MASS LAYOFFS IN DECEMBER 2003 AND ANNUAL AVERAGES FOR 2003

Employers initiated 1,929 mass layoff actions in December 2003, as measured by new filings for unemployment insurance benefits during the month, according to data from the U.S. Department of Labor's Bureau of Labor Statistics. Each action involved at least 50 persons from a single establishment, and the number of workers involved totaled 192,633. (See table 1.) The number of layoff events and initial claims were sharply lower than a year ago, with both measures at the lowest levels for December since 1999. Fewer mass-layoff initial claims were filed against employers in motion picture and video production, in highway, street, and bridge construction, and in temporary help services in December 2003 compared with December 2002.

The total of layoff events for all of 2003 was 18,963 and the total of initial claimants was 1,888,926. The annual totals were lower than in 2002 (20,277 and 2,245,051, respectively). Additional information on the annual data is provided starting on page 3 of this release.

Industry Distribution

School and employee bus transportation, with 12,178 initial claimants, and highway, street, and bridge construction, with 11,254 initial claimants, together accounted for 12 percent of all initial claims in December. (See table A.) The 10 industries reporting the highest number of mass-layoff initial claims accounted for 29 percent of the total.

The manufacturing sector recorded 34 percent of all mass layoff events and 40 percent of all initial claims filed in December. A year ago, manufacturing reported 40 percent of events and 48 percent of initial claims. Within manufacturing, the number of claimants was highest in transportation equipment (21,061) and food processing (9,285). (See table 2.)

Construction accounted for 17 percent of events and 13 percent of initial claims filed in December, with layoffs mostly in highway, street, and bridge construction. Administrative and waste services accounted for 10 percent of events and 9 percent of initial claims during the month, mainly in temporary help services. Seven percent of the events and 8 percent of the initial claims were from the transportation and warehousing sector, largely among school and employee bus transportation. An additional 7 percent of all layoff events and 8 percent of initial claims filed during December were from accommodation and food services, primarily among food services contractors.

Government establishments accounted for 4 percent of events and 3 percent of initial claims filed during the month, particularly in executive, legislative and general government.

Table A. Industries with the largest mass-layoff initial claims in December 2003 p

* 1		December peak			
Industry	Initial claims	Year	Initial claims		
School and employee bus transportation	12,178	1996	13,146		
Highway, street, and bridge construction	11,254	2000	17,277		
Food service contractors	· ·	2003	9,229

Household refrigerator and home freezer					
manufacturing	2,324	2000	5,758		

p=preliminary.

Compared with December 2002, the largest decreases in initial claims were reported in plastics and rubber products manufacturing (-8,197), motion picture and sound recording industries (-5,454), and computer and electronic product manufacturing (-5,294). The largest over-the-year increase in initial claims was in professional and technical services (+1,500).

Geographic Distribution

Among the four regions, the highest number of initial claims in December due to mass layoffs was reported in the Midwest, 87,806. (See table 3.) Transportation equipment manufacturing and heavy and civil engineering construction accounted for 33 percent of all initial claims in that region during the month. The West region was next, with 37,923 initial claims, followed by the Northeast, with 34,437, and the South, with 32,467.

The number of initial claimants in mass layoffs declined over the year in all four of the regions, with the largest decrease in the South (-28,193). This was the first December in which all four regions had over-the-year declines since the mass layoffs program began in 1995. Eight of the nine geographic divisions had over-the-year decreases in the number of initial claims associated with mass layoffs, with the largest decreases in the Pacific (-20,430) and South Atlantic (-14,776) divisions. The Mountain division had the only increase (+144).

Among the states, California recorded the largest number of initial claims filed in mass layoff events in December, 25,953, mostly in administrative and support services, followed by professional and technical services and educational services. Indiana reported 15,330 initial claims, followed by Illinois (15,006) and Michigan (12,275). These four states accounted for 37 percent of all layoff events and 36 percent of initial claims for unemployment insurance. (See table 4.)

California registered the largest over-the-year decrease in the number of initial claims (-16,272), followed by South Carolina (-11,205). The largest over-the-year increase occurred in Michigan (+5,775).

Table B. Number of mass layoff events and initial claimants for unemployment insurance, 1996-2003

Year	Layoff events	Initial claimants for unemployment insurance
1996	14,111	1,437,628
1997	14,960	1,542,543
1998	15,904	1,771,069
1999	14,909	1,572,399
2000	15,738	1,835,592
2001	21,467	2,514,862
2002	20,277	2,245,051
2003	18,963	1,888,926

r=revised.

Review of 2003

During 2003, 18,963 layoff events occurred, resulting in 1,888,926 initial claim filings for unemployment insurance. In 2002, there were 20,277 events and 2,245,051 initial claimants. (See table B.)

The 10 industries with the highest number of mass-layoff initial claims accounted for 25 percent of the total in 2003. (See table C.) In 2002, they comprised 23 percent of the total. The top five industries had the same rankings in both years.

Manufacturing accounted for 32 percent of all mass layoff events and 39 percent of initial claims filed during 2003. A year earlier, manufacturing accounted for 35 percent of events and 40 percent of initial claims. Initial claim filings were most numerous in transportation equipment, 178,282, followed by food processing, 87,353, and machinery manufacturing, 60,370. Compared with 2002, the largest decrease in initial claims occurred in computer and electronic products (-39,070) and machinery manufacturing (-27,340). The largest over-the-year increase in initial claims occurred in transportation equipment (+1,777).

The number of initial claims filed in 2003 due to mass layoffs was higher in the West, 594,937, than in any other region. Layoffs in administrative and support services, motion picture and sound recording, and agricultural and forestry support activities accounted for 32 percent of the claims in the West. The fewest number of mass-layoff initial claims was reported in the Northeast region, 306,462. For the second consecutive year, over-the-year decreases in mass-layoff initial claims occurred in each of the four regions. The largest decreases in initial claims were in the West (-151,121) and South (-110,520).

Among the 50 states and the District of Columbia, California recorded the largest number of initial claims filed in mass layoff events for the period (467,573), 25 percent of the national total. The states with the next highest numbers of initial claims were Pennsylvania (112,356), Ohio (102,864), New York (93,583), and Illinois (90,181). Half of all events and 46 percent of all initial claims were from these five states.

California reported the largest over-the-year decrease in initial claims (-108,537), followed by Texas (-36,208), and South Carolina (-30,005). The largest over-the-year increases occurred in New York (+8,005) and Georgia (+7,121).

Table C. Industries with largest mass layoff initial claims in 2003 p

p=preliminary.

<u>Note</u>

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. Information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended mass layoffs"). The quarterly release provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include short-term layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 1.) See the Technical Note for more detailed definitions.

The report on Extended Mass Layoffs in the Fourth Quarter of 2003 is scheduled to be released on Thursday, February 12, 2004. The report on Mass Layoffs in January 2004 is scheduled to be released on Wednesday, February 25, 2004.

Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on establishments which have at least 50 initial claims filed against them during a consecutive 5-week period. These establishments then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others 5 weeks, and the number of weeks in a given month may be different from year to year. Therefore,

analysis of over-the-month and over-the-year change should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

Definitions

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an establishment during a 5-week period, regardless of duration.

¹ The event realization rate is the percentage of total mass layoff events lasting more than 30 days. The initial claimant realization rate is the percentage of total mass-layoff initial claimants associated with layoffs lasting more than 30 days.

data on these layoffs become avaliable. Recent experience suggests that the number of extended mass layoff events is generally revised upwards by less than 10 percent and the number of initial claimants associated with such events increases by 25-40 percent.

² These quarterly numbers are provisional and will increase as more

^p = preliminary.
