

Dear Marine Engine Manufacturer:

As you may know, the true-up period for existing technology is approaching. This letter outlines the format and procedures for submitting true-up data for manufacturers who used the equation at 91.118(h)(1), or good engineering judgement. The true-up procedure is as follows:

1. Obtain valid test data for engine families using the FTP, or approved alternate test procedures.
2. Submit revised applications for the engine families (process code= FEL Change) and new test data. Items 1, 3-8, 15, and 18-32 should be filled out on the certification application template.

* A manufacturer should select an FEL which allows sufficient cushion for engine to engine variation.

3. Submit **True-up Summary Sheets**. (See attachments A & B)
4. Submit revised Filemaker credit reports

If you have any questions concerning your obligations for true-up, please call me at 202-564-9275.

Sincerely,

Joe Hresko
Environmental Engineer
Engine Programs and Compliance Division
