**SUPPLEMENTARY INFORMATION:** The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

The applicant proposes to annually capture up to 250 green and 320 hawksbill sea turtles to provide information on the ecology and population dynamics of these species. The research would take place in the waters surrounding Puerto Rico and its adjacent islands including Mona, Monito, Desecheo, Caja-de-Muertos, Vieques and Culebra. Researchers would identify marine habitat, determine distribution and abundance, determine sex ratios, evaluate the extent of ingestion of marine debris, determine growth rates and sexual maturity, and quantify threats. All turtles would be measured, weighed, tagged, and blood sampled. A subset of animals would be lavaged and have transmitters attached to them. The permit would be issued for 5 years.
