SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau is the preeminent collector and provider of timely, relevant, and quality data about the people and economy of the United States. Economic data are the Census Bureau's primary program commitment during nondecennial census years. The Census Bureau conducts surveys to estimate expenditures for residential improvement, including alterations and repairs. This segment of the economy amounted to more than \$157 billion in 2001. Work done to rental or vacant residential properties is collected on the Survey of Residential Alterations and Repairs (SORAR) report form. The Consumer Expenditures Survey collects data for improvement and repairs to owner-occupied residential properties.

The Census Bureau publishes estimates from these two sources in the C50 Series, *Expenditures for Residential Improvements and Repairs*. These estimates are used by a variety of private businesses and trade associations for marketing studies, economic forecasts, and assessments of the remodeling and construction industries. They also help governments evaluate economic policy. For example, the Bureau of Economic Analysis uses these statistics to develop the structures component of gross private domestic investment in the national income and product accounts.

In an effort to make our data dissemination more timely, the survey will begin monthly data collection for the January 2004 survey month. Currently the survey is conducted quarterly. At the same time, to improve the scope of the survey, we will begin to collect expenditures for wall-to-wall carpeting and kitchen appliances. To reduce some of the respondent burden, we expect to decrease the number of improvement queries on the monthly form. For example, siding work done as

an "alteration" and siding work done as a "major replacement" may be combined into one siding improvement category.

II. Method of Collection

The universe for this survey is the owners or designated representatives of the more than 40 million rental and vacant housing units in the United States. A sample of these owners, as identified in the Consumer Expenditure Survey, is mailed the SORAR-705 form. They are asked to report detailed alterations, improvement, and repair expenditures for their entire property.

When the survey begins monthly data collection, approximately 2,800 owners will be sampled each month. The sample design uses a rotation procedure which will bring one-twelfth of the sample (about 230 properties) into the survey each month and, conversely, take one-twelfth out each month. The data collected will continue to be adjusted for unreturned or unusable forms by region and metropolitan statistical area (MSA). The weights are adjusted so that sample counts of renter occupied and vacant housing units agree with independently derived controls from the Current Population Survey.
