ACKNOWLEDGMENTS

This report was prepared by **Carol Fendler** under the direction of **Arno I. Winard**, Staff Assistant for Poverty Statistics. Overall direction was provided by **Roger A. Herriot**, then Chief of the Income and Poverty Statistics Branch. Assistance in preparation and review of the tables was provided by **Pauline Koustenis, Kathryn K. Grossman, Anthony Franco, Vivian M. Simmons, Cathleen T. Brinson, Donna S. Coleman, and Ellen Yates**. The historical tables were programmed by **Emmett F. Spiers**. Income editing and allocation procedures were developed by **John F. Coder**. Editorial assistance was provided by **Rosa B. Taylor**.

Thelma N. Varhach of the Demographic Surveys Division was responsible for production of the detailed tables. Sampling review was performed by **Diana Harley** of the Statistical Methods Division.

Characteristics of the Population Below the Poverty Level: 1976

NOTE

The poverty estimates compiled from the March 1977 Current Population Survey (CPS) were obtained from an expanded sample of households. This sample consisted of 65,500 housing units, approximately 10,500 more housing units than were used to develop the poverty estimates from the March 1976 CPS. Further discussion of the sample expansion can be found in the section, "New Procedures Used in the March 1977 CPS." In addition, it should be noted that the term "householder" has been used in the text of this report in place of the term "head," which appears in the detailed tables. See the section, "Head versus Householder" for further details.

This report presents detailed social and economic statistics for the population of the United States below the poverty level in 1976 based on the March 1977 Current Population Survey (CPS). As in previous poverty reports, data are presented by selected characteristics such as race, family status, residence, education, work experience, and type and source of income. For the first time, poverty data for the 20 largest SMSA's and their central cities are included.

The poverty threshold for a nonfarm family of four persons was \$5,815 in 1976, about 6 percent higher than the comparable 1975 figure of \$5,500. The poverty thresholds are updated every year to reflect changes in the annual average Consumer Price Index (CPI). See page 204 for a detailed explanation of the poverty concept. In this text, the terms "poverty," "low-income," and "poor" are used interchangeably.

HIGHLIGHTS

As reported in the advance report on income and poverty (*Current Population Reports*, Series P-60, No. 107), the number of persons in poverty declined by about 900,000 between 1975 and 1976 (from 25.9 to 25.0 million). This was in contrast to the 2 preceding years when the number of poor persons increased (by 2.5 million between 1974 and 1975 and 1.3 million between 1973 and 1974). The decline in poverty accompanied a general improvement in the economy. For example, real median family income increased by about 3 percent between 1975 and 1976, reversing 2 years of decline. The poverty thresholds, which reflect changes in consumer prices, increased 5.8 percent during the same period, compared to a 9.1 percent increase the year before. In addition, the average annual unemployment rate decreased from 8.5 percent in 1975 to 7.7 percent in 1976.¹

¹ U.S. Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, Volume 24, Number 2, February 1977, p. 23.

The overall 3.5 percent decline in the incidence of poverty between 1975 and 1976 was not distributed evenly throughout the population. Table A summarizes changes in the number of poor during this period by race, age, residence, and family status:

- The number of Whites below the poverty level decreased by 1.1 million, or 5.9 percent; sampling variability was too large to reliably determine whether a change in the number of low-income Blacks or persons of Spanish origin actually occurred. As in previous years, the poverty rate for Whites (9.1 percent) was considerably lower than the rates for Blacks and persons of Spanish origin (31.1 and 24.7 percent, respectively) as shown in figure 2.
- The number of elderly (persons 65 years and over) below the poverty level did not change significantly, remaining at about 3.3 million. In contrast, the number of poor persons under 65 years old declined by 4 percent, partly offsetting the 11-percent increase in the number of such persons the year before. The survey also showed a 7-percent decrease in the number of poor children under 18 years of age (from 10.9 million in 1975 to 10.1 million in 1976).
- There was a substantial decline (7.4 percent) in the poverty population residing in nonmetropolitan areas, whereas no significant change occurred in metropolitan areas as a whole. Within metropolitan areas, the number of poor residing in the suburban rings decreased by 510,000 (8.2 percent), while the increase in the poverty population residing in central cities was not statistically significant.
- For families below the poverty level, the survey revealed a mixed picture. The number of poor husband-wife families, which had increased sharply between 1974 and 1975, declined by 10 percent, from 2.9 million to 2.6 million. In contrast, the number of poor families with a female householder, no husband present, rose slightly between 1975 and 1976 (from 2.4 to 2.5 million), an increase

similar to that observed the year before. Among families with a male householder, no wife present, the number of poor increased by 40 percent. Nevertheless, such families accounted for only 3 percent of families in poverty in 1976.

- The number of unrelated individuals (persons living alone or with nonrelatives) below the poverty level increased by 5 percent, from 5.1 to 5.3 million. The number of male unrelated individuals in poverty increased by 7 percent, while for poor female unrelated individuals the increase was 4 percent. However, the apparent difference between these two rates of increase was not statistically significant.

CHANGING COMPOSITION OF THE POVERTY POPULATION, 1959 TO 1976

In 1976, as in previous years, Blacks, persons of Spanish origin, children under 18 years, elderly persons, and persons

in families with a female householder (no husband present) constituted larger proportions of the poverty population than of the population as a whole. Of the 25 million poor in 1976, 30 percent were Black, 11 percent were Spanish, 13 percent were 65 years old or over, 40 percent were children under 18 years old, and 36 percent were in families with a female householder, no husband present. These same groups accounted for smaller proportions of the total population, as shown in figure 3.

For the population as a whole, the poverty rate declined substantially between 1959 and 1969, as did the number of poor persons. In contrast, between 1969 and 1976, both the size of the poverty population and the overall poverty rate fluctuated but showed little cumulative change (table B). For specific groups within the population, there were substantial variations in the incidence of poverty and rates of decline throughout the 1959-76 period. This, coupled with the changing make-up of the total population, produced some significant long-term changes in the composition of the poor.

FIGURE 2.
Number and Percent of Persons Below the Poverty
Level in 1976, by Race and Spanish Origin

FIGURE 3.
Groups Overrepresented Among the Poverty
Population in 1976

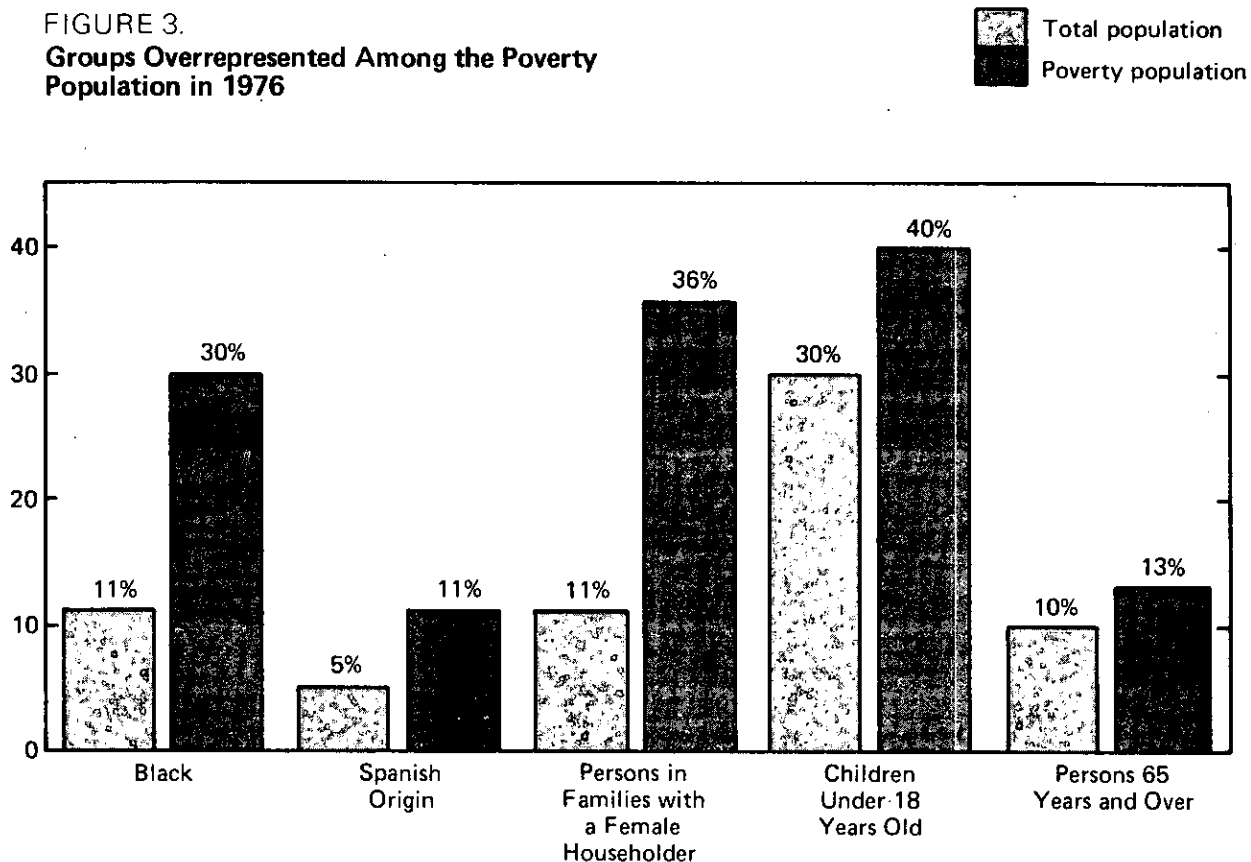

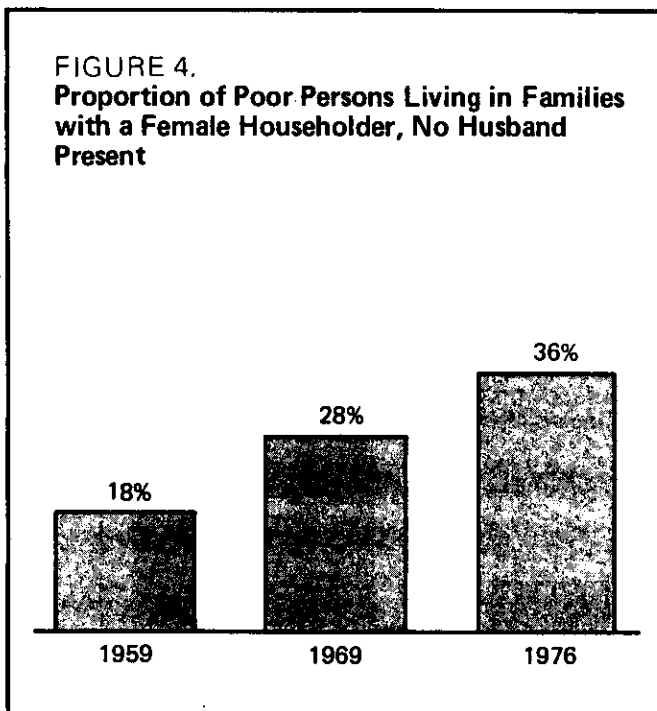

FIGURE 4.
Proportion of Poor Persons Living in Families with a Female Householder, No Husband Present

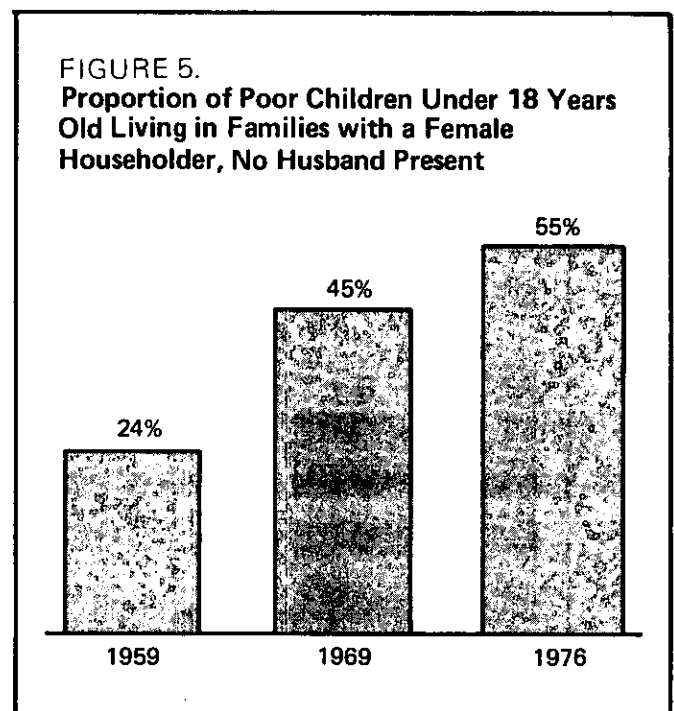

Overall, the proportion of poor persons who were not family members increased between 1959 and 1976. These unrelated individuals comprised 12 percent of the poverty population in 1959, increasing to 21 percent in 1976 (the number of poor unrelated individuals also increased during this period, from 4.9 to 5.3 million). This change, however, largely reflects their increased number in the total population. Unrelated individuals represented 6 percent of the total population in 1959 as compared to 10 percent in 1976.

In 1959, 14 percent of all poor persons were aged (65 years old or over). This proportion reached a peak of 20 percent in 1969, as poverty declined more slowly among the aged than among the total population during this period. The enactment of substantial increases in Social Security benefits contributed to a significant decline in the number of low-income elderly after 1970; as a result, the proportion of the poverty population represented by the aged fell to 13 percent by 1976.

One of the most significant changes in the composition of the poor between 1959 and 1976 was the dramatic increase in the number and percent of poor persons living in families with a female householder, no husband present (figure 4). Such persons accounted for 18 percent of all poor persons in 1959, 28 percent in 1969, and 36 percent in 1976. In part, this rise reflected the increasing representation in the general population of persons living in families with a female householder; they comprised 8 percent of the population in 1959 and 11 percent in 1976. In addition, these persons have

FIGURE 5.
Proportion of Poor Children Under 18 Years Old Living in Families with a Female Householder, No Husband Present

consistently had a higher poverty rate than persons in families with a male householder. The poverty rate for persons in families with a female householder was 49 percent in 1959 and 37 percent in 1976. In contrast, the poverty rate for persons in husband-wife and other families dropped from 18 percent in 1959 to 6 percent in 1976.

The increasing concentration of the poor in families where the householder is a female was especially evident among Blacks. The number of poor Blacks living in such families rose from 2.4 million to 4.4 million between 1959 and 1976. They accounted for almost three-fifths of the Black poor in 1976, compared to about one-fourth in 1959. These increases reflected the growing number of Blacks in the total population who lived in families with a female householder, rather than an increase in poverty among these persons; as shown in table B, their poverty rate dropped from 71 percent in 1959 to 56 percent in 1976. This decline, however, was much less rapid than that experienced by Blacks living in husband-wife or other families. Between 1959 and 1976, the poverty rate of these families decreased from 51 percent to 16 percent.

Like poor persons in general, poor children have been increasingly found in families with a female householder, and for much the same reasons. The proportion of poor children living in such families rose steadily from 24 percent in 1959 to 45 percent in 1969 and 55 percent in 1976 (figure 5). Table 1 shows the high poverty rate and number of these children compared to children in husband-wife or other families.

Note: For the year 1959, data for persons 65 years and over and for Blacks are based on 1-in-1,000 sample of the 1960 census.

GEOGRAPHICAL DISTRIBUTION OF THE POOR

Like the general population, the overwhelming majority (95 percent) of the poor in 1976 were nonfarm residents. The number of poor persons living on farms has declined substantially, from 8.0 million in 1959 (when they represented 20 percent of the poverty population) to 1.3 million in 1976.

In 1959, the poverty population was about evenly divided between the South and the other regions of the country. However, by 1976, 59 percent of the poor were found in the North and West and only 41 percent resided in the South. At

the same time, the proportion of the total population living in the South remained fairly constant at slightly more than 30 percent.

The proportion of the poor residing in metropolitan areas has been rising steadily, from 44 percent in 1959 to 54 percent in 1969 and 61 percent in 1976. In contrast, nonmetropolitan areas experienced a decline (figure 6). Between 1959 and 1969, a shift from nonmetropolitan to metropolitan areas also took place among the total population. As shown in table C, only 31 percent of all persons lived outside metropolitan areas in 1969, compared to 37 percent 10 years earlier. During the 1969-1976 period, there

¹Based on 1-in-1,000 sample of 1960 census.

was a reverse movement from metropolitan to nonmetropolitan areas, but the number of poor in nonmetropolitan areas continued to decline. In contrast, the poverty population in metropolitan areas increased by about 2 million during the same period.

The poverty rate for metropolitan areas has been consistently lower than the rate for nonmetropolitan areas, but the gap has narrowed substantially since 1959. Table C shows that 33 percent of nonmetropolitan residents were poor in 1959, compared to 15 percent of metropolitan area residents. In 1976, the difference was much smaller; the poverty rates for nonmetropolitan and metropolitan areas were 14 percent and 11 percent, respectively.

The poor have become increasingly concentrated in the central cities of metropolitan areas. Table C shows that only 27 percent of all poor persons in 1959 were central city residents, compared to 38 percent in 1976. Furthermore, this

increase occurred at the same time as the proportion of the total population living in these areas was dropping, from 32 percent to 28 percent.

The increasing concentration of the poor in central cities is particularly evident for Blacks; 55 percent of all poor Blacks lived in these areas in 1976, compared to 43 percent in 1969, and 38 percent 10 years earlier. As a consequence, the proportion of central city residents below the poverty level who are Black has also risen, from 37 percent in 1959 to 44 percent in 1976.

In 1976, 40.3 million persons or about one-fifth of all persons in the United States lived in poverty areas (see table D). Although only 26 percent of the persons living in these areas were classified as poor, about 42 percent of all poor persons resided in these areas. Poverty areas in SMSA's are defined in terms of census tracts in which 20 percent or more

of the population was below the poverty level in 1969. Outside SMSA's, the same criteria are applied to minor civil divisions.

Within metropolitan areas, Blacks, both poor and nonpoor were more likely to live in poverty areas than Whites. In fact, a larger proportion of nonpoor Blacks than of poor Whites lived in these areas. About 60 percent of poor Blacks and 35 percent of nonpoor Blacks resided in poverty areas as contrasted to 21 percent of Whites below the poverty level and 5 percent of nonpoor Whites.

Whereas poor persons residing in the poverty areas of metropolitan areas were predominantly Black (about three-fifths), the poor residing in nonmetropolitan poverty areas were predominantly White (also about three-fifths). The great majority of poverty residents outside the poverty areas of both metropolitan and nonmetropolitan areas were White.

INCOME DEFICIT

In 1976, the aggregate income deficit (the amount required to raise all poor families and unrelated individuals above the poverty line) was \$16.7 billion. As shown in table E, the mean (average) income deficit for families in 1976 was lower than in 1959 (\$1,990 compared to \$2,300, in 1976 dollars). For unrelated individuals, the comparable figures were \$1,150 and \$1,530, respectively. The decrease in the average

deficit during this period reflects the decline in the proportion of poor families and unrelated individuals who had very low incomes (less than 75 percent of the poverty threshold). For unrelated individuals the change is striking, decreasing from 80 percent in 1959 to 58 percent in 1976 (see table E).

The average income deficit in 1976 was \$2,120 for Black families, compared to \$1,930 for White families. In 1959, the difference was much larger; the mean deficit was \$2,860 for Black families and \$2,110 for White families. Because the income cutoffs used to define poverty families vary by size and type of family, these factors must be taken into consideration when comparing the average deficits of families by race or type of family.

These are some of the highlights obtained from the Consumer Income Supplement conducted in March 1977 in connection with the Bureau's monthly Current Population Survey (CPS). The information was collected from a sample of persons representing: (1) the civilian noninstitutional population, and (2) members of the Armed Forces living off post or with their families on post in the United States. Unrelated individuals under 14 years of age are excluded from this report.

The poverty definition used in this report is based on an index developed at the Social Security Administration (SSA) in 1964, and revised by a Federal Interagency Committee in 1969. A directive from the Bureau of the Budget (described

¹Data for "Black" include "other" races.

in the September 1969 Statistical Reporter) established the Census Bureau statistics on poverty as the standard data series to be used by all Federal agencies.

The poverty concept is a statistical yardstick based on the Department of Agriculture's 1961 Economy food plan and reflects the different consumption requirements of families in relation to their size and composition, sex and age of the family head, and farm-nonfarm residence. A food-to-income ratio of one-third for families of three or more, based on the Department of Agriculture's 1955 Survey of Food Consumption, was used to derive the poverty thresholds from the economy food plan. See page 204 for further details.

When analyzing CPS data on the low-income population, it is important to keep in mind that these data are based on a sample survey (56,000 households) and are therefore subject to sampling variability. An explanation of sampling variability is found in the section entitled, "Source and Reliability of the Estimates" and tables 10, 16, 40, and 46 show examples of standard errors.

Data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workmen's compensation; government and private employee pensions; and other periodic income. Certain money receipts such as capital gains are not included. Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families received nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents such as the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. In addition, it should be noted that nonmoney income is not considered in calculating the poverty thresholds. Recently, however, receipts from nonmoney transfers such as food stamps have become an increasingly important element in the income of poor persons.² Data from the 1976 Survey of Income and Education indicate that about 40 percent of all poor families and unrelated individuals participated in the food stamp program.

Moreover, readers should be aware that for many different reasons, there is a tendency in household surveys for respondents to underreport their income. Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, public assistance, unemployment compensation and net income from interest, dividends, rentals, etc. Overall, income earned from wages or salary is more accurately reported than other

sources of income. After editing and allocation of missing amounts, wages and salaries in the survey accounted for approximately 97 percent of independently derived administrative sources. By contrast, 1976 income data on Social Security and public assistance payments to beneficiaries amounted to approximately 89 and 78 percent, respectively, of independently derived estimates. Comparable estimates are not available for the poverty population. For further details, see page 210.

A study which attempts to adjust the CPS data for underreporting and to impute government "in-kind" transfer program benefits, such as food stamps, Medicare, and subsidized housing to families in the survey, has been prepared by the Congressional Budget Office (CBO).³ Statistical techniques were used to simulate eligibility and participation of persons in the various programs. For simulated participants, the services received were given a money "value" based on the assumption that the value of these services to the beneficiaries is equal, on the average, to the government's cost.

The CBO report represents one attempt to measure and study the effects of adjusting for underreporting of money income and the inclusion of nonmoney transfer payments, on the size distribution of income and poverty counts. Although, the procedures used by the CBO provide one approach, there continues to be a general lack of agreement of how to measure and value in-kind income. The interested reader may wish to consult a report by a governmental interagency task force which discusses many of these issues.⁴

The poverty counts presented in the CBO report are not entirely comparable to those presented in this report because the institutionalized population, members of the Armed Forces living in group quarters, and the population of Puerto Rico are included in the CBO report but are excluded from the estimates presented here. In addition, the reference period for the CBO estimates and the poverty threshold levels were adjusted to cover fiscal year 1976 rather than calendar year 1975.

It also should be noted that the poverty threshold levels used in this Census report correspond to a measure of income adequacy which was originally developed as a relative measure based on money income.⁵ Whether this measure also would serve as a measure of income adequacy for an income distribution which includes nonmoney as well as money income as in the CBO report, is an issue which deserves attention.⁶

² Statistical Abstract of the United States 1976, table 688.

NEW PROCEDURES USED IN THE MARCH 1977 CPS

The poverty statistics tabulated from the March 1977 CPS reflect the use of an expanded sample of households. As previously indicated, the basic monthly CPS sample of approximately 55,000 housing units and other living quarters was expanded to about 65,500 units per month. The sample expansion was initiated in conjunction with the Comprehensive Employment Training Act (CETA) to obtain estimated annual averages of the number of unemployed in each of the 50 States and the District of Columbia. The expanded sample was designed to obtain these estimates with a fixed reliability requirement (a 10-percent coefficient of variation on an estimate of the number of unemployed assuming a 6-percent unemployment rate).

The CETA supplement has been in existence since July 1975, but was not incorporated into the published income estimates prior to the March 1977 CPS. A comparison of data from the March 1976 CPS before and after expansion of the sample indicated that inclusion of the CETA supplement had only a slight impact on the data for the poverty population. For example, as shown in table F, the total number of poor persons in 1975 based on the CPS sample was 25.9 million, while the estimate obtained from the CPS-CETA combined sample was 25.8 million, a difference of only 0.3 percent. The accompanying poverty rates were also quite similar, about 12 percent for both samples.

Estimates from the CPS and CPS-CETA samples of the number of poor differed by more than 5 percent in only one case (poor persons living on farms). Differences in poverty rates were also minimal. However, when making year-to-year comparisons, the reader should remember that the 1975 poverty data are based on the unexpanded sample whereas the 1976 poverty data are based on the expanded sample.

HEAD VERSUS HOUSEHOLDER

In the 1980 census the Census Bureau plans to discontinue the use of the terms "head of family" and "head of household." Instead, the terms "family householder" and "householder" are likely to be used. Recent social changes have resulted in a trend toward more nearly equal status for adult members of a household and therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau is reconsidering its longtime practice of always classifying the husband as head when he and his wife are living together.

In the 1980 census, the householder is to be the first adult household member listed on the census questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first and thereby become the reference person, or householder, to whom the relationship of other household members is to be recorded. Thus, the

Bureau plans to publish the responses on relationship as given in the 1980 census, except in selected tables where the husband will always be shown as the householder in order to maintain comparability with previous census classifications.

The user of this report is cautioned that the term "householder" as used in the text refers to the "head," as defined in earlier reports; the term "head" is retained in the detailed tables. Therefore, the number of householders in the text is the same as the number of heads in the detailed tables. When the 1980 census procedures are used in collecting and processing data in the Current Population Survey in the near future, the number of men classified as householders may be as much as 10 percentage points smaller, and the number of women classified as householders may be as much as 10 percentage points larger than the corresponding numbers of heads of families or households, according to pretest results.

Current Population Survey

Current Population Survey Reports. A detailed explanation of the poverty concept appears in **Current Population Reports, Series P-23, No. 28, "Revision in Poverty Statistics, 1959 to 1968"** and in **The Measure of Poverty, A Report to Congress as Mandated by the Education Amendments of 1974**, prepared by a Poverty Studies Task Force under the auspices of the Department of Health, Education, and Welfare. This report also discusses limitations of the current poverty definition and presents alternative methods for measuring poverty.

A detailed description of the original poverty index developed by the Social Security Administration appears in the following articles by Mollie Orshansky published in the **Social Security Bulletin**: "Counting the Poor: Another Look at the Poverty Profile," January 1965, and in "Who's Who Among the Poor: A Demographic View of Poverty," July 1965.

Data on poverty based on the original poverty definition appear in **Current Population Reports, Series P-60, No. 54, "The Extent of Poverty in the United States: 1959 to 1966."** Comprehensive data and analysis of poor persons and families based on the revised definition of poverty appear in Series P-60, No. 68, "Poverty in the United States, 1959 to 1968;" P-60, No. 76, "24 MILLION AMERICANS, Poverty in the United States: 1969;" P-60, No. 81, "Characteristics of the Low-Income Population: 1970;" P-60, No. 86, "Characteristics of the Low-Income Population: 1971;" P-60, No. 91, "Characteristics of the Low-Income Population: 1972;" P-60, No. 95, "Supplementary Report on the Low-Income Population: 1966 to 1972;" P-60, No. 98, "Characteristics of the Low-Income Population: 1973;" P-60, No. 102, "Characteristics of the Population Below the Poverty Level: 1974;" and P-60, No. 106, "Characteristics of the Population Below the Poverty Level: 1975." Data based on the Current Population Survey showing the distribution of families and persons, by income levels, appear in the other

Table F. Comparison of Poverty Data Based on March 1976 CPS-CETA Combined Sample and March 1976 CPS Sample

(Numbers in thousands. Families, unrelated individuals, and persons as of March 1976. For meaning of symbols, see text)

P-60 reports, the latest of which is P-60, No. 114, "Money Income in 1976 of Families and Persons in the United States."

Advance data on the poverty population in 1976 cross-classified by selected characteristics appear in **Current Population Reports**, Series P-60, No. 107, "Money Income and Poverty Status of Families and Persons in the United States: 1976."

A summary of the changes in the composition of the low-income population since 1959 and the limitations of the data used to quantify poverty are presented in "Trends and Composition of the Low-Income Population," by Renée Miller and Arno Winard, **Proceedings of the Social Statistics Section**, American Statistical Association, 1974.

An analysis of the characteristics of food stamp households appears in **Current Population Reports**, Series P-23, No. 61, "Characteristics of Households Purchasing Food Stamps."

Office of Economic Opportunity Tabulations. The contents of the tabulations originally prepared for the Office of Economic Opportunity (OEO tables) are outlined in appendix B. These tabulations contain more detailed cross-classifications by age than are shown in the tables presented in this report.

Survey of Income and Education

The Survey of Income and Education (SIE) was a one-time survey of approximately 151,000 interviewed households nationwide, conducted in each State by the Bureau of the Census between April and July 1976. The purpose of the SIE was to provide estimates of the number of children 5 to 17 years old in poverty families in each State and the District of Columbia, as required by the Education Amendments of 1974.

In addition to collecting income data needed to determine poverty status, the opportunity presented by such a large survey was also used to gather some additional income-related information not usually collected in the Census Bureau's current income surveys. Such data include the receipt of food stamps, housing costs for homeowners and renters, and estimated cash assets. Also, information relevant to a number of Department of Health, Education, and Welfare (HEW) programs was collected, including data on English language proficiency, school enrollment, food stamp and public assistance reciprocity, housing tenure, liquid asset holdings, child and adult disability, and health insurance coverage.

Income and poverty data from the SIE have been published in a series of four reports (one for each of the four major regions in the Nation): **Current Population Reports**, Series P-60, No. 110 (Northeast); No. 111 (North Central); No. 112 (South); and No. 113 (West). Each report presents data for the divisions and States within the region and for the total United States. Contained in the reports are income distributions and poverty data for families, persons, and unrelated individuals, cross-classified by a broad range of socioeconomic and demographic characteristics similar in

content to data published from the Current Population Survey. The income tables include such characteristics as residence, housing tenure, age, race, size and type of family, number of children under 18 years old, number of earners, and occupation, work experience, and education of head. In addition to many of the above characteristics, the poverty tables also include information on reasons for not working, type of income, subsidized housing of renters and living arrangements for unrelated individuals.

An additional report, **Current Population Reports**, Series P-60, No. 108, contains estimates of household money income in 1975 for the United States, regions, divisions, and States. The primary focus of this report is to show income distributions by housing tenure and type of residence, cross-classified by age of head and other key characteristics of households. Added emphasis has been placed on showing summary statistics and in addition to mean and median incomes, average household size and per capita income are shown along with each income distribution.

Data on income and poverty for calendar year 1975 from the SIE differ somewhat from those based on the CPS. In general, the estimates of median income from the SIE are slightly higher than comparable estimates from the CPS. For example, the median family income from the SIE was \$14,094 compared to \$13,719 from the CPS. Estimates of the number of persons below the poverty level by various characteristics from the SIE are generally lower than from the CPS. For example, there were 23,991,000 persons below the poverty level in 1975 from the SIE compared to 25,877,000 from the CPS.

Although two major aspects of these surveys were the same, the money income concept and the questionnaire wording and design, there were some significant procedural differences which probably cause the income estimates in these surveys to differ. For a detailed discussion of these differences, see the published SIE reports.

Decennial Census

Poverty data collected in the 1970 Census of Population appear in a number of published reports. Selected characteristics of persons, families, and unrelated individuals below the poverty level, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in **1970 Census of Population, Vol. I, Characteristics of the Population**, chapter C, "General Social and Economic Characteristics." Statistics on poverty status in 1969 of persons and families by detailed characteristics, including cross-classifications by race, age, weeks worked, education, type of family, etc., are presented in **1970 Census of Population, Vol. I, Characteristics of the Population**, chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, and standard metropolitan statistical areas of 250,000 inhabitants or more. Further information is contained in **Data Access Description No. 29**, Collection, Evaluation, and Processing Series CEP-7, "Low-Income Data from the 1970 census."

Cross-classifications of poverty status in 1969 for persons and families by detailed social, economic, and housing characteristics are presented in **1970 Census of Population, Vol. II Report PC(2)-9A, "Low-Income Population."** Tables are generally for the United States, although some are repeated for regions and metropolitan-nonmetropolitan residence. Data on the social, economic, and housing characteristics of the low-income population residing in poverty areas in the 50 largest cities can be found in **1970 Census of Population, Vol. II Report PC(2)-9B, "Low-Income Areas in Large Cities,"** Supplementary Report PC(S1)-56,

"Selected Characteristics of the Population in Low-Income Areas of Large Cities," and Supplementary Reports PC(S1)-65 to PC(S1)-103, "Low-Income Neighborhoods in Large Cities: 1970." Selected data on the poverty status in 1969 and 1959 of persons and families for the United States, each of the States, counties, standard metropolitan statistical areas (SMSA's), and central cities of large SMSA's appear in **1970 Census of Population, Supplementary Report, PC(S1)-105, "Poverty Status in 1969 and 1959 of Persons and Families, for States, SMSA's, Central Cities, and Counties: 1970 and 1960."**

NOTE

In the past the Census Bureau has designated a head of household to serve as the central reference person for the collection and tabulation of data for individual members of the household (or family). However, recent social changes have resulted in a trend toward recognition of more equal status for all members of the household (or family), making the term "head" less relevant in the analysis of household and family data. As a result, the Bureau is currently developing new techniques of enumeration and data presentation which will eliminate the concept of "head." While much of the data in this report are based on the concept of "head," methodology for future Census Bureau reports will reflect a gradual movement away from this traditional practice.

**Table 1. PERSONS BELOW THE POVERTY LEVEL BY FAMILY STATUS, SEX OF HEAD AND RACE
AND SPANISH ORIGIN: 1959 TO 1976**

(Numbers in thousands. Persons as of March of the following year. Unless stated otherwise, all tables exclude unrelated individuals under 14 years old, inmates of institutions, and members of Armed Forces, except those living off post and those living with families on post. For meaning of symbols, see text)

Table 24. TENURE BY SELECTED CHARACTERISTICS—PRIMARY FAMILIES AND PRIMARY UNRELATED INDIVIDUALS BY POVERTY STATUS IN 1976 AND RACE OF HEAD

(Numbers in thousands. Primary families and unrelated individuals as of March 1977. For meaning of symbols, see text)

Table with columns for Selected Characteristics, All Income Levels, Below Poverty Level, and Percent Below Poverty Level. Sub-headers include Total, In Owner-Occupied Units, and In Renter-Occupied Units. The table lists various characteristics such as All Races, Primary Families, Type of Residence, Age of Head, Median Age, Size of Family, Mean Size of Family, Presence of Related Children, and Number of Workers.

Appendix A

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and approximately 1,000,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The definition of farm and nonfarm residence in the present survey and in the Current Population Surveys since March 1960 is the same as that used in the 1960 and 1970 censuses but differs from that used in earlier surveys and censuses. In the present survey, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under \$50, \$50 to \$249, \$250 to \$999, or \$1,000 or more)?" The household was classified as in the farm population if either (a) the acreage response was "Yes" and sales amounted to \$50 or more, or (b) the acreage response was "No" and sales amounted to \$250 or more. All other households were classified as in the nonfarm population, which comprises persons living in urban areas and rural persons not on farms. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming, are classified as nonfarm population.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm. However, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

For detailed information on the effect of the above definitional change, see Series P-60, No. 35, pages 10 and 11.

In August 1975, the U.S. Department of Agriculture and the Bureau of the Census announced a change in the official definition of a farm. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place from which

\$1,000 or more of agricultural products were sold, or would normally be sold, in the reporting year. However, for purposes of comparability, the figures presented in this report are based on the definition in use from 1960 to 1975.

Metropolitan-nonmetropolitan residence. The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contain at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

This report contains data for the 20 largest SMSA's and their central cities; these figures are based on SMSA's as defined in the 1970 census. The counties (or towns and cities) which comprised these SMSA's in the 1970 census can be found in **1970 Census of Population, Vol. 1, Characteristics of the Population, Part A, "Number of Inhabitants."**

Central cities. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) The additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

Geographic regions. The four major regions of the United States for which data are presented in this report represent groups of States, as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

North Central: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

North and West: Northeast, North Central, and West regions combined.

Poverty areas. For this report poverty areas in metropolitan areas are defined in terms of census tracts and in nonmetropolitan areas in terms of minor civil divisions (townships, districts, etc.) in which 20 percent or more of the population was below the low-income level in 1969.

For further details, see **1970 Census of Population Report PC(2)-9B, "Low-Income Areas in Large Cities,"** and Supplementary Reports PC(S1)-65 to PC(S1)-103, "Low-Income Neighborhoods in Large Cities: 1970."

Federal regions. The 10 standard Federal administrative regions for which data are presented in this report represent groups of States, as follows:

Region I, Boston: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

Region II, New York: New Jersey, New York.

Region III, Philadelphia: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia.

Region IV, Atlanta: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee.

Region V, Chicago: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.

Region VI, Dallas-Fort Worth: Arkansas, Louisiana, New Mexico, Oklahoma, Texas.

Region VII, Kansas City: Iowa, Kansas, Missouri, Nebraska.

Region VIII, Denver: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming.

Region IX, San Francisco: Arizona, California, Hawaii, Nevada.

Region X, Seattle: Alaska, Idaho, Oregon, Washington.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Mobility status. The population of the United States 2 years old and over has been classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the March 1977 CPS and the place of residence 2 years earlier. Nonmovers are all persons who were living in the same house at the beginning and end of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

Income. For each person in the sample 14 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or bonds); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and workmen's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

When an indefinite amount was reported by the respondent, a specific value was assigned during processing wherever possible. If the indefinite amount was reported in terms of a range, the mid-point of the range was assigned (e.g., \$10,000 to \$15,000 was coded as \$12,500). Open-ended amounts were converted to designated specific amounts; e.g., over \$10,000 may be coded as \$15,000.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, labor force status, etc., and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents which often take the form of the use of

business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of salable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes, otherwise, inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. "Medicare" reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments such as aid to families with dependent children and general assistance. Separate payments received for hospital or other medical care (vendor payments) are excluded from this item.

Dividends, interest (on savings or bonds), income from estates or trusts, net rental income or royalties include dividends from stockholdings or membership in associations, interest on savings or bonds, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or workmen's compensation include: (1) Unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) workmen's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include: (1) Private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company; (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include the following types of income: (1) Periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Receipts not counted as income. Receipts from the following sources were not included as income: (1) Money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings—the algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings—the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. The algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings represents total money income. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group (under \$1,000) those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Many of these were living on income "in kind," savings, or gifts; or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole breadwinner had recently died or had left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of families or unrelated individuals (as appropriate) in that group.

Income per family member. The income per family member is the average amount of income available to every man, woman, and child in a family. Income per family member is derived by dividing the total family income of a group by the number of family members in the same group.

Poverty (low-income) definition. Poverty statistics presented in this report are based on a definition developed by the Social Security Administration in 1964 and revised by a Federal Interagency Committee in 1969.

Statistics presented in Census Bureau reports prior to publication of **Current Population Reports, Series P-60, No. 68, "Poverty in the United States, 1959 to 1968,"** were based on the poverty index developed by the Social Security Administration (SSA) in 1964. This index provided a range of income cutoffs adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four food plans that are nutritionally sound, designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level

for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. Annual revisions of these SSA poverty cutoffs were based on price changes of the items in the economy food budget.

As a result of deliberations of a Federal Interagency Committee in 1969, the following two modifications to the original SSA definition of poverty were recommended: (1) that the SSA thresholds for nonfarm families be retained for the base year 1963, but that annual adjustments in the levels be based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of food included in the economy food plan; and (2) that the farm thresholds be raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase of 360,000 poor families and 1.6 million poor persons in 1967. The reasons for making these changes are outlined below.

Change in cost of living adjustment. Annual revisions of the SSA poverty thresholds were based only on the average per capita cost of the foods in the economy food budget. This method of updating these cutoffs did not fully reflect increases in the overall cost of living during the 1960's. The pace at which the general cost of living advanced in the 1960's was not uniformly matched by increases in the price of goods in the economy food plan. Thus, general price changes since 1959 were not paralleled by comparable changes in the poverty thresholds. The differences between changes in the cost of the economy food budget and the overall cost of living led to the adoption of the CPI as the basis for annual revisions in the income cutoffs.

Table A-1 shows the changes in the CPI between 1959 and 1976 and the corresponding average thresholds for a nonfarm family of four.

Change in the farm-nonfarm relationship. Under the old definition, the poverty thresholds for farm families were adjusted for the average value of food consumed by these families which they had grown themselves. Based on a 1961 study of household consumption which indicated that the value of food produced by farm families for home use amounted to about 30 percent of their total food budget, the poverty cutoffs for farm families were established at 70 percent of the nonfarm levels.

Up to the present time, no entirely satisfactory means of determining the income required for equivalent levels of living for farm and nonfarm families has been provided by studies on this subject. Further research is needed to analyze the differences in the costs between farm and nonfarm families. Although it is not yet possible to quantify exactly all the factors contributing to cost of living differences between farm and nonfarm families, research already completed suggests that the differences are not as great as provided for by the 70 percent differential. After weighing the available evidence, the Review Committee agreed that

narrowing the farm-nonfarm differential to 85 percent more nearly reflects the overall cost of living differences between farm and nonfarm families than the previously used differential.

Table A-1. Changes Between 1959 and 1976 in the Consumer Price Index and the Average Poverty Threshold for a Nonfarm Family of Four

Year	Consumer Price Index (1963=100)	Average threshold for a nonfarm family of four persons
1976.....	185.9	\$5,815
1975.....	175.8	5,500
1974.....	161.1	5,038
1973.....	145.1	4,540
1972.....	136.6	4,275
1971.....	132.3	4,137
1970.....	126.8	3,968
1969.....	119.7	3,743
1968.....	113.6	3,553
1967.....	109.1	3,410
1966.....	106.0	3,317
1965.....	103.1	3,223
1964.....	101.3	3,169
1963.....	100.0	3,128
1962.....	98.8	3,089
1961.....	97.7	3,054
1960.....	96.7	3,022
1959.....	95.2	2,973

Alternate level. Because the poverty definition currently in use by the Federal Government does not meet all the needs of the analysts of the data, a variation was introduced at the same time that modifications were made to the SSA poverty index and set at 125 percent of the official government standard. This alternate cutoff is obtained by multiplying the income cutoffs at the low-income level by 1.25. Thus, the income cutoff for a nonfarm family of four, at 125 percent of the poverty level is \$7,269. Tables 2, 44, and 45 present selected data for persons, families, and unrelated individuals below 125 percent of the poverty level. Also, the entire set of tables shown in this report has been tabulated for those below 125 percent of the poverty level. Requests for these unpublished data, giving a specific description of the figures desired, may be made in writing to the Chief, Population Division, Bureau of the Census, Washington, D.C. 20233.

Weighted average thresholds at the poverty level. The poverty cutoffs used by the Bureau of the Census to determine the poverty status of families and unrelated individuals consist of a set of 124 thresholds arranged in a four-dimensional matrix consisting of family size (from one

person, i.e., unrelated individuals, to seven or more person families) cross-classified by presence and number of family members under 18 years old (from no children present to six or more children present); sex of head, and farm-nonfarm residence (table A-2). Unrelated individuals and two-person families are further differentiated by age of head (under 65 years and 65 years and over). The total family income of each family in the sample is tested against the appropriate dollar threshold to determine the poverty status of that family. If the family's total income is less than its corresponding cutoff, the family is classified as below the poverty level. The average thresholds shown in table A-3 were weighted by the presence and number of children. For example, for a given size of family, sex of head, and residence category, the weighted average threshold for that group is obtained by multiplying the threshold for each presence and number of children category within the given family size by the number of families in that category. These products are then aggregated across the entire range of presence and number of children categories, and the total aggregate is divided by the total number of families in the group to yield the weighted average threshold at the poverty level for that size family.

Because family composition varies by farm-nonfarm residence, the weighted average thresholds at the poverty level for farm families, as shown in table A-3, will not be exactly 85 percent of the nonfarm levels. Moreover, since family composition does not remain constant from year to year, the weighted average thresholds for 1976 will not reflect, identically, the change in the CPI between 1976 and earlier years.

Since the basic thresholds used to determine the poverty status of families and unrelated individuals are applied to all families and unrelated individuals, the weighted poverty thresholds are derived using all families and unrelated individuals rather than just those families and unrelated individuals classified as below the poverty level. To obtain the weighted poverty thresholds for families and unrelated individuals below 125 percent of the poverty level, the weighted thresholds shown in table A-3 may be multiplied directly by 1.25.

Income deficit. Income deficit is the difference between the total income of families and unrelated individuals below the poverty level, and their respective income thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the deficit is equal to the poverty threshold. This measure provides an estimate of the amount which would be required to raise the incomes of all low-income families and unrelated individuals to their respective low-income thresholds. The income deficit is thus a measure of the degree of impoverishment of a family or unrelated individual. However, caution must be exercised in comparing the average deficit of families of different racial groups. Since the poverty thresholds used in this report are based on family size and composition, apparent differences in the average income

Table A-2. Income Thresholds at the Poverty Level in 1976 by Sex of Head, Size of Family, and Number of Related Children Under 18 Years Old, by Farm-Nonfarm Residence

Size of family unit	Number of related children under 18 years old						
	None	1	2	3	4	5	6 or more

7 or more persons.....	8,456	8,583	8,557	8,483	8,262	8,088	\$7,694

deficits of racial groups may, to some extent, be a function of the differences in these characteristics. It must also be remembered that the thresholds in this report vary according to the sex of the family head. Thus, differences in the average deficit between families with a male or female head may be in part attributable to both differences in thresholds and to differences in family size and composition.

Median income deficit. The median income deficit is the amount which divides the distribution into two equal groups, one having an income deficit above the median and the other having an income deficit below the median.

Mean income deficit. The mean income deficit is the amount obtained by dividing the total income deficit of a group below the poverty level by the number of families or unrelated individuals (as appropriate) in that group.

Deficit per family member. The deficit per family member is the average amount of money necessary to raise every man, woman, and child in a family out of poverty. The deficit per family member is derived by dividing the total family income deficit of a group by the number of family members in the same group.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit, when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters are living arrangements for groups containing five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates by institutions were excluded from the survey.

Family. The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son of the head of the household and the son's wife are in the household, they are treated as part of the head's family. On the other hand, a lodger and his wife not related to the head of the household or an unrelated servant and his wife are considered as additional families, and not a part of the household head's family.

Subfamily. A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a subfamily are also members of a primary family. The number of subfamilies, therefore, is not included in the number of families.

Table A-3. Weighted Average Thresholds at the Poverty Level in 1976 by Size of Family and Sex of Head, by Farm-Nonfarm Residence

Size of family unit	Total	Nonfarm			Farm		
		Total	Male head ¹	Female head ¹	Total	Male head ¹	Female head ¹
1 person (unrelated individual)....	\$2,877	\$2,884	\$3,016	\$2,788	\$2,438	\$2,532	\$2,348
14 to 64 years.....	2,954	2,959	3,069	2,840	2,542	2,608	2,413
65 years and over.....	2,720	2,730	2,758	2,722	2,322	2,344	2,313
2 persons.....	3,688	3,711	3,721	3,660	3,128	3,133	3,033
Head 14 to 64 years.....	3,806	3,826	3,846	3,733	3,267	3,271	3,159
Head 65 years and over.....	3,417	3,445	3,447	3,428	2,928	2,928	2,922
3 persons.....	4,515	4,540	4,565	4,414	3,858	3,864	3,734
4 persons.....	5,786	5,815	5,818	5,790	4,950	4,953	4,840
5 persons.....	6,838	6,876	6,884	6,799	5,870	5,871	5,847
6 persons.....	7,706	7,760	7,766	7,709	6,585	6,584	6,607
7 persons or more.....	9,505	9,588	9,622	9,375	8,072	8,068	8,428

¹For one person (i.e., unrelated individual), sex of the individual.

Unrelated individuals. The term "unrelated individuals," refers to persons 14 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household; (2) be part of a household including one or more other families or unrelated individuals; or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the head of the household or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Primary families and individuals. The term "primary family" refers to the head of a household and all other persons in the household related to the head by blood, marriage, or adoption. If nobody in the household is related to the head, then the head constitutes a "primary individual." A household can contain one and only one primary family or primary individual. The number of "primary" families and individuals is identical with the number of households.

Head of family. One person in each family was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey. Married couples related to the head of a family are included in the head's family and are not classified as separate families.

Size of family. The term "size of family" refers to the number of persons who are living together and are related to each other by blood, marriage, or adoption.

Own children and related children. "Own" children, as used in this report, are sons and daughters, including stepchildren and adopted children, of a family or subfamily head. "Related" children in a family includes own children and all other children in the household who are related to the family head by blood, marriage, or adoption.

Number of workers. This number includes all persons in the family who worked at any time during the year.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Spanish origin. Persons of Spanish origin were determined on the basis of a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (or the origin of some other household member) from a "flash card" listing ethnic origins. Persons of Spanish origin, in particular, were

those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Spanish origin. It should be noted that persons of Spanish origin can be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 14 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register;

(2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force. All civilians 14 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work; seasonal workers for whom the survey week fell in an off season; and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

Occupation, industry, and class of worker. Persons are classified according to the civilian job held longest during the year. Persons who held two jobs or more were reported in the job at which they worked the greatest number of weeks.

The occupation and industry groupings included in this report were based on the classification system used in the 1970 census, as were the data included in *Current Population Reports*, Series P-60, Nos. 81, 86, 91, 98, and 102. A detailed comparison of the 1970 classification systems to those used during the 1960's may be found in the Bureau of the Census Technical Paper 26, *1970 Occupation and Industry Classification Systems in Terms of Their 1960 Occupation and Industry Elements*.

In addition to the change in occupational titles between the March 1972 and the March 1971 surveys which did not affect the comparability of the data, a supplemental question, "What were your most important activities or duties?" was added which provided additional information for classifying persons by occupation. In general, the major impact of this supplemental question was to reclassify some persons from the "managers" classification into other types of occupations (primarily into the major occupation group of "craft and kindred workers").

Class of worker refers to the subdivision of workers into three groups: Wage and salary workers, self-employed workers, and unpaid family workers. The first group refers to persons working for wages, salaries, commissions, tips, pay "in kind", or at piece rate for private employer or for any government unit. The second group refers to persons working in their own business, profession, or trade, for profit or fees. The third group refers to persons working without pay in a business operated by a member of the household to whom they are related by blood or marriage.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year, if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round full-time worker. A year-round full-time worker is one who worked primarily at full-time civilian jobs (35 hours or more per week) for 50 weeks or more during the preceding calendar year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported that they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question "What were you doing most of last year?"

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Symbols. A dash "-" represents or rounds to zero. The symbol "B" means that the base for the derived figure is less than 75,000. Three dots "..." mean not applicable, "NA" means not available, and the symbol "r" means revised.

Base figures. The base figures shown for 1971 to 1976 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey" *Employment and Earnings*, Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

The major effects resulting from the introduction of population controls and estimation procedures based on the 1970 census were to raise the number of families from 51.2 million to 51.6 million in the March 1970 CPS and to lower

the number of related children under 18 from 69.8 to 68.7 million. However, the number of poor families and the number of related children below the poverty level remained about the same—5 million and about 9.5 million, respectively.

LIMITATIONS OF THE POVERTY CONCEPT

In analyzing data on the low-income population, the following limitations should be noted. The poverty concept has been developed in order to identify, in dollar terms, a minimum level of income adequacy for families of different types in keeping with American consumption patterns. Based on an analysis of the percent of income devoted to food expenditures, an estimate was developed of the minimum cost at which an American family, making average choices, can be provided with a diet meeting recommended nutritional goals. Consequently, it is an overall statistical yardstick which reflects the different consumption requirements of families of different size, taking into account family composition and farm-nonfarm residence. Insofar as individual circumstances or consumption patterns differ, the dollar value of the poverty threshold for a given family size may not represent the money income required by an individual family to maintain a level of economic well being equivalent to other families with similar incomes. For a discussion of the limitations of money income as a measure of economic status, see "Trends and Composition of the Low-Income Population," by Renee Miller and Arno Winard, *Proceedings of the Social Statistics Section*, American Statistical Association, 1974.

The original intent of the poverty definition was not for administrative use in any specific program; it was to be a statistical yardstick. In April 1973, the Interagency Committee on Income Distribution and Poverty was requested by the Statistical Policy Division of the Office of Management and Budget to conduct a thorough review of the statistics on income and poverty. Three subcommittees, one focusing on updating the poverty threshold, another on measuring cash income, and the third on measuring noncash income, met throughout the summer of 1973 and came up with a number of recommendations. One of the conclusions reached by the Subcommittee on Updating the Poverty Threshold was that the development of separate measures for eligibility in programs should receive high priority. For a summary of the research recommendations of the Interagency Committee see "Review of Poverty and Income Distribution Statistics" by Bette S. Mahoney, *Statistical Reporter*, Statistical Policy Division, Office of Management and Budget, January 1974.

A detailed review of the poverty definition has recently been completed. The Education Amendments of 1974 required the Assistant Secretary of Education, Department of Health, Education, and Welfare, to supervise a "thorough study of the manner in which the relative measure of poverty for use in the financial assistance program authorized by Title I of the Elementary and Secondary Education Act of 1965 may be more accurately and currently developed." At

the end of 1974 an interagency Poverty Studies Task Force was established under the leadership of HEW which undertook an intensive review of the present definition of poverty and of the implications of various alternative measurement schemes. The findings of this study have been summarized in the report entitled "The Measure of Poverty" which was transmitted to Congress in April of 1976. Additional information about the study as well as requests for copies of the report should be addressed to: Mr. George Grob, Department of Health, Education, and Welfare, Room 445-G, Humphrey Building, Washington, D.C. 20201.

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis (formerly the Office of Business Economics), Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. **Income definition.** The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: Wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. **Source of data.** The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employers' wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households. As discussed in the section "Source and reliability of the estimates," income data obtained in household interviews are subject to various

types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable total money income aggregates and about 97 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see "Size Distributions of Family Personal Income: Methodology and Estimates for 1964" by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. Population coverage. The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post). In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

COMPARABILITY OF ESTIMATES FROM MARCH 1977 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1977 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in: (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; and (5) change in sample size and interpolation procedures. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

The data for 1971 through 1976 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the over all national level is the introduction of population controls based on the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes (see table 3, *Current Population Reports*, Series P-60, No. 91). Basically, these changes should have no substantial impact on

summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different sub-groupings such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings*, Vol. 18, No. 8, February 1972.

The figures shown for metropolitan areas are based on standard metropolitan statistical areas (SMSA's) as defined on the basis of the 1970 census; those published prior to the March 1973 CPS referred to SMSA's defined on the basis of the 1960 census. There are significant differences in the population classified as metropolitan from each of these definitions. For the 1970 definition of SMSA's, see *1970 Census of Population*, Vol. 1, *Characteristics of the Population*, Part A, "Number of Inhabitants."

The number of poor persons in 1969 residing in metropolitan areas based on the 1970 definitions and procedures is about 760,000 higher than that based on the 1960 definitions and procedures. This difference arises partly because of the addition of new SMSA's and the expansion of existing ones, resulting in an increase in the size of the total metropolitan population.

Collection of Income and Work Experience Data

This report presents data for persons and family heads with varying amounts of work experience. In the surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. Beginning with the March 1970 survey, in order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together in the March survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions.

Noninterviews, Nonresponses, and Allocations

In the March 1977 CPS, no interview was obtained for approximately 4 percent of the 56,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of head and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or referred. In March 1977, the income data were incomplete for about 17 percent of the persons 14 years old and over. About 23 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Although nonresponse rates for families by poverty status are not available, it is known that families in the lower income intervals tend to have lower nonresponse rates than those in the middle and upper income intervals. This is due in part to the fact that lower income families have less complicated financial arrangements than those in other income groups. For a more detailed discussion of this topic see paper by Mitsuo Ono and Herman P. Miller, "Income Nonresponses in the Current Population Survey" published in *Proceedings of the Social Statistics Section*, American Statistical Association, 1969.

For more detailed information on the characteristics of nonrespondents, see "Characteristics of Income Nonrespondents in the Current Population Survey," by Emmett Spiers, John Coder, and Mitsuo Ono, *American Statistical Association Proceedings of the Social Statistics Section*, 1971.

The history of imputing missing responses to the income questions on the March CPS began in 1962. Prior to this time, income tabulations were based solely on persons for which complete income information was obtained. In the survey years from 1962 to 1965, all of the income items were imputed for persons who did not answer one or more of the income items, even though some items may have been answered.

Beginning with the March 1966 survey, in the event a respondent did not answer one or more of the income questions, the missing income data for this person were imputed for only those income items which were not answered. Each of the earnings items was handled individually, whereas income items other than earnings were handled as a group. Characteristics used in this imputation

were age, family status, race, residence, weeks worked, and major occupation group. The income amount assigned to a nonrespondent was that observed for another person with similar demographic and economic characteristics who did respond and who was selected systematically in the order in which individual records were processed.

Starting with the 1967 CPS, the Bureau of the Census introduced improved income edit and allocation procedures. The main feature of these procedures was a more refined method for imputing missing income data which expanded the use of information already known about that person. Among the major improvements made affecting the income data were the following: (1) An expanded set of social and economic characteristics within which the imputations were made; in addition to age, race, occupation, and weeks worked, the procedures included sex and type of family member as major variables within which the missing income items are imputed; (2) the elimination of inconsistent reporting which resulted in having workers with no earnings and earners with no weeks worked; and (3) the imputation procedure assigned missing earnings entries first and then utilized the earnings information to assign missing sources of income other than earnings. A more detailed description of the computer editing and allocation procedures may be found in a paper, "Computer Method to Process Missing Income and Work Experience Information in the Current Population Survey," by Emmett F. Spiers and Joseph J. Knott, published in the *American Statistical Association, Proceedings of the Social Statistics Section*, 1969. See also "Current Developments on Collecting Income Data in the Current Population Survey," by Mitsuo Ono, published in the *American Statistical Association, Proceedings of the Social Statistics Section*, 1971.

However, because of coding errors in the processing of the 1968 CPS data, in that year alone it was not possible to apply all the aforementioned improvements to the editing and allocation procedures. Since these errors produced an under-estimate of income, they had the effect of over-stating the number of poor.

In addition, it was discovered that the computer procedures for editing certain incorrect income codes caused an upward bias in the income data for some respondents and therefore would tend to produce an underestimate of the number of poor. It is estimated that the net impact of these errors had the effect of overestimating the number of poor families by about 120,000. Due to these errors affecting the income data for 1967, data for that year are not strictly comparable with those shown for 1966 and 1968 to 1974.

Comparison of 1966 poverty data according to original and revised editing and allocation procedures. In order to evaluate the impact of the new procedures, the poverty data from the March 1967 CPS were rerun, thus providing a bridge for the 1966 income year showing the results of both the earlier and the new procedures. Both series of data are shown in table 1 of *Current Population Reports*, Series P-60, No. 98. The general impact of the new allocation procedure

was to shift the income distribution slightly upward, thus decreasing by 416,000 the number of poor families. A more detailed description of the new computer editing and allocation procedures may be found in **Current Population Reports**, Series P-60, No. 59, "Income in 1967 of Families in the United States," pages 17 to 19.

In processing the data collected in the March 1976 Current Population Survey, the Bureau of the Census utilized a new computer processing system designed to take maximum advantage of the Bureau's expanded computer capabilities. The revised system incorporated many improvements in the income edit and allocation procedures. The main feature of these procedures was a more refined method for inputting missing responses to the income and work experience questions on the March CPS questionnaire.

There were two main objectives in the revisions of the imputation procedures for income, work experience, and longest job. The first objective was to expand the detail and number of demographic and economic characteristics used in making imputations. Since nonrespondents are assigned information from respondents with "similar" characteristics, the degree of bias due to nonresponse may be reduced by incorporating more detailed information in the imputation procedures. The second objective was to maintain—wherever possible—observed relationships for respondents among income, work experience, and longest job variables in imputing missing information for nonrespondents. A detailed discussion of these improvements and the subsequent revisions to the 1974 income data (for comparability with 1975 data) can be found in **Current Population Reports**, Series P-60, No. 106. In addition to the major revisions that occurred in March 1967 and March 1976, procedures have been modified from time to time in order to refine the allocation models.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March-April 1969 CPS. Several modifications were introduced in the collection of income data in the March and April CPS supplements. These include (1) extension of the interview period of the six rotation groups for which income questions were asked in March and the use of follow-up forms in these six groups to accommodate household respondents who needed more time to obtain the required income information (it is estimated that some members of approximately 4,400 households, or 9 percent of the total relevant households, made use of these follow-up forms); (2) modification of the design and content of the questionnaire to allow for more detailed questioning of certain income items; thus, boxes for gross receipts, business expense, and net income have been added to the self-employment income questions to help the interviewer and respondent determine net income, and "yes-no" circles were added to the questions on income other than earnings in order to ascertain whether the respondent received or did not receive income; (3) field

office editing procedures were extended to a 100 percent income edit of the CPS schedules; (4) training instructions were strengthened by including more detailed explanations and more examples; and (5) the interview group training session was shifted from February to March.

Modifications in collecting income data in the March 1970 Current Population Survey. The Bureau introduced modifications in the collection of income data for the March 1970 CPS supplement. These were: (1) An advance letter informing households about the collection of income data was mailed to all households except those in the first and fifth months. The latter households received special letters which explained the need for collecting both CPS and census data; (2) information on work experience and income was collected simultaneously for the full sample (in previous years, work experience information was collected separately from income data); (3) the interview period was extended one week for three-fourths of the sample (using follow-up calls and separate questionnaires). In addition, modified procedures which were incorporated in the March 1969 CPS supplement were also implemented in the March 1970 CPS. Overall, data indicate that the use of these procedures has resulted in some improvement in the collection of income data. The family income nonresponse rate has not only dropped by 5 percentage points (from 19 to 14 percent) but also it appears that the proportion of aggregate income amounts collected increased slightly in the March 1970 CPS supplement as compared with the proportion collected in the March 1969 CPS supplement.

Modifications in collecting income data in the March 1971 Current Population Survey. The Bureau continued to use the improved procedures which were incorporated in the March 1970 CPS. Procedural changes that were instituted in the March 1971 CPS, among others, were:

1. The interview period was extended one week for all households in the sample (using follow-up calls and separate questionnaires). In the previous year's survey, the interview period was extended for only three-fourths of the sample.

2. Income from net royalties was included in the question covering estates, trusts, or dividends, interest on savings accounts or bonds, and net rental income. In previous surveys, income from net royalties was included in the question covering private pensions, annuities, alimony, regular contributions from persons not living in this household, and anything else.

3. An additional regional office follow-up was made by telephone to obtain income amounts for all follow-up cases containing one or more persons who were not interviewed during the original follow-up period, except for refusal.

Modifications in collecting income data in the March 1975 Current Population Survey. Several modifications in the design and content of the questionnaire were introduced in

the March 1975 CPS to allow for more detailed questioning of certain income items. These changes were:

1. In the March 1974 CPS, income from aid to families with dependent children, old age assistance, and aid to the blind or totally disabled were asked in one combined question on welfare payments. Beginning in January 1974, the programs for old age assistance and aid to the blind or totally disabled were replaced by the Supplemental Security program. Therefore, in the March 1975 CPS a separate question was asked for the receipt of Supplemental Security income. Income from aid to families with dependent children or any other assistance was asked under the general category of public assistance or welfare payments.

2. In the March 1974 CPS, income from interest, net rental income or income from estates, trusts, or dividends was asked in one question. In the 1975 CPS these income types were asked as two questions with income received from interest on savings accounts or bonds included in one question and income from estates, trusts, or dividends in the other.

3. In the March 1974 CPS, income received from private pensions was asked along with alimony and certain other income items while income from government employee pensions was asked along with veterans' payments, unemployment compensation and workmen's compensation. In the March 1975 CPS, income received from both private and government employee pensions (including military retirement) were extracted from their previous categories and asked as one combined question.

Modifications in collecting income data in the March 1977 Current Population Survey. In the March 1977 CPS there were two modifications in the wording of the questionnaire. These two changes were:

1. In the March 1976 CPS, the respondent was asked if he or she received any income from "interest on saving accounts, bonds, etc." In the March 1977 CPS, the wording was changed to "interest on savings or bonds, etc. Include even small amounts credited to . . . 's account."

2. In the March 1976 CPS, income from "anything else" was asked along with alimony or child support and other regular contributions from persons not living in the household. In the March 1977 CPS, the wording "anything else" was changed to "any other money income."

OTHER LIMITATIONS OF THE DATA

Although every effort is made to reduce the errors of underreporting, nonreporting or misreporting of income data in the Current Population Survey, they still occur because of various reasons. Some of these are (1) overlooking income received, especially small amounts of income types not regularly received, e.g., contributions from nonhousehold members, (2) reluctance to reveal certain types of income, e.g., public assistance, (3) rounding estimates, (4) misunderstanding the question, (5) lack of information, especially covering family members not present at the time of

interview, (6) interviewers' errors, (7) processing errors, etc. For more details on this topic of income underreporting in censuses and surveys, see (1) **Income Distribution in the United States** (a 1960 Census Monograph), by Herman P. Miller, Bureau of the Census, 1966, (2) **The Structure of Income**, by Irving B. Kravis, University of Pennsylvania, 1962; and (3) "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

SOURCE AND RELIABILITY OF THE ESTIMATES

Source of Data

The estimates in this report are based on data from the Current Population Survey and the 1960 Decennial Census 1-in-1,000 sample from the Bureau of the Census.

Current Population Survey (CPS). Most of the CPS estimates in this report are based on data obtained in March 1977. Some estimates are based on data obtained in earlier years. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked every month about each member 14 years old and older in each sample household. In addition, supplementary questions are asked each March about money income for the previous year. In order to obtain more reliable data for the Spanish origin population, the March 1977 CPS sample was enlarged to include all households from the November 1976 sample which contained at least one person of Spanish origin. This resulted in almost doubling the number of sample persons of Spanish origin. In addition, this report includes persons in the Armed Forces living off post or with their families on post.

The present CPS sample was initially selected from the 1970 census files and is updated continuously to reflect new construction where possible (see section "Nonsampling Variability" below). The monthly CPS sample is spread over 461 areas with coverage in each of the 50 States and the District of Columbia. A supplementary sample of housing units in 24 States and the District of Columbia was incorporated with the monthly CPS sample to produce the March 1977 income data. The expanded CPS sample is located in 614 areas comprising 1,113 counties, independent cities, and divisions in the nation. The 614 sample areas used in March include 461 areas from the monthly CPS and 153 supplementary areas.

Samples for previous sample designs were selected from files from the most recently completed census. The following table provides a description of some aspects of the CPS sample designs in use during the referenced data collection periods.

Description of the Current Population Survey

Time period	Number of sample areas ¹	Households eligible		Housing units visited, not eligible ²
		Interviewed	Not interviewed	
Supplemental sample.....	153	8,500	500	1,500
Aug. 1972 to present.....	461	45,000	2,000	8,000
Aug. 1971 to July 1972.....	449	45,000	2,000	8,000
Jan. 1967 to July 1971.....	449	48,000	2,000	8,500
Mar. 1963 to Dec. 1966.....	357	33,500	1,500	6,000
Jan. 1960 to Feb. 1963.....	333	33,500	1,500	6,000

¹ These areas were chosen to provide coverage in each State and the District of Columbia.

² These are housing units which were visited, but were found to be vacant or otherwise not eligible for interview.

Note: Prior to 1966 income data were collected from approximately 75 percent of occupied households in CPS.

The estimation procedure used for the monthly CPS data involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from decennial censuses; statistics on births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces. The estimation procedure for the data in the report also involved a further adjustment so that husband and wife of a household received the same weight.

Decennial Census of Population. The 1960 1-in-1,000 sample is a stratified systematic sample of .001 of the households enumerated in the 1960 census.

Reliability of the Estimates

Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey—sampling and nonsampling. The standard errors provided for this report primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability. As in any survey work, the results are subject to errors of response and nonreporting in addition to sampling variability. Nonsampling errors can be

attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units within the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage, as compared to the level of the decennial census, is about 5 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races than for Whites.

Ratio estimation to independent age-sex-race population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the 1970 census, which was estimated at 2.5 percent of the population with similar undercoverage differentials by age, sex, and race as are observed in CPS.

The approximate magnitude of two sources of undercoverage of housing units is known. Of the 83,000,000 housing units in the U.S. about 600,000 new construction housing units other than mobile homes are not represented in the CPS sample because they were assigned building permits prior to January 1970, but building was not completed by the time of the census, (i.e., April 1970). Conventional new

construction for which building permits were issued after 1969, is represented. About 290,000 occupied mobile homes are not represented in CPS; these units were either missed in the census or have been built or occupied since the census. These estimates of missed units are relevant to the present sample only and not to earlier designs where the extent of undercoverage was generally less. The extent of other sources of undercoverage of housing units is unknown but believed to be small.

In most cases the schedule entries for income are based on the memory or knowledge of one person, usually not the major earner. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept. Some of those errors are discussed in greater detail in the text of the report. See also the section entitled "Other Limitations of the Data."

Comparability with other data. Caution should be used in comparing income estimates based on 1976 data when the supplemental sample was used, to those from 1975 and earlier years. Some relatively large differences in estimates of population in metropolitan and nonmetropolitan areas have been observed between the 461 and 614 area samples. These differences reflect a relatively large increase in variance on these estimates and do not represent actual changes in the population.

Sampling variability. The standard errors given in the following tables are primarily measures of sampling variability, that is, of the variations that occurred by chance because a sample rather than the whole of the population was surveyed. The chances are about 68 out of 100 that an estimate from the survey differs from a complete census figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error and about 95 out of 100 that the difference would be less than twice the standard error.

All the statements of comparison appearing in the text are significant at 1.6 standard error level or better, and most are significant at a level of more than 2.0 standard errors. This means that for most differences cited in the text, the estimated difference is greater than twice the standard error of the difference. Statements of comparison qualified in some way (e.g., by use of the phrase, "some evidence") have a level of significance between 1.6 and 2.0 standard errors.

Note when using small estimates. Summary measures (such as means, medians, poverty rates, and percent distributions) are shown in the report only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than

those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

Data based on the CPS sample. The figures presented in tables A-4 through A-10 are approximations to the standard errors of various CPS estimates shown in this report for the years 1966 through 1976. Tables A-4 and A-5 contain the standard errors of estimates of the number of total persons and persons 65 years old and over by poverty status and the number of families and unrelated individuals regardless of poverty status for "Total or White" and "Black and Other Races," respectively. The last column of tables A-4 and A-5 pertaining to families should also be used for items which can typically appear only once in a given family, e.g., "number of heads of families."

Table A-6 contains the standard errors of the estimated number of persons below the poverty level in the 10 federal regions in the United States.

Tables A-7 through A-10 contain standard errors of estimated percentages of persons below the poverty level for the United States and the 10 federal regions and of families and unrelated individuals regardless of poverty status for the United States.

Table A-11 presents the factors (f_1) to be used for other characteristics and table A-12 presents the factors (f_2) to be used for the years 1959 to 1965. These factors must be applied to the generalized standard errors in tables A-4 through A-10 in order to adjust for the combined effect of sample design and the estimating procedure on the value of the characteristic. For example to produce approximate standard errors for families below the poverty level in 1959 with seven or more members, use the factor 1.1 for family size from table A-11 and the factor 1.4 for 1959 from table A-12. Thus from table A-4, the generalized standard error on 1,257,000 families is 35,000; applying the two factors, 1.1 and 1.4, the standard error for families below the poverty level in 1959 with seven or more members is $1.1 \times 1.4 \times 35,000 = 54,000$.

Standard errors of estimated numbers of persons and families below the poverty level are shown in tables 10, 16, 40, and 46 of this report.

To calculate standard errors for persons and families in poverty it was necessary to use two parameters (denoted as "a" and "b") which are presented in tables A-13 through A-16. These parameters were used to calculate the tabulated

standard errors in tables A-4 through A-10 and to calculate the factors in table A-11. They also may be used to calculate standard errors for estimated numbers and estimated percentages. Direct computation of the standard errors will give more accurate results than the use of the standard error tables. Methods for direct computation are given in the following sections.

Data based on 1960 census 1-in-1,000 sample. Standard errors for data based on the 1960 census 1-in-1,000 sample

are estimated by applying the factor given in table A-12 to the standard errors shown in tables A-4 through A-10. Apply factors in table A-11 to obtain standard errors for other characteristics.

Standard errors of estimated numbers. The approximate standard error, σ_x , of an estimated number shown in this report can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f_1 f_2 \sigma \quad (1)$$

Table A-4. Standard Errors of Estimated Numbers: 1966 through 1976

Note: See table A-11 for factors to be applied to the standard errors for other characteristics and table A-12 for factors for the years 1959 through 1965.

where f_1 is the appropriate factor from table A-11, f_2 is the appropriate factor from table A-12, and σ is the standard error for a characteristic obtained by interpolation from table A-4, -5 or -6. Alternatively, the standard errors may be approximated by the following formula, (2), from which the standard errors were calculated in tables A-4, -5, and -6. Use of this formula will provide more accurate results than the use of formula (1) above.

$$\sigma_x = f_2 \sqrt{ax^2 + bx} \quad (2)$$

Here x is the size of the estimate and a and b are the parameters in tables A-13 to A-16 associated with the particular type of characteristic.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter indicated by the numerator. The approximate standard error $\sigma_{(x,p)}$ of an estimated percentage can be obtained by use of the formula

$$\sigma_{(x,p)} = f_1 f_2 \sigma \quad (3)$$

In this formula f_1 is the appropriate factor from table A-11, f_2 the appropriate factor from table A-12, and σ is the standard error for a characteristic in tables A-7 through A-10. Alternatively, the standard errors may be approximated by the following formula, (4), from which the standard errors in tables A-7 through A-10 were calculated; direct computation will give more accurate results than use of the standard error tables and the factors.

$$\sigma_{(x,p)} = f_2 \sqrt{\frac{b}{x} \cdot p (100 - p)} \quad (4)$$

Here x is the size of the subclass of the persons or families and unrelated individuals which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter in tables A-13 to A-16 associated with the particular type of characteristic in the numerator of the percentage.

Illustration of the use of standard error tables. Table B of this report shows that in 1976 there were 24,975,000 persons below the poverty level. Table A-4 shows the standard error of an estimate of this size to be approximately 367,000. In this situation no factors have to be applied to the standard error, i.e., both f_1 and f_2 are equal to 1.0. Alternatively, using the parameters in table A-13 in formula (2) gives a standard error of

$$368,000 = \sqrt{(-0.000029) (24,975,000)^2 + (6134) (24,975,000)}$$

The chances are 68 out of 100 that the estimate would have been a figure differing from a complete census figure by less than 368,000. The chances are 95 out of 100 that the estimate would have differed from a complete census figure by less than 736,000 (twice the standard error).

Of these 24,975,000 persons below the poverty level, 7,595,000 or 30.4 percent were Black. Table A-7 shows the standard error of 30.4 percent on a base of 24,975,000 to be approximately 0.7 percent.

Alternatively, this standard error could have been derived by using the "b" parameter for Blacks from table A-13 in formula (4).

$$0.7 = \sqrt{\frac{5539}{24,975,000}} (30.4) (69.6)$$

Consequently, chances are 68 out of 100 that the estimated 30.4 percent would be within 0.7 percentage points of a complete census figure, and 95 out of 100 that the estimate would be within 1.4 percentage points of a complete census figure, i.e., this 95 percent confidence interval would be from 29.0 to 31.8 percent.

Standard error of a difference. The formula for approximate standard errors of the difference between two estimates is given by (5).

$$\sigma_{\Delta} = \sqrt{\sigma_1^2 + \sigma_2^2 - 2\rho \sigma_1 \sigma_2} \quad (5)$$

The estimates can be of numbers, percents, ratios, etc. σ_1 and σ_2 are the standard errors presented in tables A-4 through A-10. The correlation coefficient ρ can be determined from table A-17 for year-to-year comparisons for poverty estimates and proportions; for other comparisons assume that ρ equals zero. Making this assumption will result in accurate estimates of standard errors for the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overstate the true standard error.

Table A-6. Standard Errors of Estimated Numbers of Persons Below the Poverty Level in the
10 Federal Regions

(68 chances out of 100. Numbers in thousands. For meaning of symbols, see text)

50,000.....	4,200	5,000

Note: To estimate standard errors for persons in the 10 federal regions at all income levels divide these standard errors by 2.0.

Table A-7. Standard Errors of Estimated Percentages of Persons Below the Poverty Level:
1966 through 1976

(68 chances out of 100)

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75.....	4.0	6.2	8.6	12.4	14.3
100.....	3.5	5.4	7.4	10.7	12.4
250.....	2.2	3.4	4.7	6.8	7.8
500.....	1.6	2.4	3.3	4.8	5.5
1,000.....	1.1	1.7	2.3	3.4	3.9
2,500.....	0.7	1.1	1.5	2.1	2.5
5,000.....	0.5	0.8	1.1	1.5	1.8
10,000.....	0.3	0.5	0.7	1.1	1.2
25,000.....	0.2	0.3	0.5	0.7	0.8
50,000.....	0.2	0.2	0.3	0.5	0.6
100,000.....	0.11	0.2	0.2	0.3	0.4

Note: To estimate standard errors for persons at all income levels, divide these standard errors by 2.0. See table A-11 for factors to be applied to the standard errors for other characteristics and table A-12 for factors for the years 1959 through 1965.

Illustration of the computation of the standard error of a difference in estimates. Table A shows that the number of persons below the poverty level in 1976 was 24,975,000 and in 1975 the figure was 25,877,000. The apparent difference is 902,000. As shown above, the standard error on the 24,975,000 persons below the poverty level is 368,000. The standard error on the 25,877,000 low-income persons computed from (2) is 373,000. The correlation coefficient, ρ is equal to 0.4. The standard error of the estimated difference of 902,000 is about

$$406,000 = \sqrt{(368,000)^2 + (373,000)^2 - 2(0.4)(368,000)(373,000)}$$

This means the chances are 68 out of 100 that the estimated difference based on the samples would differ from the difference derived using complete census figures by less than 406,000. The 68 percent confidence interval around the 902,000 difference is from 496,000 to 1,308,000, i.e., $902,000 \pm 406,000$. A conclusion that the average estimate of the difference derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. The 95 percent confidence interval is 90,000 to 1,714,000. We can conclude with 95 percent confidence that the number of persons below the poverty level in 1975 is actually larger than the number of persons below the poverty level in 1976, i.e., the confidence interval does not include zero.

Table A-8. Standard Errors of Estimated Percentages for Families and Unrelated Individuals: 1966 through 1976

(68 chances out of 100)

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50

25,000.....	0.09	0.14	0.2	0.3	0.3
50,000.....	0.06	0.10	0.14	0.2	0.2

Note: See table A-11 for factors to be applied to the standard errors for other characteristics and table A-12 for the years 1959 through 1965.

Table A-9. Standard Errors of Estimated Percentages of Persons Below the Poverty Level in Federal Regions I to VII, and IX

(68 chances out of 100)

Base of estimated percentage (thousands)	Estimated percentage					
	1 or 99	2 or 98	5 or 95	10 or 90	25 or 75	50
75.....	6.3	8.8	13.7	18.8	27.2	31.4
100.....	5.4	7.6	11.9	16.3	23.6	27.2
250.....	3.4	4.8	7.5	10.3	14.9	17.2
500.....	2.4	3.4	5.3	7.3	10.5	12.2
1,000.....	1.7	2.4	3.8	5.2	7.5	8.6
2,500.....	1.1	1.5	2.4	3.3	4.7	5.4
5,000.....	0.8	1.1	1.7	2.3	3.3	3.8
10,000.....	0.5	0.8	1.2	1.6	2.4	2.7
25,000.....	0.3	0.5	0.8	1.0	1.5	1.7
50,000.....	0.2	0.3	0.5	0.7	1.1	1.2

Note: For Regions I and II, multiply standard errors by 0.70; for Regions III, IV, and IX, multiply standard errors by 0.85; for Region V, multiply standard errors by 0.80; for Region VI, multiply standard errors by 0.95 and for Region VII, multiply standard errors by 1.00.

Ratios. A ratio of two numbers can be expressed as a mean for the purposes of computing an approximate standard error. In the case where the numerator of the ratio is income, formula (6) for the standard error of the arithmetic mean should be used. In cases where the ratio has persons in the numerator and families in the denominator, formula (7) with the appropriate ρ will give a preferable result to that of formula (6).

Computation of the standard error of an arithmetic mean.

To get a rough estimate of the standard error of a mean, the following formula can be used:

$$\sigma_{\bar{x}} = \sqrt{\frac{b}{y} \left[\frac{c}{\sum_{i=1}^c p_i x_i^2} - \bar{x}^2 \right]} \quad (6)$$

In this formula, y is the size of the base, p_i are the percentages of total cases in the i classes, x_i are the midpoints of the i classes (or discrete values of the i classes).²

The mean value, \bar{x} , is defined by $\frac{c}{\sum_{i=1}^c p_i x_i}$. The b parameter is

the parameter from tables A-13 to A-16 corresponding to the characteristic of interest.

Standard error of a ratio. Certain mean values, for persons in families, listed in the tables of this report were not calculated using the formula for \bar{x} given above. Rather, they were calculated as the ratio of two numbers. For example, the mean number of children per family with children is calculated as

$$\frac{x}{y} = \frac{\text{total number of children in families}}{\text{total number of families with children}}$$

Standard errors for these means may be approximated as shown below from the standard error tables or by using formula (2) and the parameters from tables A-13 and A-14. There are two cases to consider. In either case, the denominator y represents a count of families of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families.

Case 1: There is at least one person having the characteristic in every family of the class; as for example, the mean number of children per family with children. For ratios of this kind, the standard error is approximated by the following formula:

$$\sigma_{\frac{x}{y}} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{\sigma_y}{y}\right)^2 + \left(\frac{\sigma_x}{x}\right)^2 - 2\rho \left(\frac{\sigma_x}{x}\right) \left(\frac{\sigma_y}{y}\right) \right]} \quad (7)$$

² For income tables, use -\$5,000 as the midpoint for "Loss" and \$8,500 as the midpoint for "\$8,000 or more." For the income deficit table use \$6,000 as the midpoint of the "\$5,000 or more" interval and \$2,250 as the midpoint of the "\$1,500 or more" interval.

The standard error of the estimated number of families, σ_y , and the standard error of the estimated number of persons with the characteristic, σ_x , may be obtained from table A-4 or A-5. Alternatively, formula (2) and tables A-13 and A-14 may be used. In formula (7), ρ represents the correlation coefficient between the numerator and the denominator of the estimate. In the above example, and for other ratios of this kind, use 0.7 as an estimate of ρ . This procedure can also be used to compute the standard error on the estimate of mean family size where

$$\frac{x}{y} = \frac{\text{total number of persons in families}}{\text{total number of families}}$$

and ρ is again estimated to be approximately 0.7.

Case 2: The number of persons having the characteristic in a given family may be 0, 1, 2, 3, or more; for example, the mean number of children per family. For ratios of this kind the standard error is approximated by formula (7) but ρ is assumed to be zero. If ρ is actually positive, then this procedure will provide an overestimate of the standard error of the ratio.

Standard error of a median The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for measuring the reliability of a median is to determine an interval about the estimated median, such that there is a stated degree of confidence that the median based on a complete census lies within the interval. The following procedure may be used to estimate the 68 percent confidence limits of a median based on sample data:

1. Determine, using the standard error tables or formula (4), the standard error of a 50 percent characteristic, using the appropriate base.
2. Add to and subtract from 50 percent the standard error determined in step (1).
3. Using the distribution of the characteristic, read off the confidence interval corresponding to the two points established in step (2).

A 95 percent confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step (1).

Illustration of the computation of a confidence interval for a median. Using estimates from table 39 it can be shown that the median income deficit for poor female-headed families was \$1,715 in 1976. The size, or base, of the distribution from which this median was determined is 2,543,000.

1. Table A-8 shows that the standard error of an estimate of 50 percent on a base of 2,543,000 is about 1.0 percent.

Table A-10. Standard Errors of Estimated Percentages of Persons Below the Poverty Level in Federal Regions VIII and X

(68 chances out of 100)

Base of estimated percentage (thousands)	Estimated percentage					
	1 or 99	2 or 98	5 or 95	10 or 90	25 or 75	50
75.....	9.2	13.0	20.2	27.8	40.2	46.4
100.....	8.0	11.2	17.5	24.1	34.8	40.2
250.....	5.1	7.1	11.1	15.2	22.0	25.4
500.....	3.6	5.0	7.8	10.8	15.6	18.0
1,000.....	2.5	3.6	5.5	7.6	11.0	12.7
2,500.....	1.6	2.2	3.5	4.8	7.0	8.0
5,000.....	1.1	1.6	2.5	3.4	4.9	5.7
10,000.....	0.8	1.1	1.8	2.4	3.5	4.0
25,000.....	0.5	0.7	1.1	1.5	2.2	2.5
50,000.....	0.4	0.5	0.8	1.1	1.6	1.8

Note: For Region VIII, multiply standard errors by 1.00; for Region X, multiply standard errors by 0.80.

Table A-11. Factors to be Applied to Generalized Standard Errors in Tables A-4, A-5, A-7, and A-8 for Family Characteristics and for Persons and Families by Region

Educational attainment of head.....	-0.000011	1431	-0.000123	1859	-0.000020	1422

Note: These parameters can be used to estimate standard errors for families at all income levels. See table A-12 for factors to be applied to standard errors for the years 1959 through 1965.

Table A-15. Parameters for Estimated Numbers and Percentages of Persons Below the Poverty Level in the 10 Federal Regions

Parameter	Region I (Boston)	Region II (New York)	Region III (Philadelphia)	Region IV (Atlanta)	Region V (Chicago)
a.....	0.034561	0.014617	0.017573	0.006710	0.009527
b.....	14,169	15,586	22,296	21,323	18,109
Parameter	Region VI (Dallas-Ft. Worth)	Region VII (Kansas City)	Region VIII (Denver)	Region IX (San Francisco)	Region X (Seattle)
a.....	0.014312	0.044507	0.192584	0.019675	0.131217
b.....	27,625	29,608	64,494	21,408	41,684

Note: To estimate standard errors for persons at all income levels in the 10 Federal Regions divide the parameter by 4 and use the appropriate formulas given in the text.

Table A-16. Parameters for Estimated Numbers and Percentages of Persons and Families Below the Poverty Level by Region and Farm-Nonfarm Residence: 1966 through 1976

Region	Persons		Families and unrelated individuals	
	a	b	a	b
North and West.....	0.001456	7,694	0.000252	1,334
Northeast.....	0.003222	7,048	0.000559	1,222
North Central.....	0.002657	8,701	0.000461	1,508
West.....	0.004471	7,227	0.000775	1,253
South.....	0.002189	8,677	0.003794	1,504
Farm.....	0.000824	11,716	0.000143	2,031
Nonfarm.....	-0.000029	6,134	-0.000008	1,063

Note: To estimate standard errors for persons at all income levels divide the parameters by 4 and use the appropriate formula given in the text. For families and unrelated individuals at all income levels, use the same parameters that are shown in the table for families and unrelated individuals below the poverty level. See table A-9 for factors to be applied to standard errors for the years 1959 through 1965.

Table A-17. Year-to-Year Correlation Coefficients for Poverty Estimates

(Numbers and proportions)

Characteristic	1975-1976 ¹		1971-1972		1970-1971	
	Persons	Families	Persons	Families	Persons	Families
Total.....	0.40	0.35	0.15	0.14	0.31	0.28
White.....	0.35	0.30	0.14	0.13	0.28	0.25
Black.....	0.45	0.40	0.17	0.16	0.35	0.32
Other races.....	0.45	0.40	0.17	0.16	0.35	0.32
Spanish origin.....	0.45	0.40	0.17	0.16	0.35	0.32

¹ These correlation coefficients are also applicable to 1974-1975, 1973-1974, 1972-1973, 1969-1970 and earlier years.

2. To obtain a two standard error confidence interval on the estimated median, initially add to and subtract from 50 percent twice the standard error found in step (1). This yields percentage limits of 48.0 and 52.0.
3. Since 45.2 percent of these families had income deficits below \$1,500 and 11.0 percent had income deficits between \$1,500 and \$1,999 the dollar value of the lower limit may be found by linear interpolation to be:

$$\$1,500 + \$500 \left[\frac{48.0 - 45.2}{11.0} \right] = \$1,627$$

Similarly, the upper limit may be found by linear interpolation to be about:

$$\$1,500 + \$500 \left[\frac{52.0 - 45.2}{11.0} \right] = \$1,809$$

Thus, an approximate 95 percent confidence interval is from \$1,627 to \$1,809.

Appendix B

OEO TABULATION SPECIFICATIONS

The data in tables 10, 13, 14, 29, and 36 of this report were extracted from a series of tabulations prepared for and previously distributed by the Office of Economic Opportunity (OEO). These tabulations contain more detailed cross-classifications by age and other characteristics than are shown in the tables presented in this report. Financial support for the preparation of the OEO tabulations was provided by the Office of the Assistant Secretary for Planning and Evaluation, Department of Health, Education, and Welfare. Requests for further information about these tabulations as well as limited requests for copies should be made in writing to Chief, Population Division, Bureau of the Census, Washington, D.C. 20233. Outlines of the contents of the complete OEO tabulations are shown on the following pages.

OEO Table 1. AGE OF PERSON AND FAMILY RELATIONSHIP BY AGE AND SEX OF HEAD

Age of person and relationship to head	Total	In families								Unrelated individuals
		Total	Age of head (years)						65 and over	
			14 to 21	22 to 34	35 to 44	45 to 54	55 to 59	60 to 64

OEO Table 2. EDUCATIONAL ATTAINMENT OF PERSONS BY AGE AND FAMILY RELATIONSHIP

Years of school completed and family relationship	Total	Age (years)								
		14 and 15	16 and 17	18 to 21	22 to 34	35 to 44	45 to 54	55 to 59	60 to 64	65 and over

Both Sexes

Total.....
 No years of school completed.....
 Elementary: 1 to 5 years.....
 6 to 7 years.....
 8 years.....
 High school: 1 to 3 years.....
 4 years.....
 College (1 year or more).....
 Median years of school completed.....
 Percent not a high school graduate.....

Same as "Total" block for:
 Family heads
 Wives
 Other family members
 Unrelated individuals

Same as "Both Sexes" for:
 Male
 Female

All of the above for:
 Below Poverty Level
 Percent Below Poverty Level
 Between 100 and 125 Percent of the Poverty Level

All of the above for:
 White
 Black

OEO Table 3. WORK EXPERIENCE OF PERSONS BY AGE AND FAMILY RELATIONSHIP

Work experience and family relationship	Total	Age (years)							
		14 and 15	16 to 21	22 to 34	35 to 44	45 to 54	55 to 59	60 to 64	65 and over

Both Sexes

Total.....	Same as "Total" block for: Family heads Wives Other family members Unrelated individuals
Worked full time.....	Same as "Both Sexes" for: Male Female
50 to 52 weeks.....	All of the above for: Same Poverty Level and Race repeats as OEO Table 2
40 to 49 weeks.....	
27 to 39 weeks.....	
26 weeks or less.....	
Worked part time.....	
50 to 52 weeks.....	
40 to 49 weeks.....	
27 to 39 weeks.....	
26 weeks or less.....	
Worked less than 50 weeks--	
Main reason for working part year:	
Ill or disabled.....	
Keeping house.....	
Unable to find work.....	
Other.....	
Worked less than 50 weeks--Number of weeks unemployed:	
1 to 4 weeks.....	
5 to 14 weeks.....	
15 to 26 weeks.....	
27 weeks or more.....	
Did not work last year.....	
Main reason for not working:	
Ill or disabled.....	
Keeping house.....	
Going to school.....	
Unable to find work.....	
Retired.....	
Other.....	
In Armed Forces.....	

OEO Table 4. OCCUPATION OF LONGEST JOB OF PERSONS BY AGE

Occupation of longest job	Total	Age (years)							
		14 and 15	16 to 21	22 to 34	35 to 44	45 to 54	55 to 59	60 to 64	65 and over

Both Sexes

Worked last year, total.....	Same as "Total" block for: Family heads Wives Other family members Unrelated individuals
Wage and salary workers, incl. gov't.....	Same as "Both Sexes" for: Male Female
Professional and managerial.....	All of the above for: Same Poverty Level and Race repeats as OEO Table 2
Clerical and sales.....	
Crafts and kindred workers.....	
Operatives, including transport.....	
Laborers, except farm.....	
Farmers and farm managers.....	
Farm laborers and supervisors.....	
Private household workers.....	
Service workers, exc. private household.....	
Self-employed, farm.....	
Self-employed, other.....	
Unpaid family workers.....	

OEO Table 5. INDUSTRY OF LONGEST JOB OF PERSONS BY FAMILY RELATIONSHIP

Industry of longest job and family relationship	Total	Age (years)						
		14 and 15	16 to 21	22 to 34	35 to 44	45 to 54	55 to 64	65 and over

Both Sexes

Worked last year, total.....
 Wage and salary workers, incl. gov't.....
