ESTIMATES OF THE POPULATION OF VOTING AGE, BY STATES: 1948

(This report presents estimates of the total and civilian population 21 years old and over and under 21 years old, by States, for July 1, 1948)

By November 2, 1948, the date of the forthcoming presidential election, the population old enough to vote will reach a total of approximately 95 million, according to provisional estimates announced today by J. C. Capt, Director, Bureau of the Census, Department of Commerce. This total includes the civilian population 21 years old and over for all States except Georgia, the civilian population 18 years old and over for Georgia, and all persons at least 21 years old in the armed forces, whether in this country or abroad. Georgia is the only State in which persons as young as 18 years are permitted by law to vote.

The population of voting age includes a great many persons who, although old enough to vote, may not do so because they have not satisfied State requirements as to citizenship, residence, registration, or payment of poll taxes. The alien population of the United States 21 years old and over, including foreign-born persons for whom citizenship was not reported, numbered 4,133,178 in 1940. However, by November 2, 1948, it is expected that there will be only in the neighborhood of 2,000,000 aliens of voting age in the United States. Among the citizens of voting age there are also many persons not qualified to vote because they are confined in penal institutions or are inmates of mental hospitals and kindred institutions. There are still others who may not vote because they reside elsewhere than in the State in which they have voting privileges. This group includes some members of the armed forces away from their place of voting residence, either in this country or abroad. In all these cases, eligibility to vote is determined by State laws which vary in many respects.

Furthermore, there is an unascertainable number of persons in the District of Columbia who lack voting residence in any State.

In the presidential election of 1944, the total vote cast was 47,976,263, of which it is estimated that 45,285,103 represented votes cast by civilians. The civilian vote for president amounted to about 56.4 percent of the civilian population of voting age on July 1, 1944. In 1940, the vote cast for president was 49,820,312. Very little of this can be attributed to persons then in the armed forces, the strength of which was only a fraction of what it is today. Neglecting the relatively small armed forces vote, there were in 1940 about 59.5 votes cast per 100 civilians of voting age. In forecasting the vote to be cast next month, account should be taken of this large increase in the civilian population of voting age since 1944 and 1940.

Table 1.—CIVILIAN POPULATION OF VOTING AGE, 1940, 1944, AND 1948, AND VOTE CAST FOR PRESIDENTIAL ELECTORS, 1940 AND 1944

Date	Estimated civilian population of voting age ¹	Vote cast for presidential electors	
		Number	Percent of civilian population of voting age
July 1, 1948....	93,704,000	-	-
July 1, 1944....	80,298,000	² 45,285,103	56.4
April 1, 1940...	83,789,000	49,820,312	59.5

¹ Population 21 years old and over plus population 18 to 20 years in Georgia for 1944 and 1948 only.

² Vote cast by civilians. The total vote was 47,976,263. See U. S. Bureau of the Census, Elections: 1944, Nos. 3 and 5.

STATE FIGURES: JULY 1, 1948

Estimates of the population of voting age, by States, require for their preparation, among other figures, independent estimates of net interstate migration. Since data by which to prepare estimates of recent net interstate migration will not be available for all States until the fall of 1949, provisional estimates based on past trends have been prepared. These will be revised when all the necessary figures are at hand. Since even the revised estimates of net migration are subject to error, it should be emphasized that the State figures for 1948 and 1944 in this release may be very rough.

According to provisional estimates, the civilian population 21 years old and over was greater in 1948 than in 1940 in all but six States. In two of these States, North Dakota and Montana, the losses amounted to slightly more than 10 percent. In one other State, Mississippi, the loss was about 3.5 percent. In the remaining three States, Kentucky, Arkansas, and South Dakota, the indicated loss was less than one percent. Among the States with indicated increases in the population at least 21 years of age, 4 States (Oregon, Washington, California, and Arizona) had gains of between 30 and 50 percent, 3 States (Florida, Nevada, and Utah) and the District of Columbia had gains of between 20 and 30 percent, and the remaining 35 States had gains of less than 20 percent. The States with the most impressive increases were all among those that are estimated to have gained heavily through internal migration since 1940. (See Current Population Reports, Series P-25, No. 12.)

Estimates of the civilian population of voting age, by States, for July 1, 1944, the year of the last presidential election, in each instance were lower than the corresponding figures for July 1, 1948. In only three cases, Georgia, Mississippi, and the District of Columbia, were the increases between 1944 and 1948 less than 10 percent. In the other States, the increases ranged from 10.3 percent for Idaho to 29.4 percent for Oregon. The increases during this 4-year period were primarily the result of demobilization permitting millions of men of voting age to return to the civilian population. However, internal migration and the aging of the population were also factors of importance for many States.

The vote cast for president by civilians in 1944, by States, varied considerably in relation to State civilian population of voting age. In

half the States the vote was more than 62.2 percent of the civilian population of voting age. In general, the Southern States had the smallest vote cast in proportion to the population old enough to vote, whereas the North Central States averaged the largest vote per person of voting age. It is noteworthy that the States benefiting most from internal migration were usually not the States with the larger ratios of votes cast per person of voting age. This situation undoubtedly reflects a lapse of time between the date of migration and the date when the migrant is interested in voting in his new State or is permitted to vote by State laws.

METHOD OF ESTIMATION

Estimates for the United States as a whole presented in this release are based on data from the 1940 census; statistics of births and deaths provided by the National Office of Vital Statistics, United States Public Health Service; statistics of foreign immigration and emigration reported by the Immigration and Naturalization Service, Department of Justice; and statistics on strength, distribution, and separations from the armed forces provided by the Department of National Defense.

The estimates of total and civilian State population for July 1, 1948, given in tables 2 and 3 are taken from Current Population Reports, Series P-25, No. 14, and were prepared by the method described in that report. The estimates of State civilian population 21 years old and over, for July 1, 1944 and 1948, are based on statistics for those cohorts in 1940, adjusted for deaths, net loss to the armed forces, and net civilian migration between April 1, 1940, and the estimate date. An estimate of persons 21 years old and over in the armed forces stationed in each State was added to the estimate of civilian population 21 years old and over to obtain the estimate for the total population 21 years old and over in the State.

The estimates of deaths in the cohort 21 years old and over, on July 1, 1948, made use of statistics of actual deaths by age for each State for 1940 to 1946, provisional figures for 1947 and 1948, and estimates of deaths of members of the armed forces stationed in each State. The estimated net loss of population to the armed forces for each State represents the difference between the number of persons 21 years old and over from the State serving in the armed forces on July 1, 1948, and the number of all ages in the armed forces on April 1, 1940,

plus an allowance for persons in the cohort from the State who died while serving in the armed forces.

The estimates of net migration for the population 21 years old and over are based on estimated rates of net migration for the population of all ages. The State rates of net migration for the population of all ages were developed in connection with estimates of State population presented in Current Population Reports, Series P-25, No. 14. The method used to prepare these estimates of net migration is described in that report. Because it was assumed in making the estimates that the rate of net migration for the population of school age was the same as that for the population of all ages, the State figures may vary considerably in accuracy, depending on the validity of the assumption for the State. By and large, however, the figures may be accepted as reflecting the general direction and approximate size of changes since 1940.

Estimates of the population under 21 years of age were obtained by subtracting the estimates for the population 21 years old and over from those for the population of all ages.

Estimates for July 1, 1948, including persons in the armed forces stationed in each State, are shown in table 2, and estimates for civilians only in table 3. Table 4 presents figures on the civilian population of voting age for July 1, 1944 and 1948, and figures on the vote cast for presidential electors in 1944. (See U. S. Bureau of the Census, Elections: 1944, Nos. 3 and 5.) The figures in table 4 include civilians 18 years old or over in Georgia.

The estimates presented in this report have been rounded to the nearest thousand without being adjusted to group totals, which have been independently rounded. Derived figures are based on the unrounded absolute numbers.

LIST OF TABLES

Table	Page

¹ The population figures for all States except Georgia relate to civilians 21 years old and over. For Georgia the figures are for the civilian population 18 years old and over.

² See U. S. Bureau of the Census, Elections, 1944, No. 5.

³ Vote cast by civilians equals total vote cast minus effective ballots received from servicemen. See U. S. Bureau of the Census, Elections, 1944, No. 3.
