SUPPLEMENTARY INFORMATION:

I. Background

The National Longitudinal Survey of Youth 1979 (NLSY79) is a representative national sample of persons who were born in the years 1957 to 1964 and lived in the U.S. in 1978. These respondents were ages 14-22 when the first round of interviews began in 1979; they will be ages 43 to 50 when the planned twenty-third round of interviews is conducted from January 2008 to January 2009. The NLSY79 was conducted annually from 1979 to 1994 and has been conducted biennially since 1994. The longitudinal focus of this survey requires information to be collected from the same individuals over many years in order to

trace their education, training, work experience, fertility, income, and program participation.

In addition to the main NLSY79, the biological children of female NLSY79 respondents have been surveyed since 1986, when the National Institute of Child Health and Human Development began providing funding to the BLS to gather a large amount of information about the lives of these children. A battery of child cognitive, socio-emotional, and physiological assessments has been administered biennially since 1986 to NLSY79 mothers and their children. Starting in 1994, children who had reached age 15 by December 31 of the survey year (the Young Adults) were interviewed about their work experiences, training, schooling, health, fertility, and self-esteem, as well as sensitive topics addressed in a supplemental, self-administered questionnaire.

The BLS contracts with the Center for Human Resource Research (CHRR) of the Ohio State University to implement the NLSY79, Child, and Young Adult surveys. Interviewing of respondents is conducted by the National Opinion Research Center (NORC) of the University of Chicago. Among the objectives of the Department of Labor (DOL) are to promote the development of the U.S. labor force and the efficiency of the U.S. labor market. The BLS contributes to these objectives by gathering information about the labor
