In construction of the annual pay ranges, 38 U.S.C. 7431(c)(4)(A) required the consultation of two or more national surveys of pay for physicians and dentists, as applicable, whether prepared by private, public, or quasi-public entities in order to make a general assessment of the range of pays payable to physicians and dentists. Background

The "Department of Veterans Affairs Health Care Personnel Enhancement Act of 2004" (Pub. L. 108-445) was signed by the President on December 3, 2004.

The major provisions of the law established a new pay system for Veterans Health Administration (VHA) physicians and dentists consisting of base pay, market pay, and performance pay. While the base pay component is set by statute, market pay is intended to reflect the recruitment and retention needs for the specialty or assignment of a particular physician or dentist at a facility. Further, performance pay is intended to recognize the achievement of specific goals and performance objectives prescribed annually. These three components create a system of pay that is driven by both market indicators and employee performance, while recognizing employee tenure in VHA.

Discussion

The Department of Veterans Affairs (VA) performed an extensive search of salary survey data for physicians and dentists. The result was a wealth of information in the field of compensation. Upon completion of the initial review of the data collected, VA utilized those sources which most closely represented VA comparability in the areas of practice setting, employment environment, and hospital/healthcare system. Thus, the Association of American Medical Colleges (AAMC), Hospital and Healthcare Compensation Service (HHCS), Sullivan, Cotter, and Associates (S&C) and Physician Executive Management Center (PEMC), were collectively utilized as benchmarks from which to prescribe annual pay ranges for physicians and dentists across the scope of assignments/specialties within the Department. While aggregating the data, a preponderance of weight was given to those surveys which most directly resembled the environment of the Department.

An analysis of the data produced the emergence of natural groupings for consideration in constructing annual pay ranges to accommodate the more than thirty specialties that currently exist in the VA system. The benefit of grouping specialties into consolidated pay ranges allows VA to use multiple sources that yield a high number of physician salary data which helps to minimize disparities and aberrations that may surface from data involving smaller numbers of physicians and dentists for comparison and from sample change from year to year. Thus, by aggregating multiple survey sources into like groupings, greater confidence exists that the average compensation reported is truly representative. In addition, aggregation of data provides for a large enough sample size and provides pay range with maximum
