

Natural Gas Transmission Line Safety

Call Before You Dig 1-888-258-0808

- Never assume that a pipeline is located directly between two markers or directly beneath a marker.
- Make sure that markers are maintained and not removed for any reason.
- Provide adequate illumination at night in all work areas, particularly near pipeline right-of-ways. Make sure that markers are visible at all times.
- Maintain a safe distance between active mining and the pipeline right-of-way.
