

activities during the period from November 1, 2006, through May 31, 2008. Specimens would be collected from Federal waters off the east coast of Florida and Federal waters off the coasts of Georgia, South Carolina, and North Carolina. Sampling would occur during normal fishing operations of the commercial snapper-grouper vertical hook-and-line fishery. Sampling would occur year-round, collecting up to 500 fish during the course of the sampling. Data collections for this study would support improved information about the catch, bycatch, discards, and discard mortality for species in the snapper-grouper complex. These data would provide insight on a stock's resilience to fishing, and would help refine estimates of long-term biological productivity of the stocks. Currently, these data are unavailable, and it is anticipated project results would yield valuable data within this fishery.

NMFS finds this application warrants further consideration. Based on a preliminary review, NMFS intends to issue an EFP. Possible conditions the agency may impose on this permit, if it is indeed granted, include but are not limited to, a prohibition of conducting research within marine protected areas, marine sanctuaries, or special management zones, without additional authorization. Additionally, NMFS may prohibit the possession of Nassau or goliath grouper, and require any sea turtles taken incidentally during the

course of fishing or scientific research activities to be handled with due care to prevent injury to live specimens, observed for activity, and returned to the water. A final decision on issuance of the EFP will depend on a NMFS review of public comments received on the application, consultations with the affected states, the South Atlantic Fishery Management Council, and the U.S. Coast Guard, and a determination that it is consistent with all applicable laws.
