

this population of assets, it became apparent that a mechanism was needed to solicit data from the asset owners/operators. TSA needs this data, such as the assets' security measures currently deployed, along with a high-level assessment of system security effectiveness, in order to prioritize resources.

In response to this need, TSA's Office of Threat Assessment and Risk Management (OTRM) developed the Department of Homeland Security—Vulnerability Identification Self-Assessment Tool—Transportation (DHS-VISAT-T), formerly called the TSA Self-Assessment Risk Module (TSARM), as a means to gather security-related data. TSA designed this tool to be flexible to support the unique characteristics of each transportation mode, while still providing a common framework from which analysis and trends can be identified. DHS-VISAT-T represents the U.S. Government's first self-assessment tool that provides the following features:

- The tool is provided to users at no cost;
- The tool is voluntary;
- The tool is Web-based, easily accessible; and
- All ratings are determined by the user.

The self-assessment tool contains two sections. In the first section of the tool, users answer a series of questions divided into seven countermeasure categories to develop a comprehensive picture of the asset's security system posture. The countermeasure categories include:

- Plans, Policies, and Procedures;
- Security Training;
- Access Control;
- Physical Security Assets;
- Security Technologies and Equipment;
- Communications Security; and
- Information Security.

The second section of the tool focuses on the prevention and the mitigation of a base array of threat scenarios developed for different categories of assets. Users rate their asset in terms of target attractiveness (from a terrorist's perspective) and several consequence categories that describe health and well-being, economic consequences, and symbolic value of the asset. Users first list the asset's baseline security countermeasures that apply for each of the threat scenarios, and then rate the effectiveness of the countermeasures in detecting and/or preventing the terrorist's actions against each threat scenario. Descriptive guidance for the effectiveness rating is provided for each of the countermeasure categories. The

performance-based effectiveness ratings describe the asset's ability to thwart the threat.

After the tool is applied considering baseline countermeasures, users apply the tool two additional times to assess the impact of adding new countermeasures or enhancing existing countermeasures. The first additional assessment assumes a general increase in the national threat level (orange). The second additional assessment assumes that the asset is known to be a specific target (red). The intent is that the enhanced countermeasures will increase the security effectiveness compared to the baseline effectiveness ratings.

Upon completion of the tool assessment, users receive a report that summarizes their inputs. They may then use this report to develop a security plan or to identify areas of potential vulnerability. Users have the option to submit the completed assessment to DHS. If submitted, DHS reviews the assessment for consistency and provides feedback to the users.

Number of Respondents: Of the possible 3,002,450 respondents, TSA expects that approximately 10 percent, or 300,245, will use the tool.

Issued in Arlington, Virginia, on August 3, 2005.

Privacy Officer.
