SUPPLEMENTARY INFORMATION:

I. Background

Title 30 CFR 56.13015 and 57.13015 require that compressed-air receivers and other unfired pressure vessels be inspected by inspectors holding a valid National Board Commission and in

accordance with the applicable chapters of the National Board Inspection Code, a manual for Boiler and Pressure Vessels Inspectors, 1979.

Title 30 CFR 56.13030 and 57.13030 require that fired pressure vessels (boilers) be equipped with safety devices approved by the American Society of Mechanical Engineers (ASME) to protect against hazards from overpressure, flameouts, fuel interruptions and low water level. 56/57.13030 requires that records of inspections and repairs be retained by the mine operator in accordance with the requirements of the ASME Boiler and Pressure Vessel Code and the National Board Inspection Code (progressive records—no limit on retention time) and made available to the Secretary or his/her authorized representative.

Title 30 CFR 56.14100 and 57.14100 require equipment operators to inspect equipment, machinery, and tools that are to be used during a shift for safety defects before the equipment is placed in operation. Defects affecting safety are required to be corrected in a timely manner. In instances where the defect makes continued operation of the equipment unsafe, the standards require removal from service, tagging to identify that it is out of use, and repair before use is resumed.

Title 30 CFR 56.18002 and 57.18002 require that a competent person designated by the operator shall examine each working place at least once each shift for conditions which may adversely affect safety or health. A record that such examinations were conducted shall be kept by the operator for a period of one year, and shall be made available for review by the Secretary or his/her authorized representative.
