## MASS LAYOFFS IN JANUARY 2008

In January, employers took 1,438 mass layoff actions, seasonally adjusted, as measured by new filings for unemployment insurance benefits during the month, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Each action involved at least 50 persons from a single employer; the number of workers involved totaled 144,111, on a seasonally adjusted basis. The number of mass layoff events in January 2008 increased by 5 from the prior month, while the number of associated initial claims increased

Chart 1. Mass layoff events, seasonally adjusted, February 2003-January 2008

Chart 2. Mass layoff initial claims, seasonally adjusted, February 2003-January 2008

## Changes to Mass Layoff Data

Effective with this news release, the Mass Layoff Statistics (MLS) program has switched the basis for their industry classification from the 2002 North American Industry Classification System (NAICS) to the 2007 NAICS. The change in classification resulted in minor definitional changes within manufacturing; telecommunications; financial activities; and professional, scientific, and technical services. Several industry titles and descriptions also were updated. For more information on the impact of the change to the 2007 NAICS on the MLS program's data, see http://www.bls.gov/mls/mls2007naics.htm.

For additional information on the 2007 NAICS, see http://www.census.gov/epcd/www/ naics.html.

Table A. Industries with the largest number of mass layoff initial claims in January 2008

| Industry | Initial claims | January peak |  |
| :---: | :---: | :---: | :---: |
|  |  | Year | Initial claims |
| Temporary help services. | 12,509 | 1998 | 26,224 |
| School and employee bus transportation. | 7,444 | 2005 | 14,526 |
| Automobile manufacturing. | 4,575 | 2001 | 21,093 |
| Professional employer organizations | 3,705 | 2005 | 5,258 |
| Discount department stores | 3,560 | 2004 | 6,063 |
| Light truck and utility vehicle manufacturing | 3,191 | 2001 | 8,450 |
| Highway, street, and bridge construction | 2,858 | 2000 | 9,680 |
| Motion picture and video production. | 2,844 | 1998 | 12,038 |
| Wood kitchen cabinet and countertop manufacturing | 2,602 | 2008 | 2,602 |
| Farm labor contractors and crew leaders | 2,354 | 1999 | 5,859 |

by 2,361 . The number of initial claims due to mass layoffs have increased for five consecutive months. In January, 427 mass layoff events were reported in the manufacturing sector, seasonally adjusted, resulting in 55,488 initial claims. Over the month, mass layoff activity in manufacturing decreased by 35 events, and initial claims decreased by 2,620 . (See table 1.)

The national unemployment rate was 4.9 percent in January, seasonally adjusted, down from 5.0 percent in the prior month and up from 4.6 percent a year earlier. Total nonfarm payroll employment decreased by 17,000 in January from the previous month and increased by 994,000 from a year earlier.

## Industry Distribution (Not Seasonally Adjusted)

The 10 industries reporting the highest numbers of mass layoff initial claims, not seasonally adjusted, accounted for 30 percent of all such claims in January. The industry with the highest number of initial claims was temporary help services with 12,509 , followed by school and employee bus transportation $(7,444)$, automobile manufacturing ( 4,575 ), and professional employer organizations $(3,705)$. Together, these four industries accounted for 18 percent of all initial claims due to mass layoffs during the month. (See table A.)

The manufacturing sector accounted for 30 percent of all mass layoff events and 35 percent of all related initial claims filed in January; a year earlier, manufacturing made up 32 percent of events and 40 percent of initial claims. In January 2008, the number of manufacturing claimants was highest in transportation equipment manufacturing $(17,920)$, followed by food manufacturing $(5,024)$ and wood product manufacturing $(4,780)$. (See table 3.)

Administrative and waste services accounted for 14 percent of mass layoff events and 13 percent of initial claims in January, primarily from administrative and support services. Construction comprised 12 percent of events and 9 percent of initial claims, primarily from specialty trade contractors and from heavy and civil engineering construction. Transportation and warehousing made up 8 percent of all mass layoff events and related initial claims, mainly from transit and ground passenger transportation. Seven percent of all mass layoff events and 8 percent of related initial claims filed were from retail trade, largely from general merchandise stores.

On a not seasonally adjusted basis, the number of mass layoff events in January 2008, at 1,647, was up by 240 from a year earlier, and the number of associated initial claims increased by 19,519 to 154,503 . (See table 2.) The largest over-the-year increases in initial claims for all layoff events were reported in administrative and support services $(+3,799)$ and transit and ground passenger transportation $(+2,799)$. The largest over-the-year decrease in mass layoff initial claims was reported in transportation equipment manufacturing $(-4,395)$. The average weekly numbers of events and initial claimants for the United States were at their highest levels (412 and 38,626, respectively) for the month of January since 2005.

## Geographic Distribution (Not Seasonally Adjusted)

Among the 4 census regions, the highest number of initial claims in January 2008 due to mass layoffs was in the West $(46,556)$. Temporary help services accounted for 13 percent of all mass layoff initial claims in that region during the month. The Midwest had the second largest number of initial claims among the regions, 42,229 , followed by the Northeast with 32,949 and the South with 32,769 . (See table 5.)

The number of initial claimants in mass layoffs increased over the year in all four of the regions. The Northeast $(+7,486)$ experienced the largest increase; the South reported the smallest over-the-year increase $(+2,899)$. Seven of the 9 geographic divisions had over-the-year increases in the numbers of initial claims associated with mass layoffs, with the largest increases in the Middle Atlantic $(+8,779)$ and Pacific $(+5,068)$ divisions. The division with the largest over-the-year decrease was the West South Central $(-2,198)$.

California recorded the highest number of initial claims filed due to mass layoff events in January $(38,715)$, reflecting layoffs in administrative and support services. Other states with large numbers of mass layoff-related claims were New York $(18,636)$, Alabama $(10,160)$, Pennsylvania $(9,644)$, Ohio $(9,352)$, and Illinois $(9,106)$. (See table 6.)

Twenty-three states reported over-the-year increases in initial claims associated with mass layoffs, led by Alabama $(+8,368)$, New York $(+7,958)$, and California $(+5,155)$. For Alabama, the largest over-the-year increases in initial claims occurred in transportation equipment manufacturing, wood product manufacturing, and administrative and support services. For New York, transit and ground passenger transportation had the largest over-the-year increase. In California, general merchandise stores registered the largest increase in claims over the year. States with the largest over-the-year decreases in mass layoff claims were Kentucky $(-3,782)$, Louisiana $(-1,152)$, and Texas $(-1,007)$.

## Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. For private nonfarm employers, information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs"). The quarterly release provides more information on the nature of the layoff and the location of the employer, and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 4.) See the Technical Note for more detailed definitions.

The report on Mass Layoffs in February 2008 is scheduled to be released on Friday, March 21.

## Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on employers which have at least 50 initial claims filed against them during a consecutive 5 -week period. These employers then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others, 5 weeks, the number of weeks in a given month may be different from year to year, and the number of weeks in a year may vary. Therefore, analysis of over-the-month and over-theyear change in not seasonally adjusted series should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

## Definitions

Employer. Employers in the MLS program include those covered by state unemployment insurance laws. Information on employers is obtained from the Quarterly Census of Employment and Wages (QCEW) program, which is administered by the Bureau of Labor Statistics (BLS).

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination
entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an employer during a 5-week period, regardless of duration.

## Seasonal adjustment

Effective with the release of data for January 2005, BLS began publishing six seasonally adjusted monthly MLS series. The six series are the numbers of mass layoff events and mass layoff initial claims for the total, private nonfarm, and manufacturing sectors.

Seasonal adjustment is the process of estimating and removing the effect on time series data of regularly recurring seasonal events such as changes in the weather, holidays, and the beginning and ending of the school year. The use of seasonal adjustment makes it easier to observe fundamental changes in time series, particularly those associated with general economic expansions and contractions.

The MLS data are seasonally adjusted using the X-12ARIMA seasonal adjustment method on a concurrent basis. Concurrent seasonal adjustment uses all available monthly estimates, including those for the current month, in developing seasonal adjustment factors. Revisions to the most recent 5 years of seasonally adjusted data will be made once a year with the issuance of December data. Before the data are seasonally adjusted, prior adjustments are made to the original data to adjust them for differences in the number of weeks used to calculate the monthly data. Because weekly unemployment insurance claims are aggregated to form monthly data, a particular month's value could be calculated with 5 weeks of data in one year and 4 weeks in another. The effects of these differences could seriously distort the seasonal factors if they were ignored in the seasonal adjustment process. These effects are modeled in the X-12ARIMA program and are permanently removed from the final seasonally adjusted series.

Table 1. Mass layoff events and initial claimants for unemployment insurance, February 2004 to January 2008, seasonally adjusted

| Date | Total |  | Private nonfarm |  | Manufacturing |  |
