

Section XI – Chapter 52

Cotton

Subheading Note

1. For the purposes of subheadings 5209.42 and 5211.42, the expression "denim" means fabrics of yarns of different colors, of 3–thread or 4–thread twill, including broken twill, warp faced, the warp yarns of which are of one and the same color and the weft yarns of which are unbleached, bleached, dyed grey or colored a lighter shade of the color of the warp yarns.

Statistical Notes

1. The staple length of cotton shall be determined for all purposes by application of the Official Cotton Standards of the United States for the length of staple, as established by the Secretary of Agriculture and in effect when the determination is to be made.
2. For the purposes of classifying yarns of headings 5205 and 5206 the term "nm" as applied in these headings, means the number of 1,000–meter lengths of yarn in one kilogram. To determine the nm measurement of any yarn, whether single, multiple (folded) or cabled, the actual meters per kilogram shall be divided by 1,000 and the quotient thereof multiplied by the number of single yarns therein, including the single yarns used in the manufacturing multiple (folded) or cabled yarns.
3. For the purposes of the woven fabrics of chapter 52:
 - (a). The term "number", as applied to woven fabrics of cotton, means the average yarn number of the yarns contained therein. In computing the average yarn number, the length of the yarn is considered to be equal to the distance covered by it in the fabric in the condition as exported, with all clipped yarn being measured as if continuous and with the count being taken of the total single yarns in the fabric including the single yarns in any multiple (folded) or cabled yarns. The weight shall be taken after any excessive sizing is removed by boiling or other suitable process. Any one of the following formulas can be used to determine the average yarn number:

$$N = BYT/1,000, 100 T/Z', BT/Z \text{ or } ST/10$$

when:

N is the average yarn number,
B is the breadth (width) of the fabric in centimeters,
Y is the meters (linear) of the fabric per kilogram,
T is the total single yarns per square centimeter,
S is the square meters of fabric per kilogram,
Z is the grams per linear meter of fabric, and
Z' is the grams per square meter of fabric.

Fractions in the resulting "number " shall be disregarded.

Section XI – Chapter 52

- (b). Unless the context otherwise requires, provisions relating to one or more weaves embrace only those fabrics which (excluding selvage) are wholly of the specified weave or weaves, including combinations exclusively thereof.
4. For the purposes of heading 5208 and 5209, the term "hand-loomed fabrics" means fabrics made on a hand loom (i.e., a nonpower-driven loom).
5. For the purposes of the woven fabrics of chapter 52:
- (a). The term "poplin or broadcloth" means plain weave fabrics, not of square construction, whether or not napped, but does not include the following types:
 - (i). Fabrics weighing not more than 200 grams per square meter, containing 33 or less warp ends and filling picks per square centimeter; and
 - (ii). Fabrics weighing more than 200 grams per square meter, of average yarn number 26 or lower number.
 - (b). The term "sheeting" means plain weave fabrics, whether or not napped, of the following types:
 - (i). Fabrics weighing not more than 200 grams per square meter, of square construction, containing more than 33 warp ends and filling picks per square centimeter, of average yarn number 68 or lower number, but not including printcloth; and
 - (ii). Fabrics weighing more than 200 grams per square meter, but does not include:
 - (A). Fabrics of which the warp or filling consists of multiple (folded) or cabled yarns, of average yarn number 26 or lower number; and
 - (B). Fabrics of average yarn number 27 or higher number, not of square construction.
 - (c). The term "cheesecloth" means plain weave fabrics, weighing not more than 200 grams per square meter, containing not more than 33 warp ends and filling picks per square centimeter, whether or not napped.
 - (d). The term "printcloth" means plain weave fabrics, weighing not more than 200 grams per square meter, of average yarn numbers 43–68, consisting of more than 33 singles yarns per square centimeter and not containing multiple (folded) or cabled yarns, of square construction, not combed and whether or not of yarns of different colors.

Section XI – Chapter 52

- (e). The term "lawns, voiles or batistes" means plain weave fabrics, weighing not more than 200 grams per square meter, of average yarn number 69 or higher number, containing more than 33 warp ends and filling picks per square centimeter, of square construction, whether or not napped.
- (f). The term "sateens" means satin weave fabrics, whether or not napped.
- (g). The term "duck" means fabrics weighing more than 200 grams per square meter, of average yarn number 26 or lower number, of the following types:
 - (i). Plain weave, of which the warp or filling consists of multiple (folded) or cabled yarns; or
 - (ii). Woven as plain weave except that two or more warp ends are woven as one (taped warp), whether or not containing multiple (folded) or cabled yarns; this latter type of duck is not to be classified as a plain weave fabric.
- (h). The term "square construction" means fabrics of the following types:
 - (i). Containing less than 79 warp ends and filling picks per square centimeter, of which the difference between the total count of warp ends per centimeter and the total count of filling picks per centimeter is less than 11; or
 - (ii). Containing 79 or more warp ends and filling picks per square centimeter, of which the total count of warp ends per centimeter and the total count of filling picks per centimeter are each less than 57 percent of the total count per square centimeter of such warp ends and filling picks.
- (i). The term "not combed" means fabrics wholly or in part of uncombed cotton or wool fibers.
- (j). The term "combed" means fabrics containing cotton or wool, in which such fibers are combed, whether or not containing other fibers.
