## CURRENT INDUSTRIAL REPORTS SERIES

#### 2007

# MA333F — MINING MACHINERY AND MINERAL PROCESSING EQUIPMENT (DOMESTIC AND EXPORT SHIPMENTS) DEFINITIONS AND SPECIAL INSTRUCTIONS

#### 1. Scope of survey

This survey covers firms engaged in the manufacture of underground mining machinery; mineral processing equipment; crushing, pulverizing, and screening machinery; portable oil and gas and water drilling rigs; and related mining machinery and equipment, including drills and breakers, and mine cars. It does not include conveyors, hoists, locomotives, or beneficiation equipment.

#### 2. Figures to be reported

Companies with more than one establishment manufacturing the products covered by this survey are requested to complete a separate report form for each location. If you have not received a separate form for each of your establishments, please call the contact listed on the front of the report form or write to the U.S. Census Bureau for additional forms.

## a. Value of shipments

The figures on value of shipments should include all products sold, transferred to other establishments within your company, or shipped on consignment, whether for domestic or export sale. The value represents the net sales price, f.o.b. plant, to the customer or branch to which the products are shipped, net of discounts, allowances, freight charges and returns. Shipments to your own branches should be assigned the same value as comparable sales to unaffiliated customers, i.e., the value includes an appropriate allocation of company overhead and profit. Products bought and resold without further manufacture should not be included in shipments.

#### b. Columnar structure of report

Column 1 — Quantity (number of units)

Column 2 — Value of shipments (\$1,000)

#### 3. Definitions

Screens, vibrating (item codes 2475—2477) — Machines used for dry or wet screening applications, such as the sizing, washing, and dewatering of ores, coals, sand, and gravel.

Portable drilling rigs (item codes 6005—6495) — Drills mounted on a carrier and used on the surface (above ground).

Rotary drills (item codes 6005—6121) — Machines using a rotary drill pipe and continuous fluid cleaning of the

hole of filling (mud pump, air compressor, or combination).

Pull-back capacity (item codes 6005—6012) — Lifting capacity of drawworks, or hoisting capacity of taphead.

Pull-down capacity (item codes 6110—6121) — Capacity to apply bit pressure.

Bucket drills (item code 6350) — Machines which rotate a bucket and remove cuttings by lifting the bucket to be dumped.

Auger drills (item code 6350) — Machines which utilize continuous flight auger bits for removing cuttings.

Cable tool drills (item code 6495) — Machines using percussion-type tools and cleaning the hole with tubular-type bailing tools.

Reverse circulation drills (item code 6495) — Machines using a rotary drilling process where the drill cuttings and fluid return to the surface inside the drill stem (large diameter holes, 18" or larger).

*Unit, for portable drilling rigs (item codes 6005-6495)* — Complete rig including carrier.

#### 4. Comparability

Data reported in this survey should correspond to data reported in the Economic Census - Manufacturing Sector form. The sum of values for item codes shown in column (a) should correspond to dollar values reported under product codes indicated in column (b) below.

Current Industrial Reports (Form MA333F)	Economic Census - Manufacturing Sector
Item codes (a)	Product codes (b)
0951 through 0957	3331208110
1085 through 1185	3331311100
2415 through 2490	3331315100
4004 through 4075	3331317100
6005 through 6495	3331327101
6500	3331327210
