SUPPLEMENTARY INFORMATION: *Title of Collection:* 2006 Survey of Doctorate Recipients.

OMB Approval Number: 3145–0020.

Expiration Date of Approval: February 28, 2005.

Type of Request: Intent to seek approval to reinstate an information collection for three years.

1. Abstract. The Survey of Doctorate Recipients (SDR) has been conducted

biennially since 1973. The 2006 SDR will consist of a sample of individuals under the age 76 who have earned a research doctoral degree in a science, engineering or health field from an U.S. institution. The purpose of this longitudinal study is to provide national estimates on the doctoral science and engineering workforce and changes in employment, education and demographic characteristics. The study is one of three components of the Scientists and Engineers Statistical Data System (SESTAT), which produces national estimates of the size and characteristics of the nation's science and engineering population.

The National Science Foundation Act of 1950, as subsequently amended, includes a statutory charge to “* * * provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources, and to provide a source of information for policy formulation by other agencies of the Federal Government.” The SDR is designed to comply with these mandates by providing information on the supply and utilization of nation's doctoral level scientists and engineers. Collected data will be used to produce estimates of the characteristics of these individuals. They will also provide necessary input into the SESTAT data system, which produces national estimates of the size and characteristics of the country's science and engineering population. The Foundation uses this information to prepare congressionally mandated reports such as Women, Minorities and Persons with Disabilities in Science and Engineering and Science and Engineering Indicators. The NSF publishes statistics from the survey in many reports, but primarily in the biennial series, Characteristics of Doctoral Scientists and Engineers in the United States. A public release file of collected data, designed to protect respondent confidentiality, also will be made available to researchers on CD-ROM and on the World Wide Web.

The National Opinion Research Center at the University of Chicago will conduct the study for NSF. Data are obtained by mail questionnaire, computer-assisted telephone interviews and web survey beginning April 2006. The survey will be collected in conformance with the Privacy Act of 1974 and the individual's response to the survey is voluntary. NSF will insure that all information collected will be taken strictly confidential and will be used only for research of statistical purposes, analyzing data, and preparing scientific reports and articles.
