

The second project proposes to continue studies of long-term trends in the abundance, distribution and population structure of sea turtle populations residing on the sabellariid worm reef in Indian River County, Florida. The applicant would capture by tangle net, flipper and PIT tag, measure, weigh, blood sample, photograph and release 200 green, 20 loggerhead, 2 Kemp's ridley and 2 hawksbill sea turtles. Green sea turtles would also be lavaged.

The third project proposes to use satellite telemetry to study the movements of juvenile green sea turtles in inshore waters of eastern Florida. Forty green sea turtles would be captured by tangle net, flipper and PIT tagged, measured, weighed, blood sampled, photographed, fitted with a satellite transmitter and released.

The fourth project proposes to elucidate patterns and trends in the abundance, distribution, and population structure of sea turtles at the Trident Turning Basin, Cape Canaveral, Florida. The applicant would capture by tangle net, flipper and PIT tag, measure, weigh, blood sample, photograph, and release 200 green and 10 loggerhead sea turtles. Green sea turtles would also be marked with non-toxic paint.

The fifth project proposes to study green and loggerhead sea turtle habitat utilization in the central region of the Indian River Lagoon System in Florida. Eighteen green and 18 loggerhead sea turtles would be captured by tangle net, flipper and PIT tagged, measured, weighed, photographed, fitted with VHF transmitters and time-depth-temperature recorders, released, and tracked.

The applicant requests a five-year permit. Each of the above projects would provide information that would be used to help recover and conserve threatened and endangered sea turtles.
