Preliminary Determinations by the ITC.

The ITC will preliminarily determine no later than November 5, 2007, whether there is a reasonable indication that imports of raw flexible magnets from Taiwan and the PRC are materially injuring or threatening material injury to a U.S. industry. A negative ITC determination for any country will result in the investigation being terminated with respect to that country; otherwise, these investigations will proceed according to statutory and regulatory time limits.

Docket Number: 07–040. Applicant: Penn State University, 311 Deike Building, University Park, PA 16802. Instrument: Distributed Temperature Sensor, model Sentinel DTS–SR(0– 5KM). Manufacturer: Sensornet Ltd.,

United Kingdom. Intended Use: The instrument is intended to be used for a study that involves the determination of stream-aquifer interaction as related to precipitation events, and the detection of areas that build and release moisture along the hillslope. The work will involve collection of field-based physical measurements of groundwater discharge, including spatially and temporally exhaustive temperature gradients and Darcian flux calculations, to improve quantification of streambed leakage and assess the rate and scale of stream-aquifer exchange to determine controls on threshold behavior. Good temperature resolution and capability to collect data every minute to 0.1° C. accuracy are essential to the research. Application accepted by Commissioner of Customs: September 5, 2007.

Dated: October 15, 2007.
