#### I. Abstract

For several years the USPTO has supported an ongoing forecasting program for patent application filings that includes the use of quantitative and qualitative methodologies. Given the importance of accurate application filings forecasts, the USPTO considers more than one type of methodology. As part of this strategy, information from a survey of the inventor community is included when formulating application filings forecasts. In addition to using the survey as part of a comprehensive approach to forecasting, the USPTO is also using this tool in response to Senate Appropriations Report 106-404 (September 8, 2000). This report directed the USPTO to "develop a workload forecast with advice from a representative sample of industry and the inventor community." A patent application filing survey will assist the USPTO in better understanding key factors driving future application filings, such as newly emerging technologies.

The USPTO has developed the United States Patent Applicant Survey as part of the continuing effort to better predict the future growth of patent application filings by understanding applicant intentions. The main purpose of this
