

New Mexico. The petitioner states that the miner will wear the M-20 units (MSHA rated at 10 minutes) on their person and a 60 minute unit (the SR-100, EBA 6.5 or equivalent MSHA rated for 60 minutes) on their vehicles or equipment. These units will be located within 300 to 500 feet or 5 minutes maximum of the employee. The combination of devices will be made available to all employees working underground and maintained in good condition. The petitioner further states that: (1) This proposal will satisfy the State Mining Act while enabling the miners to wear an ergonomically suitable SCSR on their belt; (2) the alternative to the smaller M-20 type are bulky and heavy units that will expose the miners to additional risk associated with a large and heavy unit hanging off their belt; and (3) the current MSA W-65 filter self rescuer (Approval No. TC-14G-82) weighs 2.2 pounds, and the smallest SCSR is the SR-100 which weighs 6 pounds and is approximately 2.5 larger than the W-65 filter and is awkward to wear. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as the existing standard.

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-333]

Entergy Nuclear Operations, Inc.; James A. Fitzpatrick Nuclear Power Plant; Exemption

1.0 Background

Entergy Nuclear Operations, Inc. (ENO or the licensee) is the holder of Facility Operating License No. DPR-59, which authorizes operation of the James A. FitzPatrick Nuclear Power Plant (JAF). The license provides, among other things, that the facility is subject to all rules, regulations, and orders of the Nuclear Regulatory Commission (NRC or the Commission) now or hereafter in effect.

The facility consists of one boiling-water reactor located in Oswego County, New York.

2.0 Request/Action

Title 10 of the Code of Federal Regulations (10 CFR), Part 50, Section 50.48, requires that nuclear power plants that were licensed before January 1, 1979, of which JAF is one, must satisfy the requirements of 10 CFR Part 50, Appendix R, Section III.G. Subsection III.G.2 addresses fire protection features for ensuring that one of the redundant trains necessary to achieve and maintain hot shutdown conditions remains free of fire damage in the event of a fire. Subsection III.G.2.c provides use of a 1-hour fire barrier as one means for complying with this fire protection requirement. ENO proposes that the absence and/or control of ignition sources, the adequacy of detection and suppression systems, and the capability of the existing Hemyc fire wrap in this fire area, satisfy the underlying intent of 10 CFR 50, Appendix R, Subsection III.G.2.c.
