

the public at large, the Pamlico Sound shallow water fishery begins September 1. A second round of public comments would likely result in issuing Permit 1528 well past the September start date. NMFS will accept, at any time, comments and additional data on Permit 1528. This information will be considered in annual reauthorization of Permit 1528.

Comment 20: Observer coverage must be mandatory and adequate, and funding must be assured. One commenter felt that NMFS should fund at least 50 percent or more of the observer program.

Response: Observer coverage will be a mandatory requirement of the permit. NCDMF is expected to have adequate funds to provide the mandatory observer coverage. The permit requires the stipulated levels of observer coverage, and therefore if the required levels cannot be met, management actions would be undertaken to address the issue.

As to NMFS funding some level of the observer program, ESA section 10(a)(2) clearly specifies that the applicant is responsible for identifying available funds for conservation plans under section 10(a)(1)(B). However, NMFS works closely with NCDMF to help identify appropriate funding sources, as well as provide funding support when appropriate and when funds are available.

Comment 21: NMFS needs to expeditiously address the problem of the cumulative impact of Atlantic gillnets, not just the impacts from the Pamlico Sound gillnet fisheries.

Response: NMFS recognizes the need to take a broader, gear-based approach to dealing with fishery impacts on sea turtles. NMFS has devoted staff to gather information on a coastwide gear-basis, however, assimilation and evaluation of this information is a long-term process that is still in its early stages. In managing impacts to sea turtles, however, cumulative impacts from both fishery and non-fishery sources are always considered and are taken into account when we analyze actions in pursuant to ESA section 7 jeopardy determinations.

Comment 22: NMFS should continue to support research on the seasonal abundance and distribution of sea turtles in North Carolina waters to determine which inshore, nearshore, and offshore habitats and migratory routes are used by turtles.

Response: NMFS, along with NCDMF, has continuing programs that provide valuable information to help determine migratory routes and important sea turtle habitats. Various sources of

information including observer programs and directed research conducted and/or funded by NMFS and NCDMF are providing information leading to a better understanding of sea turtles in North Carolina waters.

Comment 23: Pound net interactions data need to be made available to help develop future management efforts.

Response: Interaction data from various fishery observer programs, and directed research, including the pound net fisheries, are always used where appropriate to get a better understanding of sea turtle abundance, distribution, behavior, and habitat use in order to aid future management efforts. When pound net data are fully analyzed and available, NMFS will review the data to determine whether changes are necessary to future management efforts.

Upon a review of the application, relevant documents, public comments, and further discussions with NCDMF, NMFS found that the application met the criteria for issuance of 50 CFR 222.307(c). Permit 1528 was issued on August 26, 2005, and expires on December 31, 2010.

Dated: August 30, 2005.
