR footnoted equity in earnings (losses) of nonconsolidated subsidiaries were not extensive enough to affect comparative published data materially.
- d. Noncurrent Assets include investments in nonconsolidated subsidiaries under either the cost or equity method. The rule change precluding full consolidation of foreign activity caused a marked increase in this line item. Corporations that consolidated foreign activity fully up to 1973 were required to eliminate their investment in accordance with generally accepted accounting principles. Now, since foreign activity is not fully consolidated, investments in these subsidiaries are included in the noncurrent asset line.

Changes in the Series—Industry Classification: In the reports for the first quarter of 1947 through the fourth quarter of 1958, classification was based on the 1945 edition of the SIC Manual. Beginning with the first quarter of 1959, corporations were classified within the framework of the 1957 SIC edition. The SIC was revised again in 1967, but did not affect the level of aggregation used in the QFR. A 1972 SIC revision required the reclassification of some corporations. Reclassifications having a measurable

¹See the QFR, Second Quarter 1975, Appendix Tables I and II.

effect on the industry estimates were incorporated in the fourth-quarter revision of the 1972 data published in the first quarter of the 1973 QFR. Similarly, the 1987 SIC revision has resulted in some reclassifications. Revisions of 1987 data provided in the first quarter of 1988 include measurable changes.

Beginning in 1969, Newspaper Publishing was included in the QFR coverage of manufacturing corporations.

Prior to the first quarter of 1974, a corporation was classified as a manufacturer only if 50 percent or more of its gross receipts were derived from manufacturing operations. The new classification rules (see How Corporations Are Classified by Industry) are more inclusive. Therefore, in the series existing prior to 1974, fewer corporations qualified for inclusion as manufacturers.

Changes in the Series—Sampling: The first sample in this survey was drawn from U.S. Corporation Income Tax Returns (Form 1120) filed with IRS for the taxable year 1943. A second sample was drawn from income tax returns for the taxable year 1949. The third (current) sample was drawn from income tax returns for the taxable year 1954 and each taxable year thereafter. Each sample has been supplemented by quarterly samples of applications for a Federal Social Security Employer's Identification Number filed with the SSA.

The second and third samples were drawn in order to redistribute the reporting responsibility among the smallest corporations and to maintain representativeness on a current basis. (The older the sample, the less representative it is of the current population.) The third (current) sample meets both requirements to the fullest extent permitted by known sampling methodology, consistent with a minimal budgetary allocation.

The first sample was used to generate estimates for each quarter in calendar years 1947 to 1951, inclusive; the second sample, from the third quarter of 1951 to the second quarter of 1956, inclusive; the third (current) sample, from the second quarter of 1956 to date.

From the third quarter 1977 through the fourth quarter 1986, the strata including very small manufacturing firms (generally those with assets less than \$250,000) and all newly incorporated manufacturers were estimated for by multivariate techniques. Beginning in the first quarter 1987, the QFR universe of corporations has been redefined to exclude these strata. In the fourth quarter of 1987 through the third quarter of 1988, the mining, wholesale and retail trade tables only included estimates for corporations with assets of \$25 million and over at the time of sample selection, fall 1987. Prior to that quarter, estimates were based upon reports from corporations with that asset level at the end of the reference quarter. Beginning in the fourth quarter of 1988, the asset level for inclusion in published mining, wholesale and retail trade estimates was raised to \$50 million at the time of sample selection.

For 50 years, the QFR Program has requested a sample of corporations to file financial data on a universal form. In

1980, Congress mandated a reduction in both QFR form complexity and sample size. In response, the program adopted a short form for surveyed corporations generally with total assets of less than \$50 million. Corporations with higher asset values submit the long form, which has been in use since 1974. To accomplish the sample size cut, the threshold for sampling on less than a 1:1 ratio was raised from \$10 million to \$25 million in assets. The threshold for sampling was subsequently raised to \$50 million in 1988 and to \$250 million in 1995. (See Description of the Sample on page XI.) The resulting reduced sample size was optimally allocated with further cuts made in asset sizes below \$10 million. The results of these changes are reflected beginning in the Q4 1981 report as follows:

- a. Tables presenting universe estimates by SIC division and major group are published on the short-form basis. Therefore, the more detailed data submitted by larger corporations (generally those with assets of \$50 million and over) are collapsed in these tables. Immediately following, on pages XVII and XVIII, is a table used by the program which provides the reader with a key to trace "long" to "short" format conversion.
- b. Tables presenting estimates by major group for manufacturing corporations with assets of \$25 million and over are published on the long-form basis but are presented separately.
- c. The combination of change in sample design; i.e., raising of the sampling threshold with further sample size cuts in small company strata, and the updating of IRS population estimates necessitated revision of previously published estimates for Q4 1980-Q3 1981.
- d. **It is especially important** to note that published universe estimates of "Income (or loss) before taxes" include all equity in earnings (losses) from nonconsolidated subsidiaries and foreign branches. This change places these universe estimates on a different basis than those previously published. To minimize the impact of this change, please consider the following:
 1. Corporations filing the "short form" report equity in earnings (losses) of nonconsolidated subsidiaries and foreign branches as a component of "Net nonoperating income (expense)." Although this treatment will introduce elements of foreign earnings (losses) into "Income (or loss) before income taxes," the contribution of foreign earnings (losses) of these smaller asset size corporations to this data item has been historically insignificant.
 2. Corporations with assets of \$50 million and over continue to report equity in earnings (losses) as a separate data item. As can be seen in the conversion table (following page), this data item is collapsed for universe estimation into "Net nonoperating income (expense)." However, since these larger asset size corporations continue to report

equity in earnings (losses) separately, as reflected in the tables published for corporations with assets of \$25 million and over, comparability with prior data can be achieved, for the most part, through subtraction.

New tables were also introduced in the Q4 1981 publication that provide the user with the following:

- a. Asset size data (under \$25 million, \$25 million and over) by SIC major groups in manufacturing;
- b. SIC major group data for wholesale trade (SIC 50 and 51) and retail trade (SIC 53, 54, and all other);
- c. More asset size breaks for durable and nondurable manufacturing industries; and
- d. Historical rates of return tables for wholesaling, retailing, and mining.

Data Revisions: Revisions to the QFR data are attributable primarily to industry reclassifications of major corporations involved in merger/acquisition activities or restructuring of operations. In order to reflect these changes and to provide users with comparable data, revisions are made each quarter to the most recent four quarters of previously published data. Also, when respondents submit corrections after publication, we reflect such corrections in the next publication.

Summary Chronology of Discontinuities: Because of the various QFR series changes discussed above, discontinuities were introduced that affect use of the published estimates in constructing time series. In order to help users evaluate the adequacy of past data for the analysis of economic changes, a table of discontinuities is provided. Note that not all aggregates are affected by all discontinuities. The user will need to examine each situation in the light of his or her needs.

¹Includes net income (loss) of foreign branches and equity in earnings (losses) of nonconsolidated subsidiaries net of foreign taxes.

²Some of the data in this column have been revised since their first appearance. See footnotes to Tables 1.0 — 52.1.

³Sampling variability precludes characterizing change.

⁴Includes tobacco industry.

⁵Change in excess of 100 percent, or change from gain to loss or vice versa.

⁶Includes leather industry.

⁷Included in major industry above.

⁸Mining, wholesale and retail trade data are the quarterly results of companies in those divisions with assets over \$50 million. Data for manufacturing corporations represent the quarterly results of companies with assets over \$250,000.

¹Mining, wholesale and retail trade data are the quarterly results of companies in those divisions with assets over \$50 million. Data for manufacturing corporations represent the quarterly results of companies with assets over \$250,000.

²Estimated universe total; figures are rounded and will not necessarily add to totals.

³Drawn from a universe of approximately 171,000.

⁴Excludes manufacturing corporations with less than \$250,000 in assets at the time of sample selection. (See text, page XI.)

⁵Drawn from a universe of approximately 400.

⁶Drawn from a universe of approximately 1,100.

⁷Drawn from a universe of approximately 1,400.

⁸Composition of sample, fourth quarter 1997, revised.

¹First quarter 1998.

²The coefficient of variation (CV) for the item "Income before income taxes" is more volatile than for the other items shown on this table. This is due in part to the fact that "Income before income taxes" can be negative. Aggregation of positive and negative values may result in totals which approach zero and cause the CV's to rapidly increase. Therefore, the standard error (in millions of dollars) is provided as a measure of precision for this item and should show consistency from quarter to quarter.

³Includes tobacco industry.

⁴Includes leather industry.

⁵Included in major industry above.

NOTE: Seasonally adjusted estimates are the result of removing normal seasonal patterns from an unadjusted data series to bring out underlying trends. The seasonally adjusted estimate is computed by dividing the unadjusted estimate by its seasonal component or factor. To obtain the seasonally adjusted estimates and seasonal factors, the unadjusted data are run through the X-11 ARIMA, a modification of the Census Method II, a seasonal adjustment program. Further information on the X-11 ARIMA may be obtained from the Associate Director for Statistical Design, Methodology, and Standards, Bureau of the Census, Washington, DC 20233.
