

NEW

SKILCRAFT® Camouflage Pen

Here's a new beautifully designed SKILCRAFT™, pen – *for field use*. The new four-color green Camouflage Pen is an excellent writing instrument and features practical utility for field usage thanks to its unique color design and non-reflective rubberized surface. The rubberized surface is comfortable to the hand while eliminating unwanted slippage. Black plastic nose and pocket clip.

NSN: 7520-01-457-5400
Description: Ballpoint pen
Point Size: Medium
Color Ink: Black
U/I: DZ
Price: \$8.46

Creative Building Products — Dura-Bull 24" Barricade

A brand new product has been introduced just in time for those last minute purchases before the end of the fiscal year! Creative Building Products now produces a new and innovative plastic security barricade called, "Dura-Bull Barricade". This product is a perfect end to airfield security problems you have faced in the past.

The obvious benefits in its use are ease of handling, no heavy equipment necessary, and fast set up time. Some places to use the barricade are guard gates, around secured areas, sports events, and with a 24" height, on the airfield flight lines and services areas.

Using only two people, you can close a guard gate with three barricades in approximately 10 minutes or completely change your approach in a couple of hours. If you now use sandbags that get ripped, sawhorses that get blown over, concrete that breaks-up and gets sucked into jet intakes, the solution is the Dura-Bull Barricade.

Off The Wall Products, LLC

New Multi-Barrier Model AR-1, Installed at Newark Airport

The Multi-Barrier Model AR-1, manufactured by Off the Wall Products, qualifies for installation at airports and flight lines for several reasons. First, the Multi-Barrier Model AR-1 passed height limitation and jet blast testing performed on-site by the Port Authority. Second, its exceptional portability permits quick installation and allows workers to move the length of the barrier as the work proceeds up the runway, which reduces the number of work order changes necessary in the project. Third, the bright orange and white Multi-Barrier AR-1 gives high visibility delineation for pilots.

The AR-1 unit provides better visibility to pilots and less maintenance problems. The unique shape deflects the jet blast and is low enough not to interfere with air traffic. The resiliently plastic barrier will prevent damage to aircraft and equipment. In addition, many airport authorities are now replacing concrete barriers on their airfields with plastic, water ballast barriers as the plastic units will not break apart like concrete barriers. Once the smooth surface finish of the concrete has been violated, loose aggregate can be sucked into jet engine intakes. Plastic barriers are also excellent for fueling station safety and security, as plastic will not spark when struck by a metal object.

According to the Federal Aviation Administration (FAA), poor runway markings are a significant cause of ground accidents. Poor marking of construction zones, freight ramp areas, and other hazards primarily caused a significant number of ground accidents involving aircraft. One pilot suggested the following, "surely there is some sort of marking which can be added to close hazardous taxiways."

Off the Wall Products has developed the Multi-Barrier Model AR-1 to meet this demand.

Schedule 85 II A — Toiletries

Floss Rings — The Biggest Innovation in Oral Care since the Toothbrush

Floss Rings were designed to offer comfort and control eliminating the pain and slipping familiar with traditional flossing. The ability to floss with complete control allows for a more effective removal of plaque. This was demonstrated in a recent clinical study conducted at Indiana University in Indianapolis where the rings were found to remove 23.8% more plaque than floss alone. This product increases the thoroughness and effectiveness of flossing because discomfort and irritation to the fingers is reduced. Users do not “rush through,” and do a better job.

In June of 1996, the Floss Rings were placed in the Dr. Samuel D. Harris National Museum of Dentistry earning a place in history. They have since been reviewed as revolutionary in such major publications as Prevention, The New York Times, The Boston Globe, The Saturday Evening Post, and many other magazines and newspapers.

Floss Rings are to floss what the toothbrush is to toothpaste - a necessary tool. Try them and make a commitment to better oral hygiene.

Federal Supply Schedule 78 I A Athletic and Recreational Equipment and Supplies

Turnkey - Sound, Light, Video Courtesy of Celebrity Entertainment Systems Anchor with Sound! Dazzle with Light! Communicate with Video!

Introducing Turnkey entertainment centers, meeting rooms, paging and security-deployment packages.

Integrating sound, light and video (SLV) into a high-tech entertainment center is tricky business. The SLV dynamics for an officer's club, for example, differ substantially from a bowling alley or youth center — even more so for a chapel or theatre room. The estimating, design, installation and maintenance process must all unfold in perfect unison to optimize your Morale, Welfare, and Recreational (MWR) investment. Celebrity Entertainment Systems has extensive field experience to give you an edge in knowing the performance characteristics you want.

Time spent in meetings, training sessions and educational seminars is prime time. One minute a room could have a speaker's lectern and blackboard, the next a full-blown video conference with automatic drop-down screen, projector and day-to-night window shades.

Celebrity Entertainment Systems' in-depth knowledge of sound amplification and speakers, video mixing and intelligent zoning provides them with the credentials to handle advanced paging and security needs.

No one knows more than Celebrity about how to take a show on the road. Celebrity Entertainment Systems' Turnkey road packages

are not only technologically superior, they're all but "bullet proof." Ship it, pop it open and get down to business.

Schedule 78 I C

Park and Outdoor Recreational Equipment

Jamestown Wheelchair Accessible Campfire Ring

The Jamestown Wheelchair Accessible Campfire Ring is uniquely designed with a double wall and ventilation holes around the bottom of the outer ring. The inner ring and ventilation holes on the outer ring provide natural cooling sources for the outer ring. These features protect an individual who may not be able to feel the potentially injurious temperatures that may be found in the traditional single wall fire ring or a ring design in which the fire pit temperatures are carried through material between rings to the outer surface.

The Jamestown Wheelchair Accessible Campfire Ring design provides a means of securing the ring in place with two heavy steel staples, while allowing the entire assembly to be tilted back for ease of cleaning or mowing. This product also includes cooking and log grates, which allow the users to enjoy the outdoor experience, without the need to provide their own cooking surfaces or grates. The grates are installed at heights recommended in the Americans with Disabilities Act (ADA) guidelines.

Maintenance crews and other users will benefit from this design. These fire ring assemblies only require the digging of a small hole into which the staples are positioned. The hole is then filled with concrete mix, thus securing the staples and the fire ring in place. The log grate eliminates the need for filler materials such as gravel, thus allowing ease of tipping for cleaning and drainage during rainy periods.

Price: \$179.00 each

Federal Supply Schedule 19, Part I - Marine Craft and Equipment, Inboard and Outboard Engines, Towable Bladders and Floating Barriers, and Buoys

Federal Supply Schedule 19, Part I SeaArk Marine

Founded in 1959 as MonArk Boat Company, SeaArk Marine has a long and varied history in the aluminum boat building industry. The company got its start building riveted aluminum flat bottom Jon boats. After a few years and several additions to the product line, they started selling riveted and all-welded boats to entities such as the U.S. Army Corps of Engineers, law enforcement agencies, and Fish and Wildlife Departments.

SeaArk now builds all-welded aluminum boats up to 85 feet in length. Several hull designs and cabin arrangements are available to meet specific mission requirements. Models include flat-bottom skiffs with or without cabins, cathedral-hull utility boats (which provide stable work platforms), small vee-hull patrol boats, rigid hull inflatable boats, and deep-vee hull offshore patrol boats. SeaArk boats are used for aids to navigation, cargo transport, construction, dive support, hydrographic survey, personnel transport, tender launch, crew boats, buoy maintenance, combatant craft, debris removal, firefighting, law enforcement, pollution control, water sampling and excursion.

All models are available on GSA Contract.

SeaArk Boats

SeaArk Boats is a sister company to SeaArk Marine, builder of commercial and government work patrol boats. SeaArk Boats build all-welded and riveted aluminum boats in several different styles. Jon boats from 10 to 24 feet in length are available in riveted and all-welded models. Bass Boats, Crappie Boats, Walleye Boats, and Duck Hunting models are available, as well as Deck-style Boats. SeaArk's larger Jon boats are available with options and accessories such as storage boxes, four-wheeler ramps, floors and consoles to adapt these models to specific uses.

Federal Supply Schedule 19, Part I

Marine Craft and Equipment, Inboard and Outboard Engines, Towable Bladders and Floating Barriers, and Buoys

New Boston Whaler Boats

Boston Whaler, located in Edgewater, Florida, has manufactured boats since 1958. Boston Whaler's Commercial and Government Products Division specializes in the design and manufacture of safe, high quality, durable, mission-specific (law enforcement, fire/rescue, military), and general-purpose workboats. Each boat is constructed with our Unibond™ foam core hull, which makes it unsinkable.

Boston Whaler's latest additions to the GSA schedule are the 18' Guardian and the 26' Justice. Boston Whaler's 18' Guardian is designed for inland and coastal waters. Its center console design promotes 360-degree access to all areas of the boat for boarding, rescue, and related procedures. Extra wide gunnel boards with aggressive molded-in nonskid provides a secure foothold for boarding and docking maneuvers. An abundance of locking dry storage is found throughout the boat. The standard leaning post features twin compartments suitable for literature, tools, or first response kit storage. A leaning post option includes a locking shotgun rack. Bow, console, and transom storage compartments are also readily accessible. The flexible 18' Guardian can be configured as a workboat, patrol boat, or fire/rescue craft.

Boston Whaler's 26' Justice is designed to tackle hazardous conditions offshore. The 26' Justice features a wide open deck which can be outfitted with everything from gun mounts to fire pumps and dive doors. Its new generation hull features the remarkable stability you expect from a Whaler, with the smooth ride associated with Whaler's new deep-V hull. The 26' Justice's wide gunnels and spacious decks are covered with nonskid to promote secure footing under any conditions. The oversized console features standing room within for additional locking storage, a concealed optional head, or easy access to the console wiring. Power options include twin outboards and gas or diesel I/O power.

As with all Boston Whalers, the 18' Guardian and 26' Justice are unsinkable and feature a limited 10-year transferable warranty.

Federal Supply Schedule 84 VI A Law Enforcement and Security Equipment

UPV Conversion Unit UPV Police Vehicles, Inc.

UPV Police Vehicles, Inc., manufactures patrol vehicles, prisoner transport vehicles, and canine units for law enforcement and correctional use. These vehicles are produced by installing UPV Conversion Units on full-size pickup trucks.

This concept provides the purchasing agency flexibility to choose the type of vehicle they need. UPV Conversion Units are available for installation on 4 x 2 or 4 x 4 trucks. Extended cab, regular cab, or even four-door trucks can be used with the UPV Conversion Unit. This flexibility also extends to trucks with a minimum of 1/2-ton rating to extra-duty trucks.

UPV police vehicles provide complete separation (physical and environmental) of law enforcement officers and prisoners. Safety for both the officer and prisoners (or canine) is unsurpassed.

With a UPV police vehicle, users are able to take advantage of the durability and value of full-sized pickup trucks. The UPV Conversion Unit is durable as well. When it's necessary to replace a truck, the UPV Conversion Unit can be re-installed on a new pickup.

UPV Police Vehicles, Inc., offers complete electrical hookups within the Conversion Unit to simplify your electronic needs. All components, from light bars to radios, are installed one time and can stay with the Conversion Unit when moving it from one pickup truck to another.

UPV Police Vehicles, Inc., now offers complete installation on your vehicle or we can ship the Conversion Unit to your maintenance facility for installation by your staff. On-site assistance is available if requested.
